GREECE.*

The Land.—Its geographical characteristics, and their influence upon the People.—

"The considerable part played by the people of Greece during many ages must undoubtedly be ascribed to the geographical position of their country. Other tribes having the same origin, but inhabiting countries less happily situated—such, for instance, as the Pelasgians of Illyria, who are believed to be the ancestors of the Albanians—have never risen above a state of barbarism, whilst the Hellenes placed themselves at the head of civilised nations, and opened fresh paths to their enterprise. If Greece had remained for ever what it was during the tertiary geological epoch—a vast plain attached to the deserts of Libya, and run over by lions and the rhinoceros—would it have become the native country of a Phidias, an *Æschylos*, or a *Demosthenes*? Certainly not. It would have shared the fate of Africa, and, far from taking the initiative in civilisation, would have waited for an impulse to be given to it from beyond. Greece, a sub-peninsula of the peninsula of the Balkans, was even more completely protected by transverse mountain barriers in the north than was Thracia or Macedonia. Greek culture was thus able to develop itself without fear of being stifled at its birth by successive invasions of barbarians. Mounts Olympus, Pelion, and Ossa, towards the north and east of Thessaly, constituted the first line of formidable obstacles towards Macedonia. A second barrier, the steep range of the Othrys, runs along what is the present political boundary of Greece. To the south of the Gulf of Lamia a fresh obstacle awaits us, for the range of the *Æta* closes the passage, and there is but the narrow pass of the Thermopylæ between it and the sea. Having crossed the mountains of the Locri and descended into the basin of Thebæ, there still remain to be crossed the Parnes or the spurs of the Cithæron before we reach the plains of Attica. The 'isthmus' beyond these is again defended by transverse barriers, outlying ramparts, as it were, of the mountain citadel of the Peloponnesus, that acropolis of all Greece. Hellas has frequently been compared to a series of chambers, the doors of which were strongly bolted; it was difficult to get in, but more difficult to get out again, owing to their stout defenders. Michelet likens Greece to a trap having three compartments. You entered, and found yourself taken first in Macedonia, then in Thessaly, then between the Thermopylæ and the isthmus. But the difficulties increase beyond the isthmus, and Lacedæmonia remained impregnable for a long time. At an epoch when the navigation even of a land-locked sea like the *Ægean* was attended with danger, Greece found herself sufficiently protected against the invasions of oriental nations; but, at the same time, no other country held out such inducements to the pacific expeditions of merchants. Gulfs and harbours facilitated access to her *Ægean* coasts, and the numerous outlying islands were available as stations or as places of refuge. Greece, therefore, was favourably placed for entering into commercial intercourse with the more highly civilised peoples who dwelt on the opposite coasts of Asia Minor. The colonists and voy-

agers of Eastern Ionia not only supplied their *Achæan* and *Pelasgian* kinsmen with foreign commodities and merchandise, but they also imparted to them the myths, the poetry, the sciences, and the arts of their native country. Indeed, the geographical configuration of Greece points towards the east, whence she has received her first enlightenment. Her peninsulas and outlying islands extend in that direction; the harbours on her eastern coasts are most commodious, and afford the best shelter; and the mountain-surrounded plains there offer the best sites for populous cities. . . . The most distinctive feature of Hellas, as far as concerns the relief of the ground, consists in the large number of small basins, separated one from the other by rocks or mountain ramparts. The features of the ground thus favoured the division of the Greek people into a multitude of independent republics. Every town had its river, its amphitheatre of hills or mountains, its acropolis, its fields, pastures, and forests, and nearly all of them had, likewise, access to the sea. All the elements required by a free community were thus to be found within each of these small districts, and the neighbourhood of other towns, equally favoured, kept alive perpetual emulation, too frequently degenerating into strife and battle. The islands of the *Ægean* Sea, likewise, had constituted themselves into miniature republics. Local institutions thus developed themselves freely, and even the smallest island of the Archipelago has its great representatives in history. But whilst there thus exists the greatest diversity, owing to the configuration of the ground and the multitude of islands, the sea acts as a binding element, washes every coast, and penetrates far inland. These gulfs and numerous harbours have made the maritime inhabitants of Greece a nation of sailors—*amphibians*, as *Strabo* called them. From the most remote times the passion for travel has always been strong amongst them. When the inhabitants of a town grew too numerous to support themselves upon the produce of their land, they swarmed out like bees, explored the coasts of the *Mediterranean*, and, when they had found a site which recalled their native home, they built themselves a new city. . . . The Greeks held the same position relatively to the world of the ancients which is occupied at the present time by the *Anglo-Saxons* with reference to the entire earth. There exists, indeed, a remarkable analogy between Greece, with its archipelago, and the *British Islands*, at the other extremity of the continent. Similar geographical advantages have brought about similar results, as far as commerce is concerned, and between the *Ægean* and the *British* seas time and space have effected a sort of harmony."—*E. Reclus, The Earth and its Inhabitants: Europe*, v. 1, pp. 36-38.—"The independence of each city was a doctrine stamped deep on the Greek political mind by the very nature of the Greek land. How truly this is so is hardly fully understood till we see that land with our own eyes. The map may do something; but no map can bring home to us the true nature of the Greek land till we have stood on a Greek hill-top, on the *akropolis* of Athens or the loftier *akropolis* of Corinth, and have seen how thoroughly the land was a land of valleys cut off by hills, of islands and peninsulas cut off by arms of sea,

* An important part of Greek history is treated more fully under the heading "Athens" (in Vol. 1), to which the reader is referred.

from their neighbours on either side. Or we might more truly say that, while the hills fenced them off from their neighbours, the arms of the sea laid them open to their neighbours. Their waters might bring either friends or enemies; but they brought both from one wholly distinct and isolated piece of land to another. Every island, every valley, every promontory, became the seat of a separate city; that is, according to Greek notions, the seat of an independent power, owning indeed many ties of brotherhood to each of the other cities which helped to make up the whole Greek nation, but each of which claimed the right of war and peace and separate diplomatic intercourse, alike with every other Greek city and with powers beyond the bounds of the Greek world. Corinth could treat with Athens and Athens with Corinth, and Corinth and Athens could each equally treat with the King of the Macedonians and with the Great King of Persia. . . . How close the Greek states are to one another, and yet how physically distinct they are from one another, it needs, for me at least, a journey to Greece fully to take in."—E. A. Freeman, *The Practical Bearings of European Hist. (Lect's to Am. Audiences)*, pp. 243-244.

Ancient inhabitants.—Tribal divisions. See PELASGIANS; HELLENES; ACHAIA; ÆOLIANS; and DORIANS and IONIANS.

The Heroes and their Age.—"The period included between the first appearance of the Hellenes in Thessaly and the return of the Greeks from Troy, is commonly known by the name of the heroic age, or ages. The real limits of this period cannot be exactly defined. The date of the siege of Troy is only the result of a doubtful calculation [ending B.C. 1183, as reckoned by Eratosthenes, but fixed at dates ranging from 33 to 63 years later by Isocrates, Callimachus and other Greek writers]; and . . . the reader will see that it must be scarcely possible to ascertain the precise beginning of the period: but still, so far as its traditions admit of anything like a chronological connexion, its duration may be estimated at six generations, or about 200 years [say from some time in the 14th to some time in the 12th century before Christ]. . . . The history of the heroic age is the history of the most celebrated persons belonging to this class, who, in the language of poetry, are called 'heroes.' The term 'hero' is of doubtful origin, though it was clearly a title of honour; but, in the poems of Homer, it is applied not only to the chiefs, but also to their followers, the freemen of lower rank, without, however, being contrasted with any other, so as to determine its precise meaning. In later times its use was narrowed, and in some degree altered: it was restricted to persons, whether of the heroic or of after ages, who were believed to be endowed with a superhuman, though not a divine, nature, and who were honoured with sacred rites, and were imagined to have the power of dispensing good or evil to their worshippers; and it was gradually combined with the notion of prodigious strength and gigantic stature. Here, however, we have only to do with the heroes as men. The history of their age is filled with their wars, expeditions, and adventures, and this is the great mine from which the materials of the Greek poetry were almost entirely drawn."—C. Thirlwall, *Hist. of Greece*, ch. 5 (v. 1).—The legendary heroes whose exploits and adventures became the favorite subjects of Greek

tragedy and song were Perseus, Hercules, Theseus, the Argonauts, and the heroes of the Siege of Troy.

The Migrations of the Hellenic tribes in the Peninsula.—"If there is any point in the annals of Greece at which we can draw the line between the days of myth and legend and the beginnings of authentic history, it is at the moment of the great migrations. Just as the irruption of the Teutonic tribes into the Roman empire in the 5th century after Christ marks the commencement of an entirely new era in modern Europe, so does the invasion of Southern and Central Greece by the Dorians, and the other tribes whom they set in motion, form the first landmark in a new period of Hellenic history. Before these migrations we are still in an atmosphere which we cannot recognize as that of the historical Greece that we know. The states have different boundaries, some of the most famous cities have not yet been founded, tribes who are destined to vanish occupy prominent places in the land, royal houses of a foreign stock are established everywhere, the distinction between Hellenic and Barbarian is yet unknown. We cannot realize a Greece where Athens is not yet counted as a great city, while Mycenae is a seat of empire; where the Achaean element is everywhere predominant, and the Dorian element is as yet unknown. When, however, the migrations are ended, we at once find ourselves in a land which we recognize as the Greece of history. The tribes have settled into the districts which are to be their permanent abodes, and have assumed their distinctive characters. . . . The original impetus which set the Greek tribes in motion came from the north, and the whole movement rolled southward and eastward. It started with the invasion of the valley of the Peneus by the Thessalians, a warlike but hitherto obscure tribe, who had dwelt about Dodona in the uplands of Epirus. They crossed the passes of Pindus, and flooded down into the great plain to which they were to give their name. The tribes which had previously held it were either crushed and enslaved, or pushed forward into Central Greece by the wave of invasion. Two of the displaced races found new homes for themselves by conquest. The Arnaeans, who had dwelt in the southern lowlands along the courses of Apidanus and Enipeus, came through Thermopylae, pushed the Locrians aside to right and left, and descended into the valley of the Cephissus, where they subdued the Minyae of Orchomenus [see MINYAE], and then, passing south, utterly expelled the Cadmeians of Thebes. The plain country which they had conquered received a single name. Boeotia became the common title of the basins of the Cephissus and the Asopus, which had previously been in the hands of distinct races. Two generations later the Boeotians endeavoured to cross Cithaeron, and add Attica to their conquests; but their king Xanthus fell in single combat with Melanthus, who fought in behalf of Athens, and his host gave up the enterprise. In their new country the Boeotians retained their national unity under the form of a league, in which no one city had authority over another, though in process of time Thebes grew so much greater than her neighbours that she exercised a marked preponderance over the other thirteen members of the confederation. Orchomenus, whose Minyan inhabitants had been subdued but not exterminated by the invaders, remained dependent on the league without being

at first amalgamated with it. A second tribe who were expelled by the irruption of the Thessalians were the Dorians, a race whose name is hardly heard in Homer, and whose early history had been obscure and insignificant. They had till now dwelt along the western slope of Pindus. Swept on by the invaders, they crossed Mount Othrys, and dwelt for a time in the valley of the Spercheius and on the shoulders of Oeta. But the land was too narrow for them, and, after a generation had passed, the bulk of the nation moved southward to seek a wider home, while a small fraction only remained in the valleys of Oeta. Legends tell us that their first advance was made by the Isthmus of Corinth, and was repulsed by the allied states of Peloponnesus, Hyllus the Dorian leader having fallen in the fight by the hand of Echemus, King of Tegea. But the grandsons of Hyllus resumed his enterprise, and met with greater success. Their invasion was made, as we are told, in conjunction with their neighbours the Aetolians, and took the Aetolian port of Naupactus as its base. Pushing across the narrow strait at the mouth of the Corinthian Gulf, the allied hordes landed in Peloponnesus, and forced their way down the level country on its western coast, then the land of the Epeians, but afterwards to be known as Elis and Pisatis. This the Aetolians took as their share, while the Dorians pressed further south and east, and successively conquered Messenia, Laconia, and Argolis, destroying the Cauconian kingdom of Pylos and the Achaian states of Sparta and Argos. There can be little doubt that the legends of the Dorians pressed into a single generation the conquests of a long series of years. . . . It is highly probable that Messenia was the first seized of the three regions, and Argos the latest . . . but of the details or dates of the Dorian conquests we know absolutely nothing. Of the tribes whom the Dorians supplanted, some remained in the land as subjects to their newly found masters, while others took ship and fled over sea. The stoutest-hearted of the Achaeans of Argolis, under Tisamenus, a grandson of Agamemnon, retired northward when the contest became hopeless, and threw themselves on the coast cities of the Corinthian Gulf, where up to this time the Ionic tribe of the Aegialeans had dwelt. The Ionians were worsted, and fled for refuge to their kindred in Attica, while the conquerors created a new Achaia between the Arcadian Mountains and the sea, and dwelt in the twelve cities which their predecessors had built. The rugged mountains of Arcadia were the only part of Peloponnesus which were to escape a change of masters resulting from the Dorian invasion. A generation after the fall of Argos, new war-bands thirsting for land pushed on to the north and west, led by descendants of Temenus. The Ionic towns of Sicyon and Phlius, Epidaurus and Troezen, all fell before them. Even the inaccessible Acropolis which protected the Aetolian settlement of Corinth could not preserve it from the hands of the enterprising Aletes. Nor was it long before the conquerors pressed on from Corinth beyond the isthmus, and attacked Attica. Foiled in their endeavour to subdue the land, they at least succeeded in tearing from it its western districts, where the town of Megara was made the capital of a new Dorian state, and served for many generations to curb the power of Athens. From Epidaurus a short voyage of fifteen miles took the Dorians to Aegina, where

they formed a settlement which, first as a vassal to Epidaurus, and then as an independent community, enjoyed a high degree of commercial prosperity. It is not the least curious feature of the Dorian invasion that the leaders of the victorious tribe, who, like most other royal houses, claimed to descend from the gods and boasted that Heracles was their ancestor, should have asserted that they were not Dorians by race, but Achaeans. Whether the rude northern invaders were in truth guided by princes of a different blood and higher civilization than themselves, it is impossible to say. . . . In all probability the Dorian invasion was to a considerable extent a check in the history of the development of Greek civilization, a supplanting of a richer and more cultured by a poorer and wilder race. The ruins of the prehistoric cities, which were supplanted by new Dorian foundations, point to a state of wealth to which the country did not again attain for many generations. On the other hand, the invasion brought about an increase in vigour and moral earnestness. The Dorians throughout their history were the sturdiest and most manly of the Greeks. The god to whose worship they were especially devoted was Apollo, the purest, the noblest, the most Hellenic member of the Olympian family. By their peculiar reverence for this noble conception of divinity, the Dorians marked themselves out as the most moral of the Greeks."—C. W. C. Oman, *Hist. of Greece*, ch. 5.

Mycenæ and its kings.—The unburied memorials.—"Thucydides says that before the Dorian conquest, the date of which is traditionally fixed at B. C. 1104, Mycenæ was the only city whence ruled a wealthy race of kings. Archaeology produces the bodies of kings ruling at Mycenæ about the twelfth century and spreads their wealth under our eyes. Thucydides says that this wealth was brought in the form of gold from Phrygia by the founder of the line, Pelops. Archaeology tells us that the gold found at Mycenæ may very probably have come from the opposite coast of Asia Minor which abounded in gold; and further that the patterns impressed on the gold work at Mycenæ bear a very marked resemblance to the decorative patterns found on graves in Phrygia. Thucydides tells us that though Mycenæ was small, yet its rulers had the hegemony over a great part of Greece. Archaeology shews us that the kings of Mycenæ were wealthy and important quite out of proportion to the small city which they ruled, and that the civilisation which centred at Mycenæ spread over south Greece and the Ægean, and lasted for some centuries at least. It seems to me that the simplest way of meeting the facts of the case is to suppose that we have recovered at Mycenæ the graves of the Pelopid race of monarchs. It will not of course do to go too far. . . . It would be too much to suppose that we have recovered the bodies of the Agamemnon who seems in the Iliad to be as familiar to us as Caesar or

Alexander, or of his father Atreus, or of his charioteer and the rest. We cannot of course prove the Iliad to be history; and if we could, the world would be poorer than before. But we can insist upon it that the legends of heroic Greece have more of the historic element in them than anyone supposed a few years ago. . . . Assuming then that we may fairly class the Pelopidae as Achæan, and may regard the remains at Mycenæ as characteristic of the Achæan civilisation of Greece, is it possible to trace with bolder hand the history of Achæan Greece? Certainly we gain assistance in our endeavour to realize what the pre-Dorian state of Peloponnesus was like. We secure a hold upon history which is thoroughly objective, while all the history which before existed was so vague and imaginative that the clear mind of Grote refused to rely upon it at all. But the precise dates are more than we can venture to lay down, in the present condition of our knowledge. . . . The Achæan civilisation was contemporary with the eighteenth Egyptian dynasty (B. C. 1700-1400). It lasted during the invasions of Egypt from the north (1300-1100). When it ceased we cannot say with certainty. There is every historical probability that it was brought to a violent end in the Dorian invasion. The traditional date of that invasion is B. C. 1104. But it is obvious that this date cannot be relied upon."—P. Gardner, *New Chapters in Greek Hist.*, ch. 2-3.

ALSO IN: H. Schliemann, *Mycenæ*.—C. Schuchhardt, *Schliemann's Excavations*, ch. 4.

Ancient political and geographical divisions.

—"Greece was not a single country. . . . It was broken up into little districts, each with its own government. Any little city might be a complete State in itself, and independent of its neighbours. It might possess only a few miles of land and a few hundred inhabitants, and yet have its own laws, its own government, and its own army. . . . In a space smaller than an English county there might be several independent cities, sometimes at war, sometimes at peace with one another. Therefore when we say that the west coast of Asia Minor was part of Greece, we do not mean that this coast-land and European Greece were under one law and one government, for both were broken up into a number of little independent States: but we mean that the people who lived on the west coast of Asia Minor were just as much Greeks as the people who lived in European Greece. They spoke the same language, and had much the same customs, and they called one another Hellenes, in contrast to all other nations of the world, whom they called barbarians . . . , that is, 'the unintelligible folk,' because they could not understand their tongue."—C. A. Fyfe, *Hist. of Greece (History Primers)*, ch. 1.—"The nature of the country had . . . a powerful effect on the development of Greek politics. The whole land was broken up by mountains into a number of valleys more or less isolated; there was no central point from which a powerful monarch could control it. Hence Greece was, above all other countries, the home of independence and freedom. Each valley, and even the various hamlets of a valley, felt themselves possessed of a separate life, which they were jealous to preserve."—E. Abbott, *Hist. of Greece*, pt. 1, ch. 1.—See AKAHNANIANS; ACHAIA; ÆGINA; ÆTOLIA; ARCADIA; ARGOS; ATHENS; ATTICA; BÆOTIA; CORINTH; DORIS AND

Political evolution of the leading States.—Variety in the forms of Government.—Rise of democracy at Athens.

—"The Hellenes followed no common political aim. . . . Independent and self-centred, they created, in a constant struggle of citizen with citizen and state with state, the groundwork of those forms of government which have been established in the world at large. We see monarchy, aristocracy, democracy, rising side by side and one after another, the changes being regulated in each community by its past experience and its special interests in the immediate present. These forms of government did not appear in their normal simplicity or in conformity with a distinct ideal, but under the modifications necessary to give them vitality. An example of this is Lakedæmon. If one of the families of the Heracleidæ [the two royal families—see SPARTA: THE CONSTITUTION] aimed at a tyranny, whilst another entered into relations with the native and subject population, fatal to the prerogatives of the conquerors, we can understand that in the third case, that of the Spartan community, the aristocratic principle was maintained with the greatest strictness. Independently of this, the divisions of the Lakedæmonian monarchy between two lines, neither of which was to have precedence, was intended to guard against the repetition in Sparta of that which had happened in Argos. Above all, the members of the Gerusia, in which the two kings had only equal rights with the rest, held a position which would have been unattainable to the elders of the Homeric age. But even the Gerusia was not independent. There existed in addition to it a general assembly, which, whilst very aristocratic as regards the native and subject population, assumed a democratic aspect in contrast with the king and the elders. The internal life of the Spartan constitution depended upon the relations between the Gerusia and the aristocratic demos. . . . The Spartan aristocracy dominated the Peloponnesus. But the constitution contained a democratic element working through the Ephors, by means of which the conduct of affairs might be concentrated in a succession of powerful hands. Alongside of this system, the purely aristocratic constitutions, which were without such a centre, could nowhere hold their ground. The Bacchiadæ in Corinth, two hundred in number, with a prytanis at their head, and intermarrying only among themselves, were one of the most distinguished of these families. They were deprived of their exclusive supremacy by Kypselus, a man of humble birth on his father's side, but connected with the Bacchiadæ through his mother. . . . As the Kypselidæ rose in Corinth, the metropolis of the colonies towards the west, so in the corresponding eastern metropolis, Miletus, Thrasybulus raised himself from the dignity of prytanis to that of tyrant; in Ephesus, Pythagoras rose to power, and overthrew the Basilidæ; in Samos, Polykrates, who was master also of the Kyklades, and of whom it is recorded that he confiscated the property of the citizens and then made them a present of it again. By concentrating the forces of their several communities the tyrants obtained the means

of surrounding themselves with a certain splendor, and above all of liberally encouraging poetry and art. To these Polycrates opened his citadel, and in it we find Anacreon and Ibycus; Kypselus dedicated a famous statue to Zeus, at Olympia. The school of art at Sikyon was without a rival, and at the court of Periander were gathered the seven sages—men in whom a distinguished political position was combined with the prudential wisdom derived from the experience of life. This is the epoch of the legislator of Athens, Solon [see ATHENS: B. C. 594], who more than the rest has attracted to himself the notice of posterity. He is the founder of the Athenian democracy. . . . His proverb 'Nothing in excess' indicates his character. He was a man who knew exactly what the time has a right to call for, and who utilized existing complications to bring about the needful changes. It is impossible adequately to express what he was to the people of Athens, and what services he rendered them. That removal of their pecuniary burdens, the *seisachtheia* [see DEBT, LAWS CONCERNING: ANCIENT GREEK], made life for the first time endurable to the humbler classes. Solon cannot be said to have introduced democracy, but, in making the share of the upper classes in the government dependent upon the good pleasure of the community at large, he laid its foundations. The people were invested by him with attributes which they afterwards endeavored to extend. . . . Solon himself lived long enough to see the order which he established serve as the basis of the tyranny which he wished to avoid; it was the Four Hundred themselves who lent a hand to the change. The radical cause of failure was that the democratic element was too feebly constituted to control or to repress the violence of the families. To elevate the democracy into a true power in the state other events were necessary, which not only rendered possible, but actually brought about, its further development. The conflicts of the principal families, hushed for a moment, were revived under the eyes of Solon himself with redoubled violence. The Alcæonidæ [banished about 595 B. C.—see ATHENS: B. C. 612-595] were recalled, and gathered around them a party consisting mainly of the inhabitants of the seacoast, who, favored by trade, had the money in their hands; the genuine aristocrats, described as the inhabitants of the plains, who were in possession of the fruitful soil, were in perpetual antagonism to the Alcæonidæ; and, whilst these two parties were bickering, a third was formed from the inhabitants of the mountain districts, inferior to the two others in wealth, but of superior weight to either in the popular assemblies. At its head stood Peisistratus, a man distinguished by warlike exploits, and at an earlier date a friend of Solon. It was because his adherents did not feel themselves strong enough to protect their leader that they were induced to vote him a body-guard chosen from their own ranks. . . . As soon, however, as the first two parties combined, the third was at a disadvantage, so that after some time sentence of banishment was passed upon Peisistratus. . . . Peisistratus . . . found means to gather around him a troop of brave mercenaries, with whom, and with the support of his old adherents, he then invaded Attica. His opponents made but a feeble resistance, and he became without much trouble

master both of the city and of the country [see ATHENS: B. C. 560-510]. He thus attained to power; it is true, with the approbation of the people, but nevertheless by armed force. . . . We have almost to stretch a point in order to call Peisistratus a tyrant—a word which carries with it the invidious sense of a selfish exercise of power. No authority could have been more rightly placed than his; it combined Athenian with Panhellenist tendencies. But for him Athens would not have been what she afterwards became to the world. . . . Nevertheless, it must be admitted that Peisistratus governed Athens absolutely, and even took steps to establish a permanent tyranny. He did, in fact, succeed in leaving the power he possessed to his sons, Hippias and Hipparchus. . . . Of the two brothers it was the one who had rendered most service to culture, Hipparchus, who was murdered at the festival of the Panathenæa. It was an act of revenge for a personal insult. . . . In his dread lest he should be visited by a similar doom, Hippias actually became an odious tyrant and excited universal discontent. One effect, however, of the loss of stability which the authority of the dominant family experienced was that the leading exiles ejected by Peisistratus combined in the enterprise which was a necessary condition of their return, the overthrow of Hippias. The Alcæonidæ took the principal part. . . . The revolution to which this opened the way could, it might seem, have but one result, the establishment of an oligarchical government. . . . But the matter had a very different issue," resulting in the constitution of Cleisthenes and the establishment of democracy at Athens, despite the hostile opposition and interference of Sparta.—L. von Ranke, *Universal History: The oldest Historical Group of Nations and the Greeks*, ch. 5.—See, also, ATHENS: B. C. 510-507, and 509-506.

B. C. 500-493.—Rising of the Ionians of Asia Minor against the Persians.—Aid rendered to them by the Athenians.—Provocation to Darius.—The Ionic Greek cities, or states, of Asia Minor, first subjugated by Cræsus, King of Lydia, in the sixth century B. C., were swallowed up, in the same century, with all other parts of the dominion of Cræsus, in the conquests of Cyrus, and formed part of the great Persian Empire, to the sovereignty of which Cambyses and Darius succeeded. In the reign of Darius there occurred a revolt of the Ionians (about 502 B. C.), led by the city of Miletus, under the influence of its governor, Aristagoras. Aristagoras, coming over to Greece in person, sought aid against the Persians, first at Sparta, where it was denied to him, and then, with better success, at Athens. Presenting himself to the citizens, just after they had expelled the Pisistratidæ, Aristagoras said to them "that the Milesians were colonists from Athens, and that it was just that the Athenians,

being so mighty, should deliver them from slavery. And because his need was great, there was nothing that he did not promise, till at the last he persuaded them. For it is easier, it seems, to deceive a multitude than to deceive one man. Cleomenes the Spartan, being but one man, Aristagoras could not deceive; but he brought over to his purpose the people of Athens, being thirty thousand. So the Athenians, being persuaded, made a decree to send twenty ships to help the men of Ionia, and appointed one Melanthius, a man of reputation among them, to be captain. These ships were the beginning of trouble both to the Greeks and the barbarians. . . . When the twenty ships of the Athenians were arrived, and with them five ships of the Eretrians, which came, not for any love of the Athenians, but because the Milesians had helped them in the old time against the men of Chalcis, Aristagoras sent an army against Sardis, but he himself abode in Miletus. This army, crossing Mount Tmolus, took the city of Sardis without any hindrance; but the citadel they took not, for Artaphernes held it with a great force of soldiers. But though they took the city they had not the plunder of it, and for this reason. The houses in Sardis were for the most part built of reeds, and such as were built of bricks had their roofs of reeds; and when a certain soldier set fire to one of these houses, the fire ran quickly from house to house till the whole city was consumed. And while the city was burning, such Lydians and Persians as were in it, seeing they were cut off from escape (for the fire was in all the outskirts of the city), gathered together in haste to the market-place. Through this market-place flows the river Pactolus, which comes down from Mount Tmolus, having gold in its sands, and when it has passed out of the city it flows into the Hermus, which flows into the sea. Here then the Lydians and Persians were gathered together, being constrained to defend themselves. And when the men of Ionia saw their enemies how many they were, and that these were preparing to give battle, they were stricken with fear, and fled out of the city to Mount Tmolus, and thence, when it was night, they went back to the sea. In this manner was burnt the city of Sardis, and in it the great temple of the goddess Cybele, the burning of which temple was the cause, as said the Persians, for which afterwards they burnt the temples in Greece. Not long after came a host of Persians from beyond the river Halys; and when they found that the men of Ionia had departed from Sardis, they followed hard upon their track, and came up with them at Ephesus. And when the battle was joined, the men of Ionia fled before them. Many indeed were slain, and such as escaped were scattered, every man to his own city. After this the ships of the Athenians departed, and would not help the men of Ionia any more, though Aristagoras besought them to stay. Nevertheless the Ionians ceased not from making preparations of war against the King, making to themselves allies, some by force and some by persuasion, as the cities of the Hellespont and many of the Carians and the island of Cyprus. For all Cyprus, save Amathus only, revolted from the King under Onesilus, brother of King Gorgus. When King Darius heard that Sardis had been taken and burned with fire by the Ionians and the Athenians, with Aristagoras for leader, at the first he

took no heed of the Ionians, as knowing that they would surely suffer for their deed, but he asked, 'Who are these Athenians?' And when they told him he took a bow and shot an arrow into the air, saying, 'O Zeus, grant that I may avenge myself on these Athenians.' And he commanded his servant that every day, when his dinner was served, he should say three times, 'Master, remember the Athenians.' . . . Meanwhile the Persians took not a few cities of the Ionians and Æolians. But while they were busy about these, the Carians revolted from the King; whereupon the captains of the Persians led their army into Caria, and the men of Caria came out to meet them; and they met them at a certain place which is called the White Pillars, near to the river Mæander. Then there were many counsels among the Carians, whereof the best was this, that they should cross the river and so contend with the Persians, having the river behind them, that so there being no escape for them if they fled, they might surpass themselves in courage. But this counsel did not prevail. Nevertheless, when the Persians had crossed the Mæander, the Carians fought against them, and the battle was exceeding long and fierce. But at the last the Carians were vanquished, being overborne by numbers, so that there fell of them ten thousand. And when they that escaped—for many had fled to Labranda, where there is a great temple of Zeus and a grove of plane trees—were doubting whether they should yield themselves to the King or depart altogether from Asia, there came to their help the men of Miletus with their allies. Thereupon the Carians, putting away their doubts altogether, fought with the Persians a second time, and were vanquished yet more grievously than before. But on this day the men of Miletus suffered the chief damage. And the Carians fought with the Persians yet again a third time; for, hearing that these were about to attack their cities one by one, they laid an ambush for them on the road to Pedasus. And the Persians, marching by night, fell into the ambush, and were utterly destroyed, they and their captains. After these things, Aristagoras, seeing the power of the Persians, and having no more any hope to prevail over them—and indeed, for all that he had brought about so much trouble, he was of a poor spirit—called together his friends and said to them, 'We must needs have some place of refuge, if we be driven out of Miletus. Shall we therefore go to Sardinia, or to Myrcinus on the river Strymon, which King Darius gave to Histieus?' To this Hecateus, the writer of chronicles, made answer, 'Let Aristagoras build a fort in Leros (this Leros is an island thirty miles distant from Miletus) and dwell there quietly, if he be driven from Miletus. And hereafter he can come from Leros and set himself up again in Miletus.' But Aristagoras went to Myrcinus, and not long afterwards was slain while he besieged a certain city of the Thracians."—Herodotus, *The Story of the Persian War* (version of A. J. Church, ch. 2).—See, also, PERSIA: B. C. 521-493; and ATHENS: B. C. 501-490.

B. C. 492-491.—Wrath of the Persian king against Athens.—Failure of his first expedition of invasion.—Submission of 'Medizing' Greek states.—Coercion of Ægina.—Enforced

union of Hellas.—Headship of Sparta recognized.—The assistance given by Athens to the Ionian revolt stirred the wrath of the Persian monarch very deeply, and when he had put down the rebellion he prepared to chastise the audacious and insolent Greeks. "A great fleet started from the Hellespont, with orders to sail round the peninsula of Mt. Athos to the Gulf of Therma, while Mardonius advanced by land. His march was so harassed by the Thracians that when he had effected the conquest of Macedonia his force was too weak for any further attempt. The fleet was overtaken by a storm off Mt. Athos, on whose rocks 300 ships were dashed to pieces, and 20,000 men perished. Mardonius returned in disgrace to Asia with the remnant of his fleet and army. This failure only added fury to the resolution of Darius. While preparing all the resources of his empire for a second expedition, he sent round heralds to the chief cities of Greece, to demand the tribute of earth and water as signs of his being their rightful lord. Most of them submitted: Athens and Sparta alone ventured on defiance. Both treated the demand as an outrage which annulled the sanctity of the herald's person. At Athens the envoy was plunged into the loathsome Barathrum, a pit into which the most odious public criminals were cast. At Sparta the herald was hurled into a well, and bidden to seek his earth and water there. The submission of Ægina, the chief maritime state of Greece, and the great enemy of Athens, entailed the most important results. The act was denounced by Athens as treason against Greece, and the design was imputed to Ægina of calling in the Persians to secure vengeance on her rival. The Athenians made a formal complaint to Sparta against the 'Medism' of the Æginetans; a charge which is henceforth often repeated both against individuals and states. The Spartans had recently concluded a successful war with Argos, the only power that could dispute her supremacy in Peloponnesus; and now this appeal from Athens, the second city of Greece, at once recognized and established Sparta as the leading Hellenic state. In that character, her king Cleomenes undertook to punish the Medizing party in Ægina 'for the common good of Greece'; but he was met by proofs of the intrigues of his colleague Demaratus in their favour. . . . Cleomenes obtained his deposition on a charge of illegitimacy, and a public insult from his successor Leotychides drove Demaratus from Sparta. Hotly pursued as a 'Medist,' he effected his escape to Darius, whose designs against Athens and Sparta were now stimulated by the councils of their exiled sovereigns, Hippias and Demaratus. Meanwhile, Cleomenes and his new colleague returned to Ægina, which no longer resisted, and having seized ten of her leading citizens, placed them as hostages in the hands of the Athenians. Ægina was thus effectually disabled from throwing the weight of her fleet into the scale of Persia: Athens and Sparta, suspending their political jealousies, were united when their disunion would have been fatal; their conjunction drew after them most of the lesser states: and so the Greeks stood forth for the first time as a nation prepared to act in unison, under the leadership of Sparta (B. C. 491). That city retained her proud position till it was forfeited by the misconduct of her statesmen."—P. Smith, *Hist. of the World: Ancient*, ch. 13 (v. 1).

B. C. 490.—The Persian Wars: Marathon.—The second and greater expedition launched by Darius against the Greeks sailed from the Cilician coast in the summer of the year 490 B. C. It was under the command of two generals,—a Mede, named Datis, and the king's nephew, Artaphernes. It made the passage safely, destroying Naxos on the way, but sparing the sacred island and temple of Delos. Its landing was on the shores of Eubœa, where the city of Eretria was easily taken, its inhabitants dragged into slavery, and the first act of Persian vengeance accomplished. The expedition then sailed to the coast of Attica and came to land on the plain of Marathon, which spreads along the bay of that name. "Marathon, situated near to a bay on the eastern coast of Attica, and in a direction E. N. E. from Athens, is divided by the high ridge of Mount Pentelikus from the city, with which it communicated by two roads, one to the north, another to the south of that mountain. Of these two roads, the northern, at once the shortest and the most difficult, is 22 miles in length. . . . [The plain] 'is in length about six miles, in breadth never less than about one mile and a half. Two marshes bound the extremities of the plain; the southern is not very large and is almost dry at the conclusion of the great heats; but the northern, which generally covers considerably more than a square mile, offers several parts which are at all seasons impassable. Both, however, leave a broad, firm sandy beach between them and the sea. The uninterrupted flatness of the plain is hardly relieved by a single tree; and an amphitheatre of rocky hills and rugged mountains separates it from the rest of Attica.'"—G. Grote, *Hist. of Greece*, pt. 2, ch. 36 (v. 4).—The Athenians waited for no nearer approach of the enemy to their city, but met them at their landing-place. They were few in number—only 10,000, with 1,000 more from the grateful city of Platea, which Athens had protected against Thebes. They had sent to Sparta for aid, but a superstition delayed the march of the Spartans and they came the day after the battle. Of all the nearer Greeks none came to the help of Athens in that hour of extreme need; and so much the greater to her was the glory of Marathon. The ten thousand Athenian hoplites and the one thousand brave Plateans confronted the great host of Persia, of the numbers in which there is no account. Ten generals had the right of command on successive days, but Miltiades was known to be the superior captain and his colleagues gave place to him. "On the morning of the seventeenth day of the month of Metagition (September 12th), when the supreme command according to the original order of succession fell to Miltiades, he ordered the army to draw itself up according to the ten tribes. . . . The troops had advanced with perfect steadiness across the trenches and palisadings of their camp, as they had doubtless already done on previous days. But as soon as they had approached the enemy within a distance of 5,000 feet they changed their march to a double-quick pace, which gradually rose to the rapidity of a charge, while at the same time they raised the war-cry with a loud voice. When the Persians saw these men rushing down from the heights, they

thought they beheld madmen: they quickly placed themselves in order of battle, but before they had time for an orderly discharge of arrows the Athenians were upon them, ready in their excitement to begin a closer contest, man against man in hand-to-hand fight, which is decided by personal courage and gymnastic agility, by the momentum of heavy-armed warriors, and by the use of lance and sword. Thus the well-managed and bold attack of the Athenians had succeeded in bringing into play the whole capability of victory which belonged to the Athenians. Yet the result was not generally successful. The enemy's centre stood firm. . . . But meanwhile both wings had thrown themselves upon the enemy; and after they had effected a victorious advance, the one on the way to Rhamnus, the other towards the coast, Miltiades . . . issued orders at the right moment for the wings to return from the pursuit, and to make a combined attack upon the Persian centre in its rear. Hereupon the rout speedily became general, and in their flight the troubles of the Persians increased; . . . they were driven into the morasses and there slain in numbers."—E. Curtius, *Hist. of Greece*, bk. 3, ch. 1 (v. 2).—The Athenian dead, when gathered for the solemn obsequies, numbered 193; the loss of the Persians was estimated by Herodotus at 6,400.—Herodotus, *Hist.*, bk. 6.

B. C. 481-479.—Congress at Corinth.—Hellenic union against Persia.—Headship of Sparta.—"When it was known in Greece that Xerxes was on his march into Europe, it became necessary to take measures for the defence of the country. At the instigation of the Athenians, the Spartans, as the acknowledged leaders of Hellas and head of the Peloponnesian confederacy, called on those cities which had resolved to uphold the independence of their country to send plenipotentiaries to a congress at the Isthmus of Corinth. When the envoys assembled, a kind of Hellenic alliance was formed under the presidency of Sparta, and its unity was confirmed by an oath, binding the members to visit with severe penalties those Greeks who, without compulsion, had given earth and water to the envoys of Xerxes. This alliance was the nearest approach to a Hellenic union ever seen in Greece; but though it comprised most of the inhabitants of the Peloponnesus, except Argos and Achæa, the Megarians, Athenians, and two cities of Bœotia, Thespie and Plataea, were the only patriots north of the Isthmus. Others, who would willingly have been on that side, such as the common people of Thessaly, the Phocians and Locrians, were compelled by the force of circumstances to 'medize.' From the time at which it met in the autumn or summer of 481 to the autumn of 480 B. C., the congress at the Isthmus directed the military affairs of Greece. It fixed the plan of operations. Spies were sent to Sardis to ascertain the extent of the forces of Xerxes; envoys visited Argos, Crete, Corcyra, and Syracuse, in the hope, which proved vain, of obtaining assistance in the impending struggle. As

soon as Xerxes was known to be in Europe, an army of 10,000 men was sent to hold the pass of Tempe, but afterwards, on the advice of Alexander of Macedon, this barrier was abandoned; and it was finally resolved to await the approaching forces at Thermopylae and Artemisium. The supreme authority, both by land and sea, was in the hands of the Spartans; they were the natural leaders of any army which the Greeks could put into the field, and the allies refused to follow unless the ships also were under their charge. . . . When hostilities were suspended, the congress re-appears, and the Greeks once more meet at the Isthmus to apportion the spoil and adjudge the prizes of valour. In the next year we hear of no common plan of operations, the fleet and army seeming to act independently of each other; yet we observe that the chiefs of the medizing Thebans were taken to the Isthmus (Corinth) to be tried, after the battle of Plataea. It appears then that, under the stress of the great Persian invasion, the Greeks were brought into an alliance or confederation; and for the two years from midsummer 481 to midsummer 479 a congress continued to meet, with more or less interruption, at the Isthmus, consisting of plenipotentiaries from the various cities. This congress directed the affairs of the nation, so far as they were in any way connected with the Persian invasion. When the Barbarians were finally defeated, and there was no longer any alarm from that source, the congress seems to have discontinued its meetings. But the alliance remained; the cities continued to act in common, at any rate, so far as naval operations were concerned, and Sparta was still the leading power."—E. Abbott, *Persians and the Golden Age of Athens*, ch. 3.

B. C. 480.—The Persian War: Thermopylae.—"Now when tidings of the battle that had been fought at Marathon [B. C. 490] reached the ears of King Darius, the son of Hystaspes, his anger against the Athenians," says Herodotus, "which had been already roused by their attack on Sardis, waxed still fiercer, and he became more than ever eager to lead an army against Greece. Instantly he sent off messengers to make proclamation through the several states that fresh levies were to be raised, and these at an increased rate; while ships, horses, provisions and transports were likewise to be furnished. So the men published his commands; and now all Asia was in commotion by the space of three years." But before his preparations were completed Darius died. His son Xerxes, who ascended the Persian throne, was cold to the Greek undertaking and required long persuasion before he took it up. When he did so, however, his preparations were on a scale more stupendous than those of his father, and consumed nearly five years. It was not until ten years after Marathon that Xerxes led from Sardis a host which Herodotus computes at 1,700,000 men, besides half a million more which manned the fleet he had assembled. "Was there a nation in all Asia," cries the Greek historian, "which Xerxes did not bring with him against Greece? Or was there a river, except those of unusual size, which sufficed for his troops to drink?" By a bridge of boats at Abydos the army crossed the Hellespont, and moved slowly through Thrace, Macedonia and Thessaly; while the fleet, moving on the

coast circuit of the same countries, avoided the perilous promontory of Mount Athos by cutting a canal. The Greeks had determined at first to make their stand against the invaders in Thesaly, at the vale of Tempe; but they found the post untenable and were persuaded, instead, to guard the narrower Pass of Thermopylæ. It was there that the Persians, arriving at Trachis, near the Malian gulf, found themselves faced by a small body of Greeks. The spot is thus described by Herodotus: "As for the entrance into Greece by Trachis, it is, at its narrowest point, about fifty feet wide. This, however, is not the place where the passage is most contracted; for it is still narrower a little above and a little below Thermopylæ. At Alpeni, which is lower down than that place, it is only wide enough for a single carriage; and up above, at the river Phenix, near the town called Anthela, it is the same. West of Thermopylæ rises a lofty and precipitous hill, impossible to climb, which runs up into the chain of Ceta; while to the east the road is shut in by the sea and by marshes. In this place are the warm springs, which the natives call 'The Cauldrons'; and above them stands an altar sacred to Hercules. A wall had once been carried across the opening; and in this there had of old times been a gateway. . . . King Xerxes pitched his camp in the region of Malis called Trachinia, while on their side the Greeks occupied the straits. These straits the Greeks in general call Thermopylæ (the Hot Gates); but the natives and those who dwell in the neighbourhood call them Pylæ (the Gates). . . . The Greeks who at this spot awaited the coming of Xerxes were the following:—From Sparta, 300 men-at-arms; from Arcadia, 1,000 Tegeans and Mantineans, 500 of each people; 120 Orchomenians, from the Arcadian Orchomenus; and 1,000 from other cities; from Corinth, 400 men; from Phlius, 200; and from Mycenæ 80. Such was the number from the Peloponnese. There were also present, from Boeotia, 700 Thespians and 400 Thebans. Besides these troops, the Locrians of Opus and the Phocians had obeyed the call of their countrymen, and sent, the former all the force they had, the latter 1,000 men. . . . The various nations had each captains of their own under whom they served; but the one to whom all especially looked up, and who had the command of the entire force, was the Lacedæmonian, Leonidas. . . . The force with Leonidas was sent forward by the Spartans in advance of their main body, that the sight of them might encourage the allies to fight, and hinder them from going over to the Medes, as it was likely they might have done had they seen Sparta backward. They intended presently, when they had celebrated the Carneian festival, which was what now kept them at home, to leave a garrison in Sparta, and hasten in full force to join the army. The rest of the allies also intended to act similarly; for it happened that the Olympic festival fell exactly at this same period. None of them looked to see the contest at Thermopylæ decided so speedily." For two days Leonidas and his little army held the pass against the Persians. Then, there was found a traitor, a man of Malis, who betrayed to Xerxes the secret of a pathway across the mountains, by which he might steal into the rear of the post held by the Greeks. A thousand Phocians had been stationed on the mountain to guard this path; but

they took fright when the Persians came upon them in the early dawn, and fled without a blow. When Leonidas learned that the way across the mountain was open to the enemy he knew that his defense was hopeless, and he ordered his allies to retreat while there was yet time. But he and his Spartans remained, thinking it "unseemly" to quit the post they had been specially sent to guard. The Thespians remained with them, and the Thebans—known partisans at heart of the Persians—were forced to stay. The latter deserted when the enemy approached; the Spartans and the Thespians fought and perished to the last man.—Herodotus, *History* (trans. by Rawlinson), bk. 7.

ALSO IN: E. Curtius, *Hist. of Greece*, bk. 3, ch. 1.—G. Grote, *Hist. of Greece*, pt. 2, ch. 40 (v. 4).—See, also, ATHENS: B. C. 480–479.

B. C. 480.—The Persian Wars: Artemisium.—On the approach of the great invading army and fleet of Xerxes, the Greeks resolved to meet the one at the pass of Thermopylæ and the other at the northern entrance of the Eubœan channel. "The northern side of Eubœa afforded a commodious and advantageous station: it was a long beach, called, from a temple at its eastern extremity, Artemisium, capable of receiving the galleys, if it should be necessary to draw them upon the shore, and commanding a view of the open sea and the coast of Magnesia, and consequently an opportunity of watching the enemy's movements as he advanced towards the south; while, on the other hand, its short distance from Thermopylæ enabled the fleet to keep up a quick and easy communication with the land force."—C. Thirlwall, *Hist. of Greece*, ch. 15 (v. 1).—The Persian fleet, after suffering heavily from a destructive storm on the Magnesian coast, reached Apheta, opposite Artemisium, at the mouth of the Pagasan gulf. Notwithstanding its losses, it still vastly outnumbered the armament of the Greeks, and feared nothing but the escape of the latter. But, in the series of conflicts which ensued, the Greeks were generally victorious and proved their superior naval genius. They could not, however, afford the heavy losses which they sustained, and, upon hearing of the disaster at Thermopylæ and the Persian possession of the all-important pass, they deemed it necessary to retreat.—W. Mitford, *Hist. of Greece*, ch. 8, sect. 4 (v. 2).

B. C. 480.—The Persian Wars: Salamis.—Leonidas and his Spartan band having perished vainly at Thermopylæ, in their heroic attempt to hold the pass against the host of Xerxes, and the Greek ships at Artemisium having vainly beaten their overwhelming enemies, the whole of Greece north of the isthmus of Corinth lay completely at the mercy of the invader. The Thebans and other false-hearted Greeks joined his ranks, and saved their own cities by helping to destroy their neighbors. The Plateans, the Thespians and the Athenians abandoned their homes in haste, conducted their families, and such property as they might snatch away, to the nearer islands and to places of refuge in Peloponnesus. The Greeks of Peloponnesus rallied in force to the isthmus and began there the building of a defensive wall. Their fleet, retiring from Artemisium, was drawn together, with some reinforcements, behind the island of Salamis, which stretches across the entrance to the bay of Elenis, off the inner coast of Attica, near Athens.

Meantime the Persians had advanced through Attica, entered the deserted city of Athens, taken the Acropolis, which a small body of desperate patriots resolved to hold, had slain its defenders and burned its temples. Their fleet had also been assembled in the bay of Phalerum, which was the more easterly of the three harbors of Athens. At Salamis the Greeks were in dispute. The Corinthians and the Peloponnesians were bent upon falling back with the fleet to the isthmus; the Athenians, the Eginetans and the Megarians looked upon all as lost if the present combination of the whole naval power of Hellas in the narrow strait of Salamis was permitted to be broken up. At length Themistocles, the Athenian leader, a man of fertile brain and overbearing resolution, determined the question by sending a secret message to Xerxes that the Greek ships had prepared to escape from him. This brought down the Persian fleet upon them at once and left them no chance for retreat. Of the memorable fight which ensued (Sept. 20 B. C. 480) the following is a part of the description given by Herodotus: "Against the Athenians, who held the western extremity of the line towards Eleusis, were placed the Phœnicians; against the Lacedæmonians, whose station was eastward towards the Pireus, the Ionians. Of these last, a few only followed the advice of Themistocles, to fight backwardly; the greater number did far otherwise. . . . Far the greater number of the Persian ships engaged in this battle were disabled, either by the Athenians or by the Eginetans. For as the Greeks fought in order and kept their line, while the barbarians were in confusion and had no plan in anything that they did, the issue of the battle could scarce be other than it was. Yet the Persians fought far more bravely here than at Eubœa, and indeed surpassed themselves; each did his utmost through fear of Xerxes, for each thought that the king's eye was upon himself. . . . During the whole time of the battle Xerxes sat at the base of the hill called Egaleos, over against Salamis; and whenever he saw any of his own captains perform any worthy exploit he inquired concerning him; and the man's name was taken down by his scribes, together with the names of his father and his city. . . . When the rout of the barbarians began, and they sought to make their escape to Phalerum, the Eginetans, awaiting them in the channel, performed exploits worthy to be recorded. Through the whole of the confused struggle the Athenians employed themselves in destroying such ships as either made resistance or fled to shore; while the Eginetans dealt with those which endeavoured to escape down the straits; so that the Persian vessels were no sooner clear of the Athenians than straightway they fell into the hands of the Eginetan squadron. . . . Such of the barbarian vessels as escaped from the battle fled to Phalerum, and there sheltered themselves under the protection of the land army. . . . Xerxes, when he saw the extent of his loss, began to be afraid lest the Greeks might be counselled by the Ionians, or without their advice might determine, to sail straight to the Hellespont and break down the bridges there; in which case he would be blocked up in Europe and run great risk of perishing. He therefore made up his mind to fly."—Herodotus, *History* (ed. and tr. by Rawlinson), bk. 8, sect. 85-97 (v. 4).

B. C. 479.—The Persian Wars: Plataea.

When Xerxes, after the defeat of his fleet at Salamis, fled back to Asia with part of his disordered host, he left his lieutenant, Mardonius, with a still formidable army, to repair the disaster and accomplish, if possible, the conquest of the Greeks. Mardonius retired to Thessaly for the winter, but returned to Attica in the spring and drove the Athenians once more from their shattered city, which they were endeavoring to repair. He made overtures to them which they rejected with scorn, and thereupon he destroyed everything in city and country which could be destroyed, reducing Athens to ruins and Attica to a desert. The Spartans and other Peloponnesians who had promised support to the Athenians were slow in coming, but they came in strong force at last. Mardonius fell back into Boeotia, where he took up a favorable position in a plain on the left bank of the Asopus, near Plataea. This was in September, B. C. 479. According to Herodotus, he had 300,000 "barbarian" troops and 50,000 Greek allies. The opposing Greeks, who followed him to the Asopus, were 110,000 in number. The two armies watched one another for more than ten days, unwilling to offer battle because the omens were on both sides discouraging. At length the Greeks undertook a change of position and Mardonius, mistaking this for a movement of retreat, led his Persians on a run to attack them. It was a fatal mistake. The Spartans, who bore the brunt of the Persian assault, soon convinced the deluded Mardonius that they were not in flight, while the Athenians dealt roughly with his Theban allies. "The barbarians," says Herodotus, "many times seized hold of the Greek spears and brake them; for in boldness and warlike spirit the Persians were not a whit inferior to the Greeks; but they were without bucklers, untrained, and far below the enemy in respect of skill in arms. Sometimes singly, sometimes in bodies of ten, now fewer and now more in number, they dashed forward upon the Spartan ranks, and so perished. . . . After Mardonius fell, and the troops with him, which were the main strength of the army, perished, the remainder yielded to the Lacedæmonians and took to flight. Their light clothing and want of bucklers were of the greatest hurt to them: for they had to contend against men heavily armed, while they themselves were without any such defence." Artabazus, who was second in command of the Persians, and who had 40,000 immediately under him, did not strike a blow in the battle, but quitted the field as soon as he saw the turn events had taken, and led his men in a retreat which had no pause until they reached and crossed the Hellespont. Of the remainder of the 300,000 of Mardonius' host, only 3,000, according to Herodotus, outlived the battle. It was the end of the Persian invasions of Greece.—Herodotus, *History* (tr. by Rawlinson), bk. 9.—G. Grote, *Hist. of Greece*, pt. 2, ch. 42 (v. 5).—C. Thirlwall, *Hist. of Greece*, ch. 16 (v. 1).—G. W. Cox, *Hist. of Greece*, bk. 2, ch. 7 (v. 1).—In celebration of the victory an altar to Zeus was erected and consecrated by the united Greeks with solemn ceremonies, a quintennial festival, called the Feast of Liberty, was instituted at

Platea, and the territory of the Plateans was declared sacred and inviolable, so long as they should maintain the appointed sacrifices and funeral honors to the dead. But these agreements did not avail to protect the Plateans when the subsequent Peloponnesian War broke out, and they stood faithfully among the allies of Athens. "The last act of the assembled army was the expedition against Thebes, in order, according to the obligation incumbent upon them, to take revenge on the most obstinate ally of the national enemy. Eleven days after the battle Pausanias appeared before the city and demanded the surrender of the party-leaders, responsible for the policy of Thebes. Not until the siege had lasted twenty days was the surrender obtained. . . . Timagenidas and the other leaders of the Thebans were executed as traitors against the nation, by order of Pausanias, after he had dismissed the confederate army."—E. Curtius, *Hist. of Greece*, bk. 3, ch. 1 (v. 2).

B. C. 479.—The Persian Wars: Mycale.—The same day, in September, B. C. 479, on which the Greeks at Platea destroyed the army of Mardonius, witnessed an almost equal victory won by their compatriots of the fleet, on the coast of Asia Minor. The Persian fleet, to avoid a battle with them, had retreated to Mycale on the narrow strait between the island of Samos and the mainland, where a land-army of 60,000 men was stationed at the time. Here they drew their ships on shore and surrounded them with a rampart. The Greeks, under Leotychides the Lacedæmonian, landed and attacked the whole combined force. The Ionians in the Persian army turned against their masters and helped to destroy them. The rout was complete and only a small remnant escaped to reach Sardis, where Xerxes was still lingering.—Herodotus, *History* (tr. by Ravulinson), bk. 9.

B. C. 478-477.—Reduction of Byzantium.—Mad conduct of Pausanias.—His recall.—Alienation of the Asiatic Greeks from Sparta.—Their closer union with Athens.—Withdrawal of the Spartans from the war.—Formation of the Delian Confederacy.—"Sestos had fallen: but Byzantium and the Thrakian Doriskos, with Eion on the Strymon and many other places on the northern shores of the Egean, were still held by Persian garrisons, when, in the year after the battle of Plataiai, Pausanias, as commander of the confederate fleet, sailed with 20 Peloponnesian and 30 Athenian ships to Kypros (Cyprus) and thence, having recovered the greater part of the island, to Byzantium. The resistance here was as obstinate perhaps as at Sestos; but the place was at length reduced, and Sparta stood for the moment at the head of a triumphant confederacy. It was now in her power to weld the isolated units, which made up the Hellenic world, into something like an organised society, and to kindle in it something like national life. . . . But she had no statesman capable, like Themistokles, of seizing on a golden opportunity, while in her own generals she found her greatest enemies." Pausanias "was, it would seem,

dazzled by Persian wealth and enamoured of Persian pleasures. He had roused the indignation of his own people by having his name inscribed, as leader of all the Greek forces, on the tripod which was to commemorate the victory of Plataiai: and now his arrogance and tyranny were to excite at Byzantium a discontent and impatience destined to be followed by more serious consequences to his country as well as to himself. On the fall of Byzantium he sent to the Persian king the prisoners taken in the city, and spread the report that they had escaped. He forwarded at the same time, it is said, . . . a letter in which he informed Xerxes that he wished to marry his daughter and to make him lord of all Hellas." Xerxes opened negotiations with him, and "the head of this miserable man was now fairly turned. Clad in Persian garb, he aped the privacy of Asiatic despots; and when he came forth from his palace it was to make a royal progress through Thrace, surrounded by Median and Egyptian life guards, and to show his insolence to men who were at least his equals. The reports of this significant change in the behaviour of Pausanias led to his recall. He was put on his trial; but his accusers failed to establish the personal charges brought against him, while his Medism also was dismissed as not fully proved. The suspicion, however, was so strong that he was deprived of his command. . . . All these events were tending to alienate the Asiatic Greeks and the islanders of the Egean from a state which showed itself incapable of maintaining its authority over its own servants." Even before the recall of Pausanias, "the Asiatic Greeks intreated Aristides the Athenian commander to admit them into direct relations with Athens; and the same change of feeling had passed over all the non-medising Greek states with the exception of the Peloponnesian allies of Sparta. In short, it had become clear that all Hellas was divided into two great sections, the one gravitating as naturally to Sparta, the great land power, as the other gravitated to Athens with her maritime preponderance. When therefore a Spartan commission headed by Dorkis arrived with a small force to take the place of Pausanias, they were met by passive resistance where they had looked for submission; and their retirement from the field in which they were unable to compel obedience left the confederacy an accomplished fact."—G. W. Cox, *Hist. of Greece*, bk. 2, ch. 8 (v. 2).—This confederacy of the Asiatic Greeks with Athens, now definitely organized, is known as the Confederacy of Delos, or the Delian League. "To Athens, as decidedly the preponderant power, both morally and materially, was of necessity, and also with free good-will, consigned the headship and chief control of the affairs and conduct of the alliance; a position that carried with it the responsibility of the collection and administration of a common fund, and the presidency of the assemblies of delegates. As time went on and circumstances altered, the terms of confederation were modified in various instances; but at first the general rule was the contribution, not only of money or ships, but of actual personal service. . . . We have no precise enumeration of the allies of Athens at this early time, but the course of the history brings up the mention of many. . . . Crete was never directly affected by these events, and Cyprus was also soon to be left aside; but otherwise all the Greek

islands of the Aegean northwards—except Melos, Thera, Aegina, and Cythera—were contributory, including Euboea; as were the cities on the coasts of Thrace and the Chalcidic peninsula from the Macedonian boundary to the Hellespont; Byzantium and various cities on the coasts of the Propontis, and less certainly of the Euxine; the important series of cities on the western coast of Asia Minor—though apparently with considerable exceptions—Aeolian, Ionian, Dorian, and Carian, as far as Caunus at least on the borders of Lycia, if not even round to the Chelidonian isles. The sacred island of Delos was chosen as the depository of the common treasure and the place of meeting of the contributors. Apart from its central convenience and defensibility as an island, and the sanctity of the temple, . . . it was a traditional centre for solemn reunions of Ionians from either side the Aegean. . . . At the distinct request of the allies the Athenians appointed Aristides to superintend the difficult process of assessing the various forms and amounts of contribution. . . . The total annual amount of the assessment was the large sum of 460 talents (£112,125), and this perhaps not inclusive of, but only supplementary to, the costly supply of equipped ships.”—W. W. Lloyd, *The Age of Pericles*, ch. 14 (v. 1).

B. C. 477-461.—Athens as the head of the Delian League.—Triumph of Anti-Spartan policy at Athens and approach of war.—Ostracism of Cimon.—“Between the end of the Persian war and the year 464 B. C., Sparta had sunk from the champion of the whole of Hellas to the half-discredited leader of the Peloponnese only. Athens, on the contrary, had risen from a subordinate member of the league controlled by Sparta to be the leader and almost the mistress of a league more dangerous than that over which Sparta held sway. Sparta unquestionably entertained towards Athens the jealous hatred of a defeated rival. By what steps Athens was increasing her control over the Delian League, and changing her position from that of a president to that of an absolute ruler [see ATHENS: B. C. 466-454], will be explained. . . . She was at the same time prosecuting the war against Persia with conspicuous success. Her leader in this task was Cimon. In the domain of practice Athens produced no nobler son than this man. He was the son of Miltiades, the victor of Marathon, and by heredity and inclination took his stand with the conservative party in Athens [see ATHENS: B. C. 477-462, to 460-449]. He succeeded here to the leading position of Aristides, and he possessed all that statesman's purity of character. . . . It was as a naval commander, and as a supporter of a forward policy against Persia, that Cimon won his greatest renown. But he had also a keen interest in the domestic development of Athens and her attitude to the other states of Greece. To maintain friendship with Sparta was the root of all his policy. His perfect honesty in supporting this policy was never questioned, and Sparta recognised his good will to them by appointing him Proxenus in

Athens. It was his duty in this capacity to protect any Spartan resident in or visiting Athens. His character and personality were eminently attractive. . . . Under his guidance the Athenian fleet struck Persia blow on blow. . . . In 466, near the mouth of the Eurymedon in Pamphylia [see ATHENS: B. C. 470-466], the Persian fleet was destroyed, and after a fierce struggle her land forces also were defeated with very great slaughter. It was long before Persian influence counted for anything again on the waters of the Mediterranean. Cimon, with the personal qualities of Aristides, had obtained the successes of Themistocles. Opposition to Cimon was not wanting. The Athenian democracy had entered on a path that seemed blocked by his personal supremacy. And now the party of advancing democracy possessed a leader, the ablest and greatest that it was ever to possess. Pericles was about thirty years of age. . . . He was related to great families through both father and mother, and to great families that had championed the democratic side. His father Zanthippus had prosecuted Miltiades, the father of Cimon. . . . To lead the party of advanced democracy was to attack Cimon, against whom he had hereditary hostility. . . . When in 465 Thasos rebelled from Athens, defeat was certain unless she found allies. She applied to Sparta for assistance. Athens and Sparta were still nominally allies, for the creation of the Delian League had not openly destroyed the alliance that had subsisted between them since the days of the Persian war. But the Thasians hoped that Sparta's jealousy of Athens might induce her to disregard the alliance. And they reckoned rightly. The Spartan fleet was so weak that no interference upon the sea could be thought of, but if Attica were attacked by land the Athenians would be forced to draw off some part of their armament from Thasos. Sparta gave a secret promise that this attack should be made. But before they could fulfil their promise their own city was overwhelmed by a terrible earthquake. . . . Only five houses were left standing, and twenty thousand of the inhabitants lost their lives. King Archidamus saved the state from even more appalling ruin. While the inhabitants were dazed with the catastrophe, he ordered the alarm-trumpet to be blown; the military instincts of the Spartans answered to the call, and all that were left assembled outside of the city safe from the falling ruins. Archidamus's presence of mind saved them from even greater danger than that of earthquake. The disaster seemed to the masses of Helots that surrounded Sparta clear evidence of the wrath of the god Poseidon. . . . The Helots seized arms, therefore, and from all sides rushed upon Sparta. Thanks to Archidamus's action, they found the Spartans collected and ready for battle. They fell back upon Mesenia, and concentrated their strength round Mount Ithome, the natural Acropolis of that district. . . . All the efforts of their opponents, never very successful in sieges, failed to dislodge them. At last, in 464, Sparta had to appeal to her allies for help against her own slaves; and, as Athens was her ally, she appealed to Athens. Should the help be granted? . . . Cimon advocated the granting of Sparta's demand with all his strength. . . . But there was much to be said on the other side, and it was said by Ephialtes and Pericles. The whole of Pericles's foreign

policy is founded on the assumption that union between Athens and Sparta was undesirable and impossible. In everything they stood at opposite poles of thought. . . . Cimon gained the vote of the people. He went at once with a force of four thousand heavy-armed soldiers to Ithome. Athenian soldiers enjoyed a great reputation for their ability in the conduct of sieges; but, despite their arrival, the Helots in Ithome still held out. And soon the Spartans grew suspicious of the Athenian contingent. The failure of Sparta was so clearly to the interest of Athens that the Spartans could not believe that the Athenians were in earnest in trying to prevent it; and at last Cimon was told that Sparta no longer had need of the Athenian force. The insult was all the more evident because none of the other allies were dismissed. Cimon at once returned to Athens [see MESSENIAN WAR, THE THIRD]. . . . On his return he still opposed those complete democratic changes that Pericles and Ephialtes were at this time introducing into the state. A vote of ostracism was demanded. The requisite number of votes fell to Cimon, and he had to retire into exile (461). . . . His ostracism doubtless allowed the democratic changes, in any case inevitable, to be accomplished without much opposition or obstruction, but it also deprived Athens of her best soldier at a time when she needed all her military talent. For Athens could not forget Sparta's insult. In 461 she renounced the alliance with her that had existed since the Persian wars; and that this rupture did not mean neutrality was made clear when, immediately afterwards, Athens contracted an alliance with Argos, always the enemy and now the dangerous enemy of Sparta, and with the Thessalians, who also had grounds of hostility to Sparta. Under such circumstances war could not be long in coming."—A. J. Grant, *Greece in the Age of Pericles*, ch. 5.

B. C. 458-456.—Alliance of Corinth and Ægina against Athens and Megara.—Athenian victories.—Siege and conquest of Ægina.—The Spartans in Bœotia.—Defeat of Athens at Tanagra.—Her success at Cœnophyta.—Humiliation of Thebes.—Athenian ascendancy restored.—Crippled by the great earthquake of 464 B. C., and harassed by the succeeding Messenian War, "nothing could be done, on the part of Sparta, to oppose the establishment and extension of the separate alliance between Athens and Argos; and accordingly the states of Northern Peloponnesus commenced their armaments against Athens on their own account, in order to obtain by force what formerly they had achieved by secret intrigues and by pushing forward Sparta. To stop the progress of the Attic power was a necessary condition of their own existence; and thus a new warlike group of states formed itself among the members of the disrupted confederation. The Corinthians entered into a secret alliance with Ægina and Epidaurus, and

endeavored to extend their territory and obtain strong positions beyond the Isthmus at the expense of Megara. This they considered of special importance to them, inasmuch as they knew the Megareans, whose small country lay in the midst between the two hostile alliances, to be allies little deserving of trust. . . . The fears of the Corinthians were realized sooner than they had anticipated. The Megareans, under the pressure of events, renounced their treaty obligations to Sparta, and joined the Attico-Argive alliance. . . . The passes of the Geraeæ, the inlets and outlets of the Doric peninsula, now fell into the hands of the Athenians; Megara became an outwork of Athens; Attic troops occupied its towns; Attic ships cruised in the Gulf of Corinth, where harbors stood open to them at Pegæ and Ægosthena. The Athenians were eager to unite Megara as closely as possible to themselves, and for this reason immediately built two lines of walls, which connected Megara with its port Nisæa, eight stadia off, and rendered both places impregnable to the Peloponnesians. This extension of the hostile power to the boundaries of the Isthmus, and into the waters of the western gulf, seemed to the maritime cities of Peloponnesus to force them into action. Corinth, Epidaurus, and Ægina commenced an offensive war against Athens—a war which opened without having been formally declared; and Athens unhesitatingly accepted the challenge thrown out with sufficient distinctness in the armaments of her adversaries. Myronides, an experienced general and statesman, . . . landed with an Attic squadron near Haliæis (where the frontiers of the Epidaurians and Argives met), and here found a united force of Corinthians, Epidaurians, and Æginetans awaiting him. Myronides was unsuccessful in his campaign. A few months later the hostile fleets met off the island of Cœryphalæa, between Ægina and the coast of Epidaurus. The Athenians were victorious, and the struggle now closed round Ægina itself. Immediately opposite the island ensued a second great naval battle. Seventy of the enemy's ships fell into the hands of the Athenians, whose victorious fleet without delay surrounded Ægina. The Peloponnesians were fully aware of the importance of Ægina to them. Three hundred hoplites came to the relief of the island, and the Corinthians marched across the Geranea into Megaris to the relief of Ægina. It seemed impossible that, while the fleet of the Athenians was fighting in the land of the Nile, and another was lying before Ægina, they should have a third army in readiness for Megara. But the Peloponnesians had no conception of the capabilities of action belonging to the Athenians. True, the whole military levy was absent from the country, and only enough men were left at home for the mere defence of the walls. Yet all were notwithstanding agreed that neither should Ægina be given up nor the new allies be left in the lurch. Myronides advanced to meet the Corinthians with troops composed of those who had passed the age of military service or not yet reached it. In the first fight he held his ground: when the hostile forces returned for the second time, they were routed with tremendous loss. Megara was saved, and the energy of the Athenians had been most splendidly established. In attestation of it the sepulchral pillars were erected in the Ceramicus, on which were inscribed

the names of the Athenian soldiers who had fallen in one and the same year (Ol. lxxx 3; B. C. 458-7) off Cyprus, in Egypt, Phœnicia, Halieis, Egina, and Megara. A fragment of this remarkable historical document is preserved to this day. While thus many years' accumulation of combustible materials had suddenly broken out into a flame of the fiercest war in Central Greece, new complications also arose in the north. The Thebans, who had suffered so deep a humiliation, believed the time to have arrived when the events of the past were forgotten, and when they could attain to new importance and power. In opposition to them the Phocians put forth their strength. . . . After the dissolution of the Hellenic Confederation, and the calamities which had befallen the Spartans, the Phocians thought they might venture an attack upon the Dorian tetrapolis, in order to extend their frontiers in this direction. . . . For Sparta it was a point of honor not to desert the primitive communities of the Dorian race. She roused herself to a vigorous effort, and, notwithstanding all her losses and the continuance of the war in Messenia, was able to send 11,500 men of her own troops and those of the confederates across the Isthmus before the Athenians had time to place any obstacles in their way [B. C. 457]. The Phocians were forced to relinquish their conquests. But when the Spartan troops were about to return home across the Isthmus they found the mountain-passes occupied by Athens, and the Gulf of Corinth made equally insecure by the presence of hostile ships. Nothing remained for the Lacedæmonians but to march into Bœotia, where their presence was welcome to Thebes. They entered the valley of the Asopus, and encamped in the territory of Tanagra, not far from the frontiers of Attica. Without calculating the consequences, the Athenians had brought themselves into an extremely dangerous situation. . . . Their difficulties increased when, contemporaneously, evil signs of treasonable plots made their appearance in the interior of the city [see ATHENS: B. C. 460-449]. . . . Thus, then, it was now necessary to contend simultaneously against foes within and foes without, to defend the constitution as well as the independence of the state. Nor was the question merely as to an isolated attack and a transitory danger; for the conduct of the Spartans in Bœotia clearly showed that it was now their intention to restore to power Thebes . . . because they were anxious to have in the rear of Athens a state able to stop the extension of the Attic power in Central Greece. This intention could be best fulfilled by supporting Thebes in the subjugation of the other Bœotian cities. For this purpose the Peloponnesians had busily strengthened the Theban, i. e. the oligarchical party, in the whole of the country, and encircled Thebes itself with new fortifications. Thebes was from a country town to become a great city, an independent fortified position, and a base for the Peloponnesian cause in Central Greece. Hence Athens could not have found herself threatened by a more dangerous complication. The whole civic army accordingly took the field, amounting, together with the Argives, and other allies, to 14,000 men, besides a body of Thessalian cavalry. In the low ground by the Asopus below Tanagra the armies met. An arduous and sanguinary struggle ensued, in which for the first time

Athens and Sparta mutually tested their powers in a regular battle. For a long time the result was doubtful; till in the very thick of the battle the cavalry went over to the enemy, probably at the instigation of the Laconian party. This act of treason decided the day in favor of Sparta, although patriotic Athenians would never consent to count this among the battles lost by Athens. The Spartans were far from fulfilling the expectations of the party of the Oligarchs. As soon as they knew that the passes of the Isthmus were once more open, they took their departure, towards the fall of the year, through Megara, making this little country suffer for its defection by the devastation of its territory. . . . They reckoned upon Thebes being for the present strong enough to maintain herself against her neighbors; for ulterior offensive operations against Athens, Tanagra was to serve as a base. The plan was good, and the conjuncture of affairs favorable. But whatever the Spartans did, they did only by halves: they concluded a truce for four months, and quitted the ground. The Athenians, on the other hand, had no intention of allowing a menacing power to establish itself on the frontiers of their country. Without waiting for the return of the fair season, they crossed Mount Parnes two months after the battle, before any thoughts of war were entertained in Bœotia; Myronides, who was in command, defeated the Theban army which was to defend the valley of the Asopus, near Enophyta. This battle with one blow put an end to all the plans of Thebes; the walls of Tanagra were razed. Myronides continued his march from town to town; everywhere the existing governments were overthrown, and democratic constitutions established with the help of Attic partisans. . . . Thus, after a passing humiliation, Athens was soon more powerful than ever, and her sway extended as far as the frontiers of the Phocians. Nay, during the same campaign she extended her military dominion as far as Locris. . . . Meanwhile the Æginetans also were gradually losing their power of resistance. For nine months they had resisted the Attic squadron. . . . Now their strength was exhausted; and the proud island of the Æacidae, which Pindar had sung as the mother of the men who in the glorious rivalry of the festive games shone out before all other Hellenes, had to bow down before the irresistible good fortune of the Athenians, and was forced to pull down her walls, to deliver up her vessels of war, and bind herself to the payment of tribute. Contemporaneously with this event, the two arms of walls [at ATHENS] . . . between the upper and lower town were completed. Athens was now placed beyond the fear of any attack. . . . The Peloponnesian confederation was shaken to its very foundations; and Sparta was still let and hindered by the Messenian revolt, while the Athenians were able freely to dispose of their military and naval forces."—E. Curtius, *Hist. of Greece*, bk. 3, ch. 2 (v. 2).

ALSO IN: G. W. Cox, *Hist. of Greece*, bk. 2, ch. 9 (v. 2).—Thucydides, *Peloponnesian War* (tr. by Jowett), bk. 1, sect. 107-108.

B. C. 449-445.—Quarrel of Delphians and Phocians.—Interference of Sparta and Athens.—Bœotian revolution.—Defeat of Athenians at Coroneia.—Revolt of Eubœa and Megara.—The Thirty Years Truce.—In 449 B. C. "on

occasion of a dispute between the Delphians and the Phocians as to which should have the care of the temple and its treasures, the Lacedæmonians sent an army, and gave them to the former; but as soon as they were gone, Pericles led thither an Athenian army, and put the Phocians in possession. Of this the Lacedæmonians took no notice. The right of Promantia, or first consulting the oracle, which had been given to Sparta by the Delphians, was now assigned to Athens by the Phocians; and this honor was probably the cause of the interference of both states. As the Athenians had given the upper hand to the democratic party in Bœotia, there was of course a large number of the opposite party in exile. These had made themselves masters of Orchomenus, Cheroneia, and some other places, and if not checked in time, might greatly endanger the Athenian influence. Tolmidas, therefore, led an army and took and garrisoned Cheroneia; but, as he was returning, he was attacked at Coroneia by the exiles from Orchomenus, joined by those of Eubœa and their other friends. Tolmidas fell, and his troops were all slain or made prisoners. (Ol. 83, 2.) [B. C. 447.] The Athenians, fearing a general war, agreed to a treaty, by which, on their prisoners being restored, they evacuated Bœotia. The exiles returned to their several towns, and things were placed on their old footing. . . . Eubœa was now (Ol. 83, 3) [B. C. 446] in revolt; and while Pericles was at the head of an army reducing it, the party in Megara adverse to Athens rose and massacred all the Athenian garrisons except that of Nisæa. Corinthians, Sicyonians, and Epidaurians came to their aid; and the Peloponnesians, led by one of the Spartan kings, entered and wasted the plain of Eleusis. Pericles led back his army from Eubœa, but the enemy was gone; he then returned and reduced that island, and having expelled the people of Hestîa, gave their lands to Athenian colonists; and the Athenians, being unwilling to risk the chance of war with the Dorian confederacy, gladly formed (Ol. 83, 4) [B. C. 445] a truce for thirty years, surrendering Nisæa and Pegæ, and withdrawing a garrison which they had in Trœzen, and ceasing to interfere in Achaia."—T. Keightley, *Hist. of Greece*, pt. 2, ch. 1.—"The Athenians saw themselves compelled to give up their possessions in Peloponnesus, especially Achaia, as well as Trœzene and Pagæ, an important position for their communication with the peninsula. Even Nisæa was abandoned. Yet these losses, sensibly as they affected their influence upon the Grecian continent, were counterbalanced by a concession still more significant, the acknowledgment of the Delian League. It was left open to states and cities which were members of neither confederacy to join either at pleasure. These events happened in Ol. 83, 3 (B. C. 445)—the revolt of Megara and Eubœa, the invasion of Pleistoanax, the re-conquest of Eubœa, and the conclusion of the treaty, which assumed the form of an armistice for thirty years. Great importance must be attributed to this settlement, as involving an acknowledgment which satisfied both parties and did justice to the great interests at stake on either side. If Athens renounced some of her possessions, the sacrifice was compensated by the fact that Sparta recognized the existence of the naval supremacy of Athens, and the basis on which it rested. We may perhaps assume that

the compromise between Pericles and Pleistoanax was the result of the conviction felt by both these leading men that a fundamental dissociation of the Peloponnesian from the Delian league was a matter of necessity. The Spartans wished to be absolutely supreme in the one, and resigned the other to the Athenians."—L. von Ranke, *Universal Hist.: The Oldest Hist. Group of Nations and the Greeks*, ch. 7, sect. 2.

B. C. 435-432.—Causes of the Peloponnesian War.—"In B. C. 431 the war broke out between Athens and the Peloponnesian League, which, after twenty-seven years, ended in the ruin of the Athenian empire. It began through a quarrel between Corinth and Kerkyra [or Korkyra, or Corcyra], in which Athens assisted Kerkyra. A congress was held at Sparta; Corinth and other States complained of the conduct of Athens, and war was decided on. The real cause of the war was that Sparta and its allies were jealous of the great power that Athens had gained. A far greater number of Greek States were engaged in this war than had ever been engaged in a single undertaking before. States that had taken no part in the Persian war were now fighting on one side or the other. Sparta was an oligarchy, and the friend of the nobles everywhere; Athens was a democracy, and the friend of the common people; so that the war was to some extent a struggle between these classes all over Greece."—C. A. Fyffe, *Hist. of Greece (History Primer)*, ch. 5.—"The Peloponnesian War was a protracted struggle, and attended by calamities such as Hellas had never known within a like period of time. Never were so many cities captured and depopulated—some by Barbarians, others by Hellenes themselves fighting against one another; and several of them after their capture were repopled by strangers. Never were exile and slaughter more frequent, whether in the war or brought about by civil strife. . . . There were earthquakes unparalleled in their extent and fury, and eclipses of the sun more numerous than are recorded to have happened in any former age; there were also in some places great droughts causing famines, and lastly the plague which did immense harm and destroyed numbers of the people. All these calamities fell upon Hellas simultaneously with the war, which began when the Athenians and Peloponnesians violated the thirty years' truce concluded by them after the recapture of Eubœa. Why they broke it and what were the grounds of quarrel I will first set forth, that in time to come no man may be at a loss to know what was the origin of this great war. The real though unavowed cause I believe to have been the growth of the Athenian power, which terrified the Lacedæmonians and forced them into war."—Thucydides, *History* (tr. by Jowett), bk. 1, sect. 23.—The quarrel between Corinth and Kerkyra, out of which, as an immediate excitement, the Peloponnesian War grew, concerned "the city of Epidamnus, known afterwards, in the Roman times, as Dyrrachium, hard by the modern Durazzo—a colony founded by the

Korkyreans on the coast of Illyria, in the Ionic gulf, considerably to the north of their own island." The oligarchy of Epidamnus, driven out by the people, had allied themselves with the neighboring Illyrians and were harassing the city. Korkyra refused aid to the latter when appealed to, but Corinth (of which Korkyra was itself a colony) promptly rendered help. This involved Corinth and Korkyra in hostilities, and Athens gave support to the latter.—E. Curtius, *Hist. of Greece*, v. 3, bk. 4.

B. C. 432.—Great Sea-fight of the Corinthians with the Korkyrians and Athenians.—Revolt of Potidæa.—"Although Korkyra became the ally of Athens, the force sent to her aid was confined to the small number of ten ships, for the express purpose of making it clear to the Corinthians that no aggressive measures were intended; and the generals received precise instructions to remain strictly neutral unless the Corinthians should attempt to effect a landing either on Korkyra or on any Korkyrian settlements. The Corinthians lost no time in bringing the quarrel to an issue. With a fleet of 150 ships, of which 60 were furnished by their allies, they sailed to the harbor of Cheimeron near the lake through which the river Acheron finds its way into the sea about thirty miles to the east of the southernmost promontory of Korkyra. The conflict which ensued exhibited a scene of confusion which the Athenian seamen probably regarded with infinite contempt. After a hard struggle the Korkyrians routed the right wing of the enemy's fleet, and chasing it to its camp on shore, lost time in plundering it and burning the tents. For this folly they paid a terrible price. The remainder of the Korkyrian fleet, borne down by sheer force of numbers, was put to flight, and probably saved from utter ruin only by the open interference of the Athenians, who now dashed into the fight without scruple, and came into direct conflict with the Corinthians. The latter were now resolved to press their advantage to the utmost. Sailing through the enemy's ships, they applied themselves to the task not of taking prizes, but of indiscriminate slaughter, to which not a few of their own people fell victims. After this work of destruction, they conveyed their disabled ships with their dead to Sybota, and, still unwearied, advanced again to the attack, although it was now late in the day. Their Paian, or battle cry, had already rung through the air, when they suddenly backed water. Twenty Athenian ships had come into sight, and the Corinthians, supposing them to be only the vanguard of a larger force, hastily retreated. The Korkyrians, ignorant of the cause of this movement, marvelled at their departure; but the darkness was now closing in, and they also withdrew to their own ground. So ended the greatest sea-fight in which Hellenes had thus far contended not with barbarians but with their own kinsfolk. On the following day the Korkyrians sailed to Sybota with such of their ships as were still fit for service, supported by the thirty Athenian ships. But the Corinthians, far from wishing to come to blows with the newcomers, were anxious rather for their own safety. Concluding that the Athenians now regarded the Thirty Years' Truce as broken, they were afraid

of being forcibly hindered by them in their homeward voyage. It became necessary therefore to learn what they meant to do. The answer of the Athenians was plain and decisive. They did not mean to break the truce, and the Corinthians might go where they pleased, so long as they did not go to Korkyra or to any city or settlement belonging to her. . . . Upwards of a thousand prisoners had fallen into the hands of the Corinthians. Of these 250 were conveyed to Corinth, and treated with the greatest kindness and care. Like the Athenians, the Corinthians were acting only from a regard to their own interests. Their object was to send these prisoners back to Korkyra, nominally under pledge to pay a heavy ransom for their freedom, but having really covenanted to put down the Demos, and thus to insure the hearty alliance of Korkyra with Corinth. These men returned home to stir up the most savage seditions that ever disgraced an Hellenic city."—G. W. Cox, *General Hist. of Greece*, bk. 3, ch. 1.—"The evils of this imprudent interference of the Athenians began now to be seen. In consequence of the Coreyrian alliance, the Athenians issued an order to Potidæa, a Macedonian town acknowledging their supremacy, to demolish its walls; to send back certain officers whom they had received from Corinth, and to give hostages for their good conduct. Potidæa, although an ally of Athens, had originally been a colony of Corinth, and thus arose the jealousy which occasioned these harsh and peremptory orders. Symptoms of universal hostility to Athens now appeared in the states around. The Corinthians and their allies were much irritated; the oppressed Potidæans were strongly instigated to revolt; and Perdiccas, king of Macedon, who had some time since been at open war with the Athenians, now gladly seized the opportunity to distress them, by exciting and assisting the malcontents. The Potidæans, however, deputed ambassadors to Athens to deprecate the harsh orders which had been sent them; but in the mean time to prepare for the worst, they also sent messengers to Sparta entreating support, where they met deputies from Corinth and Megara. By these loud and general complaints Sparta was at length roused to head the conspiracy against Athens, and the universal flames of war shortly afterwards broke forth throughout Greece." The revolt of Potidæa followed immediately; the Corinthians placed a strong force in the town, under Aristæus, and the Athenians sent an army under Phormion to lay siege to it.—*Early Hist. of Greece (Enc. Metropolitana)*, p. 283.

B. C. 432-431.—Charges brought by Corinth against Athens.—The hearing and the Congress at Sparta.—Decision for war.—Theban attack on Plataea.—The Peloponnesian War begun.—"The Corinthians "invited deputies from the other states of the confederacy to meet them at Sparta, and there charged the Athenians with having broken the treaty, and trampled on the rights of the Peloponnesians. The Spartans held an assembly to receive the complaints of their allies, and to discuss the question of peace or war. Here the Corinthians were seconded by several other members of the confederacy, who had also wrongs to complain of against Athens, and urged the Spartans for redress. . . . It happened that at this time Athenian envoys, who had been sent on other business, were still in Sparta. They

desired permission to attend and address the assembly. . . . When the strangers had all been heard, they were desired to withdraw, that the assembly might deliberate. The feeling against the Athenians was universal; most voices were for instant war. . . . The deputies of the allies were then informed of the resolution which the assembly had adopted, and that a general congress of the confederacy would shortly be summoned to deliberate on the same question, in order that war, if decided on, might be decreed by common consent. . . . The congress decided on the war; but the confederacy was totally unprepared for commencing hostilities, and though the necessary preparations were immediately begun and vigorously prosecuted, nearly a year elapsed before it was ready to bring an army into the field. In the meantime embassies were sent to Athens with various remonstrances and demands, for the double purpose of amusing the Athenians with the prospect of peace, and of multiplying pretexts for war. An attempt was made, not, perhaps, so foolish as it was insolent, to revive the popular dread of the curse which had been supposed to hang over the Alcæonids. The Athenians were called upon, in the name of the gods, to banish all who remained among them of that blood-stained race. If they had complied with this demand, they must have parted with Pericles, who, by the mother's side, was connected with the Alcæonids. This, indeed, was not expected; but it was hoped that the refusal might afford a pretext to his enemies at Athens for treating him as the author of the war. The Athenians retorted by requiring the Spartans to expiate the pollution with which they had profaned the sanctuary of Tænarus, by dragging from it some Helots who had taken refuge there, and that of Athene, by the death of Pausanias. . . . Still, war had been only threatened, not declared; and peaceful intercourse, though not wholly free from distrust, was still kept up between the subjects of the two confederacies. But early in the following spring, B. C. 431, in the fifteenth year of the Thirty Years' Truce, an event took place which closed all prospects of peace, precipitated the commencement of war, embittered the animosity of the contending parties, and prepared some of the most tragical scenes of the ensuing history. In the dead of night the city of Platea was surprised by a body of 300 Thebans, commanded by two of the great officers called *Boeotarchs*. They had been invited by a Platean named Naucrides, and others of the same party, who hoped, with the aid of the Thebans, to rid themselves of their political opponents, and to break off the relation in which their city was standing to Athens, and transfer its alliance to Thebes. The Thebans, foreseeing that a general war was fast approaching, felt the less scruple in strengthening themselves by this acquisition, while it might be made with little cost and risk. The gates were unguarded, as in time of peace, and one of them was secretly opened to the invaders, who advanced without interruption into the market-place. . . . The Plateans, who were not in the plot, imagined the force by which their city had been surprised to be much stronger than it really was, and, as no hostile treatment was offered to them, remained quiet, and entered into a parley with the Thebans. In the course of these conferences they gradually discovered that the num-

ber of the enemy was small, and might be easily overpowered. . . . Having barricaded the streets with wagons, and made such other preparations as they thought necessary, a little before day-break they suddenly fell upon the Thebans. The little band made a vigorous defence, and twice or thrice repulsed the assailants; but as these still returned to the charge, and were assisted by the women and slaves, who showered stones and tiles from the houses on the enemy, all, at the same time, raising a tumultuous clamour, and a heavy rain increased the confusion caused by the darkness, they at length lost their presence of mind, and took to flight. But most were unable to find their way in the dark through a strange town, and several were slain as they wandered to and fro in search of an outlet. . . . The main body, which had kept together, entered a large building adjoining the walls, having mistaken its gates, which they found open, for those of the town, and were shut in. The Plateans at first thought of setting fire to the building; but at length the men within, as well as the rest of the Thebans, who were still wandering up and down the streets, surrendered at discretion. Before their departure from Thebes it had been concerted that as large a force as could be raised should march the same night to support them. The distance between the two places was not quite nine miles, and these troops were expected to reach the gates of Platea before the morning; but the Asopus, which crossed their road, had been swollen by the rain, and the state of the ground and the weather otherwise retarded them, so that they were still on their way when they heard of the failure of the enterprise. Though they did not know the fate of their countrymen, as it was possible that some might have been taken prisoners, they were at first inclined to seize as many of the Plateans as they could find without the walls, and to keep them as hostages. . . . The Thebans afterward alleged that they had received a promise, confirmed by an oath, that, on condition of their retiring from the Platean territory, the prisoners should be released; and Thucydides seems disposed to believe this statement. The Plateans denied that they had pledged themselves to spare the lives of the prisoners, unless they should come to terms on the whole matter with the Thebans; but it does not seem likely that, after ascertaining the state of the case, the Thebans would have been satisfied with so slight a security. It is certain, however, that they retired, and that the Plateans, as soon as they had transported their movable property out of the country into the town, put to death all the prisoners—amounting to 180, and including Eurymachus, the principal author of the enterprise, and the man who possessed the greatest influence in Thebes. On the first entrance of the Thebans into Platea, a messenger had been despatched to Athens with the intelligence, and the Athenians had immediately laid all the *Boeotians* in Attica under arrest; and when another messenger brought the news of the victory gained by the Plateans, they sent a herald to request that they would reserve the prisoners for the disposal of the Athenians. The herald came too late to prevent the execution; and the Athenians, foreseeing that Platea would stand in great need of defence, sent a body of troops to garrison it, supplied it with provisions, and removed the

women and children and all persons unfit for service in a siege. After this event it was apparent that the quarrel could only be decided by arms. Plataea was so intimately united with Athens, that the Athenians felt the attack which had been made on it as an outrage offered to themselves, and prepared for immediate hostilities. Sparta, too, instantly sent notice to all her allies to get their contingents ready by an appointed day for the invasion of Attica."—C. Thirlwall, *Hist. of Greece*, ch. 19 (v. 1).

B. C. 431-429.—The Peloponnesian War: How Hellas was divided.—The opposing camps.—Peloponnesian invasions of Attica.—The Plague at Athens.—Death of Pericles.—Surrender of Potidæa to the Athenians.—"All Hellas was excited by the coming conflict between her two chief cities. . . . The feeling of mankind was strongly on the side of the Lacedæmonians; for they professed to be the liberators of Hellas. . . . The general indignation against the Athenians was intense; some were longing to be delivered from them, others fearful of falling under their sway. . . . The Lacedæmonian confederacy included all the Peloponnesians with the exception of the Argives and the Achæans—they were both neutral; only the Achæans of Pellene took part with the Lacedæmonians at first; afterwards all the Achæans joined them. Beyond the borders of the Peloponnese, the Megarians, Phocians, Locrians, Boeotians, Ambraciots, Leucadians, and Anactorians were their allies. Of these the Corinthians, Megarians, Sicyonians, Pellenians, Eleans, Ambraciots, and Leucadians provided a navy, the Boeotians, Phocians, and Locrians furnished cavalry, the other states only infantry. The allies of the Athenians were Chios, Lesbos, Plataea, the Messenians of Naupactus, the greater part of Acarnania, Corcyra, Zacynthus, and cities in many other countries which were their tributaries. There was the maritime region of Caria, the adjacent Dorian peoples, Ionia, the Hellespont, the Thracian coast, the islands that lie to the east within the line of Peloponnesus and Crete, including all the Cyclades with the exception of Melos and Thera. Chios, Lesbos and Corcyra furnished a navy; the rest, land forces and money. Thus much concerning the two confederacies, and the character of their respective forces. Immediately after the affair at Plataea the Lacedæmonians determined to invade Attica, and sent round word to their Peloponnesian and other allies, bidding them equip troops and provide all things necessary for a foreign expedition. The various states made their preparations as fast as they could, and at the appointed time, with contingents numbering two-thirds of the forces of each, met at the Isthmus." Then followed the invasion of Attica, the siege of Athens, the plague in the city, the death of Pericles, and the success won by the indomitable Athenians, at Potidæa, in the midst of their sore distress.—Thucydides, *History* (trans. by Jowett), bk. 2, sect. 8-70 (v. 1).

ALSO IN: E. Abbott, *Pericles*, ch. 13-15.—See ATHENS: B. C. 431 and 430-429.

B. C. 429-427.—The Peloponnesian War: Siege, capture and destruction of Plataea.—"In the third spring of the war, the Peloponnesians changed their plan of offence. By the invasion and ravage of Attica for two following summers, too much injury had been done to the Athenians,

little advantage had accrued to themselves: the booty was far from paying the expence of the expedition; the enemy, it was found, could not be provoked to risk a battle, and the great purpose of the war was little forwarded. The Peloponnesians were yet very unequal to attempt naval operations of any consequence. Of the continental dependencies of Athens none was so open to their attacks, none so completely excluded from naval protection, none so likely by its danger to superinduce that war of the field which they wished, as Plataea. Against that town therefore it was determined to direct the principal effort. . . . Under the command still of Archidamus, the confederate army accordingly entered the Platæid, and ravage was immediately begun. . . . The town was small, as may be judged from the very small force which sufficed for an effectual garrison; only 400 Platæans, with 80 Athenians. There were besides in the place 110 women to prepare provisions, and no other person free or slave. The besieging army, composed of the flower of the Peloponnesian youth, was numerous. The first operation was to surround the town with a palisade, which might prevent any ready egress; the neighboring forest of Cithæron supplying materials. Then, in a chosen spot, ground was broken, according to the modern phrase, for making approaches. The business was to fill the town-ditch, and against the wall to form a mound, on which a force sufficient for assault might ascend. . . . Such was at that time the inartificial process of a siege. Thucydides appears to have been well aware that it did no credit to the science of his age. . . . To oppose this mode of attack, the first measure of the besieged was to raise, on that part of their wall against which the mound was forming, a strong wooden frame, covered in front with leather and hides; and, within this, to build a rampart with bricks from the neighboring houses. The wooden frame bound the whole, and kept it firm to a considerable height: the covering of hides protected both work and workmen against weapons discharged against them, especially fiery arrows. But the mound still rising as the superstructure on the wall rose, and this superstructure becoming unavoidably weaker with increasing height, while the mound was liable to no counterbalancing defect, it was necessary for the besieged to devise other opposition. Accordingly they broke through the bottom of their wall, where the mound bore against it, and brought in the earth. The Peloponnesians, soon aware of this, instead of loose earth, repaired their mound with clay or mud inclosed in baskets. This requiring more labor to remove, the besieged undermined the mound; and thus, for a long time unperceived, prevented it from gaining height. Still, however, fearing that the efforts of their scanty numbers would be overborne by the multitude of hands which the besiegers could employ, they had recourse to another device. Within their town-wall they built, in a semilunar form, a second wall, connected with the first at the extremities. These extended, on either side, beyond the mound; so that should the enemy possess themselves of the outer wall, their work would be to be renewed in a far less favorable situation. . . . A ram, advanced upon the Peloponnesian mound, battered the superstructure on the Platæan rampart, and shook it violently; to the great alarm of the

garrison, but with little farther effect. Other machines of the same kind were employed against different parts of the wall itself, but to yet less purpose. . . . No means however were neglected by the besiegers that either approved practice suggested, or their ingenuity could devise, to promote their purpose; yet, after much of the summer consumed, they found every effort of their numerous forces so completely baffled by the vigilance, activity, and resolution of the little garrison, that they began to despair of succeeding by assault. Before however they would recur to the tedious method of blockade, they determined to try one more experiment, for which their numbers, and the neighboring woods of Cithæron, gave them more than ordinary facility. Preparing a very great quantity of faggots, they filled with them the town-ditch in the parts adjoining to their mound, and disposed piles in other parts around the place, wherever ground or any other circumstance gave most advantage. On the faggots they put sulphur and pitch, and then set all on fire. The conflagration was such as was never before known, says Thucydides, to have been prepared and made by the hands of men. . . . But fortunately for the garrison, a heavy rain, brought on by a thunderstorm without wind, extinguished the fire, and relieved them from an attack far more formidable than any they had before experienced. This attempt failing, the Peloponnesians determined immediately to reduce the siege to a blockade. . . . To the palisade, which already surrounded the town, a contravallation was added; with a double ditch, one without, and one within. A sufficient body of troops being then appointed to the guard of these works, the Bæotians undertaking one half, the other was allotted to detachments drafted from the troops of every state of the confederacy, and, a little after the middle of September, the rest of the army was dismissed for the winter." —W. Mitford, *Hist. of Greece*, ch. 15, sect. 1 (v. 2). —When the blockade had endured for more than a year, and food in the city grew scarce, about half of the defending force made a bold dash for liberty, one stormy night, scaled the walls of circumvallation, and escaped. The remainder held out until some time in the next year, when they surrendered and were all put to death, the city being destroyed. The families of the Plataeans had been sheltered at Athens before the siege began.—Thucydides, *History*, bk. 2-3.

B. C. 429-427.—The Peloponnesian War: Phormio's sea-fights.—Revolt of Lesbos.—Siege and capture of Mitylene.—The ferocious decree of Cleon reversed.—"At the same time that Archidamus laid siege to Plataea, a small Peloponnesian expedition, under a Spartan officer named Cnemus, had crossed the mouth of the Gulf of Corinth, and joined the land forces of the Leucadians and Ambraciots. They were bent on conquering the Acarnanians and the Messenians of Naupactus, the only continental allies whom Athens possessed in Western Greece. . . . When Cnemus had been joined by the troops of Leucas and the other Corinthian towns, and had further strengthened himself by summoning to his standard a number of the predatory barbarian tribes of Epirus, he advanced on Stratus, the chief city of Acarnania. At the same time a squadron of Peloponnesian ships collected at Corinth, and set sail down the gulf towards Naupactus. The only Athenian force in these waters consisted of

twenty galleys under an able officer named Phormio, who was cruising off the straits of Rhium, to protect Naupactus and blockade the Corinthian Gulf. Both by land and by sea the operations of the Peloponnesians miscarried miserably. Cnemus collected a very considerable army, but as he sent his men forward to attack Stratus by three separate roads, he exposed them to defeat in detail. . . . By sea the defeat of the Peloponnesians was even more disgraceful; the Corinthian admirals Machaon and Isocrates were so scared, when they came across the squadron of Phormio at the mouth of the gulf, that, although they mustered 47 ships to his 20, they took up the defensive. Huddling together in a circle, they shrank from his attack, and allowed themselves to be hustled and worried into the Achaian harbour of Patrae, losing several ships in their flight. Presently reinforcements arrived; the Peloponnesian fleet was raised to no less than 77 vessels, and three Spartan officers were sent on board, to compel the Corinthian admirals, who had behaved so badly, to do their best in future. The whole squadron then set out to hunt down Phormio. They found him with his 20 ships coasting along the Aetolian shore towards Naupactus, and at once set out in pursuit. The long chase separated the larger fleet into scattered knots, and gave the fighting a disconnected and irregular character. While the rear ships of Phormio's squadron were compelled to run on shore a few miles outside Naupactus, the 11 leading vessels reached the harbour in safety. Finding that he was now only pursued by about a score of the enemy—the rest having stayed behind to take possession of the stranded Athenian vessels—Phormio came boldly out of port again. His 11 vessels took 6, and sunk one of their pursuers; and then, pushing on westward, actually succeeded in recapturing most of the 9 ships which had been lost in the morning. This engagement, though it had no great results, was considered the most daring feat performed by the Athenian navy during the whole war. . . . The winter passed uneventfully, and the war seemed as far as ever from showing any signs of producing a definite result. But although the Spartan invasion of 428 B. C. had no more effect than those of the preceding years, yet in the late summer there occurred an event so fraught with evil omens for Athens, as to threaten the whole fabric of her empire. For the first time since the commencement of hostilities, an important subject state made an endeavour to free itself by the aid of the Spartan fleet. Lesbos was one of the two Aegean islands which still remained free from tribute, and possessed a considerable war-navy. Among its five towns Mitylene was the chief, and far exceeded the others in wealth and resources. It was governed by an oligarchy, who had long been yearning to revolt, and had made careful preparation by accumulating warlike stores and enlisting foreign mercenaries. . . . The whole island except Methymna, where a democracy ruled, rose in arms, and determined to send for aid to Sparta. The Athenians at once despatched against Mitylene a squadron of 40 ships under Cleippides, which had just been equipped for a cruise in Peloponnesian waters. This force had an engagement with the Lesbian fleet, and drove it back into the harbour of Mitylene. To gain time for assistance from across the Aegean to arrive, the Lesbians now pretended

to be anxious to surrender, and engaged Cleipides in a long and fruitless negotiation, while they were repeating their demands at Sparta. But at last the Athenian grew suspicious, established a close blockade of Mitylene by sea, and landed a small force of hoplites to hold a fortified camp on shore. . . . Believing the revolt of the Lesbians to be the earnest of a general rising of all the vassals of Athens, the Peloponnesians determined to make a vigorous effort in their favour. The land contingents of the various states were summoned to the Isthmus—though the harvest was now ripe, and the allies were loath to leave their reaping—while it was also determined to haul over the Corinthian Isthmus the fleet which had fought against Phormio, and then to despatch it to relieve Mitylene. . . . The Athenians were furious at the idea that their vassals were now about to be stirred up to revolt, and strained every nerve to defend themselves. While the blockade of Mitylene was kept up, and 100 galleys cruised in the Aegean to intercept any succours sent to Lesbos, another squadron of 100 ships sailed round Peloponnesus and harried the coastland with a systematic ferocity that surpassed any of their previous doings. To complete the crews of the 250 ships now afloat and in active service proved so great a drain on the military force of Athens, that not only the Thetes but citizens of the higher classes were drafted on shipboard. Nevertheless the effect which they designed by this display of power was fully produced. To defend their own harvests the confederates who had met at the Isthmus went homewards, while the dismay at the strength of the Athenian fleet was so great that the plan of sending naval aid to Lesbos was put off for the present. . . . All through the winter of 428-7 B. C. the blockade of Mitylene was kept up, though its maintenance proved a great drain on the resources of Athens. On the land side a considerable force of hoplites under Paches strengthened the troops already on the spot, and made it possible to wall the city in with lines of circumvallation. . . . When the spring of 427 B. C. arrived, the Spartans determined to make a serious attempt to send aid to Lesbos; but the fear of imperilling all their naval resources in a single expedition kept them from despatching a fleet of sufficient size. Only 42 galleys, under an admiral named Alcidas, were sent forth from Corinth. This squadron managed to cross the Aegean without meeting the Athenians, by steering a cautious and circuitous course among the islands. But so much time was lost on the way, that on arriving off Embatium in Ionia, Alcidas found that Mitylene had surrendered just seven days before. . . . Learning the fall of Mitylene, he made off southward, and, after intercepting many merchant vessels off the Ionian coast and brutally slaying their crews, returned to Corinth without having struck a single blow for the cause of Sparta. Paches soon reduced Antissa, Eresus, and Pyrrha, the three Lesbian towns which had joined in the revolt of Mitylene, and was then able to sail home, taking with him the Laconian general Salaethus, who had been caught in hiding at Mitylene, together with the other leaders of the revolt. When the prisoners arrived at Athens Salaethus was at once put to death without a trial. But the fate of the Lesbians was the subject of an important and characteristic debate in the Eccle-

sia. Led by the demagogue Cleon, the Athenians at first passed the monstrous resolution that the whole of the Mitylenaeans, not merely the prisoners at Athens, but every adult male in the city, should be put to death, and their wives and families sold as slaves. It is some explanation but no excuse for this horrible decree that Lesbos had been an especially favoured ally, and that its revolt had for a moment put Athens in deadly fear of a general rising of Ionia and Aeolis. Cleon the leather-seller, the author of this infamous decree, was one of the statesmen of a coarse and inferior stamp, whose rise had been rendered possible by the democratic changes which Pericles had introduced into the state. . . . On the eve of the first day of debate the motion of Cleon had been passed, and a galley sent off to Paches at Mitylene, bidding him slay all the Lesbians; but on the next morning . . . the decree of Cleon was rescinded by a small majority, and a second galley sent off to stay Paches from the massacre. . . . By extraordinary exertions the bearers of the reprieve contrived to reach Lesbos only a few hours after Paches had received the first despatch, and before he had time to put it into execution. Thus the majority of the Mitylenaeans were saved; but all their leaders and prominent men, not less than 1,000 in number, were put to death. . . . The land of the Lesbians was divided into 3,000 lots, of which a tenth was consecrated to the gods, while the rest were granted out to Athenian cleruchs, who became the landlords of the old owners."—C. W. C. Oman, *Hist. of Greece*, ch. 28.

ALSO IN: Thucydides, *History*, bk. 2, sect. 80-92, and bk. 3, sect. 1-50.—E. Curtius, *Hist. of Greece*, bk. 4, ch. 2 (v. 3).

B. C. 425.—The Peloponnesian War: Spartan catastrophe at Sphacteria.—Peace pleaded for and refused by Athens.—In the seventh year of the Peloponnesian War (B. C. 425), the enterprising Athenian general, Demosthenes, obtained permission to seize and fortify a harbor on the west coast of Messenia, with a view to harassing the adjacent Spartan territory and stirring up revolt among the subjugated Messenians. The position he secured was the promontory of Pylos, overlooking the basin now called the Bay of Navarino, which latter was protected from the sea by the small island of Sphacteria, stretching across its front. The seizure of Pylos created alarm in Sparta at once, and vigorous measures were taken to expel the intruders. The small force of Demosthenes was assailed, front and rear, by a strong land army and a powerful Peloponnesian fleet; but he had fortified himself with skill and stoutly held his ground, waiting for help from Athens. Meantime his assailants had landed 420 men on the island of Sphacteria, and these were mostly hoplites, or heavy-armed soldiers, from the best citizenship of Sparta. In this situation an Athenian fleet made its sudden and unexpected appearance, defeated the Peloponnesian fleet completely, took possession of the harbor and surrounded the Spartans on Sphacteria with a ring from which there was no escape. To obtain the release of these citizens the Spartans were reduced to plead for peace on almost any terms, and Athens had her opportunity to end the war at that moment with great advantage to herself. But Cleon, the demagogue, persuaded the people to refuse peace. The beleaguered hoplites on Sphacteria were made prisoners by force, and little came of it in the

end.—Thucydides, *Hist.*, bk. 4, sect. 2-38.—Pylus remained in the possession of the Athenians until B. C. 408, when it was retaken by the Spartans.—G. Grote, *Hist. of Greece*, pt. 2, ch. 52.

B. C. 424-421.—The Peloponnesian War: Brasidas in Chalcidice.—Athenian defeat at Delium.—A year's Truce.—Renewed hostilities.—Death of Brasidas and Kleon at Amphipolis.—The Peace of Nikias (Nicias).—"About the beginning of 424 B. C. Brasidas did for Sparta what Demosthenes had done for the Athenians. Just as Demosthenes had understood that the severest blow which he could inflict on Sparta was to occupy the coasts of Laconia, so Brasidas understood that the most effective method of assailing the Athenians was to arouse the allies to revolution, and by all means to aid the uprising. But since, from lack of a sufficient naval force, he could not work on the islands, he resolved to carry the war to the allied cities of the Athenians situated on the coast of Macedonia; especially since Perdikkas, king of Macedonia, the inhabitants of Chalkidike, and some other districts subject to the Athenians, had sought the assistance of Sparta, and had asked Brasidas to lead the undertaking. Sparta permitted his departure, but so little did she appear disposed to assist him, that she granted him only 700 Helots. In addition to these, however, he succeeded, through the money sent from Chalkidike, in enrolling about 1,000 men from the Peloponnesus. With this small force of 1,700 hoplites, Brasidas resolved to undertake this adventurous and important expedition. He started in the spring of 424, and reached Macedonia through eastern Hellas and Thessaly. He effected the march with great daring and wisdom, and on his way he also saved Megara, which was in extreme danger from the Athenians. Reaching Macedonia and uniting forces with Perdikkas, Brasidas detached from the Athenians many cities, promising them liberty from the tyranny they suffered, and their association in the Peloponnesian alliance on equal terms. He made good these promises by great military experience and perfectly honest dealings. In December he became master of Amphipolis, perhaps the most important of all the foreign possessions of Athens. The historian Thucydides, to whom was intrusted the defense of that important town, was at Thasos when Brasidas surprised it. He hastened to the assistance of the threatened city, but did not arrive in time to prevent its capture. Dr. Thirlwall says it does not appear that human prudence and activity could have accomplished anything more under the same circumstances; yet his unavoidable failure proved the occasion of a sentence under which he spent twenty years of his life in exile, where he composed his history. . . . The revolution of the allied cities in Macedonia astonished the Athenians, who almost at the same time sustained other misfortunes. Following the advice of Kleon, instead of directing their main efforts to the endangered Chalkidike, they decided, about the middle of 424, to recover Boeotia itself, in conjunction as usual with some malcontents in the Boeotian towns, who desired to break down and democratize the oligarchical governments. The undertaking, however, was not merely unsuccessful, but attended with a ruinous defeat. A force of 7,000 hoplites [among

them, Socrates, the philosopher—see DELIUM], several hundred horsemen, and 25,000 light-armed, under command of Hippokrates, took possession of Delium, a spot strongly situated, overhanging the sea, about five miles from Tanagra, and very near the Attic confines. But while the Athenians were still occupied in raising their fortifications, they were suddenly startled by the sound of the Boeotian pæan, and found themselves attacked by an army of 7,000 hoplites, 1,000 horse, and 500 peltasts. The Athenians suffered a complete defeat, and were driven away with great loss. Such was the change of affairs which took place in 424 B. C. During the preceding year they could have ended the war in a manner most advantageous to them. They did not choose to do so, and were now constantly defeated. Worse still, the seeds of revolt spread among the allied cities. The best citizens, among whom Nikias was a leader, finally persuaded the people that it was necessary to come to terms of peace, while affairs were yet undecided. For, although the Athenians had suffered the terrific defeat near Delium, and had lost Amphipolis and other cities of Macedonia, they were still masters of Pylos, of Kythera, of Methone, of Nisea, and of the Spartans captured in Sphakteria; so that there was now an equality of advantages and of losses. Besides, the Lacedæmonians were ever ready to lay aside the sword in order to regain their men. Again, the oligarchy in Sparta envied Brasidas, and did not look with pleasure on his splendid achievements. Lately they had refused to send him any assistance whatever. The opportunity, therefore, was advantageous for the conclusion of peace. . . . Such were the arguments by which Nikias and his party finally gained the ascendancy over Kleon, and in the beginning of 423 B. C. persuaded the Athenians to enter into an armistice of one year, within which they hoped to be able to put an end to the destructive war by a lasting peace. Unfortunately, the armistice could not be carried out in Chalkidike. The cities there continued in their rebellion against the Athenians. Brasidas could not be prevailed upon to leave them unprotected in the struggle which they had undertaken, relying on his promises of assistance. The warlike party at Athens, taking advantage of this, succeeded in frustrating any definite conditions of peace. On the other hand, the Lacedæmonians, seeing that the war was continued, sent an ample force to Brasidas. This army did not succeed in reaching him, because the king of Macedonia, Perdikkas, had in the meantime become angered with Brasidas, and persuaded the Thessalians to oppose the Lacedæmonians in their passage. The year of the armistice passed, and Kleon renewed his expostulations against the incompetency of the generals who had the control of affairs in Chalkidike. . . . The Athenians decided to forward a new force, and intrusted its command to Kleon. He therefore, in August, 422 B. C., started from the Peiræus, with 1,200 hoplites, 300 horsemen, a considerable number of allies, and thirty triremes. Reaching Chalkidike, he engaged in battle against Brasidas in Amphipolis, suffered a disgraceful defeat, and was killed while fleeing. Brasidas also ended his short but glorious career in this battle, dying the death of a hero. The way in which his memory was honored was the best evidence of the deep impression that he had made on the Hellenic

world. All the allies attended his funeral in arms, and interred him at the public expense, in front of the market-place of Amphipolis. . . . Thus disappeared the two foremost champions of the war—its good spirit, Brasidas, and its evil, Kleon. The party of Nicias finally prevailed at Athens, and that general soon after arranged a conference with King Pleistoanax of Sparta, who was also anxious for peace. Discussions continued during the whole autumn and winter after the battle of Amphipolis, without any actual hostilities on either side. Finally, at the beginning of the spring of 421 B. C., a peace of fifty years was agreed upon. The principal conditions of this peace, known in history as the 'peace of Nicias,' were as follows: 1. The Lacedæmonians and their allies were to restore Amphipolis and all the prisoners to the Athenians. They were further to relinquish to the Athenians Argilus, Stageirus, Acanthus, Skolus, Olynthus, and Spartolus. But, with the exception of Amphipolis, these cities were to remain independent, paying to the Athenians only the usual tribute of the time of Aristides. 2. The Athenians should restore to the Lacedæmonians Koryphasium, Kythera, Methone, Pteleum, and Atalante, with all the captives in their hands from Sparta or her allies. 3. Respecting Skione, Torone, Sermylus, or any other town in the possession of Athens, the Athenians should have the right to adopt such measures as they pleased. 4. The Lacedæmonians and their allies should restore Panaktum to the Athenians. When these terms were submitted at Sparta to the consideration of the allied cities, the majority accepted them. The Boeotians, Megarians, and Corinthians, however, summarily refused their consent. The Peloponnesian war was now considered to be at an end, precisely ten years from its beginning. Both the combatants came out from it terribly maimed. Sparta not only did not attain her object—the emancipation of the Hellenic cities from the tyranny of the Athenians—but even officially recognized this tyranny, by consenting that the Athenians should adopt such measures as they choose toward the allied cities. Besides, Sparta obtained an ill repute throughout Hellas, because she had abandoned the Greeks in Chalkidike, who had at her instigation revolted, and because she had also sacrificed the interests of her principal allies. . . . Athens, on the other hand, preserved intact her supremacy, for which she undertook the struggle. This, however, was gained at the cost of Attica ravaged, a multitude of citizens slain, the exhaustion of the treasury, and the increase of the common hatred."—T. T. Timayenis, *Hist. of Greece*, pt. 5, ch. 4 (v. 1).

ALSO IN: C. Thirlwall, *Hist. of Greece*, ch. 23 (v. 3).

B. C. 421-418.—The Peloponnesian War: New combinations.—The Argive League against Sparta.—Conflicting alliances of Athens with both.—Rising influence of Alcibiades.—War in Argos.—Spartan victory at Mantinea.—Revolution in Argos.—"All the Spartan allies in Peloponnesus and the Boeotians refused to join in this treaty [of Nicias]. The latter concluded with the Athenians only a truce of ten days . . . , probably on condition, that, if no notice was given to the contrary, it was to be constantly renewed after the lapse of ten days. With Corinth there existed no truce at all. Some

of the terms of the peace were not complied with, though this was the case much less on the part of Athens than on that of Sparta. . . . The Spartans, from the first, were guilty of infamous deception, and this immediately gave rise to bitter feelings. But before matters had come to this, and when the Athenians were still in the full belief that the Spartans were honest, all Greece was startled by a treaty of alliance between Athens and Sparta against their common enemies. This treaty was concluded very soon after the peace. . . . The consequence was, that Sparta suddenly found herself deserted by all her allies; the Corinthians and Boeotians renounced her, because they found themselves given over to the Athenians, and the Boeotians perhaps thought that the Spartans, if they could but reduce the Eleans to the condition of Helots, would readily allow Boeotia to be subdued by the Athenians. Thus Argos found the means of again following a policy which ever since the time of Cleomenes it had not ventured to think of, and . . . became the centre of an alliance with Mantinea, 'which had always been opposed to the Lacedæmonians,' and some other Arcadian towns, Achaia, Elis, and some places of the Acte. The Arcadians had dissolved their union, the three people of the country had separated themselves, though sometimes they united again; and thus it happened that only some of their towns were allied with Argos. Corinth at first would listen to neither party, and chose to remain neutral; 'for although for the moment it was highly exasperated against Sparta, yet it had at all times entertained a mortal hatred of Argos, and its own interests drew it towards Sparta.' But when, owing to Sparta's dishonesty, the affairs on the coasts of Thrace became more and more complicated, when the towns refused to submit to Athens, and when it became evident that this was the consequence of the instigations of Sparta, then the relation subsisting between the two states became worse also in Greece, and various negotiations and cavillings ensued. . . . After much delay, the Athenians and Spartans were already on the point of taking up arms against each other; but then they came to the singular agreement (Olymp. 89, 4), that the Athenians should retain possession of Pylos, but keep in it only Athenian troops, and not allow the Helots and Messenians to remain there. After this the loosened bonds between the Spartans, Corinthians, and Boeotians, were drawn more closely. The Boeotians were at length prevailed upon to surrender Panacton to the Spartans, who now restored it to the Athenians. This was in accordance with the undoubted meaning of the peace; but the Boeotians had first destroyed the place, and the Spartans delivered it to the Athenians only a heap of ruins. The Athenians justly complained, that this was not an honest restoration, and that the place ought to have been given back to them with its fortifications uninjured. The Spartans do not appear to have had honest intentions in any way. . . . While thus the alliance between Athens and Sparta, in the eyes of the world, still existed, it had in reality ceased and become an impossibility. Another alliance, however, was formed between Athens and Argos (Olymp. 89, 4) through the influence of Alcibiades, who stood in the relation of an hereditary proxenus to Argos. A more natural alliance than this could not be conceived, and by it the

Athenians gained the Mantineans, Eleans, and other Peloponnesians over to their side. Alcibiades now exercised a decisive influence upon the fate of his country. . . . We generally conceive Alcibiades as a man whose beauty was his ornament, and to whom the follies of life were the main thing, and we forget that part of his character which history reveals to us. . . . Thucydides, who cannot be suspected of having been particularly partial to Alcibiades, most expressly recognises the fact, that the fate of Athens depended upon him, and that, if he had not separated his own fate from that of his native city, at first from necessity, but afterwards of his own accord, the course of the Peloponnesian war, through his personal influence alone, would have taken quite a different direction, and that he alone would have decided it in favour of Athens. This is, in fact, the general opinion of all antiquity, and there is no ancient writer of importance who does not view and estimate him in this light. It is only the moderns that entertain a derogatory opinion of him, and speak of him as an eccentric fool, who ought not to be named among the great statesmen of antiquity. . . . Alcibiades is quite a peculiar character; and I know no one in the whole range of ancient history who might be compared with him, though I have sometimes thought of Caesar. . . . Alcibiades was opposed to the peace of Nicias from entirely personal, perhaps even mean, motives. . . . It was on his advice that Athens concluded the alliance with Argos and Elis. Athens now had two alliances which were equally binding, and yet altogether opposed to each other: the one with Sparta, and an equally stringent one with Argos, the enemy of Sparta. This treaty with Argos, the Peloponnesians, etc., was extremely formidable to the Spartans; and they accordingly, for once, determined to act quickly, before it should be too late. The alliance with Argos, however, did not confer much real strength upon Athens, for the Argives were lazy, and Elis did not respect them, whence the Spartans had time again to unite themselves more closely with Corinth, Boeotia, and Megara. When, therefore, the war between the Spartans and Argives broke out, and the former resolutely took the field, Alcibiades persuaded the Athenians to send succour to the Argives, and thus the peace with Sparta was violated in an unprincipled manner. But still no blow was struck between Argos and Sparta. . . . King Agis had set out with a Spartan army, but concluded a truce with the Argives (Olymp. 90, 2); this, however, was taken very ill at Sparta, and the Argive commanders who had concluded it were censured by the people and magistrates of Argos. Soon afterwards the war broke out again, and, when the Athenian auxiliaries appeared, decided acts of hostility commenced. The occasion was an attempt of the Mantineans to subdue Tegea: the sad condition of Greece became more particularly manifest in Arcadia, by the divisions which tore one and the same nation to pieces. The country was distracted by several parties; had Arcadia been united, it would have been invulnerable. A battle was fought (Olymp. 90, 3) in the neighbourhood of Mantinea, between the Argives, their Athenian allies, the Mantineans, and part of the Arcadians ('the Eleans, annoyed at the conduct of the Argives, had abandoned their cause'), on the one hand, and the Spartans and a few allies

on the other. The Spartans gained a most decisive victory; and, although they did not follow it up, yet the consequence was, that Argos concluded peace, the Argive alliance broke up, and at Argos a revolution took place, in which an oligarchical government was instituted, and by which Argos was drawn into the interest of Sparta (Olymp. 90, 4). This constitution, however, did not last, and very soon gave way to a democratic form of government. Argos, even at this time, and still more at a later period, is a sad example of the most degenerate and deplorable democracy, or, more properly speaking, anarchy."—B. G. Niebühr, *Lects. on Ancient Hist.*, lect. 49 (v. 2).

B. C. 416.—Siege and conquest of Melos by the Athenians.—Massacre of the inhabitants.—"It was in the beginning of summer 416 B. C. that the Athenians undertook the siege and conquest of the Dorian island of Melos, one of the Cyclades, and the only one, except Thera, which was not already included in their empire. Melos and Thera were both ancient colonies of Lacedæmon, with whom they had strong sympathies of lineage. They had never joined the confederacy of Delos, nor been in any way connected with Athens; but, at the same time, neither had they ever taken part in the recent war against her, nor given her any ground of complaint, until she landed and attacked them in the sixth year of the recent war. She now renewed her attempt, sending against the island a considerable force under Kleomêdês and Tisias."—G. Grote, *Hist. of Greece*, pt. 2, ch. 56.—"They desired immediate submission on the part of Melos, any attempt at resistance being regarded as an inroad upon the omnipotence of Athens by sea. For this reason they were wroth at the obstinate courage of the islanders, who broke off all further negotiations, and thus made it necessary for the Athenians to commence a costly circumvallation of the city. The Melians even succeeded on two successive occasions in breaking through part of the wall built round them by the enemy, and obtaining fresh supplies; but no relief arrived; and they had to undergo sufferings which made the 'Melian famine' a proverbial phrase to express the height of misery; and before the winter ended the island was forced to surrender unconditionally. . . . There was no question of quarter. All the islanders capable of bearing arms who had fallen into the hands of the Athenians were sentenced to death, and all the women and children to slavery."—E. Curtius, *Hist. of Greece*, bk. 4, ch. 4 (v. 3).

B. C. 413.—The Peloponnesian War: Effects and consequences of the Sicilian expedition.—Prostration of Athens.—Strengthening of Sparta.—Negotiations with the Persians against Athens.—Peloponnesian invasion of Attica.—The Decelian War.—"The Sicilian expedition ended in a series of events which, to

this day, it is impossible to recall without a feeling of horror. . . . Since the Persian wars it had never come to pass, that on the one side all had been so completely lost, while on the other all was won. . . . When the Athenians recovered from the first stupefaction of grief, they called to mind the causes of the whole calamity, and hereupon in passionate fury turned round upon all who had advised the expedition, or who had encouraged vain hopes of victory, as orators, prophets, or soothsayers. Finally, the general excitement passed into the phase of despair and terror, conjuring up dangers even greater and more imminent than existed in reality. The citizens every day expected to see the Sicilian fleet with the Peloponnesians appear off the harbor, to take possession of the defenceless city; and they believed that the last days of Athens had arrived. . . . Athens had risked all her military and naval resources for the purpose of overcoming Syracuse. More than 200 ships of state, with their entire equipment, had been lost; and if we reckon up the numbers despatched on successive occasions to Sicily, the sum total, inclusive of the auxiliary troops, may be calculated at about 60,000 men. A squadron still lay in the waters of Naupactus; but even this was in danger and exposed to attack from the Corinthians, who had equipped fresh forces. The docks and naval arsenals were empty, and the treasury likewise. In the hopes of enormous booty and an abundance of new revenues, no expense had been spared; and the resources of the city were entirely exhausted. . . . But, far heavier than the material losses in money, ships, and men, was the moral blow which had been received by Athens, and which was more dangerous in her case than in that of any other state, because her whole power was based on the fear inspired in the subject states, so long as they saw the fleets of Athens absolutely supreme at sea. The ban of this fear had now been removed; disturbances arose in those island-states which were most necessary to Athens, and whose existence seemed to be most indissolubly blended with that of Attica, — in Eubœa, Chios, and Lesbos; everywhere the oligarchical parties raised their head, in order to overthrow the odious dominion of Athens. . . . Sparta, on the other hand, had in the course of a few months, without sending out an army or incurring any danger or losses, secured to herself the greatest advantages, such as she could not have obtained from the most successful campaign. Gylippus had again proved the value of a single Spartan man: inasmuch as in the hour of the greatest danger his personal conduct had altered the course of the most important and momentous transaction of the entire war. He was, in a word, the more fortunate successor of Brasidas. The authority of Sparta in the Peloponnesus, which the peace of Nicias had weakened, was now restored; with the exception of Argos and Elis, all her allies were on amicable terms with her; the brethren of her race beyond the sea, who had hitherto held aloof, had, by the attack made by the Athenian invasion, been drawn into the war, and had now become the most zealous and ardent allies of the Peloponnesians. . . . Moreover, the Athenians had driven the most capable of all living statesmen and commanders into the enemy's camp. No man was better adapted than Alcibiades for rousing the slowly-moving Lacedæmonians to energetic action; and it was he who

supplied them with the best advice, and with the most accurate information as to Athenian politics and localities. Lastly, the Spartans were at the present time under a warlike king, the enterprising and ambitious Agis, the son of Archidamus. . . . Nothing was now required, except pecuniary means. And even these now unexpectedly offered themselves to the Spartans, in consequence of the events which had in the meantime occurred in the Persian empire. . . . Everywhere [in that empire] sedition raised its head, particularly in Asia Minor. Pissuthnes, the son of Hystaspes, who had on several previous occasions interfered in Greek affairs, rose in revolt. He was supported by Greek soldiers, under the command of an Athenian of the name of Lycon. The treachery of the latter enabled Darius to overthrow Pissuthnes, whose son, Amorges, maintained himself by Athenian aid in Caria. After the fall of Pissuthnes, Tissaphernes and Pharnabazus appear in Asia Minor as the first dignitaries of the Great King. Tissaphernes succeeded Pissuthnes as satrap in the maritime provinces. He was furious at the assistance offered by Athens to the party of his adversary; moreover, the Great King (possibly in consequence of the Sicilian war and the destruction of the Attic fleet) demanded that the tributes long withheld by the coast-towns, which were still regarded as subject to the Persian empire, should now be levied. Tissaphernes was obliged to pay the sums according to the rate at which they were entered in the imperial budget of Persia; and thus, in order to reimburse himself, found himself forced to pursue a war policy. . . . Everything now depended for the satrap upon obtaining assistance from a Greek quarter. He found opportunities for this purpose in Ionia itself, in all the more important cities of which a Persian party existed. . . . The most important and only independent power in Ionia was Chios. Here the aristocratic families had with great sagacity contrived to retain the government. . . . It was their government which now became the focus of the conspiracy against Athens, in the first instance establishing a connection on the opposite shore with Erythræ. Hereupon Tissaphernes opened negotiations with both cities, and in conjunction with them despatched an embassy to Peloponnesus charged with persuading the Spartans to place themselves at the head of the Ionian movement, the satrap at the same time promising to supply pay and provisions to the Peloponnesian forces. The situation of Pharnabazus was the same as that of Tissaphernes. Pharnabazus was the satrap of the northern province. . . . Pharnabazus endeavored to outbid Tissaphernes in his promises; and two powerful satraps became rival suitors for the favor of Sparta, to whom they offered money and their alliance. . . . While thus the most dangerous combinations were on all sides forming against Athens, the war had already broken out in Greece. This time Athens had been the first to commence direct hostilities. . . . A Peloponnesian army under Agis invaded Attica, with the advent of the spring of B. C. 413 (Ol. xci. 3); at which date it was already to be anticipated how the Sicilian war would end. For twelve years Attica had been spared hostile invasions, and the vestiges of former wars had been effaced. The present devastations were therefore doubly ruinous; while at the same time

it was now impossible to take vengeance upon the Peloponnesians by means of naval expeditions. And the worst point in the case was that they were now fully resolved, instead of recurring to their former method of carrying on the war and undertaking annual campaigns, to occupy permanently a fortified position on Attic soil." The invaders seized a strong position at Decelea, only fourteen miles northward from Athens, on a rocky peak of Mount Parnes, and fortified themselves so strongly that the Athenians ventured on no attempt to dislodge them. From this secure station they ravaged the surrounding country at pleasure. "This success was of such importance that even in ancient times it gave the name of the Decelean War to the entire last division of the Peloponnesian War. The occupation of Decelea forms the connecting link between the Sicilian War and the Attico-Peloponnesian, which now broke out afresh. . . . Its immediate object . . . it failed to effect; inasmuch as the Athenians did not allow it to prevent their despatching a fresh armament to Sicily. But when, half a year later, all was lost, the Athenians felt more heavily than ever the burden imposed upon them by the occupation of Decelea. The city was cut off from its most important source of supplies, since the enemy had in his power the roads communicating with Eubœa. . . . One-third of Attica no longer belonged to the Athenians, and even in the immediate vicinity of the city communication was unsafe; large numbers of the country-people, deprived of labor and means of subsistence, thronged the city; the citizens were forced night and day to perform the onerous duty of keeping watch."—E. Curtius, *Hist. of Greece*, bk. 4, ch. 4-5 (v. 3).

ALSO IN: G. Grote, *Hist. of Greece*, ch. 61 (v. 7).

B. C. 413-412.—The Peloponnesian War: Revolt of Chios, Miletus, Lesbos, and Rhodes from Athens.—Revolution at Samos.—Intrigues of Alcibiades for a revolution at Athens and for his own recall.—"Alcibiades . . . persuaded the Spartans to build a fleet, and send it over to Asia to assist the Ionians in revolting. He himself crossed at once to Chios with a few ships, in order to begin the revolt. The government of Chios was in the hands of the nobles; but they had hitherto served Athens so well that the Athenians had not altered the government to a democracy. Now, however, they revolted (B. C. 413). This was a heavy blow to Athens, for Chios was the most powerful of the Ionian States, and others would be sure to follow its example. Miletus and Lesbos revolted in B. C. 412. The nobles of Samos prepared to revolt, but the people were in favour of Athens, and rose against the nobles, killing 200 of them, and banishing 400 more. Athens now made Samos its free and equal ally, instead of its subject, and Samos became the head-quarters of the Athenian fleet and army. . . . The Athenians . . . had now manned a fresh navy. They defeated the Peloponnesian and Persian fleets together at Miletus, and were only kept from besieging Miletus by the arrival of a fleet from Syracuse. [This reinforcement of the enemy held them powerless to prevent a revolt in Rhodes, carried out by the oligarchs though opposed by the people.] Alcibiades had made enemies among the Spartans, and when he had been some time in Asia Minor an order came over from

Sparta to put him to death. He escaped to Tissaphernes, and now made up his mind to win back the favour of Athens by breaking up the alliance between Tissaphernes and the Spartans. He contrived to make a quarrel between them about the rate of pay, and persuaded Tissaphernes that it would be the best thing for Persia to let the Spartans and Athenians wear one another out, without giving help to either. Tissaphernes therefore kept the Spartans idle for months, always pretending that he was on the point of bringing up his fleet to help them. Alcibiades now sent a lying message to the generals of the Athenian army at Samos that he could get Athens the help of Tissaphernes, if the Athenians would allow him to return from his exile: but he said that he could never return while there was a democracy; so that if they wished for the help of Persia they must change the government to an oligarchy (B. C. 412). In the army at Samos there were many rich men willing to see an oligarchy established at Athens, and peace made with Sparta. . . . Therefore, though the great mass of the army at Samos was democratical, a certain number of powerful men agreed to the plan of Alcibiades for changing the government. One of the conspirators, named Pisander, was sent to Athens to instruct the clubs of nobles and rich men to work 'secretly for this object. In these clubs the overthrow of the democracy was planned. Citizens known to be zealous for the constitution were secretly murdered. Terror fell over the city, for no one except the conspirators knew who did, and who did not, belong to the plot; and at last, partly by force, the assembly was brought to abolish the popular government."—C. A. Fyffe, *Hist. of Greece (Hist. Primer)*, ch. 5, sect. 36-39.

B. C. 411-407.—The Peloponnesian War: Athenian victories at Cynossema and Abydos.—Exploits of Alcibiades.—His return to Athens and to supreme command.—His second deposition and exile.—While Athens was in the throes of its revolution, "the war was prosecuted with vigour on the coast of Asia Minor. Mindarus, who now commanded the Peloponnesian fleet, disgusted at length by the often-broken promises of Tissaphernes, and the scanty and irregular pay which he furnished, set sail from Miletus and proceeded to the Hellespont, with the intention of assisting the satrap Pharnabazus, and of effecting, if possible, the revolt of the Athenian dependencies in that quarter. Hither he was pursued by the Athenian fleet under Thrasyllus. In a few days an engagement ensued (in August, 411 B. C.), in the famous straits between Sestos and Abydos, in which the Athenians, though with a smaller force, gained the victory, and erected a trophy on the promontory of Cynossema [see CYNOSSEMA], near the tomb and chapel of the Trojan queen Hecuba. The Athenians followed up their victory by the reduction of Cyzicus, which had revolted from them. A month or two afterward, another obstinate engagement took place between the Peloponnesian and Athenian fleets near Abydos, which lasted a whole day, and was at length decided in favour of the Athenians by the arrival of Alcibiades with his squadron of 18 ships from Samos."—W. Smith, *Smaller Hist. of Greece*, ch. 13.—Alcibiades, although recalled, had

"resolved to delay his return until he had performed such exploits as might throw fresh lustre over his name, and endear him to all classes of his fellow-citizens. With this ambition he sailed with a small squadron from Samos, and having gained information that Mindarus, with the Peloponnesian fleet, had gone in pursuit of the Athenian navy, he hastened to afford his countrymen succour. Happily he arrived at the scene of action, near Abydos, at a most critical moment; when, after a severe engagement, the Spartans had on one side obtained an advantage, and were pursuing the broken lines of the Athenians. . . . He speedily decided the fortune of the day, completely routed the Spartans, . . . broke many of their ships in pieces, and took 30 from them. . . . His vanity after this signal success had, however, nearly destroyed him; for, being desirous of appearing to Tissaphernes as a conqueror instead of a fugitive, he hastened with a splendid retinue to visit him, when the crafty barbarian, thinking he should thus appease the suspicions of the Spartans, caused him to be arrested and confined in prison at Sardis. Hence, however, he found means to escape. . . . He sailed immediately for the Athenian camp to diffuse fresh animation among the soldiers, and induce them hastily to embark on an expedition against Mindarus and Pharnabazus, who were then with the residue of the Peloponnesian fleet at Cyzicum" (Cyzicus). Mindarus was defeated and killed and Pharnabazus driven to flight (B. C. 410). "Alcibiades pursued his victory, took Cyzicum without difficulty, and, staining his conquest with a cruelty with which he was not generally chargeable, put to death all the Peloponnesians whom he found within the city. A very short space of time elapsed after this brilliant success before Alcibiades found another occasion to deserve the gratitude of Athens," by defeating Pharnabazus, who had attacked the troops of Thrasyllus while they were wasting the territory of Abydos. He next reduced Chalcedon, bringing it back into the Athenian alliance, and once more defeating Pharnabazus, when the Persian satrap attempted to relieve the town. He also recovered Selymbria, and took Byzantium (which had revolted) after a severe fight (B. C. 408). "Alcibiades having raised the fortunes of his country from the lowest state of depression, not only by his brilliant victories, but his conciliating policy, prepared to return and enjoy the praise of his successes. He entered the Piræus [B. C. 407] in a galley adorned with the spoils of numerous victories, followed by a long line of ships which he had taken from the foe. . . . The whole city came down to the harbour to see and welcome him, and took no notice of Thrasybulus or Theramenes, his fellow-commanders. . . . An assembly of the people being convened, he addressed them in a gentle and modest speech, imputing his calamities not to their envy, but to some evil genius which pursued him. He exhorted them to take courage, bade them oppose their enemies with all the fresh inspiration of their zeal, and taught them to hope for happier days. Delighted with these assurances, they presented him with a crown of brass and gold, which never was before given to any but the Olympic victors, invested him with absolute control over their naval and military affairs, restored to him his confiscated wealth, and ordered the ministers of religion to absolve him from the

curses which they had denounced against him. Theodorus, however, the high-priest, evaded the last part of the decree, by alleging that he had never cast any imprecation on him, if he had committed no offence against the republic. The tablets on which the curses against him had been inscribed were taken to the shore, and thrown with eagerness into the sea. His next measure heightened, if possible, the brief lustre of his triumph. In consequence of the fortification of Decelea by the Lacedæmonians, and their having possession of the passes of the country, the procession to Eleusis, in honour of Athene, had been long unable to take its usual course, and being conducted by sea, had lost many of its solemn and august ceremonials. He now, therefore, offered to conduct the solemnity by land. . . . His proposal being gladly accepted, he placed sentinels on the hills; and, surrounding the consecrated band with his soldiers, conducted the whole to Eleusis and back to Athens, without the slightest opposition, or breach of that order and profound stillness which he had exhorted the troops to maintain. After this graceful act of homage to the religion he was once accused of destroying, he was regarded by the common people as something more than human; they looked on him as destined never to know defeat, and believed their triumph was certain so long as he was their commander. But, in the very height of his popularity, causes of a second exile were maturing. The great envied him in proportion to the people's confidence, and that confidence itself became the means of his ruin: for, as the people really thought the spell of invincibility was upon him, they were prepared to attribute the least pause in his career of glory to a treacherous design. He departed with a hundred vessels, manned under his inspection, with colleagues of his own choice, to reduce the Isle of Chios to obedience. At Andros he once more gained a victory over both the natives and the Spartans, who attempted to assist them. But, on his arrival at the chief scene of action, he found that he would be unable to keep the soldiers from deserting, unless he could raise money to pay them sums more nearly equal to those which the Lacedæmonians offered, than the pay he was able to bestow. He was compelled, therefore, to leave the fleet [at Notium] and go into Caria in order to obtain supplies. While absent on this occasion, he left Antiochus in the command. . . . To this officer Alcibiades gave express directions that he should refrain from coming to an engagement, whatever provocations he might receive. Anxious, however, to display his bravery, Antiochus took the first occasion to sail out in front of the Lacedæmonian fleet, which lay near Ephesus, under the command of Lysander, and attempt, by insults, to incite them to attack him. Lysander accordingly pursued him; the fleets came to the support of their respective admirals, and a general engagement ensued, in which Antiochus was slain, and the Athenians completely defeated. On receiving intelligence of this unhappy reverse, Alcibiades hastened to the fleet, and eager to repair the misfortune, offered battle to the Spartans; Lysander, however, did not choose to risk the loss of his advantage by accepting the challenge, and the Athenians were compelled to retire. This event, for which no blame really attached to Alcibiades, completed the ruin of his influence at Athens. It was believed that this,

the first instance of his failure, must have arisen from corruption, or, at least, from a want of inclination to serve his country. He was also accused of leaving the navy under the direction of those who had no other recommendation to the charge but having been sharers in his luxurious banquets, and of having wandered about to indulge in profligate excesses. . . . On these grounds, the people in his absence took from him his command, and confided it to other generals. As soon as he heard of this new act of ingratitude, he resolved not to return home, but withdrew into Thrace, and fortified three castles . . . near to Perinthus. Here, having collected a formidable band, as an independent captain, he made incursions on the territories of those of the Thracians who acknowledged no settled form of government, and acquired considerable spoils."—Sir T. N. Talfourd, *Early Hist. of Greece* (*Encyclop. Metropolitana*), ch. 11.

B. C. 406.—The Peloponnesian War: Battle of Arginusæ.—Trial and execution of the generals at Athens.—Alcibiades was succeeded by Conon and nine colleagues in command of the Athenian fleet on the coast of Asia Minor. The Athenians, soon afterwards, were driven into the harbor of Mitylene, on the island of Lesbos, by a superior Peloponnesian fleet, commanded by Callieratidas, and were blockaded there with small chance of escape. Conon contrived to send news of their desperate situation to Athens, and vigorous measures were promptly taken to rescue the fleet and to save Mitylene. Within thirty days, a fleet of 110 triremes was fitted out at the Piræus, and manned with a crew which took nearly the last able-bodied Athenian to make it complete. At Samos these were joined by 40 more triremes, making 150 in all, against which Callieratidas was able to bring out only 120 ships from Mitylene, when the relieving armament approached. The two fleets encountered one another near the islands of Arginusæ, off Cape Malæa, the southern promontory of Lesbos. In the battle that ensued, which was the greatest naval conflict of the Peloponnesian War, the Athenians were completely victorious; Callieratidas was drowned and no less than 77 of the Peloponnesian ships were destroyed, while the Athenians themselves lost 25. As the result of this battle Sparta again made overtures of peace, as she had done after the battle of Cyzicus, and Athens, led by her demagogues, again rejected them. But the Athenian demagogues and populace did worse. They summoned home the eight generals who had won the battle of Arginusæ, to answer to a charge of having neglected, after the victory, to pick up the floating bodies of the Athenian dead and to rescue the drowning from the wrecked ships of their fleet. Six of the accused generals came home to meet the charge; but two thought it prudent to go into voluntary exile. The six were brought to trial; the forms of legality were violated to their prejudice and all means were unscrupulously employed to work up the popular passion against them. One man, only, among the prytanes—senators, that is, of the tribe then presiding, and who were the presidents of the popular assembly—stood out, without flinching, against the lawless rage of his fellow citizens,

and refused, in calm scorn of all fierce threats against himself, to join in taking the unconstitutional vote. That one was the philosopher Socrates. The generals were condemned to death and received the fatal draught of hemlock from the same populace which pressed it a little later to the lips of the philosopher. "Thus died the son of Pericles and Aspasia [one of the generals, who bore his father's name], to whom his father had made a fatal gift in obtaining for him the Attic citizenship, and with him Erasimides, Thrasylus, Lysias, Aristocrates, and Diomedon. The last-named, the most innocent of all, who had wished that the whole fleet should immediately be employed in search of the wrecked, addressed the people once more; he expressed a wish that the decree dooming him to death might be beneficial to the state, and called upon his fellow-citizens to perform the thanksgiving offerings to the saving gods which they, the generals, had vowed on account of their victory. These words may have sunk deep into the hearts of many of his hearers; but their only effect has been to cast a yet brighter halo in the eyes of subsequent generations around the memory of these martyrs. Their innocence is best proved by the series of glaring infractions of law and morality which were needed to ensure their destruction, as well as by the shame and repugnance which seized upon the citizens, when they had recognized how fearfully they had been led astray by a traitorous faction."—E. Curtius, *Hist. of Greece*, bk. 4, ch. 5 (v. 3).—Mr. Grote attempts to uphold a view more unfavorable to the generals and less severe upon the Athenian people.—G. Grote, *Hist. of Greece*, pt. 2, ch. 64.

B. C. 405.—The Peloponnesian War: Decisive battle of Aigospotamoi.—Defeat of the Athenians.—After the execution of the generals, "no long time passed before the Athenians repented of their madness and their crimes: but, yielding still to their old besetting sin, they insisted, as they had done in the days of Miltiades and after the catastrophe at Syracuse, on throwing the blame not on themselves but on their advisers. This great crime began at once to produce its natural fruits. The people were losing confidence in their officers, who, in their turn, felt that no services to the state could secure them against illegal prosecutions and arbitrary penalties. Corruption was eating its way into the heart of the state, and treason was losing its ugliness in the eyes of many who thought themselves none the worse for dallying with it. . . . The Athenian fleet had fallen back upon Samos; and with this island as a base, the generals were occupying themselves with movements, not for crushing the enemy, but for obtaining money. . . . The Spartans, whether at home or on the Asiatic coast, were now well aware that one more battle would decide the issue of the war; for with another defeat the subsidies of the Persians would be withdrawn from them as from men doomed to failure, and perhaps be transferred to the Athenians. In the army and fleet the cry was raised that Lysandros was the only man equal to the emergency. Spartan custom could not appoint the same man twice to the office of admiral; but when Arakos was sent out with Lysandros [Lysander] as his secretary, it was understood that the latter was really the

man in power." In the summer of 405 B. C. Lysandros made a sudden movement from the southern Ægean to the Hellespont, and laid siege to the rich town of Lampsacus, on the Asiatic side. The Athenians followed him, but not promptly enough to save Lampsacus, which they found in his possession when they arrived. They took their station, thereupon, at the mouth of the little stream called the Aigospotamoi (the Goat's Stream), directly opposite to Lampsacus, and endeavored for four successive days to provoke Lysandros to fight. He refused, watching his opportunity for the surprise which he effected on the fifth day, when he dashed across the narrow channel and caught the Athenian ships unprepared, their crews mostly scattered on shore. One only, of the six Athenian generals, Conon, had foreseen danger and was alert. Conon, with twelve triremes, escaped. The remaining ships, about one hundred and seventy in number, were captured almost without the loss of a man on the Peloponnesian side. Of the crews, some three or four thousand Athenians were pursued on shore and taken prisoners, to be afterwards slaughtered in cold blood. Two of the incapable generals shared their fate. Of the other generals who escaped, some at least were believed to have been bribed by Lysandros to betray the fleet into his hands. The blow to Athens was deadly. She had no power of resistance left, and when her enemies closed around her, a little later, she starved within her walls until resistance seemed no longer heroic, and then gave herself up to their mercy.—G. W. Cox, *The Athenian Empire*, ch. 7.

B. C. 399-387.—Spartan war with Persia.—Greek confederacy against Sparta.—The Corinthian War.—Peace of Antalcidas.—The successful retreat of the Ten Thousand from Cunaxa, through the length of the Persian dominions (B. C. 401-400), and the account which they brought of the essential hollowness of the power of the Great King, produced an important change among the Greeks in their estimate of the Persian monarchy as an enemy to be feared. Sparta became ashamed of having abandoned the Greek cities of Asia Minor to their old oppressors, as she did after breaking the strength of their protector, Athens, in the Peloponnesian War. When, therefore, the Persians began to lay siege to the coast cities which resisted them, Sparta found spirit enough to interfere (B. C. 399) and sent over a small army, into which the surviving Cyreans were also enlisted. The only immediate result was a truce with the Persian satrap. But, meantime, the Athenian general Conon—he who escaped with a few triremes from Ægospotami and fled to Cyprus—had there established relations with the Persian court at Susa and had acquired a great influence, which he used to bring about the creation of a powerful Persian armament against Sparta, himself in command. The news of this armament, reach-

ing Sparta, provoked the latter to a more vigorous prosecution of the war in Asia Minor. King Agesilaus took the field in Ioula with a strong army and conducted two brilliant campaigns (B. C. 396-395), pointing the way, as it were, to the expedition of Alexander a couple of generations later. The most important victory won was on the Pactolus, not far from Sardis. But, in the midst of his successes, Agesilaus was called home by troubles which arose in Greece. Sparta, by her arrogance and oppressive policy, had already alienated all the Greek states which helped her to break down Athens in the Peloponnesian War. Persian agents, with money, had assisted her enemies to organize a league against her. Thebes and Athens, first, then Argos and Corinth, with several of the lesser states, became confederated in an agreement to overthrow her domination. In an attempt to crush Thebes, the Spartans were badly beaten at Haliartus (B. C. 395), where their famous Lysander, conqueror of Athens, was killed. Their power in central and northern Greece was virtually annihilated, and then followed a struggle with their leagued enemies for the control of the Corinthian isthmus, whence came the name of the Corinthian War. It was this situation of things at home which called back King Agesilaus from his campaigns in Asia Minor. He had scarcely crossed the Hellespont on his return, in July B. C. 394, before all his work in Asia was undone by an overwhelming naval victory achieved at Cnidus by the Athenian Conon, commanding the Persian-Phœnician fleet. With his veteran army, including the old Cyreans, now returning home after seven years of incredible adventures and hardships, he made his way through all enemies into Boeotia and fought a battle with the league at Coronea, in which he so far gained a victory that he held the field, although the fruits of it were doubtful. The Spartans on the isthmus had also just gained a considerable success near Corinth, on the banks of the Nemea. On the whole, the results of the war were in their favor, until Conon and the Persian satrap, Pharnabazus, came over with the victorious fleet from Cnidus and lent its aid to the league. The most important proceeding of Conon was to rebuild (B. C. 393), with the help of his Persian friends, the Long Walls of Athens, which the Peloponnesians had required to be thrown down eleven years before. By this means he restored to Athens her independence and secured for her a new career of commercial prosperity. During six years more the war was tediously prolonged, without important or decisive events, while Sparta intrigued to detach the Persian king from his Athenian allies and the latter intrigued to retain his friendship. In the end, all parties were exhausted—Sparta, perhaps, least so—and accepted a shameful peace which was practically dictated by the Persian and had the form of an edict or mandate from Susa, in the following terms: "The king, Artaxerxes, deems it just that the cities in Asia, with the islands of Clazomenae and Cyprus, should belong to himself; the rest of the Hellenic cities he thinks it just to leave independent, both small and great, with the exception of Lemnos, Imbros, and Scyros, which three are to belong to Athens as of yore. Should any of the parties concerned not accept this peace, I, Artaxerxes, will war against him or them with those who share my views. This will I do by land and by sea, with ships and with money." By this,

called the Peace of Antalcidas (B. C. 387) from the Lacedæmonian who was instrumental in bringing it about, the Ionian Greeks were once more abandoned to the Persian king and his satraps, while Sparta, which assumed to be the administrator and executor of the treaty, was confirmed in her supremacy over the other Grecian states.—Xenophon, *Hellenica* (tr. by Dakyns), bk. 3-5 (v. 2).

B. C. 385.—Destruction of Mantinea by the Spartans.—The Mantineians, having displayed unfriendliness to Sparta during the Corinthian War, were required by the latter, after the Peace of Antalcidas, to demolish their walls. On their refusal, king Agesipolis was sent to subdue them. By damming up the waters of the river Ophis he flooded the city and brought it to terms. "The city of Mantinea was now broken up, and the inhabitants were distributed again into the five constituent villages. Out of four-fifths of the population each man pulled down his house in the city, and rebuilt it in the village near to which his property lay. The remaining fifth continued to occupy Mantinea as a village. Each village was placed under oligarchical government and left unfortified."—G. Grote, *Hist. of Greece*, pt. 2, ch. 76 (v. 9).

ALSO IN: Xenophon, *Hellenica*, bk. 5, ch. 2.

B. C. 383.—The betrayal of Thebes to the Spartans.—When the Spartans sent their expedition against Olynthus, in 383 B. C., it marched in two divisions, the last of which, under Phœbidas, halted at Thebes, on the way, probably having secret orders to do so. "On reaching Thebes the troops encamped outside the city, round the gymnasium. Faction was rife within the city. The two polemarchs in office, Ismenias and Leontiades, were diametrically opposed, being the respective heads of antagonistic political clubs. Hence it was that, while Ismenias, ever inspired by hatred to the Lacedæmonians, would not come anywhere near the Spartan general, Leontiades, on the other hand, was assiduous in courting him; and when a sufficient intimacy was established between them, he made a proposal as follows: 'You have it in your power,' he said, addressing Phœbidas, 'this very day to confer supreme benefit on your country. Follow me with your hoplites, and I will introduce you into the citadel.'"—Xenophon, *Hellenica* (tr. by Dakyns), bk. 5, ch. 2 (v. 2).—"On the day of the Thesmophoria, a religious festival celebrated by the women apart from the men, during which the acropolis, or Kadmeia, was consecrated to their exclusive use, Phœbidas, affecting to have concluded his halt, put himself in march to proceed as if towards Thrace; seemingly rounding the walls of Thebes, but not going into it. The Senate was actually assembled in the portico of the agora, and the heat of a summer's noon had driven every one out of the streets, when Leontiades, stealing away from the Senate, hastened on horseback to overtake Phœbidas, caused him to face about, and conducted the Lacedæmonians straight up to the Kadmeia; the gates of which, as well as those of the town, were opened to his order as Polemarch. There were not only no citizens in the streets, but none even in the Kadmeia; no male person being permitted to be

present at the feminine Thesmophoria; so that Phœbidas and his army became possessed of the Kadmeia without the smallest opposition. . . . The news of the seizure of the Kadmeia and of the revolution at Thebes [was] . . . received at Sparta with the greatest surprise, as well as with a mixed feeling of shame and satisfaction. Everywhere throughout Greece, probably, it excited a greater sensation than any event since the battle of Ægospotami. Tried by the recognised public law of Greece, it was a flagitious iniquity, for which Sparta had not the shadow of a pretence. . . . It stood condemned by the indignant sentiment of all Greece, unwillingly testified even by the philo-Laconian Xenophon himself. But it was at the same time an immense accession to Spartan power. . . . Phœbidas might well claim to have struck for Sparta the most important blow since Ægospotami, relieving her from one of her two really formidable enemies."—G. Grote, *Hist. of Greece*, pt. 2, ch. 76.

ALSO IN: C. Thirlwall, *Hist. of Greece*, ch. 37 (v. 5).

B. C. 383-379.—Overthrow of the Olynthian confederacy by Sparta.—Among the Greek cities which were founded at an early day in that peninsula of Macedonia called Chalcidice, from Chaleis, in Eubœa, which colonized the greater number of them, Olynthus became the most important. It long maintained its independence against the Macedonian kings, on one hand, and against Athens, when Athens ruled the Ægean and its coasts, on the other. As it grew in power, it took under its protection the lesser towns of the peninsula and adjacent Macedonia, and formed a confederacy among them, which gradually extended to the larger cities and acquired a formidable character. But two of the Chalcidian cities watched this growth of Olynthus with jealousy and refused to be confederated with her. More than that, they joined the Macedonians in sending an embassy (B. C. 383) to Sparta, then all-powerful in Greece, after the Peace of Antalcidas, and invoked her intervention, to suppress the rising Olynthian confederacy. The response of Sparta was prompt, and although the Olynthians defended themselves with valor, inflicting one severe defeat upon the Lacedæmonian allies, they were forced at last (B. C. 379) to submit and the confederacy was dissolved. "By the peace of Autalkidas, Sparta had surrendered the Asiatic Greeks to Persia; by crushing the Olynthian confederacy, she virtually surrendered the Thracian Greeks to the Macedonian princes. . . . She gave the victory to Amyntas [king of Macedonia], and prepared the indispensable basis upon which his son Philip afterwards rose, to reduce not only Olynthus, but . . . the major part of the Grecian world, to one common level of subjection."—G. Grote, *Hist. of Greece*, pt. 2, ch. 76 (v. 9).

ALSO IN: E. A. Freeman, *Hist. of Federal Govt.*, ch. 4, sect. 3.

B. C. 379-371.—The liberation of Thebes and her rise to supremacy.—The humbling of Sparta.—For three years after the betrayal of the Acropolis, or Kadmeia, of Thebes to the Spartans, the city groaned under the tyranny of the oligarchical party of Leontiades, whom the Spartans supported. Several hundreds of the more prominent of the democratic and patriotic party found a refuge at Athens, and the deliverance of Thebes was effected at last, about December, B. C. 379,

by a daring enterprise on the part of some of these exiles. Their plans were concerted with friends at Thebes, especially with one Phyllidas, who had retained the confidence of the party in power, being secretary to the polemarchs. The leader of the undertaking was Melon. "After a certain interval Melon, accompanied by six of the trustiest comrades he could find among his fellow-exiles, set off for Thebes. They were armed with nothing but daggers, and first of all crept into the neighbourhood under cover of night. The whole of the next day they lay concealed in a desert place, and drew near to the city gates in the guise of labourers returning home with the latest comers from the fields. Having got safely within the city, they spent the whole of that night at the house of a man named Charon, and again the next day in the same fashion. Phyllidas meanwhile was busily taken up with the concerns of the polemarchs, who were to celebrate a feast of Aphrodite on going out of office. Amongst other things, the secretary was to take this opportunity of fulfilling an old undertaking, which was the introduction of certain women to the polemarchs. They were to be the most majestic and the most beautiful to be found in Thebes. . . . Supper was over, and, thanks to the zeal with which the master of the ceremonies responded to their mood, they were speedily intoxicated. To their oft-repeated orders to introduce their mistresses, he went out and fetched Melon and the rest, three of them dressed up as ladies and the rest as their attendant maidens. . . . It was preconcerted that as soon as they were seated they were to throw aside their veils and strike home. That is one version of the death of the polemarchs. According to another, Melon and his friends came in as revellers, and so despatched their victims."—Xenophon, *Hellenica* (tr. by Dakyns), bk. 5, ch. 4.—Having thus made way with the polemarchs, the conspirators surprised Leontiades in his own house and slew him. They then liberated and armed the prisoners whom they found in confinement and sent heralds through the city to proclaim the freedom of Thebes. A general rally of the citizens followed promptly. The party of the oppression was totally crushed and its prominent members put to death. The Spartan garrison in the Cadmea capitulated and was suffered to march out without molestation. The government of Thebes was reorganized on a more popular basis, and with a view to restoring the Boeotian League, in a perfected state, with Thebes for its head (see THEBES: B. C. 378). In the war with Sparta which followed, Athens was soon involved, and the Spartans were driven from all their footholds in the Boeotian towns. Then Athens and Thebes quarrelled afresh, and the Spartans, to take advantage of the isolation of the latter, invaded her territory once more. But Thebes, under the training of her great statesman and soldier, Epaminondas, had become strong enough to face her Lacedæmonian enemy without help, and in the momentous battle of Leuctra, fought July 6, B. C. 371, on a plain not far from Platææ, the domineering power of Sparta was broken forever. "It was the most important of all the battles ever fought between Greeks. On this day Thebes became an independent power in Greece, and a return of Spartan despotism was henceforth impossible for all times."—E. Curtius, *Hist. of Greece*, bk. 6, ch. 1 (v. 4).

B. C. 378-357.—The new Athenian Confederacy.—The Social War. See ATHENS: B. C. 378-357.

B. C. 371.—The Arcadian union.—Restoration of Mantinea.—Building of Megalopolis.—One of the first effects of the battle of Leuctra (B. C. 371), which ended the domination of Sparta in Greek affairs, was to emancipate the Arcadians and to work great changes among them. Mantinea, which the Spartans had destroyed, was rebuilt the same year. Then "the chiefs of the parties opposed to the Spartan interest in the principal Arcadian towns concerted a plan for securing the independence of Arcadia, and for raising it to a higher rank than it had hitherto held in the political system of Greece. With a territory more extensive than any other region of Peloponnesus, peopled by a hardy race, proud of its ancient origin and immemorial possession of the land, and of its peculiar religious traditions, Arcadia—the Greek Switzerland—had never possessed any weight in the affairs of the nation; the land only served as a thoroughfare for hostile armies, and sent forth its sons to recruit the forces of foreign powers. . . . The object was to unite the Arcadian people in one body, yet so as not to destroy the independence of the particular states; and with this view it was proposed to found a metropolis, to institute a national council which should be invested with supreme authority in foreign affairs, particularly with regard to peace and war, and to establish a military force for the protection of the public safety. . . . Within a few months after the battle of Leuctra, a meeting of Arcadians from all the principal towns was held to deliberate on the measure; and under its decree a body of colonists, collected from various quarters, proceeded to found a new city, which was to be the seat of the general government, and was called Megalepolis, or Megalopolis (the Great City). The site chosen was on the banks of the Hellisson, a small stream tributary to the Alpheus. . . . The city was designed on a very large scale, and the magnitude of the public buildings corresponded to its extent; the theatre was the most spacious in Greece. . . . The population was to be drawn . . . from a great number of the most ancient Arcadian towns. Pausanias gives a list of forty which were required to contribute to it. The greater part of them appear to have been entirely deserted by their inhabitants."—C. Thirlwall, *Hist. of Greece*, ch. 39 (v. 5).—"The patriotic enthusiasm, however, out of which Megalopolis had first arisen, gradually became enfeebled. The city never attained that preëminence or power which its founders contemplated, and which had caused the city to be laid out on a scale too large for the population actually inhabiting it."—G. Grote, *Hist. of Greece*, pt. 2, ch. 78.

B. C. 371-362.—Popular fury in Argos.—Arcadian union and disunion.—Restoration of Mantinea.—Expeditions of Epaminondas into Peloponnesus.—His attempts against Sparta.—His victory and death at Mantinea.—"In many of the Peloponnesian cities, when the power of Sparta seemed visibly on the wane, internal commotions had arisen, and much blood had been shed on both sides. But now Argos displayed the most fearful example of popular

fury recorded in Greek annals, red as they are with tales of civil bloodshed. The democratic populace detected a conspiracy among the oligarchs, and thirty of the chief citizens were at once put to death. The excitement of the people was inflamed by the harangues of demagogues, and the mob, arming itself with cudgels, commenced a general massacre. When 1,200 citizens had fallen, the popular orators interfered to check the atrocities, but met with the same fate; and, sated at length with bloodshed, the multitude stayed the deadly work. But where the pressure of Spartan interference had been heaviest and most constant, there the reaction was naturally most striking. The popular impulses which were at work in Arkadia [see above] found their first outlet in the rebuilding of Mantinea." But there was far from unanimity in the Arkadian national movement. "In Tegea . . . public opinion was divided. The city had been treated by Sparta with special consideration, and had for centuries been her faithful ally; hence the oligarchical government looked with disfavour upon the project of union. But the democratical party was powerful and unscrupulous; and, with the help of the Mantineians, they effected a revolution, in which many were killed, and 800 exiles fled to Sparta." The Spartans, under Agesilaos, avenged them by ravaging the plain in front of Mantinea. "This invasion of Arkadia is chiefly important for the pretext which it furnished for Theban intervention. The Mantineians applied for help at first to Athens, and, meeting with a refusal, went on to Thebes. For this request Epaminondas must have been thoroughly prepared beforehand, and he was soon on the march with a powerful army. . . . On his arrival in the Peloponnese [B. C. 370], he found that Agesilaos had already retired; and some of the Theban generals, considering the season of the year, wished at once to return." But Epaminondas was persuaded by the allies of Thebes to make an attempt upon Sparta itself. "In four divisions the invading host streamed into the land which, according to the proudest boast of its inhabitants, had felt no hostile tread for 600 years. At Sellasia, not ten miles distant from Sparta, the army reunited; and, having plundered and burnt the town, swept down into the valley of the Eurotas, and marched along the left bank till it reached the bridge opposite the city. Within Sparta itself, though a universal terror prevailed, one man rose equal to the emergency. While the men fainted in spirit as they thought how few they were, and how wide their unvalled city, . . . Agesilaos accepted, not without mistrust, the services of 6,000 helots, collected reinforcements, preserved order, suppressed conspiracy, stamped out mutiny, posted guards on every vantage-ground, and refused to be tempted to a battle by the taunts of foes or the clamours of over-eager friends. . . . After one unsuccessful cavalry skirmish, the Theban general, who, in a campaign undertaken on his sole responsibility, dared not risk the chance of defeat, decided to leave the 'wasps'-nest' untaken. He completed his work of devastation by ravaging the whole of southern Lakonia, . . . and then turned back into Arkadia to devote himself to the more permanent objects of his expedition." Messene was now rebuilt (see *MESSENIAN WAR, THE THIRD*), and "the descendants of the old Messenian stock

were gathered to form a new nation from Rhegion and Messene [Sicily], and from the parts of Lybia round Kyrene. . . . By thus restoring the Messenians to their ancient territory, Epaminondas deprived Sparta at one blow of nearly half her possessions. . . . At last Epaminondas had done his work; and, leaving Pammenes with a garrison in Tegea, he hastened to lead his soldiers home. At the Isthmus he found a hostile army from Athens," which had been persuaded to send succor to Sparta; but the Athenians did not care to give battle to the conquering Thebans, and the latter passed unopposed. On the arrival of Epaminondas at Thebes, "the leaders of a petty faction threatened to bring him and his colleagues to trial for retaining their command for four months beyond the legal term of office. But Epaminondas stood up in the assembly, and told his simple tale of victorious generalship and still more triumphant statesmanship; and the invidious cavils of snarling intriguers were at once forgotten." Sparta and Athens now formed an alliance, with the senseless agreement that command of the common forces "should be given alternately to each state for five days. . . . The first aim of the confederates was to occupy the passes of the isthmus," but Epaminondas forced a passage for his army, captured Sikyon, ravaged the territory of Epidaurus, and made a bold but unsuccessful attempt to surprise Corinth. Then, on the arrival of reinforcements to the Spartans from Syracuse, he drew back to Thebes (B. C. 368). For a time the Thebans were occupied with troubles in Thessaly, and their Arkadian protégés in Peloponnese were carrying on war against Sparta independently, with so much momentary success that they became over-confident and rash. They paid for their foolhardiness by a frightful defeat, which cost them 10,000 men, whilst no Spartan is said to have fallen; hence the fight was known in Sparta as the Tearless Battle. "This defeat probably caused little grief at Thebes, for it would prove to the arrogant Arkadians that they could not yet dispense with Theban aid; and it decided Epaminondas to make a third expedition into the Peloponnese." The result of his third expedition was the enrolment of a number of Achaian cities as Theban allies, which gave to Thebes "the control of the coast-line of the Corinthian gulf." But the broad and statesmanlike terms on which Epaminondas arranged these alliances were set aside by his narrow-minded fellow citizens, and a policy adopted by which Achaia was "converted from a lukewarm neutral into an enthusiastic supporter of Sparta. In this unsettled state of Greek politics the Thebans resolved to have recourse, like the Spartans before them, to the authority of the Great King. Existing treaties, for which they were not responsible, acknowledged his right to interfere in the internal affairs of Greece." Pelopidas and other envoys were accordingly sent to Susa (B. C. 366), where they procured from Artaxerxes a rescript "which recognised the independence of Messene and ordered the Athenians to dismantle their fleet." But the mandate of the Great King proved void of effect. "After this the confusion in Greece grew infinitely worse. An accident transferred the town of Oropos . . . from the hands of Athens to those of Thebes; and as the Peloponnesian allies of the Athenians refused to help them to regain it, they broke with them, and, in spite of

the efforts of Epameinondas, formed an alliance with Arkadia. . . . The Athenians made soon after a vain attempt to seize the friendly city of Corinth, and the disgusted Corinthians, together with the citizens of Epidauros and Phlious, . . . obtained the grudging consent of Sparta, and made a separate peace with Thebes. As soon as tranquillity was restored in one quarter, in another the flame of war would again burst forth." Its next outbreak (B. C. 365) was between Elis and Arkadia, the former being assisted by Sparta, and its principal event was a desperate battle fought for the possession of Olympia. The Arkadians held part of the city and acquired possession of the sacred treasures in the Olympian temple, which they determined to apply to the expenses of the war. "Raising the cry of sacrilege, the Mantineians, who were jealous both of Tegea and Megalopolis, at once broke loose and shut their gates." Soon afterwards, Mantinea separated herself wholly from the Arkadian confederacy and entered the Spartan alliance. This was among the causes which drew Epameinondas once more, and for the last time, into the Peloponnese (B. C. 363). "The armies of Greece were now gathering from all quarters for the great struggle. On the one side stood Sparta, Athens, Elis, Achaia, and a part of Arkadia, led by Mantinea; on the other side were ranged Boiotia [Thebes], Argos, Messenia, and the rest of Arkadia, while a few of the smaller states—as Phokis, Phlious, and Corinth—remained neutral." At the outset of his campaign, Epameinondas made a bold attempt, by a rapid night march, to surprise Sparta; but a traitorous warning had been given, the Spartans were barricaded and prepared for defence, and the undertaking failed. Then he marched quickly to Mantinea, and failed in his design there, likewise. A pitched battle was necessary to decide the issue, and it was fought on the plain between Mantinea and Tegea, on the 3d day of July, B. C. 362. The fine discipline of the Theban troops and the skilful tactics of Epameinondas had given the victory into his hands, when, "suddenly, the aspect of the battle changed. Except among the light troops on the extreme right, the advance was everywhere stayed. The Spartan hoplites were in full flight, but the conquerors did not stir a step in the pursuit. . . . The fury of the battle had instantly ceased. . . . Epameinondas had fallen wounded to death, and this was the result. . . . Every heart was broken, every arm paralysed. . . . Both sides claimed the victory in the battle, and erected the usual trophies, but the real advantage remained with the Thebans. . . . By the peace that ensued, the independence of Messenia was secured, and Megalopolis and the Pan-Arkadian constitution were preserved from destruction. The work of Epameinondas, though cut short, was thus not thrown away; and the power of Sparta was confined within the limits which he had assigned."—C. Sankey, *The Spartan and Theban Supremacies*, ch. 12.

B. C. 359-358.—First proceedings of Philip of Macedonia.—His acquisition of Amphipolis.—The famous Philip of Macedon succeeded to the Macedonian throne in 359 B. C., at the age of 23. In his youth he had been delivered to the Thebans as one of the hostages given upon the conclusion

of a treaty of peace in 368. "His residence at Thebes gave him some tincture of Grecian philosophy and literature; but the most important lesson which he learned at that city was the art of war, with all the improved tactics introduced by Epameinondas. Philip . . . displayed at the beginning of his reign his extraordinary energy and abilities. After defeating the Illyrians he established a standing army, in which discipline was preserved by the severest punishments. He introduced the far-famed Macedonian phalanx, which was 16 men deep, armed with long projecting spears. Philip's views were first turned towards the eastern frontiers of his dominions, where his interests clashed with those of the Athenians. A few years before the Athenians had made various unavailing attempts to obtain possession of Amphipolis, once the jewel of their empire, but which they had never recovered since its capture by Brasidas in the eighth year of the Peloponnesian war."—W. Smith, *Smaller Hist. of Greece*, ch. 19.—The importance of Amphipolis to the Athenians arose chiefly from its vicinity to "the vast forests which clothed the mountains that enclose the basin of the Strymon, and afforded an inexhaustible supply of ship-timber." For the same reason that the Athenians desired ardently to regain possession of Amphipolis their enemies were strong in the wish to keep it out of their hands. Moreover, as the Macedonian kingdom became well-knitted in the strong hands of the ambitious Philip, the city of "the Nine Ways" assumed importance to that rising power, and Philip resolved to possess it. It was at this point that his ambitions first came into conflict with Athens. But the Athenians were not aware of his aims until too late. He deceived them completely, in fact, by a bargain to give help in acquiring Amphipolis for them, and to receive help in gaining Pydna for himself. But when his preparations were complete, he suddenly laid siege to Amphipolis and made himself master of the city (B. C. 358), besides taking Pydna as well. At Athens, "Philip was henceforth viewed as an open enemy, and this was the beginning—though without any formal declaration—of a state of hostility between the two powers, which was called, from its origin, the Amphipolitan War."—C. Thirlwall, *Hist. of Greece*, ch. 43 (v. 5).

B. C. 357-336.—Advancement of Philip of Macedonia to supremacy.—The Sacred Wars and their consequences.—The fatal field of Chæronea.—Philip's preparations for the invasion of Asia.—His assassination.—A war between the Thebans and their neighbors, the Phocians, which broke out in 357 or 356 B. C., assumed great importance in Greek history and was called the Sacred War,—as two earlier contests, in which Delphi was concerned, had been likewise named. It is sometimes called the Ten Years Sacred War. Thebes, controlling the shadowy Amphictyonic Council, had brought a charge of sacrilege against the Phocians and procured a decree imposing upon them a heavy fine. The Phocians resisted the decree with unexpected energy, and, by a bold and sudden movement, gained possession of Delphi, where they destroyed the records of the Amphictyonic judgment against them. Having the vast accumulation of the sacred treasures of the Delphic temple in their hands, they did not scruple to appropriate them, and were able to maintain a powerful army of mercenaries, gathered from

every part of Greece, with which they ravaged the territories of Bœotia and Locris, and acquired control of the pass of Thermopylæ. In the midst of their successes they were called upon for help by the tyrant of Phere in Thessaly, then being attacked by Philip of Macedon (B. C. 353). The Phocians opposed Philip with such success, at first, that he retreated from Thessaly; but it was only to recruit and reanimate his army. Returning presently he overthrew the Phocian army, with great slaughter—Onomarchus, its leader, being slain—and made himself master of all Thessaly. Both Athens and Sparta were now alarmed by this rapid advance into Central Greece of the conquering arms of the ambitious Macedonian, and both sent forces to the help of the Phocians. The former was so energetic that an army of 5,000 Athenian foot-soldiers and 400 horse reached Thermopylæ (May 352 B.C.) before Philip had been able to push forward from Thessaly. When he did advance, proclaiming his purpose to rescue the Delphian temple from sacrilegious robbers, he was repulsed at the pass and drew back. It was the beginning of the struggle for Greek independence against Macedonian energy and ambition. A few months later Demosthenes delivered the first of his immortal orations, called afterwards *Philippics*, in which he strove to keep the already languishing energy of the Athenians alive, in unfaltering resistance to the designs of Philip. For six years there was a state of war between Philip and the Athenians with their allies, but the conquests of the former in Thrace and the Chalcidic peninsula were steadily pressed. At length (B. C. 346) Athens was treacherously persuaded into a treaty of peace with Philip (the Peace of Philocrates) which excluded the Phocians from its terms. No sooner had he thus isolated the latter than he marched quickly to Thermopylæ, secured possession of the pass and declared himself the supporter of Thebes. The Sacred War was ended, Delphi rescued, Phocis punished without mercy, and Greece was under the feet of a master. This being accomplished, the Peace of Philocrates was doubtfully maintained for about six years. Then quarrels broke out which led up to still another Sacred War, and which gave Philip another opportunity to trample on the liberties of Greece. Curiously, the provoking causes of this outbreak were an inheritance from that more ancient Sacred War which brought ruin upon the town of Cirrha and a lasting curse upon its soil. The Locrians of Amphissa, dwelling near to the accursed territory, had ventured in the course of years to encroach upon it with brick-kilns, and to make use of its harbor. At a meeting of the Amphietyonic Council, in the spring of B. C. 339, this violation of the Sacred Law was brought to notice, by way of retaliation for some offence which the deputies of Amphissa had given to those of Athens. Hostilities ensued between the citizens of Delphi, pushed on by the Amphietyons, on one side, and the Amphiassians on the other. The influence of Philip in the Amphietyonic Council was controlling, and his partisans had no difficulty in summoning him to act for the federation in settling this portentous affair. He marched into Bœotia, took possession of the strong city of Elatea, and very soon made it manifest that he contemplated something more than mere dealing with the refractory trespassers of Amphissa. Athens watched his movements with terror,

and even Thebes, his former ally, took alarm. Through the exertions of Demosthenes, Thebes and Athens, once more, but too late, gave up their ancient enmity and united their strength and resources in a firm league. Megara, Corinth and other states were joined to them and common cause was made with the Locrians of Amphissa. These movements consumed a winter, and war opened in the spring. Philip gained successes from the beginning. He took Amphissa by surprise and carried Naupactus by storm. But it was not until August—the first day of August, B. C. 338—that the two combatants came together in force. This occurred in the Bœotian valley of the Cephissus, near the town of Chæroneia, which gave its name to the battle. The Sacred Band of Thebes and the hoplites of Athens, with their allies, fought obstinately and well; but they were no match for the veterans of the Macedonian phalanx and most of them perished on the field. It was the last struggle for Grecian independence. Henceforth, practically at least, Hellas was swallowed up in Macedonia. We can see very plainly that Philip's "conduct towards Athens after the victory, under the appearance of generosity, was extremely prudent. His object was, to separate the Thebans from the Athenians, and he at once advanced against the former. The Athenian prisoners he sent home, free and clothed, accompanied by Antipater; he ordered the dead bodies to be burned, and their ashes to be conveyed to Athens, while the Thebans had to purchase their dead from him. He then entered Thebes, which he seems to have taken without any resistance, placed a Macedonian garrison in the Cadmea, and, with the same policy which Sparta had followed at Athens after the Peloponnesian war, he established an oligarchy of 300 of his partizans, who were for the most part returned exiles, and who now, under the protection of the garrison in the Cadmea, ruled like tyrants, and raged in a fearful manner. . . . Philip accepted all the terms which were agreeable to the Athenians; no investigations were to be instituted against his enemies, and none of them was to be sent into exile. Athens was not only to remain a perfectly sovereign city, but retain Lemnos, Imbros, and Seyros, nay even Samos and Chersonnesus, though he might have taken the latter without any difficulty, and though the Athenians had most cleruchiae in Samos. Thus he bought over the Athenians through this peace, against which Demosthenes and others, who saw farther, could not venture to protest, because Philip offered more than they could give him in return. . . . The only thing which the Athenians conceded to Philip, was, that they concluded a *symmachia* with him, and conferred upon him the supreme command in the Persian war. For with great cunning Philip summoned an assembly of the Greeks whom he called his allies, to Corinth, to deliberate upon the war against Persia. The war of revenge against the Persians had already become a popular idea in Greece. . . . Philip now entered Peloponnesus with his whole army, and went to the diet at Corinth, where the Greek deputies received his orders. In Peloponnesus he acted as mediator, for he was invited as such by the Arcadians, Messenians, and Argives, to decide their disputes with Lacedæmon, and they demanded that he should restore to them their ancient territories. The Arcadians had

formerly possessed many places on the Eurotas, and the Messenians were still very far from having recovered all their ancient territories. He accordingly fixed the boundaries, and greatly diminished the extent of Laconia. . . . The Spartans, on that occasion, behaved in a dignified manner; they were the only ones who refused to acknowledge Philip as generalissimo against Persia. . . . Even the ancients regarded the day of Chaeronea as the death-day of Greece; every principle of life was cut off; the Greeks, indeed, continued to exist, but in spirit, and politically, they were dead. . . . Philip was now at the height of his power. Byzantium, and the other allied cities, had submitted to the conqueror, when he sent his army against them, and he was already trying to establish himself in Asia. 'A detachment of troops, under Attalus, had been sent across, to keep open the road for the great expedition, and had encamped on mount Ida.' Philip was thus enabled to commence his passage across the Hellespont whenever he pleased. But the close of his career was already at hand." He was assassinated in August, B. C. 336, by a certain Pausanias, at the instigation, it is said, of Olympias, one of Philip's several wives—and the mother of his famous son Alexander—whom he had repudiated to please a younger bride. "Philip was unquestionably an uncommon and extraordinary man, and the opinion of several among the ancients, that by the foundation of the Macedonian state he did something far greater than Alexander by the application of the powers he inherited, is quite correct. . . . When we regard him as the creator of his state, by uniting the most different nations, Macedonians and Greeks; . . . when we reflect what a man he must have been, from whom proceeded the impulse to train such great generals, . . . to whom Alexander, it must be observed, did not add one, for all Alexander's generals proceeded from the school of Philip, and there is not one whom Alexander did not inherit from Philip;—when we perceive the skill with which he gained over nations and states, . . . we cannot but acknowledge that he was an extraordinary man."—B. G. Niebuhr, *Lects. on Ancient Hist.*, lects. 69 and 66 (v. 2).

B. C. 351-348.—The Olynthian War.—Destruction of Olynthus by Philip of Macedonia.—After the overthrow of Spartan domination in Greece, Olynthus recovered its independence and regained, during the second quarter of the fourth century B. C., a considerable degree of prosperity and power. It was even helped in its rise by the cunning, dangerous hand of Philip of Macedonia, who secured many and great advantages in his treacherous diplomacy by playing the mutual jealousies of Athens and Olynthus against one another. The Olynthian Confederacy, formed anew, just served its purpose as a counterpoise to the Athenian Confederacy, until Philip had no more need of that service. He was the friend and ally of the former until he had secured Amphipolis, Methone, and other necessary positions in Macedonia and Thrace. Then the mask began to slip and Olynthus (B. C. 351) got glimpses of the true character of her subtle neighbor. Too late, she made overtures to Athens, and Athens, too late, saw the vital importance of a

league of friendship between the two Greek confederacies, against the half Hellenic, half barbaric Macedonian kingdom. Three of the great speeches of Demosthenes—the "Olynthiac orations"—were made upon this theme, and the orator succeeded for the first time in persuading his degenerated countrymen to act upon his clear view of the situation. Athens and Olynthus were joined in a defensive league and Athenian ships and men were sent to the Chalcidian peninsula,—too late. Partly by the force of his arms and partly by the power of his gold, buying traitors, Philip took Olynthus (B. C. 348) and all the thirty-two lesser towns that were federated with her. He took them and he destroyed them most brutally. "The haughty city of Olynthus vanished from the face of the earth, and together with it thirty-two towns inhabited by Greeks and flourishing as commercial communities. . . . The lot of those who saved life and liberty was happy in comparison with the fate of those who, like the majority of the Olynthians, fell into the hands of the conqueror and were sold into slavery, while their possessions were burnt to ashes or flung as booty to the mercenaries. . . . The mines continued to be worked for the royal treasury; with this exception the whole of Chalcidice became a desert."—E. Curtius, *Hist. of Greece*, bk. 7, ch. 3 (v. 5).

B. C. 340.—Siege of Byzantium by Philip of Macedonia.—The enmity between Athens and Byzantium yielded in 340 B. C. to their common fear of Philip of Macedonia, and the exertions of Demosthenes brought about an alliance of the two cities, in which Perinthus, the near neighbor of Byzantium, was also joined. Philip, in wrath, proceeded with a fleet and army against both cities, laying siege, first to Perinthus and afterwards to Byzantium, but without success in either case. He was compelled to withdraw, after wasting several months in the fruitless undertaking. It was one of the few failures of the able Macedonian.—G. Grote, *Hist. of Greece*, pt. 2, ch. 90 (v. 11).

B. C. 336-335.—Northern campaign of Alexander of Macedonia.—Revolt at Thebes.—Destruction of the city.—"Alexander . . . took up and continued the political and military schemes which his father had begun. We first make acquaintance with him and his army during his campaign against the tribes on the northern frontier of Macedonia. This campaign he carried out with energy equal to that of Philip, and with more success (spring of 335 B. C.). The distinctive feature of the war was that the Macedonian phalanx, the organization and equipment of which were adapted from Grecian models, everywhere won and maintained the upper hand. . . . Even at this epoch Byzantium was rising into importance. That city had, owing to its hostility with Persia, deserted the side of the Greeks for that of the Macedonians. It was from Byzantium that Alexander summoned trimen to help him against the island in the Danube on which the king of the Triballi had taken refuge. . . . The great successes of Alexander induced all the neighboring nationalities to accept the proposals of friendship which he made to them. . . . In Greece false reports concerning the progress of events in the north had raised to

fever heat the general ferment which naturally existed. Alexander relied upon the resolutions of the League of the Public Peace [formed by the Congress at Corinth], which had recognized his father and afterwards himself as its head. But he was now opposed by all those who were unable to forget their former condition, and who preferred the alliance with Persia which had left them independent, to the league with Makedonia which robbed them of their autonomy. . . . Thebes took the lead of the malcontents, and set about ridding herself of the garrison which Philip had placed in the Cadmeia. She thus became the centre of the whole Hellenic opposition. The enemies of Makedon, who had been exiled from every city, assembled in Thebes. . . . The same party was stirring in Lakedaemon, in Arcadia, in Aetolia, and, above all, at Athens. From Athens the Thebans were supplied, through the mediation of Demosthenes, and doubtless by means of Persian gold, with arms, of which they were likely to stand in need. . . . Alexander had no sooner settled with his enemies in the north than he turned to Hellas. So rapid was his movement that he found the pass of Thermopylae still open, and, long before he was expected, appeared before the walls of Thebes." The fate of the city was decided by a battle in which the Makedonians were overwhelmingly victorious. "In the market-place, in the streets, in the very houses, there ensued a hideous massacre. . . . The victors were, however, not satisfied with the slaughter. Alexander summoned a meeting of his League, by which the complete destruction of Thebes was decreed, and this destruction was actually carried out (October, 335 B. C.). [At the same time Plataea, which Thebes had destroyed, was ordered to be rebuilt.] In Grecian history it was no unheard-of event that the members of the defeated nation should be sold into slavery, and so it happened on this occasion. The sale of the slaves supplied Alexander with a sum of money which was no inconsiderable addition to his military chest. But his main object was to strike terror, and this was spread through Greece by the ruthless destruction of the city of Oedipus, of Pindar, and of Epameinondas. . . . Deep and universal horror fell upon the Greeks. . . . The close connection that existed at this moment between Grecian and Persian affairs forbade him to lose a moment in turning his arms towards Asia. . . . A war between Alexander and Persia was inevitable, not only on account of the relation of the Greeks to Makedon, whose yoke they were very loth to bear, but on account of their relation to Persia, on whose support they leaned. . . . The career which Philip had begun, and in which Alexander was now proceeding, led of necessity to a struggle with the power that held sway in Asia Minor. Until that power were defeated, the Makedonian kingdom could not be regarded as firmly established."—L. von Ranke, *Universal History: The Oldest Hist. Group of Nations and the Greeks*, ch. 10, pt. 2.

B. C. 334-323.—Asiatic conquests of Alexander the Great. See MACEDONIA: B. C. 334-330; and 330-323.

B. C. 323-322.—Attempt to break the Macedonian yoke.—The Lamian War.—Subjugation of Athens.—Suppression of democracy.—Expulsion of poor citizens.—Death of

Demosthenes.—On the death of Alexander the Great, B. C. 323, a party at Athens which still hoped for freedom in Greece set on foot a vigorous movement designed to break the Macedonian yoke. A league was formed in which many cities joined—a larger assemblage of Hellenic states, says Mr. Grote, than that which resisted Xerxes in 480 B. C. A powerful army of Greek citizens and mercenaries was formed and placed under the command of a capable Athenian, Leosthenes, who led it into Thessaly, to meet the Macedonian general Antipater, who now ruled Greece (see MACEDONIA: B. C. 323-316). The latter was defeated in a battle which ensued, and was driven into the fortified Thessalian town of Lamia, where he was besieged. Unfortunately, Leosthenes was killed during the progress of the siege, and a long interval occurred before a new commander could be agreed on. This gave Antipater time to obtain succor from Asia. A Macedonian army, under Leonnatus, crossed the Hellespont, and the besiegers of Lamia were forced to break up their camp in order to meet it. They did so with success; Leonnatus was slain and his army driven back. But meantime Antipater escaped from Lamia, joined the defeated troops and retreated into Macedonia. The war thus begun, and which took the name of the Lamian War, was continued, not unfavorably to the confederates, on the whole, until the following summer—August, 322 B. C.—when it was ended by a battle fought on the plain of Krannon, in Thessaly. Antipater, who had been joined by Kraterus, from Asia, was the victor, and Athens with all her allies submitted to the terms which he dictated. He established a Macedonian garrison in Munychia, and not only suppressed the democratic constitution of Athens, but ordered all the poorer citizens—all who possessed less than 2,000 drachmae's worth of property, being 12,000 out of the 21,000 who then possessed the Athenian franchise—to be driven from the city; thus leaving a selected citizenship of 9,000 of the richer and more manageable men. The banished or deported 12,000 were scattered in Thrace, Illyria, Italy and even in northern Africa. The leaders of the anti-Macedonian rising were pursued with unrelenting animosity. Demosthenes, the great orator, who had been conspicuous among them, was dragged from a temple at Kalauria, to which he had fled, and took poison to escape the worse death which probably awaited him.—G. Grote *Hist. of Greece*, pt. 2, ch. 95 (p. 12).

B. C. 323-301.—Wars of the Diadochi or Successors of Alexander. See MACEDONIA: B. C. 323-316; 315-310; and 310-301.

B. C. 321-312.—The contest for Athens and Peloponnesus, between Cassander and Polyperchon.—Execution of Phocion.—Restoration of Thebes.—"Antipater, after the termination of the Lamian war, passed over to Asia and took part in the affairs there [see MACEDONIA: A. D. 323-316]. Being appointed guardian to the Kings, as the children and relatives of Alexander were called, he returned to Macedonia, leading them with him. . . . Antipater died (Ol. 115, 3) shortly after his return to Macedonia. He directed that Polyperchon, his ancient mate in arms, should succeed him in his office, while to his son Cassander he left only the second place. But Cassander, an ambitious youth, looked upon his father's authority as his inheritance; and

relying on the aid of the aristocratic party in the Grecian states, of Ptolemy, who ruled in Egypt, and of Antigonus, the most powerful general in Asia, he resolved to dispute it with Polysperchon. Under pretext of going a-hunting, he escaped out of Macedonia, and passed over to Asia to concert matters with Antigonus. Polysperchon, seeing war inevitable, resolved to detach Greece, if possible, from Cassander. Knowing that the oligarchies established in the different states by Antipater would be likely to espouse the cause of his son, he issued a pompous edict, in the name of the Kings, restoring the democracies. . . . At Athens (Ol. 115, 4) [B. C. 317], Nicanor, who commanded in the Munychia, finding that the people were inclined toward Polysperchon, secretly collected troops, and seized the Piræus. The people sent to him Phocion, Conon the son of Timotheüs, and Clearchus, men of distinction, and his friends; but to no purpose. A letter also came to him from Olympias, Alexander's mother, whom Polysperchon had recalled from Epeirus, and given the charge of her infant grandson, ordering him to surrender both the Munychia and the Piræus; but to as little effect. Finally, Polysperchon's son Alexander entered Attica with an army, and encamped before the Piræus. Phocion and other chiefs of the aristocracy went to Alexander, and advised him not to give these places up to the people, but to hold them himself till the contest with Cassander should be terminated. They feared, it is evident, for their own safety, and not without reason; for the people, ferocious with the recovery of power, soon after held an assembly, in which they deposed all the former magistrates, appointed the most furious democrats in their room, and passed sentences of death, banishment, and confiscation of goods on those who had governed under the oligarchy. Phocion and his friends fled to Alexander, who received them kindly, and sent them with letters in their favor to his father, who was now in Phocis. The Athenians also despatched an embassy, and, yielding to motives of interest, Polysperchon sent his suppliants prisoners to Athens, to stand a trial for their lives before the tribunal of an anarchic mob. . . . The prisoners were condemned and led off to prison, followed by the tears of their friends and the triumphant execrations of their mean-spirited enemies. They drank the fatal hemlock-juice, and their bodies were cast unburied beyond the confines of Attica. Four days after the death of Phocion, Cassander arrived at the Piræus with 35 ships, carrying 4,000 men, given him by Antigonus. Polysperchon immediately entered Attica with 20,000 Macedonian foot and 4,000 of those of the allies, 1,000 horse, and 65 elephants, which he had brought from Asia, and encamped near the Piræus. But as the siege was likely to be tedious, and sufficient provisions for so large an army could not be had, he left a force such as the country could support with his son Alexander, and passed with the remainder into Peloponnesus, to force the Megalopolitans to submit to the Kings; for they alone sided with Cassander, all the rest having obeyed the directions to put to death or banish his adherents. The whole serviceable population of Megalopolis, slaves included, amounted to 15,000 men; and under the directions of one Damis, who had served in Asia under Alexander, they prepared for a vigorous defence. Polysperchon sat down before the town, and his

miners in a short time succeeded in throwing down three towers and a part of the wall. He attempted a storm, but was obliged to draw off his men, after an obstinate conflict. . . . The Athenians meantime saw themselves excluded from the sea, and from all their sources of profit and enjoyment, while little aid was to be expected from Polysperchon, who had been forced to raise the siege of Megalopolis, and whose fleet had just now been destroyed by Antigonus in the Hellespont. A citizen of some consideration ventured at length to propose in the assembly an arrangement with Cassander. The ordinary tumult at first was raised, but the sense of interest finally prevailed. Peace was procured, on the conditions of the Munychia remaining in Cassander's hands till the end of the present contest; political privileges being restricted to those possessed of ten minas and upwards of property, and a person appointed by Cassander being at the head of the government. The person selected for this office was Demetrius of Phaleron, a distinguished Athenian citizen; and under his mild and equitable rule the people were far happier than they could have been under a democracy, for which they had proved themselves no longer fit. Cassander then passed over into Peloponnesus, and laid siege to Tégæa. While here, he heard that Olympias had put to death several of his friends in Macedonia; among the rest, Philip Aridæus and his wife Eurydice, members of the royal family. He at once (Ol. 116, 1) [B. C. 316] set out for Macedonia; and, as the pass of Pylæ was occupied by the Ætolians, he embarked his troops in Locris, and landed them in Thessaly. He besieged Olympias in Pydna, forced her to surrender, and put her to death. Macedonia submitted to him, and he then set forth for Peloponnesus, where Polysperchon's son Alexander was at the head of an army. He forced a passage through Pylæ, and coming into Bœotia, announced his intention of restoring Thebes, which had now lain desolate for twenty years. The scattered Thebans were collected; the towns of Bœotia and other parts of Greece (Athens in particular), and even of Italy and Sicily, aided to raise the walls and to supply the wants of the returning exiles, and Thebes was once more numbered among the cities of Greece. As Alexander guarded the Isthmus, Cassander passed to Megara, where he embarked his troops and elephants, and crossed over to Epidaurus. He made Argos and Messene come over to his side, and then returned to Macedonia. In the conflict of interests which prevailed in this anarchic period, Antigonus was ere long among the enemies of Cassander. He sent one of his generals to Laconia, who, having obtained permission from the Spartans to recruit in Peloponnesus, raised 8,000 men. The command in Peloponnesus was given to Polysperchon, whose son Alexander was summoned over to Asia to accuse Cassander of treason before the assembly of the Macedonian soldiers. Cassander was proclaimed a public enemy unless he submitted to Antigonus; at the same time the Greeks were declared independent, Antigonus hoping thus to gain them over to his side. He then sent Alexander back with 500 talents; and when Ptolemæus of Egypt heard what Antigonus had done, he also hastened to declare the independence of the Greeks; for all the contending generals were anxious to stand well with the people of Greece, from which country, exclusive

of other advantages, they drew their best soldiers. . . . Antigonus, to show the Greeks that he was in earnest in his promise to restore them to independence, sent one of his generals, named Telesphorus, with a fleet and army to Peloponnesus, who expelled Cassander's garrisons from most of the towns. The following year (Ol. 117, 1) [B. C. 312] he sent an officer, named Ptolemæus, with another fleet and army to Greece. Ptolemæus landed in Bœotia, and being joined by 2,200 foot, and 1,300 horse of the Bœotians, he passed over to Eubœa; where having expelled the Macedonian garrison from Chalcis (the only town there which Cassander held), he left it without any foreign garrison, as a proof that Antigonus meant fairly. He then took Orôpus, and gave it to the Bœotians; he entered Attica, and the people forced Demetrius Phalerus to make a truce with him, and to send to Antigonus to treat of an alliance. Ptolemæus returned to Bœotia, expelled the garrison from the Cadmeia, and liberated Thebes."—T. Kieghtley, *Hist. of Greece*, pt. 3, ch. 5.

B. C. 307-197.—Demetrius and the Antigonids.—In the spring of the year 307 B. C. Athens was surprised by an expedition sent from Ephesus by Antigonus, under his adventurous son Demetrius, surnamed Poliorcetes (see MACEDONIA: B. C. 310-301). The city had then been for ten years subject to Cassander, the ruling chief in Macedonia for the time, and appears to have been mildly governed by Cassander's lieutenant, Demetrius the Phalerian. The coming of the other Demetrius offered nothing to the Athenians but a change of masters, but they welcomed him with extravagant demonstrations. Their degeneracy was shown in proceedings of Asiatic servility. They deified Demetrius and his father Antigonus, erected altars to them and appointed ministering priests. After some months spent at Athens in the enjoyment of these adulations, Demetrius returned to Asia, to take part in the war which Antigonus was waging with Ptolemy of Egypt and Lysimachus of Thrace, two of his former partners in the partition of the empire of Alexander. He was absent three years, and then returned, at the call of the Athenians, to save them from falling again into the hands of Cassander. He now made Athens his capital, as it were, for something more than a year, while he acquired control of Corinth, Argos, Sicyon, Chalcis in Eubœa and other important places, greatly reducing the dominion of the Macedonian, Cassander. His treatment at Athens, during this period, was marked by the same impious and disgraceful servility as before. He was called the guest of the goddess Athene and lodged in the Parthenon, which he polluted with intolerable debaucheries. But in the summer of 301 B. C. this clever adventurer was summoned again to Asia, to aid his father in the last great struggle, which decided the partition of the empire of Alexander between his self-constituted heirs. At the battle of Ipsus (see MACEDONIA: B. C. 310-301), Antigonus perished and Demetrius was stripped of the kingdom he expected to inherit. He turned to Athens for consolation, and the fickle city refused to admit him within her walls. But after some period of wanderings and adventures the unconquerable prince got together a force with which he compelled the Athenians to receive him, on more

definite terms of submission on their part and of mastery on his. Moreover, he established his rule in the greater part of Peloponnesus, and finally, on the death of Cassander (B. C. 297), he acquired the crown of Macedonia. Not satisfied with what fortune had thus given him, he attempted to recover the Asiatic kingdom of his father, and died, B. C. 283, a captive in the hands of the Syrian monarch, Seleucus. His Macedonian kingdom had meantime been seized by Pyrrhus of Epirus; but it was ultimately recovered by the eldest legitimate son of Demetrius, called Antigonus Gonatus. From that time, for a century, until the Romans came, not only Macedonia, but Greece at large, Athens included, was ruled or dominated by this king and his descendants, known as the Antigonid kings.—C. Thirlwall, *Hist. of Greece*, ch. 59-60 (c. 7-8).

B. C. 3d Century.—The Hellenistic world.—As the result of the conquests of Alexander and the wars of his successors, there were, in the third century before Christ, three great Hellenistic kingdoms, "Macedonia, Egypt, Syria, which lasted, each under its own dynasty, till Rome swallowed them up. The first of these, which was the poorest, and the smallest, but historically the most important, included the ancestral possessions of Philip and Alexander—Macedonia, most of Thrace, Thessaly, the mountainous centre of the peninsula, as well as a protectorate more or less definite and absolute over Greece proper, the Cyclades, and certain tracts of Caria. . . . Next came Egypt, including Cyrene and Cyprus, and a general protectorate over the sea-coast cities of Asia Minor up to the Black Sea, together with claims often asserted with success on Syria, and on the coast lands of Southern Asia Minor. . . . Thirdly came what was now called Syria, on account of the policy of the house of Seleucus, who built there its capital, and determined to make the Greek or Hellenistic end of its vast dominions its political centre of gravity. The Kingdom of Syria owned the south and south-east of Asia Minor, Syria, and generally Palestine, Mesopotamia, and the mountain provinces adjoining it on the East, with vague claims further east when there was no king like Sandracottus to hold India and the Punjab with a strong hand. There was still a large element of Hellenism in these remote parts. The kingdom of Bactria was ruled by a dynasty of kings with Greek names—Euthydemus is the chief—who coined in Greek style, and must therefore have regarded themselves as successors to Alexander. There are many exceptions and limitations to this general description, and many secondary and semi-independent kingdoms, which make the picture of Hellenism infinitely various and complicated. There was, in fact, a chain of independent kingdoms reaching from Media to Sparta, all of which asserted their complete freedom, and generally attained it by balancing the great powers one against the other. Here they are in their order. Atropatene was the kingdom in the northern and western parts

of the province of Media, by Atropates, the satrap of Alexander, who claimed descent from the seven Persian chiefs who put Darius I. on the throne. Next came Armenia, hardly conquered by Alexander, and now established under a dynasty of its own. Then Cappadocia, the land in the heart of Asia Minor, where it narrows between Cilicia and Pontus, ruled by sovereigns also claiming royal Persian descent. . . . Fourthly, Pontus, under its equally Persian dynast Mithridates—a kingdom which makes a great figure in Eastern history under the later Roman Republic. There was moreover a dynast of Bithynia, set up and supported by the robber state of the Celtic Galatians, which had just been founded, and was a source of strength and of danger to all its neighbours. Then Pergamum, just being founded and strengthened by the first Attalid, Philetærus, an officer of Lysimachus, and presently to become one of the leading exponents of Hellenism. . . . Almost all these second-rate states (and with them the free Greek cities of Heracleia, Cyzicus, Byzantium, &c.) were fragments of the shattered kingdom of Lysimachus. . . . We have taken no account of a very peculiar feature extending all through even the Greek kingdoms, especially that of the Selucids—the number of large Hellenistic cities founded as special centres of culture, or points of defence, and organized as such with a certain local independence. These cities, most of which we only know by name, were the real backbone of Hellenism in the world. Alexander had founded seventy of them, all called by his name. Many were upon great trade lines, like the Alexandria which still exists. Many were intended as garrison towns in the centre of remote provinces, like Candahar—a corruption of Iskanderieh, Iskender being the Oriental form for Alexander. Some were mere outposts, where Macedonian soldiers were forced to settle, and guard the frontiers against the barbarians, like the Alexandria on the laxartes. . . . As regards Seleucus . . . we have a remarkable statement from Appian that he founded cities through the length and breadth of his kingdom, viz., sixteen Antiochs called after his father, five Laodiceas after his mother, nine Seleucias after himself, three Apameias and one Stratoniceia after his wives. . . . All through Syria and Upper Asia there are many towns bearing Greek and Macedonian names—Berea, Edessa, Perinthos, Achæa, Pella, &c. The number of these, which have been enumerated in a special catalogue by Droysen, the learned historian of Hellenism, is enormous, and the first question which arises in our mind is this: where were Greek-speaking people found to fill them? It is indeed true that Greece proper about this time became depopulated, and that it never has recovered from this decay. . . . Yet . . . the whole population of Greece would never have sufficed for one tithe of the cities—the great cities—founded all over Asia by the Diadochi. We are therefore driven to the conclusion that but a small fraction, the soldiers and officials of the new cities, were Greeks—Macedonians, when founded by Alexander himself—generally broken down veterans, mutinous and discontented troops, and camp followers. To these were associated people from the surrounding country, it being Alexander's fixed idea to discountenance sporadic country life in villages and

encourage town communities. The towns accordingly received considerable privileges. . . . The Greek language and political habits were thus the one bond of union among them, and the extraordinary colonizing genius of the Greek once more proved itself."—J. P. Mahaffy, *The Story of Alexander's Empire*, ch. 10.—See, also, HELLENIC GENIUS AND INFLUENCE.

B. C. 280-146.—The Achaian League.—Its rise and fall.—Destruction of Sparta.—Supremacy of Rome.—The Achaian League, which bore a leading part in the affairs of Greece during the last half of the third and first half of the second century before Christ, was in some sense the revival of a more ancient confederacy among the cities of Achaia in Peloponnesus. The older League, however, was confined to twelve cities of Achaia and had little weight, apparently, in general Hellenic politics. The revived League grew beyond the territorial boundaries which were indicated by its name, and embraced the larger part of Peloponnesus. It began about 280 B. C. by the forming of a union between the two Achaian cities of Patrai and Dyme. One by one their neighbors joined them, until ten cities were confederated and acting as one. "The first years of the growth of the Achaian League are contemporary with the invasion of Macedonia and Greece by the Gauls and with the wars between Pyrrhos and Antigonos Gonatas [see MACEDONIA, &c.; B. C. 277-244]. Pyrrhos, for a moment, expelled Antigonos from the Macedonian throne, which Antigonos recovered while Pyrrhos was warring in Peloponnesos. By the time that Pyrrhos was dead, and Antigonos again firmly fixed in Macedonia, the League had grown up to maturity as far as regarded the cities of the old Achaia. . . . Thus far, then, circumstances had favoured the quiet and peaceful growth of the League." It had had the opportunity to grow firm enough and strong enough, on the small scale, to offer some lessons to its disunited and tyrannized neighbors and to exercise an attractive influence upon them. One of the nearest of these neighbors was Sikyon, which groaned under a tyranny that had been fastened upon it by Macedonian influence. Among the exiles from Sikyon was a remarkable young man named Aratos, or Aratus, to whom the successful working of the small Achaian League suggested some broader extension of the same political organism. In B. C. 251, Aratos succeeded in delivering his native city from its tyrant and in bringing about the annexation of Sikyon to the Achaian League. Eight years later, having meantime been elected to the chief office of the League, Aratos accomplished the expulsion of the Macedonians and their agents from Corinth, Megara, Troizen and Epidaurus, and persuaded those four cities to unite themselves with the Achaians. During the next ten years he made similar progress in Arkadia, winning town after town to the federation, until the Arkadian federal capital, Megalopolis, was enrolled in the list of members, and gave to the League its greatest acquisition of energy and brain. In 229 B. C. the skill of Aratos and the prestige of the League, taking advantage of disturbances in Macedonia, effected the withdrawal of the Macedonian garrisons from Athens and the liberation of that city, which did not become confederated with its liberators, but entered into alliance with them. Argos was emancipated and annexed, B. C. 228, and "the League was

now the greatest power of Greece. A Federation of equal cities, democratically governed, embraced the whole of old Achaia, the whole of the Argolic peninsula, the greater part of Arkadia, together with Phlious, Sikyon, Corinth, Megara, and the island of Aigina." The one rival of the Achaian League in Peloponnesus was Sparta, which looked with jealousy upon its growing power, and would not be confederated with it. The consequences of that jealous rivalry were fatal to the hopes for Greece which the Achaian union had seemed to revive. Unfortunately, rather than otherwise, the Lacedæmonian throne came to be occupied at this time by the last of the hero-kings of the Herakleid race—Kleomenes. When the inevitable collision of war between Sparta and the League occurred (B. C. 227-221), the personal figure of Kleomenes loomed so large in the conflict that it took the name of the Kleomenic War. Aratos was the worst of generals, Kleomenes one of the greatest, and the Achaians were steadily beaten in the field. Driven to sore straits at last, they abandoned the whole original purpose of their federation, by inviting the king of Macedonia to help them crush the independence of Sparta. To win his aid they gave up Corinth to him, and under his leadership they achieved the shameful victory of Sellasia (B. C. 221), where all that is worthy in Lacedæmonian history came to an end. The League was now scarcely more than a dependency of the Macedonian kingdom, and figured as such in the so-called Social War with the Ætolian League, B. C. 219-217. The wars of Rome with Macedonia which followed renewed its political importance considerably for a time. Becoming the ally of Rome, it was able to maintain a certain dignity and influence until the supremacy of the Roman arms had been securely proved, and then it sank to the helpless insignificance which all Roman alliances led to in the end. It was in that state when, on some complaint from Rome (B. C. 167), a thousand of the chief citizens of Achaia were sent as prisoners to Italy and detained there until less than 300 survived to return to their homes. Among them was the historian Polybios. A little later (B. C. 146) there was a wild revolt from the Roman yoke, in which Corinth took the lead. A few months of war ensued, ending in a decisive battle at Leukopetra. Then Corinth was sacked and destroyed by the Roman army and the Achaian League disappeared from history.—E. A. Freeman, *Hist. of Federal Govt.*, ch. 5-9.

B. C. 214-146.—The Roman conquest.—The series of wars in which the Romans made themselves masters of Greece were known in their annals as the Macedonian Wars. At the beginning, they were innocent of aggression. A young and ambitious but unprincipled king of Macedonia—Philip, who succeeded the able Antigonos Doson—had put himself in alliance with the Carthaginians and assailed the Romans in the midst of their desperate conflict with Hannibal. For the time they were unable to do more than trouble Philip so far as to prevent his bringing effective reinforcements to the enemy at their doors, and this they accomplished in part by a treaty with the Ætolians, which enlisted that unscrupulous league upon their side. The first Macedonian war, which began B. C. 214, was

terminated by the Peace of Dyrrachium, B. C. 205. The Peace was of five years duration, and Philip employed it in reckless undertakings against Pergamus, against Rhodes, against Athens, every one of which carried complaints to Rome, the rising arbiter of the Mediterranean world, whose hostility Philip lost no opportunity to provoke. On the Ides of March, B. C. 200, the Roman senate declared war. In the spring of B. C. 197 this second Macedonian War was ended at the battle of Cynoscephalæ—so called from the name of a range of hills known as the Dog-heads—where the Macedonian army was annihilated by the consul T. Quinctius Flamininus. At the next assembly of the Greeks for the Isthmian Games, a crier made proclamation in the arena that the Roman Senate and T. Quinctius the General, having conquered King Philip and the Macedonians, declared all the Greeks who had been subject to the king free and independent. Henceforth, whatever freedom and independence the states of Greece enjoyed were according to the will of Rome. An interval of twenty-five years, broken by the invasion of Antiochus and his defeat by the Romans at Thermopylæ (see SELEUCIDÆ: B. C. 224-187), was followed by a third Macedonian War. Philip was now dead and succeeded by his son Perseus, known to be hostile to Rome and accused of intrigues with her enemies. The Roman Senate forestalled his intentions by declaring war. The war which opened B. C. 171 was closed by the battle of Pydna, fought June 22, B. C. 168, where 20,000 Macedonians were slain and 11,000 taken prisoners, while the Romans lost scarcely 100 men. Perseus attempted flight, but was soon driven to give himself up and was sent to Rome. The Macedonian kingdom was then extinguished and its territory divided between four nominal republics, tributary to Rome. Twenty years after, there was an attempt made by a pretender to re-establish the Macedonian throne, and a fourth Macedonian War occurred; but it was soon finished (B. C. 146—see above, B. C. 280-146). The four republics then gave way, to form a Roman province of Macedonia and Epirus, while the remainder of Greece, in turn, became the Roman province of Achaia.—C. Thirlwall, *Hist. of Greece*, ch. 64-66 (v. 8).

B. C. 191.—War of Antiochus of Syria and the Romans. See SELEUCIDÆ: B. C. 224-187.

B. C. 146—A. D. 180.—Under the Romans, to the reign of Marcus Aurelius.—Sufferings in the Mithridatic war and revolt, and in the Roman civil wars.—Treatment by the emperors.—Munificence of Herodes Atticus.—“It was some time [after the Roman conquest] before the Greeks had great reason to regret their fortune. A combination of causes, which could hardly have entered into the calculations of any politician, enabled them to preserve their national institutions, and to exercise all their former social influence, even after the annihilation of their political existence. Their vanity was flattered by their admitted superiority in arts and literature, and by the respect paid to their usages and prejudices by the Romans. Their political subjection was at first not very burdensome; and a considerable portion of the nation was allowed to retain the appearance of independence. Athens

and Sparta were honoured with the title of allies of Rome. [Athens retained this independent existence, partaking something of the position of Hamburg in the Germanic body, until the time of Caracalla, when its citizens were absorbed into the Roman empire.—Footnote.] The nationality of the Greeks was so interwoven with their municipal institutions, that the Romans found it impossible to abolish the local administration; and an imperfect attempt made at the time of the conquest of Achaia was soon abandoned. . . . The Roman senate was evidently not without great jealousy and some fear of the Greeks; and great prudence was displayed in adopting a number of measures by which they were gradually weakened, and cautiously broken to the yoke of their conquerors. . . . It was not until after the time of Augustus, when the conquest of every portion of the Greek nation had been completed, that the Romans began to view the Greeks in the contemptible light in which they are represented by the writers of the capital. Crete was not reduced into the form of a province until about eight years after the subjection of Achaia, and its conquest was not effected without difficulty, after a war of three years, by the presence of a consular army. The resistance it offered was so obstinate that it was almost depopulated ere the Romans could complete its conquest. . . . The Roman government . . . soon adopted measures tending to diminish the resources of the Greek states when received as allies of the republic. . . . If we could place implicit faith in the testimony of so firm and partial an adherent of the Romans as Polybius, we must believe that the Roman administration was at first characterised by a love of justice, and that the Roman magistrates were far less venal than the Greeks. . . . Less than a century of irresponsible power effected a wonderful change in the conduct of the Roman magistrates. Cicero declares that the senate made a traffic of justice to the provincials. . . . But as the government of Rome grew more oppressive, and the amount of the taxes levied on the provinces was more severely exacted, the increased power of the republic rendered any rebellion of the Greeks utterly hopeless. . . . For sixty years after the conquest of Achaia, the Greeks remained docile subjects of Rome. . . . The number of Roman usurers increased, and the exactions of Roman publicans in collecting the taxes became more oppressive, so that when the army of Mithridates invaded Greece, B. C. 86, while Rome appeared plunged in anarchy by the civil broils of the partisans of Marius and Sylla, the Greeks in office conceived the vain hope of recovering their independence [see MITHRIDATIC WARS; and ATHENS; B. C. 87–86]. . . . Both parties, during the Mithridatic war, inflicted severe injuries on Greece. . . . Many of the losses were never repaired. The foundations of national prosperity were undermined, and it henceforward became impossible to save from the annual consumption of the inhabitants the sums necessary to replace the accumulated capital of ages, which this short war had annihilated.” —G. Finlay, *Greece under the Romans*, ch. 1.—“Scarcely had the storm of Roman war passed by, when the Cilician pirates, finding the coasts of Greece peculiarly favorable for their marauding incursions, and tempted by the wealth accumulated in the cities and temples, commenced their depredations on so gigantic a scale that

Rome felt obliged to put forth all her military forces for their suppression. The exploits of Pompey the Great, who was clothed with autocratic power to destroy this gigantic evil, fill the brightest chapter in the history of that celebrated but too unfortunate commander [see CILICIA, PIRATES OF]. . . . The civil wars in which the great Republic expired had the fields of Greece for their theatre. Under the tramp of contending armies, her fertile plains were desolated, and Roman blood, in a cause not her own, again and again moistened her soil [see ROME: B. C. 48, 44–42, and 31]. But at length the civil wars have come to an end, and the Empire introduces, for the first time in the melancholy history of man, a state of universal peace. Greece still maintains her pre-eminence in literature and art, and her schools are frequented by the sons of the Roman aristocracy. Her elder poets serve as models to the literary genius of the Augustan age. . . . The historians form themselves on Attic prototypes, and the philosophers of Rome divide themselves among the Grecian sects, while in Athens the Platonists, the Stoics, the Peripatetics, and the Epicureans still haunt the scenes with which the names of their masters were inseparably associated. . . . The establishment of the Empire made but little change in the administration of Greece. Augustus, indeed, showed no great solicitude, except to maintain the country in subjection by his military colonies,—especially those of Patrae and Nicopolis. He even deprived Athens of the privileges she had enjoyed under the Republic, and broke down the remaining power of Sparta, by declaring the independence of her subject towns. Some of his successors treated the country with favor, and endeavored, by a clement use of authority, to mitigate the sufferings of its decline. Even Nero, the amiable fiddler of Rome, was proud to display the extent of his musical abilities in their theatres. . . . The noble Trajan allowed the Greeks to retain their former local privileges, and did much to improve their condition by his wise and just administration. Hadrian was a passionate lover of Greek art and literature. Athens especially received the amplest benefits from his taste and wealth. He finished the temple of Olympian Zeus; established a public library; built a pantheon and a gymnasium; rebuilt the temple of Apollo at Megara; improved the old roads of Greece and made new ones. . . . Antoninus and Marcus Aurelius showed good will to Greece. The latter rebuilt the temple at Eleusis, and improved the Athenian schools, raising the salaries of the teachers, and in various ways contributing to make Athens, as it had been before, the most illustrious seat of learning in the world. It was in the reign of this Emperor, in the second century of our era, that one of the greatest benefactors of Athens and all Greece lived,—Herodes Atticus, distinguished alike for wealth, learning, and eloquence. Born at Marathon, . . . educated at Athens by the best teachers his father's wealth could procure, he became on going to Rome, in early life, the rhetorical teacher of Marcus Aurelius himself. Antoninus Pius bestowed on him the honor of the consulship; but he preferred the career of a teacher at Athens to the highest political dignities . . . , and he was followed thither by young men of the most eminent Roman families, from the Emperor's down. . . . At Athens, south of

the Iissus, he built the stadium . . . and the theatre of Regilla. . . . At Corinth he built a theatre; at Olympia, an aqueduct; at Delphi, a race-course; and at Thermopylae, a hospital. Peloponnesus, Eubœa, Bœotia, and Epeirus experienced his bounty, and even Italy was not forgotten in the lavish distribution of his wealth. He died in A. D. 180."—C. C. Felton, *Greece, Ancient and Modern, 4th course, lect. 3 (v. 2)*.—On the influence which Greek genius and culture exercised upon the Romans, see HELLENIC GENIUS AND INFLUENCE.

A. D. 1454-1479.—War of Turks and Venetians in the Peninsula.—Siege of Corinth.—Sack of Athens.—Massacres at Negropont and Croia.—"The taking of Constantinople by the Turks, and the captivity of the Venetians settled in Pera, threatened [the power of Venice] . . . in the East; and she felt no repugnance to enter into a treaty with the enemies of her religion. After a year's negotiation, terms were concluded [1454] between the Sultan and Venice; by which her possessions were secured to her, and her trade guaranteed throughout the empire. In virtue of this treaty she continued to occupy Modon, Coron, Napoli di Romania, Argos, and other cities on the borders of the Peninsula, together with Eubœa (Negropont) and some of the smaller islands. But this good understanding was interrupted in 1463, when the Turks

contrived an excuse for attacking the Venetian territory. Under pretence of resenting the asylum afforded to a Turkish refugee, the Pasha of the Morea besieged and captured Argos; and the Republic felt itself compelled immediately to resent the aggression. A re-inforcement was sent from Venice to Napoli, and Argos was quickly recaptured. Corinth was next besieged, and the project of fortifying the isthmus was once more renewed. . . . The labour of 30,000 workmen accomplished the work in 15 days; a stone wall of more than 12 feet high, defended by a ditch and flanked by 136 towers, was drawn across the isthmus. . . . But the approach of the Turks, whose numbers were probably exaggerated by report, threw the Venetians into distrust and consternation; and, unwilling to confide in the strength of their rampart, they abandoned the siege of Corinth, and retreated to Napoli, from which the infidels were repulsed with the loss of 5,000 men. The Peloponnesus was now exposed to the predatory retaliations of the Turks and Venetians; and the Christians appeared anxious to rival or surpass the Mahomedans in the refinement of their barbarous inflictions. . . . In the year 1465, Sigismondo Malatesta landed in the Morea with a re-inforcement of 1,000 men; and, without effecting the reduction of the citadel, captured and burned Misitra [near the ruins of ancient Sparta]. In the following year, Vittore Cappello, with the Venetian fleet, arrived in the straits of Euripus; and landing at Aulis marched into Attica. After making himself master of the Piræus, he laid siege to Athens; her walls were overthrown; her inhabitants plundered; and the Venetians retreated with the spoil to the opposite shores of Eubœa. The victorious career of Matthias Corvinus, King of Hungary, for a time diverted the Sultan from the war in the Morea; but . . . in the beginning of the year 1470 a fleet of 108 galleys, besides a number of smaller vessels, manned by a force 70,000 strong, issued from the harbour of Constantinople, and sailed for the straits of Euripus. . . . The army landed without molestation on the island, which they united to the mainland by a bridge of boats, and immediately proceeded to lay siege to the city of Negropont. . . . The hopes of the besieged were now centred in the Venetian fleet, which, under the command of Nicolo Canale, lay at anchor in the Saronic Gulf. But that admiral, whilst he awaited a re-inforcement, let slip the favourable opportunity of preventing the debarcation of the enemy, or of shutting up the Turks in the island by the destruction of their half-deserted fleet and bridge of boats. By an unaccountable inactivity, he suffered the city to be attacked, which, after a vigorous resistance of nearly a month, was carried by assault [July 12, 1470]; and all the inhabitants, who did not escape into the citadel, were put to the sword. At length that fortress was also taken; and the barbarous conqueror, who had promised to respect the head of the intrepid governor, deemed it no violation of his word to saw his victim in halves. After this decisive blow, which reduced the whole island, Mahomed led back his conquering army to Constantinople. . . . This success encouraged the Turks to attack the Venetians in their Italian territory; and the Pasha of Bosnia invaded Istria and Friuli, and carried fire and sword almost to the gates of Udine. In the following year [1474], however, the Turks were baffled in their attempt to reduce Scutari in

Albania, which had been delivered by the gallant Scanderbeg to the guardian care of Venice. Some abortive negotiations for peace suspended hostilities until 1477, when the troops of Mahomed laid siege to Croia in Albania, which they reduced to the severest distress. But a new incursion into Friuli struck a panic into the inhabitants of Venice, who beheld, from the tops of their churches and towers, the raging flames which devoured the neighbouring villages." The Turks, however, withdrew into Albania, where the siege of Croia was terminated by its surrender and the massacre of its inhabitants, and the Sultan, in person, renewed the attack on Scutari. The stubborn garrison of that stronghold, however, resisted, with fearful slaughter, a continuous assault made upon their walls during two days and a night. Mahomed was forced to convert the siege into a blockade, and his troops reappeared in Friuli. "These repeated aggressions on her territories made Venice every day more anxious to conclude a peace with the Sultan," and a treaty was signed in April, 1479. "It was agreed that the islands of Negropont and Mitylene, with the cities of Croia and Scutari in Albania, and of Tenaro in the Morea, should be consigned to the Turk; whilst other conquests were to be reciprocally restored to their former owners. A tribute of 10,000 ducats was imposed upon Venice, and the inhabitants of Scutari [now reduced to 500 men and 150 women] were to be permitted to evacuate the city."—Sir R. Comyn, *Hist. of the Western Empire*, ch. 31 (v. 2).

A. D. 1821-1829.—Overthrow of Turkish rule.—Intervention of Russia, England and France.—Battle of Navarino.—Establishment of national independence.—"The Spanish revolution of 1820 [see **SPAIN**: A. D. 1814-1827], which was speedily followed by the revolutions of Naples, Sicily, and Piedmont, caused a great excitement throughout Europe, and paved the way for the Greek revolution of 1821. Since the beginning of the century the Greeks had been preparing for the struggle; in fact, for more than fifty years there had been a general movement in the direction of independence. . . . There had been many insurrections against the Turkish authority, but they were generally suppressed without difficulty, though with the shedding of much Greek blood. Nearly every village in Greece suffered from pillage by the Turks, and the families were comparatively few that did not mourn a father, son, or brother, killed by the Turks or carried into slavery, or a daughter or sister transported to a Turkish harem. . . . Notwithstanding their subjugation, many of the Greeks

were commercially prosperous, and a large part of the traffic of the East was in their hands. They conducted nearly all the coasting trade of the Levant, and a few years before the revolution they had 600 vessels mounting 6,000 guns (for defence against pirates) and manned by 18,000 seamen. . . . In laying their plans for independence the Greeks resorted to the formation of secret societies, and so well was the scheme conducted that everything was ripe for insurrection before the Turkish rulers had any suspicion of the state of affairs. A great association was formed which included Greeks everywhere, not only in Greece and its islands, but in Constantinople, Austria, Germany, England, and other countries, wherever a Greek could be found. Men of other nationalities were occasionally admitted, but only when their loyalty to the Greek cause was beyond question, and their official positions gave them a chance to aid in the work. Several distinguished Russians were members, among them Count Capo D'Istria, a Greek by birth, who held the office of private secretary to the Emperor Alexander I. of Russia. The society was known as the Hetaira, or Hetairist, and consisted of several degrees or grades. The highest contained only sixteen persons, whose names were not all known, and it was impossible for any member of the lower classes to ascertain them. . . . All the Hetairists looked hopefully towards Russia, partly in consequence of their community of religion, and partly because of the fellow-feeling of the two countries in cordially detesting the Turk. . . . The immediate cause of the revolution, or rather the excuse for it, was the death of the Hospodar of Wallachia, January 30, 1821, followed by the appointment of his successor. During the interregnum, which naturally left the government in a weakened condition, the Hetairists determined to strike their blow for liberty. A band of 150 Greeks and Arnauts, under the command of Theodore Vladimirovko, formerly a lieutenant-colonel in the Russian service, marched out of Bucharest and seized the small town of Czernitz, near Trajan's Bridge, on the Danube. There Theodore issued a proclamation, and such was the feeling of discontent among the people, that in a few days he had a force of 12,000 men under his command. Soon afterwards there was an insurrection in Jassy, the capital of Moldavia, headed by Prince Alexander Ipsilanti, an officer in the Russian service. He issued a proclamation in which the aid of Russia was distinctly promised, and as the news of this proclamation was carried to Greece, there was a general movement in favor of insurrection. The Russian minister assured the Porte that his government had nothing to do with the insurrection, and the Patriarch and Synod of Constantinople issued a proclamation emphatically denouncing the movement, but in spite of this assurance and proclamation the insurrection went on. Count Nesselrode declared officially that Ipsilanti's name would be stricken from the Russian army list, and that his act was one for which he alone was responsible. This announcement was the death-blow of the insurrection in Moldavia and Wallachia, as the forces of Theodore and Ipsilanti were suppressed, after some sharp fighting, by the hordes of Moslems that were brought against them. . . . Nearly the whole of Greece was in full insurrection in a few months, and with far better prospects than had the insurrection on the

Danube. Turks and Greeks were embittered against each other; the war-cry of the Turk was, 'Death to the Christian!' while that of the Christian was, 'Death to the Turk!' The example was set by the Turks, and, to the eternal disgrace of the Turkish government, slaughter in cold blood was made official. It was by the order and authority of the Porte that Gregory, Patriarch of Constantinople, a revered prelate, eighty years of age, was seized on Easter Sunday, as he was descending from the altar where he had been celebrating divine service, and hanged at the gate of his archiepiscopal palace, amid the shouts and howls of a Moslem mob. After hanging three hours, the body was cut down and delivered to some Jews, who dragged it about the streets and threw it into the sea, whence it was recovered the same night by some Christian fishermen. Some weeks later it was taken to Odessa and buried with great ceremony. This act of murder was the more atrocious on the part of the Turks, since the Patriarch had denounced the insurrection in a public proclamation, and his life and character were most blameless and exemplary. It is safe to say that this barbarity had more to do with fanning the fires of revolt than any other act of the Turkish government. But it was by no means the only act of the kind of which the Turks were guilty. The Patriarch of Adrianople with eight of his ecclesiastics was beheaded, and so were the dragoman of the Porte and several other eminent residents of Constantinople, descended from Greek settlers of two or three centuries ago. Churches were everywhere broken open and plundered; Greek citizens of the highest rank were murdered, their property stolen, and their wives and daughters sold as slaves; on the 15th of June five archbishops and a great number of laymen were hanged in the streets, and 450 mechanics were sold and transported into slavery; at Salonica the battlements of the town were lined with Christian heads, from which the blood ran down and discolored the water in the ditch. In all the great towns of the empire there were similar atrocities; some were the work of mobs, which the authorities did not seek to restrain, but the greater part of them were ordered by the governors or other officials, and met the approval of the Porte. At Smyrna, the Christian population was massacred by thousands without regard to age or sex, and in the island of Cyprus a body of 10,000 troops sent by the Porte ravaged the island, executed the metropolitan, five bishops, and thirty-six other ecclesiastics, and converted the whole island into a scene of rapine, bloodshed, and robbery. Several thousand Christians were killed before the atrocities ceased, and hundreds of their wives and daughters were carried into Turkish harems. These and similar outrages plainly told the Greeks that no hope remained except in complete independence of the Turks, and from one end of Greece to the other the fires of insurrection were everywhere lighted. The islands, as well as the mainland, were in full revolt, and the fleet of coasting vessels, nearly all of them armed for resisting pirates, gave the Turks a great deal of trouble. . . . On the land, battle followed battle in different parts of the country, and the narration of the events of the insurrection would fill a bulky volume. . . . During the latter part of 1821, the advantages to the Greeks were sufficient to encourage them to proclaim their independence, which was done in

January, 1822. In the same month the Turks besieged Corinth, and in the following April they besieged and captured Chios (Scio), ending the capture with the slaughter of 40,000 inhabitants, the most horrible massacre of modern times. In July, the Greeks were victorious at Thermopylæ; in the same month Corinth fell, with great slaughter of the defenders. In April, 1823, the Greeks held a national congress at Argos; the victories of Marco Bozzaris occurred in the following June, and in August he was killed in a night attack upon the Turkish camp; in August, too, Lord Byron landed at Athens to take part in the cause of Greece, which was attracting the attention of the whole civilized world. The first Greek loan was issued in England in February, 1824; Lord Byron died at Missolonghi in the following April; in August the Capitan Pasha was defeated at Samos with heavy loss; in October, the provisional government of Greece was set up; and the fighting became almost continuous in the mountain districts of Greece. In February, 1825, Ibrahim Pasha arrived with a powerful army from Egypt, which captured Navarino in May, and Tripolitza in June of the same year. In July, the provisional government invoked the aid of England; in the following April (1826), Ibrahim Pasha took Missolonghi after a long and heroic defence [for twelve months]; and nearly a year later Reschid Pasha captured Athens. Down to the beginning of 1826, the Greeks had felt seriously the deprivation of Russian sympathy and aid for which they had been led to look before the revolution. The death of Alexander I., and the accession of Nicholas in December, 1825, caused a change in the situation. The British government sent the Duke of Wellington to St. Petersburg ostensibly to congratulate Nicholas on his elevation to the throne, but really to secure concert of action in regard to Greece. On the 4th of April a protocol was signed by the Duke of Wellington, Prince Lieven, and Count Nesselrode, which may be considered the foundation of Greek independence. Out of this protocol grew the treaty of July 6, 1827, between England, Russia, and France, by which it was stipulated that those nations should mediate between the contending Greeks and Turks. They proposed to the Sultan that he should retain a nominal authority over the Greeks, but receive from them a fixed annual tribute. . . . The Sultan . . . refused to listen to the scheme of mediation, and immediately made preparations for a fresh campaign, and also for the defence of Turkey in case of an attack. Ships and reinforcements were sent from Constantinople, and the Egyptian fleet, consisting of two 84-gun ships, twelve frigates, and forty-one transports, was despatched from Alexandria with 5,000 troops, and reached Navarino towards the end of August, 1827. The allied powers had foreseen the possibility of the Porte's refusal of mediation, and taken measures accordingly; an English fleet under Admiral Sir Edward Codrington, and a French fleet under Admiral De Rigny, were in the Mediterranean, and were shortly afterwards joined by the Russian fleet under Admiral Heiden. . . . The allied admirals held a conference, and decided to notify Ibrahim Pasha that he must stop the barbarities of plundering and burning villages and slaughtering their inhabitants. But Ibrahim would not listen to their remonstrances, and to show his utter disregard for the powers, he commanded

four of his ships to sail to the Gulf of Patras to occupy Missolonghi and relieve some Turkish forts, in effect to clear those waters of every Greek man-of-war which was stationed there. This he did easily, the allied squadrons being temporarily absent. Admiral Codrington pursued him and, without difficulty, drove him back to Navarino. . . . A general muster of all the ships was ordered by Admiral Codrington, Commander-in-Chief of the squadron. . . . The allied fleet mounted 1,324 guns, while the combined Turkish and Egyptian fleet mounted 2,240 guns. To this superiority in the number of guns on board must be added the batteries on shore, which were all in the hands of the Turks. But the Christians had a point in their favor in their superiority in ships of the line, of which they possessed ten, while the Turks had but three. . . . The allied fleet entered the Bay of Navarino about two o'clock on the afternoon of October 20, 1827. . . . In less than four hours from the beginning of the contest the Ottoman fleet had ceased to be. Every armed ship was burnt, sunk, or destroyed; the only remaining vessels belonging to the Turks and Egyptians were twenty-five of the smallest transports, which were spared by order of Admiral Codrington. It was estimated that the loss in men on the Turkish and Egyptian vessels was fully 7,000. On the side of the allies, no vessels were destroyed, but the Asia, Albion, and Genoa of the English fleet were so much injured, that Admiral Codrington sent them to Malta for repairs which would enable them to stand the voyage home to England. Seventy-five men were killed and 197 wounded on the British fleet, and the loss of the French was 43 killed and 117 wounded. The Russian loss was not reported. . . . It was feared that when the news of the event at Navarino reached Constantinople, the lives of all Europeans in that city, including the foreign ambassadors, would be in great danger, but happily there was no violence on the part of the Turks. The ambassadors pressed for an answer to their note of August 16th, and at length the Sultan replied: 'My positive, absolute, definitive, unchangeable, eternal answer is, that the Sublime Porte does not accept any proposition regarding the Greeks, and will persist in its own will regarding them even to the last day of judgment.' The Porte even demanded compensation for the destruction of the fleet, and satisfaction for the insult, and that the allies should abstain from all interference in the affairs of Greece. The reply of the ambassadors was to the effect that the treaty of July obliged them to defend Greece, and that the Turks had no claim whatever for reparation for the affair of Navarino. The ambassadors left Constantinople on the 8th December, and soon afterwards Count Capo D'Istria, who had been elected President of Greece, took his seat, and issued a proclamation, declaring that the Ottoman rule over the country was at an end after three centuries of oppression. Thus was the independence of Greece established. There was little fighting after the events of Navarino, and early in 1828 Admiral Codrington and Ibrahim Pasha held a convention and agreed upon measures for evacuating the land of the Hellenes. During the summer and autumn Patras, Navarino, and Modon were successively surrendered to the French, and the Morea was evacuated by the Turks. Missolonghi was surrendered to Greece early in 1829, and by the Treaty of

Adrianople in September of the same year the Porte acknowledged the independence of Greece, which was henceforth to be one in the family of nations."—T. W. Knox, *Decisive Battles since Waterloo*, ch. 3.

A. D. 1822-1823.—The Congress of Verona. See VERONA, THE CONGRESS OF.

A. D. 1830-1862.—The independent kingdom constituted under Otho of Bavaria.—Its unsatisfactoriness.—Dethronement of King Otho.—Election of Prince George of Denmark.—"On February 3d, 1830, a protocol was signed which constituted Greece an independent State; and on the 11th of the same month Prince Leopold of Belgium accepted the crown which was offered to him by the Powers. He, however, soon resigned the honour, giving for his main reason the hopelessness of establishing a Greek kingdom from which Krete, Epeiros, and Thessaly were to be excluded. The northern boundary, as drawn in 1830, stretched from the Gulf of Zeitoun to the mouth of the Aspropotamos, thus depriving Greece of the greater part of Akarnania and Aitolia. After the assassination [by the family of an insurgent chief] of Count Capodistria (who was the popularly elected President of Greece from April 14th, 1827, to October 9th, 1831), and after the Powers had selected Prince Otho of Bavaria for the position declined by Prince Leopold, an arrangement was concluded between England, France, Russia, and Turkey, whereby the boundary was drawn from the Gulf of Arta to the same termination in the Gulf of Zeitoun. But a few months later the district of Zeitoun, north of the Spercheios, was added to Greece; and the new kingdom paid to the Porte an indemnity of 40,000,000 piastres, or about £460,000. The Powers guaranteed a loan to Greece of 60,000,000 francs, out of which the payment of the indemnity was made; and thus, at last, in the autumn of 1832, the fatherland of the Greeks was redeemed. Under Otho of Bavaria the country was governed at first by a Council of Regency, consisting of Count Armandsparg, Professor Maurer, and General Heideck. Maurer was removed in 1834, and Armandsparg in 1837; and at the close of the latter year, after the trial of another Bavarian as president of the Council, a Greek was for the first time appointed to the principal post in the Ministry. The greatest benefit conferred upon the country by its German rulers was the reinforcement of the legal system, and the elevation of the authority of the law. But, on the other hand, an unfortunate attempt was made to centralize the whole administration of Greece, her ancient municipal rights and customs were overlooked, taxation was almost as indiscriminate and burdensome as under the Turks, whilst large sums of money were spent upon the army, and on other objects of an unremunerative or insufficiently remunerative character, so that the young State was laden with pecuniary liabilities before anything had been done to develop her resources. . . . No national assembly was convened, no anxiety was shown to con-

ciliate the people, liberty of expression was curtailed, personal offence was given by the foreigners, and by Armanberg in particular; brigandage and piracy flourished, and Greece began to suffer all the evils which might have been expected to arise from the government of unsympathetic aliens. . . . In addition to the rapid and alarming increase of brigandage by land and piracy by sea, there were popular insurrections in Messenia, Maina, Akarnania, and elsewhere. One of the most capable Englishmen who have ever espoused the cause of the Greeks, General Gordon, was commissioned in 1835 to clear northern Greece of the marauders by whom it was overrun. He executed his mission in an admirable manner, sweeping the whole of Phokis, Aitolia, and Akarnania, and securing the coöperation of the Turkish Pasha at Larissa. Hundreds of brigands were put to flight,—but only to return again next year, and to enjoy as great immunity as ever. . . . In the absence of a strong and active organization of the national forces, brigandage in Greece was an ineradicable institution; and, as a matter of fact, it was not suppressed until the year 1870. Gradually the discontent of the people, and the feebleness and infatuation of the Government, were breeding a revolution. . . . The three Guaranteeing Powers urged on Otho and his advisers the necessity of granting a Constitution, which had been promised on the establishment of the kingdom; and moral support was thus given to two very strong parties, known by the titles of Philorthodox and Constitutional, whose leaders looked to Russia and England respectively. The King and the Government neglected symptoms which were conspicuous to all besides, and the revolution of 1843 found them practically unprepared and helpless. On the 15th of September, after a well-contrived demonstration of the troops, which was acquiesced in and virtually sanctioned by the representatives of the three Powers, King Otho gave way, and signed the decrees which had been submitted to him. The Bavarian Ministers were dismissed, Mavrokordatos was made Premier, a National Assembly was convoked, and a Constitution was granted. For the first time since the Roman conquest, Greece resumed the dignity of self-government. The Constitution of 1844 was by no means an adequate one. It did not fully restore the privileges of local self-rule, and it only partially modified the system of centralization, from which so many evils had sprung. But it was nevertheless a great advance towards popular liberty. . . . The difficulties which arose between Russia and Turkey in 1853, and which led up to the Crimean War, inspired the Greeks with a hope that their 'grand idea'—the inheritance of the dominion of Turkey in Europe, so far as the Greek-speaking provinces are concerned—might be on the eve of accomplishment. . . . The Russian army crossed the Pruth in July, 1853, and preparations were at once made by the Greeks to invade Turkey. . . . The temper of the whole country was such that England and France deemed it necessary to take urgent measures for preventing an alliance between Russia and Greece. In May, 1854, an Anglo-French force was landed at the Peiraios, where it remained until February, 1857. Pressure was thus brought to bear upon King Otho, who was not in a position to resist it. . . . The humiliation of the Greeks under the foreign occupation weak-

ened the authority of the King and his Ministers, and the unhappy country was once more a prey to rapine and disorder. . . . From the year 1859 a new portent began to make itself apparent in Greece. As the insurrection of 1821 may be said to have derived some of its energy from the upheaval of France and Europe in the preceding decades, so the Greek revolution of 1862 was doubtless hastened, if not suggested, by the Italian regeneration of 1848-1861. . . . On February 13th, 1862, the garrison of Nauplia revolted; other outbreaks followed; and at last, in October, during an ill-advised absence of the Monarch from his capital, the garrison of Athens broke out into open insurrection. A Provisional Government was nominated; the deposition of King Otho was proclaimed; and when the royal couple hurried back to the city they were refused an entrance. The representatives of the Powers were appealed to in vain; and the unfortunate Bavarian, after wearing the crown for thirty years, sailed from the Peiraios never to return. The hopes of the Greeks at once centred in Prince Alfred of England for their future king. . . . But the agreement of the three Powers on the establishment of the kingdom expressly excluded from the throne all members of the reigning families of England, France, and Russia; and thus, although Prince Alfred was elected king with practical unanimity, the English Government would not sanction his acceptance of the crown. The choice eventually and happily fell upon Prince George of Denmark, the present King of the Hellenes; and neither Greece nor Europe has had reason to regret the selection. . . . From this time forward the history of modern Greece enters upon a brighter phase."—L. Sergeant, *Greece*, ch. 5.

A. D. 1846-1850.—Rude enforcement of English claims.—The Don Pacifico Affair.—"Greek independence had been established under the joint guardianship of Russia, France, and England. Constitutional government had been guaranteed. It had however been constantly delayed. Otho, the Bavarian Prince, who had been placed upon the throne, was absolute in his own tendencies, and supported by the absolute Powers; and France, eager to establish her own influence in the East, . . . had sided with the Absolutists, leaving England the sole supporter of constitutional rule. The Government and administration were deplorably bad. . . . Any demands raised by the English against the Government—and the bad administration afforded abundant opportunity for dispute—were certain to encounter the opposition of the King, supported by the advice of all the diplomatic body. Such questions had arisen. Ionians, claiming to be British subjects, had been maltreated, the boat's crew of a Queen's ship roughly handled, and in two cases the money claims of English subjects against the Government disregarded. They were trivial enough in themselves; a piece of land belonging to a Mr. Finlay [the historian of mediæval and modern Greece], a Scotchman, had been incorporated into the royal garden, and the price—no doubt somewhat exorbitant—which he set upon it refused. The house of Don Pacifico, a Jew, a native of Gibraltar, had been sacked by a mob, without due interference on the part of the police. He demanded compensation for ill-usage, for property destroyed, and for the loss of certain papers,

the only proof as he declared of a somewhat doubtful claim against the Portuguese Government. Such claims in the ordinary course of things should have been made in the Greek Law Court. But Lord Palmerston, placing no trust in the justice to be there obtained, made them a direct national claim upon the Government. For several years, on various pretences, the settlement of the question had been postponed, and Palmerston had even warned Russia that he should some day have to put strong pressure upon the Greek Court to obtain the discharge of their debts. At length, at the close of 1849, his patience became exhausted. Admiral Parker, with the British fleet, was ordered to the Piræus. Mr. Wyse, the English Ambassador, embarked in it. The claims were again formally laid before the King, and upon their being declined the Piræus was blockaded, ships of the Greek navy captured, and merchant vessels secured by way of material guarantee for payment. The French and the Russians were indignant at this unexpected act of vigour. The Russians threatened; the French offered mediation, which was accepted. The French negotiations at Athens had no success; but at London there was promise of a friendly settlement of the matter, when Mr. Wyse, the English Minister at the Greek Court, being left in ignorance of the situation, brought fresh pressure to bear upon King Otho and extorted payment of his claims. The French were enraged and withdrew their Minister from London. "For the time, this trumpery little affair caused the greatest excitement, and, being regarded as a typical instance of Lord Palmerston's management of the Foreign Office, it formed the ground of a very serious attack upon the Government."—J. F. Bright, *Hist. of Eng., period 4*, pp. 200-203.

A. D. 1862.—Annexation of the Ionian Islands. See IONIAN ISLANDS: A. D. 1815-1862.

A. D. 1862-1881.—The Cretan struggle and defeat.—The Greek question in the Berlin Congress.—Small cession of territory by Turkey.—"The annexation of the Heptanisos [the seven (Ionian) islands] was a great benefit to Hellas. It was not only a piece of good fortune for the present but an earnest of the future. . . . There still remained the delusion of the Integrity of the Turkish Empire; but the Christians of the East really cannot believe in the sincerity of all the Powers who proclaim and sustain this extraordinary figment, any more than they are able to fall a prey to the hallucination itself. The reunion of the Heptanisos with the rest of Hellas was therefore regarded as marking the beginning of another and better era—a sanction to the hopes of other re-unions in the future. The first of the Hellenes who endeavoured to gain for themselves the same good fortune which had fallen upon the Ionians were again the Cretans. They defied Turkey for three years, 1866-7-8. With the exception of certain fortresses, the whole island was free. Acts of heroism and sacrifice such as those which had rendered glorious the first War of Independence, again challenged the attention of the world. Volunteers from the West recalled the Philhellenic enthusiasm of old days. The Hellenes of the main-

land did not leave their brethren alone in the hour of danger; they hastened to fight at their side, while they opened in their own homes a place of refuge for the women and children of the island. Nearly 60,000 fugitives found protection there. For a while there was room for believing that the deliverance of Crete was at last accomplished. Russia and France were favourably disposed. Unhappily the good-will of these two Powers could not overcome the opposition of England, strongly supported by Austria. Diplomacy fought for the enslavement of the Cretans with as much persistence and more success than those with which it had opposed the deliverance of Greece. Freedom has not yet come for Crete. The islanders obtained by their struggle nothing but a doubtful amelioration of their condition by means of a sort of charter which was extracted from the unwillingness of the Porte in 1868, under the name of the 'Organic Regulation.' This edict has never been honestly put in force. However, even if it had been carried out, it would not have been a settlement of the Cretan question. The Cretans have never concealed what they want, or ceased to proclaim their intention of demanding it until they obtain it. At the time of the Congress of Berlin they thought once more that they would succeed. They got nothing but another promise from the Porte 'to enforce scrupulously the Organic Regulation of 1868, with such modifications as might be judged equitable.' . . . The history of the Greek Question at the Congress of Berlin and the conferences which followed it, is not to be treated in detail here. The time is not come for knowing all that took place. . . . We do not know why Hellas herself remained so long with her sword undrawn during the Russo-Turkish War—what promises or what threats held her back from moving when the armies of Russia, checked before Plevna, would have welcomed a diversion in the West, and when the Hellenic people both within and without the Kingdom were chafing at the do-nothing attitude of the Government of Athens. Everyone in Greece felt that the moment was come. The measures taken by hordes of Bashi-Bazooks were hardly sufficient to repress the insurrection which was ready in all quarters, and which at length broke out in the mountains of Thessaly. . . . It was only at the last moment, when the war was on the point of being closed by the treaty which victorious Russia compelled Turkey to grant at San Stefano, that the Greek Government, under the Presidency of Koumoundouros, yielded tardily to the pressure of the nation, and allowed the army to cross the frontier. It was too late for the diversion to be of any use to Russia, and it could look for no support from any other Government in Europe. This fact was realized at Athens, but men felt, at the same time, that it was needful to remind the world at any price that there is a Greek Question connected with the Eastern Question. The step was taken, but it was taken with a hesitation which betrayed itself in act as well as in word. . . . Diplomacy saw the danger of the fresh conflagration which the armed intervention of Greece was capable of kindling. The utmost possible amount of pressure was therefore brought to bear upon the Government of Athens in order to induce it to retrace the step, and in the result an order was obtained to the Greek Commander-in-Chief to

recross the frontier, upon the solemn assurance of the great Powers 'that the national aspirations and interests of the Greek populations should be the subject of the deliberations of the approaching Congress.' . . . On July 5, 1878, the Congress accepted the resolution proposed by the French plenipotentiary, 'inviting the Porte to come to an understanding with Greece for a rectification of the frontiers in Thessaly and Epiros, a rectification which may follow the valley of the Peneus upon the Eastern side, and that of the Thyamis (or Kalamas) upon the Western.' In other words, they assign to Hellas the whole of Thessaly and a large part of Epiros. Notwithstanding the abandonment of the island of Crete, this was some satisfaction for the wrongs which she had suffered at the delimitation of the Kingdom. . . . But the scheme suggested by the Congress and sanctioned by the Conference of Berlin on July 1, 1880, was not carried out. When Turkey found that she was not confronted by an Europe determined to be obeyed, she refused to submit. And then the Powers, whose main anxiety was peace at any price, instead of insisting upon her compliance, put upon Hellas all the pressure which they were able to exercise, to induce her to submit the question of the frontiers to a fresh arbitration. . . . Hellas had to yield, and on July 2, 1881, three years after the signing of the famous Protocol of Berlin, she signed the convention by which Turkey ceded to her the flat part of Thessaly and a small scrap of Epiros."—D. Bikelas, *Seven Essays on Christian Greece*, essay 6.

A. D. 1864-1893.—Government under the later constitution.—A new constitution, framed by the National Assembly, "was ratified by the King on November 21, 1864. Abolishing the old Senate, it established a Representative Chamber of 150 deputies, since increased to 190, and again to 307, elected by ballot by all males over the age of twenty-one, from equal electoral districts (they were afterwards elected by nomarchies; the system now is by eparchies). Mr. Sergeant gives the number of electors (in 1879) at

311 per 1,000, but I do not know what he does with the women and minors, who must be about 75 per cent of the population. The present [1893] number of electors is 450,000, or 205 per 1,000. The King has considerable power: he is irresponsible; he appoints and dismisses his ministers and all officers and officials; and he can prorogue or suspend Parliament. Nor is his power merely nominal. In 1866 the Chamber behaved illegally, and the King promptly dissolved it; in 1875 again the King successfully steered his country out of a whirlpool of corruption; and, lastly, in 1892, his Majesty, finding M. Deleyannes obstinate in his financial dilatoriness, dismissed him. . . . Before King Otho there were 4 administrations; under his rule 24 (13 before the Constitution was granted and 11 after), 10 in the interregnum, and 42 under King George. This gives 70 administrations in 62 years, or about one every 10½ months, or, deducting the two kingless periods, 56 administrations in 60 years—that is, with an average duration of nearly 13 months. This compares for stability very well with the duration of French Ministries, 28 of which have lasted 22 years, or about 9½ months each. It should also be stated that there has been a distinct tendency to greater Ministerial longevity of late years in Greece. Under King Otho there were seven Parliaments in 18 years, which allows 2 years and 7 months for each Parliamentary period. Under King George there have been 13 in 28 years, or with a life of 2 years and 2 months each. However, we know that Parliament had not the same free play under the first King that it has had under the second; and, besides, the present Parliament, considering the Prime Minister's enormous majority, is likely to continue some time, and bring up the Georgian average. . . . There have been no notable changes of the Greek Constitution since its first promulgation, though there has been a natural expansion, especially in the judicial section. This very fact is of itself a vindication of Hellenic national stability."—R. A. H. Bickford-Smith, *Greece under King George*, ch. 18.

GREEK EMPIRE OF NICÆA: A. D. 1204-1261.—The conquest of Constantinople by the Venetians and the Crusaders, in 1204, broke the Byzantine Empire into many fragments, some of which were secured by the conquerors and loosely bound together in the feudal empire of Romania, while others were snatched from the ruin and preserved by the Greeks, themselves. For the sovereignty of these latter numerous claimants made haste to contend. Three fugitive emperors were wandering in the outer territories of the shattered realm. One was that Alexius III., whose deposition of Isaac Angelos had afforded a pretext for the crusading conquest; and who had fled when Isaac was restored. A second was Alexius V. (Murtzuphllos), who pushed Isaac Angelos and his son Alexius IV. from the shak-

ing throne when Constantinople resolved to defend itself against the Christians of the West, but who abandoned the city in the last hours of the siege. The third was Theodore Lascaris, son-in-law of Alexius III., who was elected to the imperial office as soon as the flight of Alexius V. became known—even after the besiegers had entered the city—and who, then, could do nothing but follow his fugitive predecessors. This last was the only one of the three who found a piece of defensible territory on which to set up his throne. He established himself in Bithynia, associating his claims with those of his worthless father-in-law, and contenting himself with the title of Despot, at first. But the convenient though objectionable father-in-law was not permitted to enjoy any share of the sovereignty which he acquired. Theodore, in fact, managed his affairs with great vigor and skill. The district in which his authority was recognized widened rapidly and the city of Nicæa became his capital. There, in 1206, he received the imperial crown, more formally and solemnly, anew, and rallied the Greek resistance which was destined to triumph, a little more than half a century later, over the insolent aggression of the Latin West. The small empire of Nicæa had to contend, not merely with

GREEK EMPIRE OF NICEA.

the Latins in Constantinople and Greece, and with the Turkish Sultan of Iconium, but also with another ambitious fragment of Greek empire at Trebizond, which showed itself persistently hostile. His successors, moreover, were in conflict with a third such fragment in Europe, at Thessalonica. But, ten years after the flight of Theodore from Constantinople, his empire of Nicea "extended from Heracleia on the Black Sea to the head of the Gulf of Nicomedia; from thence it embraced the coast of the Opsikian theme as far as Cyzicus; and then descending to the south, included Pergamus, and joined the coast of the *Ægean*. Theodore had already extended his power over the valleys of the *Hermus*, the *Caister*, and the *Mæander*." Theodore Lascaris died in 1222, leaving no son, and John Dukas Vatatzes, or Vataces as his name is written by some historians, a man of eminent abilities and high qualities, who had married Theodore's daughter, was elected to the vacant throne. He was saluted as John III.—assuming a continuity from the Byzantine to the Nicean series of emperors. In a reign of thirty-three years, this prudent and capable emperor, as Gibbon expresses the fact, "rescued the provinces from national and foreign usurpers, till he pressed on all sides the imperial city [Constantinople], a leafless and sapless trunk, which must fall at the first stroke of the axe." He did not live to apply that blow nor to witness the fall of the coveted capital of the East. But the event occurred only six years after his death, and owed nothing to the energy or the capability of his successors. His son, Theodore II., reigned but four years, and left at his death, in 1258, a son, John IV., only eight years old. The appointed regent and tutor of this youth was soon assassinated, and Michael Paleologos, an able officer, who had some of the blood of the imperial Angelos family in his veins, was made in the first instance tutor to the young emperor, and soon afterwards raised to the throne with him as a colleague. In 1260 the new emperor made an attack on Constantinople and was repulsed. But on the 25th of July in the next year the city was taken by a sudden surprise, while 6,000 soldiers of its garrison were absent on an expedition against Daphnusia in the Black Sea. It was acquired almost without resistance, the Latin emperor, Baldwin II., taking promptly to flight. The destruction of life was slight; but the surprising party fired a considerable part of the city, to cover the smallness of its numbers, and Constantinople suffered once more from a disastrous conflagration. On the recovery of its ancient capital, the Greek empire ceased to bear the name of Nicea, and its history is continued under the more imposing appellation of the Greek empire of Constantinople.—G. Finlay, *Hist. of the Byzantine and Greek Empires, from 716 to 1453*, bk. 4, ch. 1 (c. 2).

GREEK FIRE.—"The important secret of compounding and directing this artificial flame was imparted [in the later part of the seventh century to the Greeks, or Byzantines, at Constantinople] by Callinicus, a native of Heliopolis, in Syria, who deserted from the service of the caliph to that of the emperor. The skill of a chemist

GREENLAND.

and engineer was equivalent to the succour of fleets and armies; and this discovery or improvement of the military art was fortunately reserved for the distressful period when the degenerate Romans of the East were incapable of contending with the warlike enthusiasm and youthful vigour of the Saracens. The historian who presumes to analyze this extraordinary composition should suspect his own ignorance and that of his Byzantine guides, so prone to the marvellous, so careless, and, in this instance, so jealous of the truth. From their obscure, and perhaps fallacious hints, it should seem that the principal ingredient of the Greek fire was the naphtha, or liquid bitumen, a light, tenacious, and inflammable oil, which springs from the earth. . . . The naphtha was mingled, I know not by what methods or in what proportions, with sulphur and with the pitch that is extracted from evergreen firs. From this mixture, which produced a thick smoke and a loud explosion, proceeded a fierce and obstinate flame . . . ; instead of being extinguished it was nourished and quickened by the element of water; and sand, urine, or vinegar were the only remedies that could damp the fury of this powerful agent. . . . It was either poured from the ramparts [of a besieged town] in large boilers, or launched in red-hot balls of stone and iron, or darted in arrows and javelins, twisted round with flax and tow, which had deeply imbibed the inflammable oil; sometimes it was deposited in fire-ships . . . and was most commonly blown through long tubes of copper, which were planted on the prow of a galley, and fancifully shaped into the mouths of savage monsters, that seemed to vomit a stream of liquid and consuming fire. This important art was preserved at Constantinople, as the palladium of the state. . . . The secret was confined, above 400 years, to the Romans of the East. . . . It was at length either discovered or stolen by the Mahometans; and, in the holy wars of Syria and Egypt, they retorted an invention, contrived against themselves, on the heads of the Christians. . . . The use of the Greek, or, as it might now be called, the Saracen fire, was continued to the middle of the fourteenth century."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 52.

GRIQUAS.—GRIQUALAND.—“The Griquas or Baastards, a mixed race sprung from the intercourse of the ‘Boers’ [of South Africa] with their Hottentot slaves,” migrated from Cape Colony after the Emancipation Act of 1833, “and, under the chiefs Waterboer and Adam Kok, settled in the country north of the confluence of the Orange and Vaal, the present Griqualand West. Subsequently, in 1852, Adam Kok’s section of the Griquas again migrated to the territory then called No Man’s Land, between Kafraria and southern Natal, now known as Griqualand East, or New Griqualand. . . . In consequence of the discovery of diamonds in the Griqua country in 1867, and the rush thither of thousands of Europeans from all the surrounding states, as well as from Europe, America, and Australia, the chief Waterboer ceded his rights to the British Government, and this region was annexed to the Cape Colony as the Lieutenant-Governorship of Griqualand West in 1871.” —Hewald-Johnston, *Africa* (Stanford’s Compendium), ch. 23, sect. 5.

GUELDERLAND: A. D. 1079-1473.—Under the House of Nassau.—Acquisition by the Duke of Burgundy.—“The arable extent of Guelderland, its central position, and the number of its ancient towns, rendered it at all times of great importance. The men of Zutphen and Arnheim were foremost among the claimants of civic freedom; and at Tiel and Bommel industry struck early root, and struggled bravely to maturity through countless storms of feudal violence and rapine. Guelderland was constituted a county, or earldom, by Henry III. [Emperor, A. D. 1079], and bestowed on Otho, count of Nassau; and thus originated the influence of that celebrated family in the affairs of the Netherlands. Three centuries later the province was created a duchy of the empire. Vigour and ability continued to distinguish the house of Nassau, and they were destined to become eventually the most popular and powerful family in the nation. Apart from their influence, however, Guelderland hardly occupies as important a place in the general history of the country as Utrecht or Holland.” In 1473, when the House of Burgundy had acquired sovereignty over most of the Netherland states, Charles the Bold availed himself of a domestic quarrel between the reigning prince of Guelderland and his heir “to purchase the duchy from the former for 92,000 crowns of gold. The old duke died before the pecuniary portion of the bargain was actually completed; and, the rightful heir being detained in prison, the grasping lord of Burgundy entered into possession of his purchase, for which no part of the price was ever paid.”—W. T. McCullagh, *Industrial Hist. of Free Nations*, ch. 8 and 10 (v. 2).

GUELFs, OR GUELPHs, AND GhibEL-LINES: German origin of these Factions and their feuds.—On the death (A. D. 1125) of Henry V., the last of the Franconian dynasty of Germanic emperors, Lothaire, Duke of Saxony, was elected emperor, in rather a tumultuous and irregular manner. Lothaire, and the Saxons generally, were embittered in enmity against the house of Franconia, and against the new family—the Suabian or Hohenstauffen—which succeeded by inheritance, through the female line, to the Franconian claims. It was the object of his reign, moreover, to pass the imperial crown from his own head to that of his son-in-law, Henry the Proud. Hence arose a persecution of the Suabian family, under Lothaire, which stirred deep passions. Henry the Proud, for whose succession Lothaire labored, but vainly, united in himself several ancient streams of noble blood. He “was fourth in descent from Welf [or Guelf], son of Azon marquis of Este, by Cunegonda, heiress of a distinguished family, the Welfs of Altorf in Suabia.” His ancestor,

Welf, had been invested with the duchy of Bavaria. He himself represented, by right of his mother, the ancient ducal house of Saxony; and, by favor of his imperial father-in-law, the two powerful duchies, Bavaria and Saxony, were both conferred on him. He also received Hanover and Brunswick as the dowry of his wife. “On the death of Lothaire in 1138 the partisans of the house of Suabia made a hasty and irregular election of Conrad [one of the Hohenstauffen princes], in which the Saxon faction found itself obliged to acquiesce. The new emperor availed himself of the jealousy which Henry the Proud’s aggrandizement had excited. Under pretence that two duchies could not legally be held by the same person, Henry was summoned to resign one of them, and on his refusal, the diet pronounced that he had incurred a forfeiture of both. Henry made but little resistance, and before his death, which happened soon afterwards, saw himself stripped of all his hereditary as well as acquired possessions. Upon this occasion the famous names of Guelf [or Guelph] and Ghibelin were first heard, which were destined to keep alive the flame of civil dissension in far distant countries, and after their meaning had been forgotten. The Guelfs, or Welfs, were, as I have said, the ancestors of Henry, and the name has become a sort of patronymic in his family. The word Ghibelin is derived from Wibelung, a town in Franconia, whence the emperors of that line are said to have sprung. The house of Suabia were considered in Germany as representing that of Franconia; as the Guelfs may, without much impropriety, be deemed to represent the Saxon line.”—H. Hallam, *The Middle Ages*, ch. 5 (v. 2).—Sir Andrew Halliday, in his “Annals of the House of Hanover,” traces the genealogy of the Guelfs with great minuteness and precision—with more minuteness, perhaps, in some remote particulars, and more precision, than seems consistent with entire credibility. He carries the line back to Edico, king or prince of the Heruli, or Rugii, or Seyrii,—the stock from which came Odoacer, who overturned the Western Roman Empire and made himself the first king of Italy. Edico, who was subject to Attila, and the favorite adviser of the king of the Huns, is thought to have had a son or brother named Guelf or Welf, who fell in battle with the Ostrogoths. It is to him that Sir Andrew is disposed to assign the honor of being the historical chief of the great family of the Guelfs. If not from this shadowy Guelf, it is from another of like name in the next generation—a brother of Odoacer—that he sees the family spring, and the story of its wide-branching and many-rooted growth, in Friuli, Altdorf, Bavaria, old Saxony, Brunswick, Hanover,—and thence, more royally than ever, in England,—is as interesting as a narrative of highly complicated genealogy can be.—Sir A. Halliday, *Annals of the House of Hanover*.—From the Guelf uncertainly indicated above were descended two Marquesses of Este, “successively known in German and Italian story as the first and second of that name. . . . Azo, the second Marquess of Este in Italy (born A. D. 995, died 1097), the head of the Italian (junior) branch of Guelphs [see ESTE], married Cunigunda, the sole heiress of the German Guelphs of Altdorf, thus uniting in his family the blood, wealth, and power of both branches

GUELFS.

of the old Guelphs, and becoming the common father of the later German and Italian princes of the name of Guelph. No wonder, then, that he was elected by the Emperor, Henry III., as his representative in Italy. . . . Cunigunda, the first wife of Azo II., bore him one son, Guelph, who was known in German history as Guelph VI. He succeeded to his mother's titles and vast estates on her death, A. D. 1055, and to those of his father, A. D. 1097. . . . Henry IV. invested him with the Duchy of Bavaria, A. D. 1071—a title first assumed 170 years before (A. D. 900) by his almost mythological ancestor, Henry of the Golden Chariot." This Guelph VI. was the grandfather of Henry the Proud, Duke of Saxony and Bavaria, referred to above.—P. M. Thornton, *The Brunswick Accession*, ch. 1.

A. D. 1580–1814.—Dutch, French and English settlements and conquests.—"There was one European nation which was not likely to hunt for a golden city, when gold was to be earned by plain and matter of fact commerce. The Dutch had as early as 1542 established a systematic if contraband trade with the Spanish Main; and in 1580 they began to settle in Guiana by planting a depôt on the river Pomeroon, in what is now the county of Essequibo. In 1599 they built two forts at the mouth of the Amazon, but were driven out by the Portuguese; and about 1613

GUIANA.

they established a colony on the Essequibo, building the fort of 'Kyk over al', 'Look over all,' on an island where the Massaruni flows into the Essequibo. The colony was founded by Zealand merchants, was known as Nova Zeelandia, and came under the control of the Netherlands West India Company, which was incorporated in 1621. Shortly afterwards colonisation began further to the east on the Berbice river. The founder was a Flushing merchant, Van Peere by name; he founded his settlement about 1624, and he held his rights under contract with the Chamber of Zealand. . . . Thus was the present province of British Guiana colonised by Dutchmen. . . . While English discovery was attracted to the west and Orinoco, the first attempts at English settlement were far to the east on the Wyapoco or Oyapok river. Here, in 1604, while Raleigh was in prison, Captain Charles Leigh founded a colony at the mouth of the river. . . . In 1609 Robert Harecourt of Stanton Harecourt in Oxfordshire took up the work in which Leigh had failed. . . . In 1613 he obtained from King James a grant of 'all that part of Guiana or continent of America lying between the river of Amazonas and the river of Dessequebe,' which was not actually possessed or inhabited by any Christian power in friendship with England. . . . In 1619 a scheme was started for an Amazon Company, the leading spirit in which was Captain Roger North. . . . The company was fortunate enough to secure the powerful patronage of the Duke of Buckingham. Harecourt threw in his lot with them, and on the 19th of May 1627 a royal grant was made to the Duke of Buckingham and 55 other adventurers, including the Earl of Pembroke and Montgomery, who were incorporated under the title of 'the governor and company of noblemen and gentlemen of England for the plantation of Guiana.' The Duke of Buckingham was Governor, North was Deputy-Governor, and the grant included the 'royal' river of the Amazon. For about two years the company did some solid work, sending out four ships and 200 colonists; an attempt was then made in 1629 to bring the territory covered by their grant immediately under royal protection, and upon its failure their efforts at colonisation appear to have gradually died away. The English were not the only Europeans who tried their hand at settlement in the east of Guiana. . . . In 1613, 160 French families settled in Cayenne. The first colony failed, but in 1624 and 1626 fresh attempts were made a little to the west on the rivers Sinamari and Cananama; and in 1643 a Rouen Company, incorporated under the name of the Cape North Company, sent out three or four hundred men to Cayenne under the Sieur de Bretigny. Bretigny ruined the scheme by savage ill-treatment of Indians and colonists alike, and the remains of the settlement were absorbed by a new and more powerful Normandy Company." This failed in its turn, and gave way to a "French Equinoctial Company," organized under the auspices of Colbert, which sent out 1,200 colonists and fairly established them at Cayenne. Colbert, in 1665, placed the colony, "with all the other French possessions in the West Indies, under one strong West India Company. Such were the beginnings of colonisation in the west and east of Guiana. Between them lies the district now known as Dutch Guiana or Surinam." The first settlement in this was made

in 1630 by 60 English colonists, under a Captain Marshall. The colony failed, and was revived in 1650 by Lord Willoughby, then representing the fugitive King Charles II., as Governor of Barbadoes. In 1663, after the Restoration, Lord Willoughby, in conjunction with Lawrence Hyde, second son of the Earl of Clarendon, received Letters Patent "constituting them lords and proprietors of the district between the Copenam and the Maroni (which included the Surinam river) under the name of Willoughby Land." Soon afterwards "war broke out with the Dutch, and in March 1667 the colony capitulated to the Dutch admiral Crynseem. The peace of Breda between Great Britain and the Netherlands, which was signed in the following July, provided that either nation should retain the conquests which it had made by the preceding 10th of May, and under this arrangement Surinam was ceded to the Netherlands, while New York became a British possession. . . . Thus ended for many long years all British connexion with Guiana. . . . When at length the English returned [in 1796 and 1803, during the subjection of the Dutch to Napoleon, and while they were forced to take part in his wars], they came as conquerors rather than as settlers, and by a strange perversity of history, the original Dutch colonies on the Berbice and Essequibo became a British dependency, while the Netherlands retain to this day the part of Guiana which Lord Willoughby marked out for his own." These arrangements were settled in the convention between Great Britain and the Netherlands signed at London in 1814.—C. P. Lucas, *Hist. Geog. of the British Colonies*, v. 2, sect. 2, ch. 8.

GUILDS, OR GILDS, Mediæval.—"The history of the Gild Merchant begins with the Norman Conquest. The latter widened the horizon of the English merchant even more than that of the English annalist. The close union between England and Normandy led to an increase in foreign commerce, which in turn must have greatly stimulated internal trade and industry. Moreover, the greatly enhanced power of the English crown tempered feudal turbulence, affording a measure of security to traders in England that was as yet unknown on the continent. . . . With this expansion of trade the mercantile element would become a more potent factor in town life, and would soon feel the need of joint action to guard its nascent prosperity against encroachments. Not until there was something of importance to protect, not until trade and industry began to predominate over agriculture within the borough, would a protective union like the Gild Merchant come into being. Its existence, in short, presupposes a greater mercantile and industrial development than that which prevailed in England in the tenth century. This circumstance and the absence of all mention of the Gild Merchant in the records of the Anglo-Saxon period render it probable that this fraternity first appeared in England soon after the Conqueror had established his sway and restored order in the land. Whether it was merely a re-

organization of older gilds, a spontaneous adaptation of the gild idea to the newly-begotten trade interests, or a new institution directly transplanted from Normandy, we have no means of determining with certainty. The last-mentioned view is strongly favoured by the circumstance that, at the time of the Conquest, the Gild Merchant doubtless existed in Northern France and Flanders. From the Frenchmen who became burgesses of English towns, and from the Norman merchants who thronged the marts of England after the Conquest, the English would soon ascertain the advantages of formal trade organization. The earliest distinct references to the Gild Merchant occur in a charter granted by Robert Fitz-Hamon to the burgesses of Burford (1087-1107), and in a document drawn up while Anselm was Archbishop of Canterbury (1093-1109). . . . Whether we place the inception of the fraternity immediately before or after the Norman Conquest, whether we make it a continuation of older Anglo-Saxon gilds, or a derivative from Normandy, or a wholly new and spontaneous growth, it was doubtless at first merely a private society, unconnected with the town government, having for its object the protection of its members, the tradesmen of the borough, and the maintenance of the newly invigorated trade interests. During the twelfth century it gradually became a recognised part of the town constitution, thus entering upon its second stage of development. How this came to pass can be easily realised from the later history of English gilds in general. For in the fourteenth and fifteenth centuries . . . a simple social-religious gild at times attained such power in a community that it came to be regarded as an important constituent element of the civic administration. Quite similar must have been the growth of the Gild Merchant, which from the outset was doubtless composed of the most influential burgesses, and which, as the exponent of the mercantile interests, must always have been greatly concerned in the increase of the privileges and prosperity of the borough in general. It was very natural that the town authorities should use such a society for public purposes, entrusting to it the surveillance of the trade monopoly, in which its members were particularly interested,—allowing it to gradually become an important part of the civic administrative machinery. . . . The beginning of this third and final stage of development cannot be definitely fixed; for in some places it was of an earlier date than in others. The fourteenth century may in general be called the period of gradual transition. In the fifteenth century the transformation was completed. In this and the following centuries the term 'Gilda Mercatoria' became less and less frequent. In many places it soon wholly disappeared. Where it continued to subsist, the Gild no longer had an individuality of its own. Its alderman and other peculiar officers, its whole organization as a distinctive entity, had vanished. It had merged its identity in that of the general municipal organism. The head of the fraternity was now the head of the town; borough and Gild, burgesses and gildsmen were now identical. What had once been a distinct integral part of the civic body politic became vaguely blended with the whole of it. The old Gild Merchant was now rarely mentioned in connection with the municipal trade restrictions and regulations, the

latter being commonly applied to burgesses, craftsmen, freemen, or 'foreigners.' The exegesis of this transformation . . . was due mainly to three causes: (1) the expansion of trade and the multiplication of the craft and mercantile fraternities, which absorbed the ancient functions of the Gild Merchant and rendered it superfluous; (2) the growth of the select governing body, which usurped most of the privileges of the old burghers at large, and hence tended to obliterate the distinction between them, or their less privileged successors, and the ancient goldsmen, leaving both only certain trade immunities; (3) the decay of the leet—the rallying point of the old burghers as distinguished from that of the goldsmen—the functions of which passed, in part, to the crafts, but mainly to the select body and to the justices of the peace. But even after the Gild Merchant and the borough had thus become identical, the old dual idea did not completely disappear, the Gild being often regarded as a particular phase or function of the town, namely, the municipality in its character of a trade monopoly. Hence the modern survivals of the Gild Merchant help to elucidate its actual functions in ancient times. In a few boroughs the select governing body of the town—the narrow civic corporation, in distinction from the burgesses or freemen at large—succeeded to the name and traditions of the Gild Merchant. In some of these cases the signification of the latter gradually dwindled down to a periodical civic feast of the privileged few. . . . In the eighteenth century we meet the word much less frequently than in the seventeenth; and toward the beginning of the present century it became very rare. The Municipal Corporations Commission, in 1835, found it still used in only a few boroughs. The remnants of the Gild Merchant and of the craft fraternities were rapidly vanishing before the new ideas of a more liberal age,—the age of *laissez faire*. The onerous, self-destructive restrictions of guilds were now being superseded by the stimulating measures of Chambers of Commerce. More than six centuries elapsed before the enactment of Magna Carta that all merchants 'may go through England, by land and water, to buy and sell, free from all unjust imposts,' became a realised fact throughout the realm. The Municipal Corporations Act of 1835 provided that 'every person in any borough may keep any shop for the sale of all lawful wares and merchandizes by wholesale or retail, and use every lawful trade, occupation, mystery, and handicraft, for hire, gain, sale, or otherwise, within any borough.' In a single town of England the Gild Merchant still subsists, but only as the shadow of its former self—a spectre from the distant past. At Preston the Gild Merchant has been 'celebrated' regularly once every twenty years for more than three centuries, on which occasions the burgesses renew their freedom and indulge in all the festivities of a civic carnival. The last Gild Merchant was held in 1882. There was then much feasting and dancing, there were gay processions of townsmen, and much talk of the glories of the past. And yet how few even of the scholars and noblemen there assembled from various parts of Great Britain knew what an important rôle the Gild Merchant had played in the annals of English municipal history, what strange vicissitudes it had undergone, what a remarkable transformation the centuries had

wrought in it."—C. Gross, *The Gild Merchant*, ch. 1 and 9 (p. 1).—"The rise of the craft guilds is, roughly speaking, a century later [than the rise of the merchant guilds]; isolated examples occur early in the twelfth century, they become more numerous as the century advances, and in the thirteenth century they appear in all branches of manufacture and in every industrial centre. Craft guilds were associations of all the artisans engaged in a particular industry in a particular town, for certain common purposes. . . . Their appearance marks the second stage in the history of industry, the transition from the family system to the artisan (or gild) system. In the former there was no class of artisans properly so called; no class, that is to say, of men whose time was entirely or chiefly devoted to a particular manufacture; and this because all the needs of a family or other domestic group, whether of monastery or manor-house, were satisfied by the labours of the members of the group itself. The latter, on the contrary, is marked by the presence of a body of men each of whom was occupied more or less completely in one particular manufacture. The very growth from the one to the other system, therefore, is an example of 'division of labour,' or, to use a better phrase, of 'division of employments.' . . . When the place of the young manufactures of the twelfth century in the development of mediæval society is thus conceived, the discussion as to a possible Roman 'origin' of the guilds loses much of its interest. No doubt modern historians have exaggerated the breach in continuity between the Roman and the barbarian world; no doubt the artisans in the later Roman Empire had an organization somewhat like that of the later guilds. Moreover, it is possible that in one or two places in Gaul certain artisan corporations may have had a continuous existence from the fifth to the twelfth century. It is even possible that Roman regulations may have served as models for the organization of servile artisans on the lands of monasteries and great nobles,—from which, on the continent, some of the later craft guilds doubtless sprang. But when we see that the growth of an artisan class, as distinguished from isolated artisans here and there, was impossible till the twelfth century, because society had not yet reached the stage in which it was profitable or safe for a considerable number of men to confine themselves to any occupation except agriculture; and that the ideas which governed the craft guilds were not peculiar to themselves but common to the whole society of the time; then the elements of organization which may conceivably have been derived from or suggested by the Roman artisan corporations become of quite secondary importance. There is, as we have said, little doubt that some of the craft guilds of France and Germany were originally organizations of artisan serfs on the manors of great lay or ecclesiastical lords. This may also have been the case in some places in England, but no evidence has yet been adduced to show that it was so. . . . The relation of the craft guilds to the merchant gild is a still more difficult question. In many of the towns of Germany and the Netherlands a desperate struggle took place during the thirteenth and fourteenth centuries between a burgher oligarchy, who monopolized the municipal government, and were still further strengthened in many cases by union in a merchant gild, and the

artisans organized in their craft guilds; the craftsmen fighting first for the right of having guilds of their own, and then for a share in the government of the town. These facts have been easily fitted into a symmetrical theory of industrial development; the merchant guilds, it is said, were first formed for protection against feudal lords, but became exclusive, and so rendered necessary the formation of craft guilds; and in the same way the craft guilds became exclusive afterwards, and the journeymen were compelled to form societies of their own for protection against the masters. . . . The very neatness of such a theory, the readiness with which it has been accepted by popular writers in spite of the paucity of English evidence, have perhaps led some historians to treat it with scant consideration. . . . At the end of the reign of Edward III. there were in London forty-eight companies or crafts, each with a separate organization and officers of its own, a number which had increased to at least sixty before the close of the century."—W. J. Ashley, *An Introduction to English Economic History and Theory*, bk. 1, ch. 2 (v. 1).—"The unions known by the names of mystery, faculty, trade, fellowship, or (from the fact of possessing particular costumes) livery company, existed in large numbers throughout the realm, and were frequently divided into two or three categories. Thus in London the principal crafts were the twelve 'substantial companies' or 'livery companies' [Mercers, Grocers, Drapers, Fishmongers, Goldsmiths, Skinners, Merchant Tailors, Haberdashers, Salters, Ironmongers, Vintners, Clothworkers]. . . . A perfect acquaintance with the details of the trade and the desire as well as the ability to produce good work were in all cases preliminary requisites [of membership]. In fact the main provisions of the craft, the very soul of its constitution, were the regulations intended to ensure the excellence of the products and the capacity of the workman. . . . The whole character of the craft guild is explained by these regulations, designed to prevent fraud and deception of the public."—E. R. A. Seligman, *Medieval Guilds of England* (*Am. Econ. Ass'n*, v. 2, no. 5), pt. 2, sect. 2.

GUILDS OF FLANDERS.—"In the course of the tenth century Bruges had waxed great and wealthy through its trade with England, while the Ghent people constructed a port at the junction of their two rivers. The Flemings, nevertheless, were still noted for the boorishness of their demeanour, their addiction to intemperance, and their excessive turbulence. Their pagan ancestors had been accustomed to form associations for their mutual protection against accidents by fire or water, and similar misadventures. These unions were called 'Minne,' or Friendships—an idea reproduced in the 'Amicitie,' to which allusion is so frequently made in the deeds of ancient corporations. . . . After a time the name of 'Minne' came to be supplanted by that of 'Ghilde,' meaning a feast at the common expense. Each ghilde was placed under the tutelage of a departed hero, or demigod, and was managed by officers elected by the members—social equality being the foundation of each fraternity. Subsequent to the introduction of Christianity the demigod was replaced by a saint,

while the members were enjoined to practise works of piety. . . . The Ghildes were the base of the municipal administration, and gradually assumed the government of the town, but took another form and appellation. The word was thenceforward applied, in its restricted sense of Guild, as referring to trade corporations, while the previous organisation came to be described in French and Latin documents as Commune or Communia, and embraced all who were entitled to gather together in the cauter, or public place, when the bell rang out the summons from the town belfry. In Flanders the Communes grew out of popular institutions of ancient date, and, though, no doubt, their influence was sensibly increased by their confirmation at the hands of King or Count, they did not owe their origin to royal or seigniorial charters."—J. Hutton, *James and Philip Van Artevelde*, pt. 1, ch. 1.

GUILLOTINE, The origin of the.—"It was during these winter months [of the session of the French National Assembly, 1790] that Dr. Guillotin read his long discourse upon the reformation of the penal code; of which the 'Moniteur' has not preserved a single word. This discourse attracts our attention on two accounts:—First, it proposed a decree that there should be but one kind of punishment for capital crimes; secondly, that the arm of the executioner should be replaced by the action of a machine, which Dr. Guillotin had invented. 'With the aid of my machine,' said the glib doctor, 'I will make your head spring off in the twinkling of an eye, and you will suffer nothing.' Bursts of laughter met this declaration; nevertheless, the Assembly listened with attention, and adopted the proposal."—G. H. Lewes, *Life of Robespierre*, ch. 10.

GYMNASIA, Greek.—"Amongst public buildings [of the ancient Greeks] we mentioned first the gymnasia, which, originating in the requirements of single persons, soon became centres of Greek life. Corporeal exercise was of great importance amongst the Greeks, and the games and competitions in the various kinds of bodily skill . . . formed a chief feature of their religious feasts. This circumstance reacted on both sculpture and architecture, in supplying the former with models of ideal beauty, and in setting the task to the latter of providing suitable places for these games to be celebrated. For purposes of this kind (as far as public exhibition was not concerned) the palaestra and gymnasia served. In earlier times these two must be distinguished. In the palaestra . . . young men practised wrestling and boxing. As these arts were gradually developed, larger establishments with separate compartments became necessary. Originally such places were, like the schools of the grammarians, kept by private persons; sometimes they consisted only of open spaces, if possible near a brook and surrounded by trees. Soon, however, regular buildings—gymnasia—became necessary. At first they consisted of an uncovered court surrounded by colonnades, adjoining which lay covered spaces, the former being used for running and jumping, the latter

for wrestling. In the same degree as these exercises became more developed, and as grown-up men began to take an interest in these youthful sports, and spent a great part of their day at the gymnasia, these grew in size and splendour. They soon became a necessary of life, and no town could be without them, larger cities often containing several."—*E. Guhl and W. Koner, Life of the Greeks and Romans, sect. 25.*—Of gymnasia "there were many at Athens; though three only, those of the Academy, Lyceum, and Cynosarges, have acquired celebrity. The site of the first of these gymnasia being low and marshy was in ancient times infested with malaria, but having been drained by Cimon and planted with trees it became a favourite promenade and place of exercise. Here, in walks shaded by the sacred olive, might be seen young men with crowns of rushes in flower upon their heads, enjoying the sweet odour of the smilax and the white poplar, while the platanos and the elm mingled their murmurs in the breeze of spring. The meadows of the Academy, according to Aristophanes the grammarian, were planted with the Apragmosune, a sort of flower so called as though it smelt of all kind of fragrance and safety, like our heart's-ease or flower of the Trinity. This place is supposed to have derived its name from Ecadamos, a public-spirited man who bequeathed his property for the purpose of keeping it in order. . . . The name of the Lyceum, sometimes derived from Lycus, son of Pandion, probably owed its origin to the temenos of Lycian Apollo there situated. It lay near the banks of the Ilissos, and was adorned with stately edifices, fountains and groves. . . . In this place anciently the Polemarch held his court and the forces of the republic were exercised before they went forth to war. Appended to the name of the Cynosarges, or third gymnasium surrounded with groves, was a legend which related that when Diomos was sacrificing to Hestia, a white dog snatched away a part of the victim from the altar, and running straightway out of the city deposited it on the spot where this gymnasium was afterwards erected."—*J. A. St. John, The Hellenes, bk. 2, ch. 5.*—"The name of that most illustrious of the Athenian gymnasia, the Academy, has been preserved through the dark ages, and exactly in the situation indicated by ancient testimony. We are informed that the Academy was six or eight stades distant from a gate in the wall of the asty named Dipylum, and that the road from thence to the Academy led through that part of the outer Cerameicus, in which it was a custom to bury the Athenian citizens who had fallen in battle on important occasions. Dipylum was the gate from whence began the Sacred Way from Athens to Eleusis. . . . It appears also that the Academy lay between the Sacred Way and the Colonus Hippius, a height near the Cephissus, sacred to Neptune, and the scene of the *Œdipus Coloneus* of Sophocles; for the Academy was not far from Colonus, and the latter was ten stades distant from the city. That part of the plain which is near the olive-groves, on the northeastern side of Athens, and is now called Akadhimia, is entirely in conformity with these data. It is on the lowest level, where some water-courses from the ridges of Lycabettus are consumed in gardens and olive plantations."—*W. M. Leake, Topography of Athens, sect. 2.*—See, also, **EDUCATION, ANCIENT**: GREECE.

GYMNASIARCH. See LITURGIES.

GYPSIES, The.—"Having in various and distant countries lived in habits of intimacy with these people, I have come to the following conclusions respecting them: that wherever they are found, their manners and customs are virtually the same, though somewhat modified by circumstances, and that the language they speak amongst themselves, and of which they are particularly anxious to keep others in ignorance, is in all countries one and the same, but has been subjected more or less to modification; and lastly, that their countenances exhibit a decided family resemblance, but are darker or fairer according to the temperature of the climate, but invariably darker, at least in Europe, than the natives of the countries in which they dwell, for example, England and Russia, Germany and Spain. The names by which they are known differ with the country, though, with one or two exceptions, not materially; for example, they are styled in Russia, *Zigani*; in Turkey and Persia, *Zingarri*; and in Germany, *Zigeuner*; all which words apparently spring from the same etymon, which there is no improbability in supposing to be '*Zincali*,' a term by which these people, especially those of Spain, sometimes designate themselves, and the meaning of which is believed to be, 'The black men of Zend or Ind.' In England and Spain they are commonly known as Gypsies and Gitanos, from a general belief that they were originally Egyptians, to which the two words are tantamount; and in France as Bohemians, from the circumstance that Bohemia was the first country in civilized Europe where they made their appearance; though there is reason for supposing that they had been wandering in the remote regions of Slavonia for a considerable time previous, as their language abounds with words of Slavonic origin, which could not have been adopted in a hasty passage through a wild and half populated country. But they generally style themselves and the language which they speak, *Rommany*. This word . . . is of Sanscrit origin, and signifies, '*The Husbands*,' or that which pertaineth unto them. From whatever motive this appellation may have originated, it is perhaps more applicable than any other to a sect or caste like them, who have no love and no affection beyond their own race; who are capable of making great sacrifices for each other, and who gladly prey upon all the rest of the human species, whom they detest, and by whom they are hated and despised. It will perhaps not be out of place to observe here, that there is no reason for supposing that the word *Roma* or *Rommany* is derived from the Arabic word which signifies Greece or Grecians, as some people not much acquainted with the language of the race in question have imagined. . . . Scholars have asserted that the language which they speak proves them to be of Indian stock, and undoubtedly a great number of their words are Sanscrit. . . . There is scarcely a part of the habitable world where they are not to be found; their tents are alike pitched on the heaths of Brazil and the ridges of the Himalayan hills, and their language is heard at Moscow and Madrid, in the streets of London and Stamboul."—G. Borrow, *The Zincali*, v. 1, pp. 2-5.—"One day, 450 years ago, or thereabouts, there knocked at the gates of the city of Lüneburg, on the Elbe, as strange a rabble rout as had ever been

seen by German burgher. There were 300 of them, men and women, accompanied by an extraordinary number of children. They were dusky of skin, with jet-black hair and eyes; they wore strange garments; they were unwashed and dirty even beyond the liberal limits tolerated by the cold-water-fearing citizens of Lüneburg; they had with them horses, donkeys, and carts; they were led by two men whom they described as Duke and Count. . . . All the Lüneburgers turned out to gaze open-mouthed at these pilgrims, while the Duke and the Count told the authorities their tale, which was wild and romantic. . . . Many years before, they explained, while the tears of penitence stood in the eyes of all but the youngest children, they had been a Christian community, living in orthodoxy, and therefore happiness, in a far-off country known as Egypt. . . . They were then a happy Christian flock. To their valley came the Saracens, an execrable race, worshipping Mahound. Yielding, in an evil hour, to the threats and persecutions of their conquerors, they—here they turned their faces and wept aloud—they abjured Christ. But thereafter they had no rest or peace, and a remorse so deep fell upon their souls that they were fain to arise, leave their homes, and journey to Rome in hope of getting reconciliation with the Church. They were graciously received by the Pope, who promised to admit them back into the fold after seven years of penitential wandering. They had letters of credit from King Sigismund—would the Lüneburgers kindly look at them?—granting safe conduct and recommending them to the protection of all honest people. The Lüneburg folk were touched at the recital of so much suffering in a cause so good; they granted the request of the strangers. They allowed them to encamp. . . . The next day the strangers visited the town. In the evening a good many things were missed, especially those unconsidered trifles which a housewife may leave about her doorway. Poultry became suddenly scarce; eggs doubled in price; it was rumoured that purses had been lost while their owners gazed at the strangers; cherished cups of silver were not to be found. . . . While the Lüneburgers took counsel, in their leisurely way, how to meet a case so uncommon, the pilgrims suddenly decamped, leaving nothing behind them but the ashes of their fires and the picked bones of the purloined poultry. . . . This was the first historical appearance of Gypsies. It was a curious place to appear in. The mouth of the Elbe is a long way from Egypt, even if you travel by sea, which does not appear to have been the case; and a journey on land not only would have been infinitely more fatiguing, but would, one would think, have led to some notice on the road before reaching Lüneburg. There, however, the Gypsies certainly are first heard of, and henceforth history has plenty to say about their doings. From Lüneburg they went to Hamburg, Lübeck, Rostock, Griefswald, travelling in an easterly direction. They are mentioned as having appeared in Saxony, where they were driven away, as at Lüneburg, for their thievish propensities. They travelled through Switzerland, headed by their great Duke Michael, and pretending to have been expelled from Egypt by the Turks. Their story in these early years, though it varied in particulars,

remained the same in essentials. In Provence they called themselves Saracens; in Swabia they were Egyptians doomed to everlasting wanderings for having refused hospitality to the Virgin and Joseph; at Bâle, where they exhibited letters of safe conduct from the Pope, they were also Egyptians. Always the Land of the Nile; always the same pretence, or it may be reminiscence, of sojourn in Egypt; always, to soothe the suspicions of priests, faithful and submissive sons of the Church. From the very first their real character was apparent. They lie, cheat, and steal at Lüneburg; they lie and steal everywhere; they tell fortunes and cut purses, they buy and sell horses, they poison pigs, they rob and plunder, they wander and they will not work. They first came to Paris in the year 1427, when more people went to see them, we are told, than ever crowded to the Fair of Laudedet. . . . They remained at St. Denis for a month, when they received peremptory orders to quit for the usual reason. . . . In the 16th century trouble began for the Roman folk. By this time their character was perfectly well known. They were called Bohemians, Heathen, Gitanos, Pharaohites, Robbers, Tartars, and Zigeuner. They had abandoned the old lying story of the penitential wanderings; they were outcasts; their hand was against every man's hand; their customs were the same then as they are described now by Leland or Borrow."—*Gypsies and their Friends* (Temple Bar, v. 47), pp. 65-67.—"Since the publication of Pott's book upon the gypsies [*Die Zigeuner in Europa und Asien*—about 30 years ago—we have come to regard the origin of this singular people with considerable unanimity of opinion. Almost nobody doubts now that they are Indians; and the assumption that all the gypsies scattered throughout Europe are descended from one parent stock meets with little contradiction. Both of these beliefs are the outcome of the investigation of their language. . . . Pott, in the introduction to his book, and quoting from the 'Shah-Name' of Firdousi, informs us that, during the 5th century of our era, the Persian monarch, Behram Gour, received from an Indian king 12,000 musicians of both sexes, who were known as Luris. Now, as this is the name by which the gypsies of Persia are known even at the present day, and as, moreover, the author of the Persian work 'Modjmal at-tawarikh' emphatically says that the Luris or Lulis of modern Persia are the descendants of these same 12,000 musicians, there is no hazard in the assumption that we have here the first recorded gypsy migration. Confirmation of this is afforded by the Arabian historian, Hamza of Ispahan, who wrote half a century before Firdousi, and who was well versed in the history of the Sassanides. It is related by this author that Behram Gour caused 12,000 musicians, called Zott, to be sent from India for the benefit of his subjects. And 'Zott' is the name by which the gypsies were known to the Arabs, and which they even bear in Damascus at the present day. In the Arabic dictionary 'al-Kamus' this entry occurs: 'Zott, arabicized from Jatt, a people of Indian origin. The word might be pronounced Zatt with equal correctness.' . . . For the fatherland of these Zott, or Jatt, we have not long to seek. Istakhri and Ibn-Haukal, the celebrated 10th-century geographers, recount as follows:— 'Between al-Mansura and Mokran the waters of

the Indus have formed marshes, the borders of which are inhabited by certain Indian tribes, called Zott; those of them who dwell near the river live in huts, like the huts of the Berbers, and subsist chiefly on fish and water-fowl; while those occupying the level country further inland live like the Kurds, supporting themselves on milk, cheese, and maize.' In these same regions there are yet two more tribes placed by these geographers, namely, the Bodha and the Meid. The former are properly, according to Ibn-Haukal, a subdivision of the Zott. . . . In course of time the Meds (to adopt the spelling favoured by Sir Henry Elliott) overcame the Zotts, whom they treated with such severity that they had to leave the country. The Zotts then established themselves on the river Pehen, where they soon became skilful sailors"; while those living farther to the north, known as Kikan, became famed as breeders of horses and herders of buffalos. When the Arabs, in their career of conquest, came in contact with the Zotts, the latter joined them, and large colonies of them were removed, for some reason, to western Asia, and settled with their herds on the lower Euphrates and Tigris, and in Syria. The Zotts on the Tigris became strong and troublesome in time, and in 834 the khalif Motacem, after subjugating them by force, removed them from the country, to the number of 27,000, sending them to Ainzarba, on the northern frontier of Syria. In 855, Ainzarba was captured by the Byzantines, who carried off the Zotts, with all their buffalo herds. "Here, then, we have the first band of gypsies brought into the Greek Empire. . . . As regards the destinies of the Zotts after they had been brought to Asia Minor from Ainzarba, in the year 855, I have been unable—in the course of a hurried search—to discover anything. But, now that we know the year in which they entered Byzantine territory, others may be more successful. Whether the name Zott, or rather its Indian form Jatt (or Jaut), has also been brought with them into Europe, I am, of course, as little able to say."—M. J. de Goeje, *A Contribution to the Hist. of the Gypsies* (In "*Acc'ts of the Gypsies of India*," ed. by D. MacRitchie).—"Students of the gypsies, and especially those who have interested themselves in the history of the race, will have read with regret the announcement of the death, at Paris, on March 1st, of the veteran 'tsiganologue,' M. Paul Bataillard. For the last half century he had devoted his leisure time to the study of the early notices of the presence of gypsies in Europe. . . . It was his opinion that there have been gypsies in Eastern Europe since prehistoric times, and that it is to them Europe owes its knowledge of metallurgy. Heterodox although this opinion may be, it has recently been observed by Mr. F. H. Groome that 'Bataillard's theory is gaining favour with foreign archæologists, among whom MM. Mortillet, Chantre, and Burnouf had arrived independently at similar conclusions.'"—*The Athenæum*, March 31, 1894.

HALIFAX: A. D. 1749.—The founding of the city.—"In the year [1749] after the peace [of Aix-la-Chapelle] the land forces in Great Britain were reduced to little more than 18,000 men; those in Minorca, Gibraltar, and the American plantations, to 10,000; while the sailors retained in the Royal Navy were under 17,000. From the large number both of soldiers and seamen suddenly discharged, it was feared that they might be either driven to distress or tempted to depredation. Thus, both for their own comfort and for the quiet of the remaining community, emigration seemed to afford a safe and excellent resource. The province of Nova Scotia was pitched upon for this experiment, and the freehold of fifty acres was offered to each settler, with ten acres more for every child brought with him, besides a free passage, and an exemption from all taxes during a term of ten years. Attracted by such advantages, above 4,000 persons, with their families, embarked under the command of Colonel Cornwallis, and landed at the harbour of Chebuetow. The new town which soon arose from their labours received its name from the Earl of Halifax, who presided at the Board of Trade, and who had the principal share in the foundation of this colony. In the first winter there were but 300 huts of wood, surrounded by a palisade."—Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713-1783, ch. 31 (v. 4).—See, also, NOVA SCOTIA: A. D. 1749-1755.

HAMITES.—HAMITIC LANGUAGES.

—The name Hamites, as now used among ethnologists, is restricted more closely than it once was to certain African races, whose languages are found to be related. The languages classed as Hamitic are those of the ancient Egyptians and the modern Copts, most of the Abyssinian tribes, the Gallas and the Berbers. Some of the older writers, Lenormant, for example, embraced the Phœnicians and all their Canaanite neighbors among the Hamites; but this is not now an accepted view. It was undoubtedly formed under the influence of the theory from which the name Hamites came, namely that the people so designated were descendants of Ham; and it sought to adjust a division of the Hamitic family to four lines of descent, indicated by the Biblical account of the four sons of Ham,—Cush, Mizraim, Phut, and Canaan. This hypothesis identified the Cushites with the Ethiopians (modern Abyssinians and Nubians), the descendants of Mizraim with the Egyptians, those of Phut with the Libyans, and those of Canaan with the Canaanites, including the Phœnicians. Some held that the Hamites occupied originally a great part of western and southern Asia; that they were the primitive inhabitants of southern Mesopotamia, or Chaldea, southern Persia, and southern Arabia, and were displaced by the Semites; also that they once inhabited the most of Asia Minor, and that the Carians were a surviving remnant of them. But the more conservative sense in which the term Hamite is now used restricts it, as stated above, to certain races which are grouped together by a relationship in their

HANOVER.

languages. Whether or not the Hamitic tongues have an affinity to the Semitic seems still an open question; and, in fact, the whole subject is in an undetermined state, as may be inferred from the following extract: "The so-called Hamitic or sub-Semitic languages of Northern Africa . . . exhibit resemblances to the language of ancient Egypt as well as to those of the Semitic family. In the Libyan dialects we find the same double verbal form employed with the same double function as in Assyrian, and throughout the 'Hamitic' languages the causative is denoted by a prefixed sibilant as it was in the parent Semitic speech. We cannot argue, however, from language to race, . . . and the Libyans have ethnologically no connection with the Semites or the Egyptians. Moreover, in several instances the 'Hamitic' dialects are spoken by tribes of negro or Nubian origin, while the physiological characteristics of the Egyptians are very different from those of the Semite."—A. H. Sayce, *The Races of the Old Testament*, ch. 4.

A. D. 1815.—Raised to the rank of a kingdom, with territorial enlargement. See VIENNA, THE CONGRESS OF.

A. D. 1837.—Separation of the Crown from that of Great Britain.—“From the hour that the Crown of these kingdoms [Great Britain and Ireland] devolved upon Queen Victoria, dates a change which was a real blessing in the relations of the Sovereign to the Continent of Europe. Hanover was at that instant wholly separated from Great Britain. By the law of that country a female could not reign except in default of heirs male in the Royal family. But in addition to the great advantage of separating the policy of England wholly from the intrigues and complications of a petty German State, it was an immediate happiness that the most hated and in some respects the most dangerous man in these islands was removed to a sphere where his political system might be worked out with less danger to the good of society than amongst a people where his influence was associated with the grossest follies of Toryism and the darkest designs of Orangeism. On the 24th of June the duke of Cumberland, now become Ernest Augustus, King of Hanover, left London. On the 28th he

made a solemn entrance into the capital of his states, and at once exhibited to his new subjects his character and disposition by refusing to receive a deputation of the Chambers, who came to offer him their homage and their congratulations. By a proclamation of the 5th of July he announced his intention to abolish the representative constitution, which he had previously refused to recognize by the customary oath. We shall have little further occasion to notice the course of this worst disciple of the old school of intolerance and irresponsible government, and we may therefore at once state that he succeeded in depriving Hanover of the forms of freedom under which she had begun to live; ejected from their offices and banished some of the ablest professors of the University of Göttingen, who had ventured to think that letters would flourish best in a free soil; and reached the height of his ambition in becoming the representative of whatever in sovereign power was most repugnant to the spirit of the age.”—C. Knight, *Popular Hist. of Eng.*, v. 8, ch. 23.

HANOVER JUNCTION, Engagement at. See UNITED STATES OF AM.: A. D. 1862 (MAY—JUNE; VIRGINIA).

HANSA TOWNS, The.—“In consequence of the liberty and security enjoyed by the inhabitants of the free towns [of Germany—see CITIES: IMPERIAL AND FREE, OF GERMANY], while the rest of the country was a prey to all the evils of feudal anarchy and oppression, they made a comparatively rapid progress in wealth and population. Nuremberg, Augsburg, Worms, Spire, Frankfort, and other cities, became at an early period celebrated alike for the extent of their commerce, the magnificence of their buildings, and the opulence of their citizens. . . . The commercial spirit awakened in the north about the same time as in the south of Germany. Hamburgh was founded by Charlemagne in the beginning of the ninth century, in the intention of serving as a fort to bridle the Saxons, who had been subjugated by the emperor. Its favourable situation on the Elbe necessarily rendered it a commercial emporium. Towards the close of the twelfth century, the inhabitants, who had already been extensively engaged in naval enterprizes, began to form the design of emancipating themselves from the authority of their counts, and of becoming a sovereign and independent state; and in 1189 they obtained an Imperial charter which gave them various privileges, including among others the power of electing councillors, or aldermen, to whom, in conjunction with the deputy of the count, the government of the town was to be entrusted. Not long after Hamburgh became entirely free. In 1224 the citizens purchased from Count Albert the renunciation of all his rights, whether real or pretended, to any property in or sovereignty over the town, and its immediate vicinity. And the government was thus early placed on that liberal footing on which it has ever since remained. Lubeck, situated on the Trave, was founded about the middle of the twelfth century. It rapidly grew to be a place of great trade. It

became the principal emporium for the commerce of the Baltic, and its merchants extended their dealings to Italy and the Levant. At a period when navigation was still imperfect, and when the seas were infested with pirates, it was of great importance to be able to maintain a safe intercourse by land between Lubeck and Hamburg, as by that means the difficult and dangerous navigation of the Sound was avoided. And it is said by some, that the first political union between these cities had the protection of merchandize carried between them by land for its sole object. But this is contradicted by Lambec in his *'Origines Hamburgenses'* (lib. xi., pa. 26). . . . But whatever may have been the motives which led to the alliance between these two cities, it was the origin of the famous Hanseatic League, so called from the German word *'hansa,'* signifying a corporation. There is no very distinct evidence as to the time when the alliance in question was established; but the more general opinion seems to be that it dates from the year 1241. . . . From the beginning of the twelfth century, the progress of commerce and navigation in the north was exceedingly rapid. The countries which stretch along the bottom of the Baltic from Holstein to Russia, and which had been occupied by barbarous tribes of Slavonic origin, were then subjugated by the Kings of Denmark, the Dukes of Saxony, and other princes. The greater part of the inhabitants being exterminated, their place was filled by German colonists, who founded the towns of Stralsund, Rostock, Wismar, etc. Prussia and Poland were afterwards subjugated by the Christian princes, and the Knights of the Teutonic order. So that in a comparatively short period, the foundations of civilization and the arts were laid in countries whose barbarism had ever remained impervious to the Roman power. The cities that were established along the coasts of the Baltic, and even in the interior of the countries bordering upon it, eagerly joined the Hanseatic confederation. They were indebted to the merchants of Lubeck for supplies of the commodities produced in more civilized countries, and they looked up to them for protection against the barbarians by whom they were surrounded. The progress of the league was in consequence singularly rapid. Previously to the end of the thirteenth century it embraced every considerable city in all those vast countries extending from Livonia to Holland; and was a match for the most powerful monarchs. The Hanseatic confederacy was at its highest degree of power and splendour during the fourteenth and fifteenth centuries. It then comprised from sixty to eighty cities, which were distributed into four classes or circles. Lubeck was at the head of the first circle, and had under it Hamburg, Bremen, Rostock, Wismar, etc. Cologne was at the head of the second circle, with twenty-nine towns under it. Brunswick was at the head of the third circle, consisting of thirteen towns. Dantzic was at the head of the fourth circle, having under it eight towns in its vicinity, besides several that were more remote. The supreme authority of the League was vested in the deputies of the different towns assembled in Congress. In it they discussed all their measures; decided upon the sum that each city should contribute to the common fund; and upon the questions that arose between the confederacy and other powers, as

well as those that frequently arose between the different members of the confederacy. The place for the meeting of Congress was not fixed, but it was most frequently held at Lubeck, which was considered as the capital of the League, and there its archives were kept. . . . Besides the towns already mentioned, there were others that were denominated confederated cities, or allies. . . . The Golden Bull proscribed all sorts of leagues and associations, as contrary to the fundamental laws of the empire, and to the subordination due to the emperor and the different princes. But Charles IV., the author of this famous edict, judged it expedient to conciliate the Hanseatic League; and his successors seem generally to have followed his example. As the power of the confederated cities was increased and consolidated, they became more ambitious. Instead of limiting their efforts to the mere advancement of commerce and their own protection, they endeavoured to acquire the monopoly of the trade of the North, and to exercise the same sort of dominion over the Baltic that the Venetians exercised over the Adriatic. For this purpose they succeeded in obtaining, partly in return for loans of money, and partly by force, various privileges and immunities from the Northern sovereigns, which secured to them almost the whole foreign commerce of Scandinavia, Denmark, Prussia, Poland, Russia, etc. They exclusively carried on the herring-fishery of the Sound, at the same time that they endeavoured to obstruct and hinder the navigation of foreign vessels in the Baltic. . . . The Kings of Denmark, Sweden and Norway were frequently engaged in hostilities with the Hanse towns. They regarded, and it must be admitted not without pretty good reason, the privileges acquired by the League in their kingdoms as so many usurpations. But their efforts to abolish these privileges served, for more than two centuries, only to augment and extend them. . . . Waldemar III., who ascended the Danish throne in 1340, engaged in a furious contest with the League. Success seemed at first rather to incline to his arms. Ultimately, however, he was completely defeated by the forces of the League and its allies, and was even obliged to fly from his kingdom. In his exile he prevailed on the Emperor and the Pope to interpose in his favour. But neither the imperial rescripts nor the thunders of the Vatican were able to divert the confederated cities from their purposes. At length, in 1370, the regents, to whom the government of Denmark had been intrusted during the absence of the monarch, concluded a peace with the League on the conditions dictated by the latter; one of which was that most of the strong places in the kingdom should be given up to the League for fifteen years, in security for the faithful performance of the treaty. Waldemar having assented to these humiliating terms, returned soon after to Denmark. In the early part of the fifteenth century the Hanse towns having espoused the side of the Count of Holstein, who was at war with Eric X., King of Denmark, sent an armament of upwards of 200 ships, having more than 12,000 troops on board, to the assistance of their ally. This powerful aid decided the contest in his favour. Nearly at the same time the League raised their ally, Albert of Mecklenburgh, to the throne of Norway, who confirmed to them several important commercial

privileges. In their contests with Sweden, during the fourteenth and fifteenth centuries, the League were equally successful. Such, indeed, was their ascendancy in that kingdom, that they were authorized to nominate some of the principal magistrates in most of the Swedish maritime towns of any importance! . . . The town of Wisby, situated on the west coast of the island of Gothland, became, during the ascendancy of the League, one of its principal depots, and also one of the best frequented emporiums of the North. But Wisby is chiefly famous from its name having become identified with the code of maritime laws that was long of paramount authority in the Baltic. . . . The principal Northern jurists and historians regard the Wisby code, or compilation, as anterior to the code, or compilation, denominated the Rules or Judgments of Oleron, and as being in fact the most ancient monument of the maritime laws of the middle ages. But no learning or ingenuity can give plausibility to so improbable a theory. . . . In order to facilitate and extend their commercial transactions, the League established various factories in foreign countries, the principal of which were at Novogorod in Russia, London in England, Bruges in the Netherlands, and Bergen in Norway. Novogorod, situated at the confluence of the Volkof with the Imler Lake, was, for a lengthened period, the most renowned emporium in the north-eastern parts of Europe. . . . The merchants of the Hanse towns, or Hansards, as they were then commonly termed, were established in London at a very early period, and their factory here was of considerable magnitude and importance. They enjoyed various privileges and immunities; they were permitted to govern themselves by their own laws and regulations; the custody of one of the gates of the city (Bishopsgate) was committed to their care; and the duties on various sorts of imported commodities were considerably reduced in their favour. These privileges necessarily excited the ill-will and animosity of the English merchants. . . . The League exerted themselves vigorously in defence of their privileges; and having declared war against England, they succeeded in excluding our vessels from the Baltic, and acted with such energy, that Edward IV. was glad to come to an accommodation with them, on terms which were anything but honourable to the English. In the treaty for this purpose, negotiated in 1474, the privileges of the merchants of the Hanse towns were renewed, and the king assigned to them, in absolute property, a large space of ground, with the buildings upon it, in Thames Street, denominated the Steel Yard, whence the Hanse merchants have been commonly denominated the Association of the Steel Yard. . . . In 1498, all direct commerce with the Netherlands being suspended, the trade fell into the hands of the Hanse merchants, whose commerce was in consequence very greatly extended. But, according as the spirit of commercial enterprise awakened in the nation, and as the benefits resulting from the prosecution of foreign trade came to be better known, the privileges of the Hanse merchants became more and more obnoxious. They were in consequence considerably modified in the reigns of Henry VII. and Henry VIII., and were at length wholly abolished in 1597. The different individuals belonging to the factory in London, as well as those be-

longing to the other factories of the League, lived together at a common table, and were enjoined to observe the strictest celibacy. . . . By means of their factory at Bergen, and of the privileges which had been either granted to or usurped by them, the League enjoyed for a lengthened period the monopoly of the commerce of Norway. But the principal factory of the League was at Bruges in the Netherlands. Bruges became, at a very early period, one of the first commercial cities of Europe, and the centre of the most extensive trade carried on to the north of Italy. The art of navigation in the thirteenth and fourteenth centuries was so imperfect, that a voyage from Italy to the Baltic and back again could not be performed in a single season, and hence, for the sake of their mutual convenience, the Italian and Hanseatic merchants determined on establishing a magazine or store-house of their respective products in some intermediate situation. Bruges was fixed upon for this purpose, a distinction which it seems to have owed as much to the freedom enjoyed by the inhabitants, and the liberality of the government of the Low Countries, as to the convenience of its situation. In consequence of this preference, Bruges speedily rose to the very highest rank among commercial cities, and became a place of vast wealth. . . . From the middle of the fifteenth century the power of the confederacy, though still very formidable, began to decline. This was not owing to any misconduct on the part of its leaders, but to the progress of that improvement it had done so much to promote. . . . Lubeck, Hamburg, Bremen, and the towns in their vicinity, were latterly the only ones that had any interest in its maintenance. The cities in Zealand and Holland joined it, chiefly because they would otherwise have been excluded from the commerce of the Baltic; and those of Prussia, Poland and Russia did the same, because, had they not belonged to it, they would have been shut out from all intercourse with strangers. When, however, the Zealanders and Hollanders became sufficiently powerful at sea to be able to vindicate their right to the free navigation of the Baltic by force of arms, they immediately seceded from the League; and no sooner had the ships of the Dutch, the English, etc., begun to trade directly with the Polish and Prussian Hanse Towns, than these nations also embraced the first opportunity of withdrawing from it. . . . At the middle of the seventeenth century the cities of Lubeck, Hamburg, and Bremen were all that continued to acknowledge the authority of the League."—*History of the Hanseatic League* (*Foreign Quarterly Rev.*, Jan., 1831).

HARAN.—"From Ur, Abraham's father had migrated to Haran, in the northern part of Mesopotamia, on the high road which led from Babylonia and Assyria into Syria and Palestine. Why he should have migrated to so distant a city has been a great puzzle, and has tempted scholars to place both Ur and Haran in wrong localities; but here, again, the cuneiform inscriptions have at last furnished us with the key. As far back as the Accadian epoch, the district in which Haran was built belonged to the rulers of Babylonia; Haran was, in fact, the frontier town of the empire, commanding at once the highway into the west and the fords of the Euphrates; the name itself was an Accadian one, signifying 'the road.'"—A. H. Sayce, *Fresh Light from the Ancient Monuments*, ch. 2.—The site of Haran is generally identified with that of the later city of Carrhæ.

HARLAW, Battle of (1411).—A very memorable battle in Scottish history, fought July 24, 1411, between the Highlanders and Lowlanders of the country. Donald, Lord of the Isles, was then practically an independent sovereign of the western Highlands of Scotland, as well as the islands opposite their shore. He claimed still larger domains and invaded the lowland districts to make his claim good. The defeat inflicted upon him, at heavy cost to the victors, was felt, says Mr. Benton in his "History of Scotland," as a more memorable deliverance even than that of Bannockburn. The independence of the Lord of the Isle was not extinguished until sixty years later. "The battle of Harlaw and its consequences were of the highest importance, since they might be said to decide the superiority of the more civilized regions of Scotland over those inhabited by the Celtic tribes, who remained almost as savage as their forefathers the Dalriads."—Sir W. Scott, *Hist. of Scotland*, ch. 17.

HATFIELD CHASE.—A vast swamp in the West Riding of Yorkshire, England, 180,000 acres in extent, which was sold by the crown in the reign of Charles I. to a Hollander who drained and reclaimed it. It had been a forest in early times and was the scene of a great battle between Penda, King of Mercia, and Edwin of Northumberland.—J. C. Brown, *Forests of England*, pt. 1, ch. 2, sect. 2.

HATRA.—"Hatra [in central Mesopotamia] became known as a place of importance in the early part of the second century after Christ. It successfully resisted Trajan in A. D. 116, and Severus in A. D. 198. It is then described as a large and populous city, defended by strong and extensive walls, and containing within it a temple of the Sun, celebrated for the great value of its offerings. It enjoyed its own kings at this time, who were regarded as of Arabian stock, and were among the more important of the Parthian tributary monarchs. By the year A. D. 363 Hatra had gone to ruin, and is then described as 'long since deserted.' Its flourishing period thus belongs to the space between A. D. 100 and A. D. 300." The ruins of Hatra, now called El-Hadhr, were "visited by Mr. Layard in 1846, and described at length by Mr. Ross in the ninth volume of the 'Journal of the Royal Geographical Society,' as well as by Mr. Fergusson, in his 'History of Architecture.'"—G. HAWAIIAN ISLANDS, The.—The Hawaiian or Sandwich Archipelago, in the North Pacific ocean, "consists of the seven large and inhabited volcanic islands of Oahu, Kauai, Niihau, Maui, Molokai, Lanai, and Hawaii, and the four bare and rocky islets of Kaula, Lehua, Kahoolawe, and Molokini, with a total area of 8,000 square miles, and a population of scarcely more than 50,000 souls. . . . The Kanakas, as the natives are called, are amongst the finest and most intelligent races of the Pacific, and have become thoroughly 'Europeanised,' or, perhaps rather, 'Americanised.' . . . The Hawaiians, like all other Polynesians, are visibly decreasing in a constantly increasing ratio."—*Stanford's Compendium of Geog.: Australasia*, ch. 24.—"Gaetano discovered one of the Sandwich [Hawaiian] Islands in 1542; and, following him, Quiros

found Tahiti and the New Hebrides. Sea voyages in the Pacific multiplied, but that sea long continued the exclusive theatre of the enterprises of the Spaniards and Portuguese. . . . Native traditions refer to the arrival of strangers a long time before Cook's appearance. In the seventeenth century Spanish merchantmen were crossing the Pacific, and might have refreshed at these islands. The buccaneers, too, may have found the small harbour a convenient place of concealment."—M. Hopkins, *Hawaii: The Past, Present and Future of the Island Kingdom*, pp. 83, 87.—"It is about a century since His Majesty's ships 'Resolution' and 'Adventure,' Captains Cook and Clerke, turned back from Behring Strait after an unsuccessful attempt to discover the North-West Passage. But the adventurers were destined to light upon fairer lands than those which they had failed to find. On the 18th of January, 1778, whilst sailing through the Pacific, the look-out man reported land ahead, and in the evening they anchored on the shores of that lovely group of twelve islands, which they named in honour of the then First Lord of the Admiralty—Lord Sandwich—better known to the satirists of his day as 'Jemmy Tackler,' one of the greatest of statesmen and most abandoned of men. The natives received the strangers gladly; but on the 14th of February, 1779, in an altercation consequent on the theft of a boat, Captain Cook was killed in Kealakekua or Karakakoa Bay, in the Island of Hawaii, or Owhyhee, from which the official name of the country—the kingdom of Hawaii—takes its name."—R. Brown, *The Countries of the World*, v. 4, p. 22.—The several islands of the Hawaiian group were politically independent of each other and ruled by different chiefs at the time of Captain Cook's visit; but a few years later a chief named Kaméhaméha, of remarkable qualities and capabilities, succeeded to the sovereignty in the Island of Hawaii, and made himself master in time of the whole group. Dying in 1819, he left a consolidated kingdom to his son Liholiho, or Kaméhaméha II., in whose reign "tabu" and idolatry were abolished and Christian missionaries began their labors. The dynasty founded by Kaméhaméha held the throne until 1872. In 1840 a constitution was proclaimed, which created a legislative body, composed of hereditary nobles and seven representatives informally elected by the people. In 1842 the United States, by an official letter from Daniel Webster, then Secretary of State, "recognized the independence of the Hawaiian Kingdom, and declared, 'as the sense of the government of the United States, that the government of the Sandwich Islands ought to be respected; that no power ought to take possession of the islands, either as a conquest or for the purpose of colonization; and that no power ought to seek for any undue control over the existing government, or any exclusive privileges or preferences in matters of commerce.'" The following year, France and England formally recognized "the existence in the Sandwich Islands of a government capable of providing for the regularity of its relations with foreign nations," and agreed "never to take possession, either directly or under the title of a protectorate, or under any other form, of any part of the territory of which they are composed." In 1852 the constitution was revised. The legislature, formerly sitting in one body, was now

divided into two houses and both enlarged. In 1864, however, King Kamehameha V. forced the adoption of a new constitution which reversed this bicameral arrangement and restored the single chamber. A double qualification of the suffrage, by property and by education, was also introduced. With the death of Kamehameha V., in 1872, his line ended. His successor, Lunalilo, was elected by the legislature, and the choice ratified by a popular vote. The reign of Lunalilo lasted but two years. His successor, David Kalakaua, was raised to the throne by election. In the year after his accession, Kalakaua visited the United States, and soon afterwards, in 1875, a treaty of reciprocity between the two countries was negotiated. This was renewed and enlarged in 1887. In 1881 the King made a tour of the world. In the fall of 1890 he came to California for his health; in January, 1891, he died at San Francisco. His sister, Liliuokalani, widow of an American resident, succeeded him.—W. D. Alexander, *Brief History of the Hawaiian People*.—In 1887 a new constitution had been adopted. "This new constitution was not framed by the king but by the people through their own appointed citizens and members of the courts. The legislative powers of the crown which had been abridged by the constitution of 1864 were now entirely removed and vested in the representatives of the people. By this the crown became an executive. In addition to this provision there was one making the ministry a responsible body and depriving the king of the right to nominate members of the house of nobles. . . . The legislature consists of a House of Nobles composed of twenty-four members, who are elected for a term of six years, and a House of Representatives consisting of from twenty-four to forty-two members elected for two years. The Houses sit in joint session. In addition to these public officers there is a cabinet composed of four ministers appointed by the sovereign holding executive power and who may be removed upon sufficient cause by the legislature. Such was the form of government in vogue up to the time of the recent revolution which has excited the interest of the American government. On the 15th of January [1893] . . . Queen Liliuokalani made the attempt to promulgate a new constitution, obviously for the purpose of increasing her power in the government. It has been hinted that the queen desired to benefit in a pecuniary way by granting concessions for the establishment of a lottery, and the importation of opium into the kingdom, both of which had until a year ago been prohibited. It is best, however, to adhere to fact. The queen desired more power. This new constitution, as framed by her, deprived foreigners of the right of franchise, abrogated the House of Nobles, and gave to the queen herself the power to appoint a new House. This blow aimed directly at the foreigners, who are the largest property holders in the kingdom, stirred them to prompt action. The queen's own ministry were unsuccessful in their efforts to dissuade her from the attempt to put the new constitution into effect. The resolve was not to be shaken, however, and her determination to carry out her plan incited the people, chiefly the foreigners, to oppose the measure. The outcome was a revolution in which not a single life was sacrificed."—A. A. Black, *The Hawaiian Islands (Chantauquan, April, 1893, pp. 54-57)*.—A provisional

government set up by the revolutionists was immediately recognized by the United States Minister, Mr. Stevens, and commissioners were sent to Washington to apply for the annexation of the islands to the United States. On the 16th of February, 1893, the President of the United States, Mr. Harrison, sent a message to the Senate, submitting an annexation treaty and recommending its ratification. Meantime, at Honolulu, on the 9th of February, the United States Minister, acting without instructions, had established a protectorate over the Hawaiian Islands, in the name of the United States. On the 4th of March, a change in the Presidency of the United States occurred, Mr. Cleveland succeeding Mr. Harrison. One of the earliest acts of President Cleveland was to send a message to the Senate, withdrawing the annexation treaty of his predecessor. A commissioner, Mr. Blount, was then sent to the Hawaiian Islands to examine and report upon the circumstances attending the change of government. On the 18th of the following December the report of Commissioner Blount was sent to Congress, with an accompanying message from the President, in which latter paper the facts set forth by the Commissioner, and the conclusions reached and action taken by the United States Government, were summarized partly as follows: "On Saturday, January 14, 1893, the Queen of Hawaii, who had been contemplating the proclamation of a new constitution, had, in deference to the wishes and remonstrances of her Cabinet, renounced it for the present at least. Taking this relinquished purpose as a basis of action, citizens of Honolulu, numbering from fifty to one hundred, mostly resident aliens, met in a private room and selected a so-called committee of safety composed of thirteen persons, nine of whom were foreign subjects, and composed of seven Americans, one Englishman, and one German. This committee, though its designs were not revealed, had in view nothing less than annexation to the United States, and between Saturday, the 14th, and the following Sunday, the 18th of January—though exactly what action was taken may never be revealed—they were certainly in communication with the United States Minister. On Monday morning the Queen and her Cabinet made public proclamation, with a notice which was specially served upon the representatives of all foreign governments, that any changes in the constitution would be sought only in the methods provided by that instrument. Nevertheless, at the call and under the auspices of the committee of safety, a mass meeting of citizens was held on that day to protest against the Queen's alleged illegal and unlawful proceedings and purpose. Even at this meeting the committee of safety continued to disguise their real purpose and contented themselves with procuring the passage of a resolution denouncing the Queen and empowering the committee to devise ways and means 'to secure the permanent maintenance of law and order and the protection of life, liberty, and property in Hawaii.' This meeting adjourned between 3 and 4 o'clock in the afternoon. On the same day, and immediately after such adjournment, the committee, unwilling to take further steps without the co-operation of the United States Minister, addressed him a note representing that the public safety was menaced and that lives and property were in danger, and

concluded as follows: 'We are unable to protect ourselves without aid, and therefore pray for the protection of the United States forces.' Whatever may be thought of the other contents of this note, the absolute truth of this latter statement is incontestable. When the note was written and delivered, the committee, so far as it appears, had neither a man nor a gun at their command, and after its delivery they became so panic-stricken at their position that they sent some of their number to interview the Minister and request him not to land the United States forces till the next morning, but he replied the troops had been ordered and whether the committee were ready or not the landing should take place. And so it happened that on the 16th day of January, 1893, between 4 and 5 o'clock in the afternoon, a detachment of marines from the United States steamship Boston, with two pieces of artillery, landed at Honolulu. The men, upwards of one hundred and sixty in all, were supplied with double cartridge belts, filled with ammunition, and with haversacks and canteens, and were accompanied by a hospital corps with stretchers and medical supplies. This military demonstration upon the soil of Honolulu was of itself an act of war, unless made either with the consent of the Government of Hawaii or for the bona fide purpose of protecting the imperilled lives and property of the citizens of the United States. But there is no pretense of any such consent on the part of the Government of Hawaii, which at that time was undisputed, and was both the de facto and the de jure Government. In point of fact the Government, instead of requesting the presence of an armed force, protested against it. There is little basis for the pretense that such forces landed for the security of American life and property. . . . When these armed men were landed the city of Honolulu was in its customary orderly and peaceful condition. There was no symptom of riot or disturbance in any quarter. . . . Thus it appears that Hawaii was taken possession of by the United States forces without the consent or wish of the Government of the Islands, or anybody else so far as known, except the United States Minister. Therefore, the military occupation of Honolulu by the United States on the day mentioned was wholly without satisfaction, either as an occupation by consent or as an occupation necessitated by dangers threatening American life and property. It must be accounted for in some other way and on some other ground, and its real motive and purpose are neither obscure nor far to seek. The United States forces being now on the scene and favorably stationed, the committee proceeded to carry out their original scheme. They met the next morning, Tuesday, the 17th, perfected the plan of temporary government and fixed upon its principal officers, who were drawn from 13 members of the committee of safety. Between 1 and 2 o'clock, by squads and by different routes to avoid notice, and having first taken the precaution of ascertaining whether there was anyone there to oppose them, they proceeded to the Government building to proclaim the new Government. No sign of opposition was manifest, and thereupon an American citizen began to read the proclamation from the steps of the Government Building almost entirely without auditors. It is said that before the reading was finished quite a concourse of persons, variously estimated

at from 50 to 100, some armed and some unarmed, gathered about the committee to give them aid and confidence. This statement is not important, since the one controlling factor in the whole affair was unquestionably the United States marines, who, drawn up under arms with artillery in readiness only 76 yards distant, dominated the situation. The Provisional Government thus proclaimed was by the terms of the proclamation 'to exist until terms of the Union with the United States had been negotiated and agreed upon.' The United States Minister, pursuant to prior agreement, recognized this Government within an hour after the reading of the proclamation, and before 5 o'clock, in answer to an inquiry on behalf of the Queen and her Cabinet, announced that he had done so. . . . Some hours after the recognition of the Provisional Government by the United States Minister, the barracks and the police station, with all the military resources of the country, were delivered up by the Queen upon the representation made to her that her cause would thereafter be reviewed at Washington, and while protesting that she surrendered to the superior force of the United States, whose Minister had caused United States troops to be landed at Honolulu and declared that he would support the Provisional Government, and that she yielded her authority to prevent collision of armed forces and loss of life, and only until such time as the United States, upon the facts being presented to it, should undo the action of its representative and reinstate her in the authority she claimed as the constitutional sovereign of the Hawaiian Islands. This protest was delivered to the chief of the Provisional Government, who indorsed it in his acknowledgment of its receipt. . . . As I apprehend the situation, we are brought face to face with the fact that the lawful government of Hawaii was overthrown without the drawing of a sword or the firing of a shot, by a process every step of which, it may safely be asserted, is directly traceable to and dependent for its success upon the agency of the United States acting through its diplomatic and naval representatives. . . . Believing, therefore, that the United States could not, under the circumstances disclosed, annex the islands without justly incurring the imputation of acquiring them by unjustifiable methods, I shall not again submit the treaty of annexation to the Senate for its consideration, and in the instructions to Minister Willis, a copy of which accompanies this message, I have directed him to so inform the Provisional Government. But in the present instance our duty does not, in my opinion, end with refusing to consummate this questionable transaction. . . . I mistake the American people if they favor the odious doctrine that there is no such thing as international morality; that there is one law for a strong nation and another for a weak one; and that even by indirection a strong power may, with impunity, despoil a weak one of its territory. . . . The Queen surrendered, not to the Provisional Government, but to the United States. She surrendered not absolutely and permanently, but temporarily and conditionally until such facts could be considered by the United States. . . . In view of the fact that both the Queen and the Provisional Government had at one time apparently acquiesced in a reference of the entire case to the United States Government, and considering

the further fact that, in any event, the Provisional Government, by its own declared limitation, was only 'to exist until terms of union with the United States of America have been negotiated and agreed upon,' I hoped that after the assurance to the members of that Government that such union could not be consummated, I might compass a peaceful adjustment of the difficulty. Actuated by these desires and purposes, and not unmindful of the inherent perplexities of the situation nor limitations upon my part, I instructed Mr. Willis to advise the Queen and her supporters of my desire to aid in the restoration of the status existing before the lawless landing of the United States forces at Honolulu on the 17th of January last, if such restoration could be effected upon terms providing for clemency as well as justice to all parties concerned. The conditions suggested contemplated a general amnesty to those concerned in setting up the Provisional Government and a recognition of all the bona fide acts and obligations. In short, they require that the past should be buried, and that the restored Government should re-assume its authority as if its continuity had not been interrupted. These conditions have not proved acceptable to the Queen, and though she has been informed that they will be insisted upon, and that unless acceded to the effort of the President to aid in the restoration of her Government will cease, I have not thus far learned that she is willing to yield them her acquiescence." The refusal of the Queen to consent to a general amnesty forbade further thought of her restoration; while the project of annexation to the United States was extinguished for the time by the just action of President Cleveland, sustained by the Senate. The unauthorized protectorate assumed by Minister Stevens having been withdrawn, the Provisional government remains (March, 1894) in control of the Government of the Hawaiian Islands, and a republican constitution is said to be in preparation.

HAYTI, HAITI, OR SAN DOMINGO (Originally called Hispaniola): *Its names.—Its beauty.*—"Columbus called the island Hispaniola, and it has also been called St. Domingo from the city of that name on its southeastern coast; but Hayti or Haiti (the mountainous country) was its original Carrib name. The French bestowed upon it the deserved name of 'la Reine des Antilles.' All descriptions of its magnificence and beauty, even those of Washington Irving in his history of Columbus, fall far short of the reality. It seems beyond the power of language to exaggerate its beauties, its productiveness, the loveliness of its climate, and its desirableness as an abode for man. Columbus labored hard to prove to Isabella that he had found here the original garden of Eden."

A. D. 1632-1803. — Partly possessed by France and partly by Spain.—Revolt of the Slaves and rise of Toussaint L'Ouverture to power.—Extinction of Slavery.—Treachery of the French.—Independence of the island acquired.—"About 1632 the French took possession of the western shore, and increased so rapidly that the Spaniards found it impossible to drive them out; and the footing they had gained was recognized by the Treaty of Ryswick, in 1697, when the western portion of Haiti was confirmed to France. The latter nation was fully conscious of the importance of the new acquirement, and under French rule it became of great value, supplying almost all Europe with cotton and sugar. But the larger eastern portion of the island, which still belonged to Spain, had no share in this progress, remaining much in the same condition as formerly; and thus matters stood—a sluggish community side by side with a thriving one—when the French Revolution broke out, and plunged the island into a state of ferment. In 1790 the population of the western colony consisted of half a million, of which number 38,360 were of European origin, 28,370 free people of colour, and the whole of the remainder negro slaves. The government of the island excluded the free people of colour—mostly mulattoes—from all political privileges, although they were in many cases well-educated men, and themselves the owners of large estates. . . . On the 15th May, 1790, the French National Assembly passed a decree declaring that people of colour, born of free parents, were entitled to all the privileges of French citizens. When this news reached the colony, it set the inhabitants in a perfect frenzy, the mulattoes manifesting an unbounded joy, whilst the whites boiled at the indignity their class had sustained. The representations of the latter caused the governor to delay the operation of the decree until the home government could be communicated with—a measure that aroused the greatest indignation amongst the mulattoes, and civil war appeared inevitable, when a third and wholly unexpected party stepped into the arena. The slaves rose in insurrection on August 23rd, 1791, marching with the body of a white infant on a spear-head as a standard, and murdering all Europeans indiscriminately. In the utmost consternation the whites conceded the required terms to the mulattoes, and, together with the help of the military, the rising was suppressed, and there seemed a prospect of peace, when the Assembly at Paris repealed the decree of the 15th May. The mulattoes now flew to arms, and for several years a terrible struggle was sustained, the horrors of which were augmented by vindictive ferocity on both sides. Commissioners sent from France could effect no settlement, for the camp of the whites was divided into two hostile sections, royalist and republican. The English and

Spaniards both descended on the island, and the blacks, under able chiefs, held impregnable positions in the mountains. Apprehensive of a British invasion in force, the Commissioners, finding they could not conquer the blacks, resolved on conciliating them; and in August, 1793, universal freedom was proclaimed — a measure ratified by the National Convention early in the following year. Meanwhile the English had taken Port-au-Prince, and were besieging the French governor in Port de la Paix, when the blacks, relying on the recent proclamation, came to his assistance, under the command of Toussaint L'Ouverture, and effected his release. . . . François Dominique Toussaint, a negro of pure blood, a slave and the offspring of slaves, was born in 1743, and on attaining manhood was first employed as a coachman, and afterwards held a post of trust in connexion with the sugar manufactory of the estate to which he belonged. The overseer having taken a fancy to him, he was taught to read and write, and even picked up some slight knowledge of Latin and mathematics." He was slow to join the rising of the blacks; "but at length, after having secured the escape of his master and family, he joined the negro army in a medical capacity," but quickly rose to leadership. "At first the blacks fought with the Spaniards against the French;" but Toussaint came to the conclusion that they had more to hope from the French, and persuaded his followers to march to the relief of the French governor, Levaux. When the latter heard that Toussaint had won the blacks to this alliance, he exclaimed, "Mais cet homme fait ouverture partout," and from that day the black commander-in-chief received the surname of L'Ouverture, by which he is best known in history. Acting with wonderful energy, Toussaint effected a junction with Levaux, drove the English from their positions, took 28 Spanish batteries in four days, and finally the British abandoned the island, whilst the Spaniards [1797] gave up all claim to its western end. "Toussaint L'Ouverture — now holding the position of commander-in-chief, but virtually dictator — succeeded with great skill in combining all the hostile elements of the colony. Peace was restored, commerce and agriculture revived, the whites were encouraged to reclaim their estates, and by a variety of prudent and temperate measures Toussaint showed the remarkable administrative abilities that he possessed. At this stage he assumed great state in public, being always guarded by a chosen body of 1,500 men in brilliant uniform, but in private life he was frugal and moderate. In the administration of affairs he was assisted by a council of nine, of whom eight were white planters. This body drew up a Constitution by which L'Ouverture was named president for life, and free trade established. The draft of this constitution, together with an autograph letter, he forwarded to Bonaparte; but the First Consul had no toleration for fellow-upstarts, and replied, 'He is a revolted slave whom we must punish; the honour of France is outraged.' At this time the whole island of Haiti was under Toussaint's sway. As some excuse for Bonaparte it must be acknowledged that Toussaint undoubtedly contemplated independence. . . . Anxious to divest his new presidency of even nominal subjection to France, he declared the independence of the island, with himself as supreme chief, in July

1801. Most unfortunately for the Haitian general, hostilities had for the moment ceased between Great Britain and France, and the First Consul was enabled to bestow his close attention on the former French colony. Determined to repossess it, Bonaparte sent out an army of 30,000 men, with 66 ships of war, under the command of his brother-in-law General Leclerc. . . . During Toussaint's presidency he had abolished slavery, the negroes still working the plantations, but as free men, and under the name of 'cultivators.' . . . Leclerc now endeavoured by proclamations to turn the cultivators against their chief, and also laboured to sow dissension in the ranks of the black army, by making the officers tempting offers, which they too often believed in and accepted. For months a bloody war raged, in which great cruelties were inflicted; but the discipline of the French was slowly telling in their favour, when Leclerc made a political blunder that destroyed the advantages he had gained. Thinking that all obstacles were overcome, he threw off the mask, and boldly declared the real object of the expedition — the re-enslavement of the negro population. This news fell like a thunderbolt amongst the blacks, who rallied round Toussaint in thousands." Alarmed at the effect, Leclerc recalled his proclamation, acknowledged it to be an error, and promised the summoning of an assembly representative of all races alike. "This specious programme won over Christophe, Dessalines, and other negro generals; and finally, on receiving solemn assurances from Leclerc, Toussaint accepted his offers, and peace was concluded." Soon afterwards, by an act of the blackest treachery, the negro statesman and soldier was lured into the hands of his mean enemy, and sent a prisoner, to France. Confined, without trial, or any hearing, in the dungeons of the Château Joux, in the department of Doubs, he was there "allowed to pine away, without warm clothing and with insufficient food. . . . Finally the governor of the prison went away for four days, leaving his captive without food or drink. On his return Toussaint was dead, and the rats had gnawed his feet. It was given out that apoplexy was the cause of death. . . . This breach of faith on the part of the French aroused the fury and indignation of the blacks. . . . Under Dessalines, Christophe, Clerveaux, and others, the fires of insurrection blazed out afresh." At the same time yellow fever raged and Leclerc was among the victims. General Rochambeau, who succeeded him, continued the war with unmeasured barbarity, but also with continued defeat and discouragement, until he was driven, in 1803, to surrender, and "the power of the French was lost on the island." — C. H. Eden, *The West Indies*, ch. 13. — *Toussaint L'Ouverture: A Biog.* (by J. R. Beard) and an *Autobiog.*

A. D. 1804-1880. — *Massacre of whites*. — *The Empire of Dessalines*. — *The kingdom of Christophe*. — *The Republic of Pétion and Boyer*. — *Separation of the independent Republic of San Domingo*. — *The Empire of Soulouque*. — *The restored Republic of Hayti*. — "In the beginning of 1804 the independence of

the negroes under Dessalines was sufficiently assured: but they were not satisfied until they had completed a general massacre of nearly the whole of the whites, including aged men, women and children, who remained in the island, numbering, according to the lowest estimate, 2,500 souls. Thus did Dessalines, in his own savage words, render war for war, crime for crime, and outrage for outrage, to the European cannibals who had so long preyed upon his unhappy race. The negroes declared Dessalines Emperor: and in October 1804 he was crowned at Port-au-Prince by the title of James I. Dessalines was at once a brave man and a cruel and avaricious tyrant. He acquired great influence over the negroes, who long remembered him with affectionate regret: but he was not warmly supported by the mulattoes, who were by far the most intelligent of the Haytians. He abolished the militia, and set up a standing army of 40,000 men, whom he found himself unable to pay, from the universal ruin which had overtaken the island. The plantation labourers refused to work. . . . Dessalines authorised the landowners to flog them. Dessalines was himself a large planter: he had 32 large plantations of his own at work, and he forced his labourers to work on them at the point of the bayonet. Both he and his successor, Christophe, like Mahomed Ali in Egypt, grew rich by being the chief merchants in their own dominions. . . . He failed in an expedition against St. Domingo, the Spanish part of the island, whence the French general Ferrand still threatened him: and at length some sanguinary acts of tyranny roused against him an insurrection headed by his old comrade Christophe. The insurgents marched on Port-au-Prince, and the first black Emperor was shot by an ambuscade at the Pont Rouge outside the town. The death of Dessalines delivered up Hayti once more to the horrors of civil war. The negroes and mulattoes, who had joined cordially enough to exterminate their common enemies, would no longer hold together; and ever since the death of Dessalines their jealousies and differences have been a source of weakness in the black republic. In the old times, Hayti, as the French part of the island of Española was henceforth called, had been divided into three provinces: South, East, and North. After the death of Dessalines each of these provinces became for a time a separate state. Christophe wished to maintain the unlimited imperialism which Dessalines had set up: but the Constituent Assembly, which he summoned at Port-au-Prince in 1806, had other views. They resolved upon a Republican constitution." Christophe, not contented with the offered presidency, "collected an army with the view of dispersing the Constituent Assembly: but they collected one of their own, under Pétion, and forced him to retire from the capital. Christophe maintained himself in Cap François, or, as it is now called, Cap Haytien; and here he ruled for 14 years. In 1811, despising the imperial title which Dessalines had desecrated, he took the royal style by the name of Henry I. Christophe, as a man, was nearly as great a monster as Dessalines. . . . Yet Christophe at his best was a man capable of great aims, and a sagacious and energetic ruler." In 1820, finding himself deserted in the face of a mulatto insurrection, he committed suicide. "In a month or two after Christophe's suicide the whole island was united

under the rule of President Boyer." Boyer was the successor of Pétion, who had been elected in the North, under the republican constitution which Christophe refused submission to. Pétion, "a mulatto of the best type," educated at the military academy of Paris, and full of European ideas, had ruled the province which he controlled ably and well for eleven years. In discouragement he then took his own life, and was succeeded, in 1818, by his lieutenant, Jean Pierre Boyer, a mulatto. "On the suicide of Christophe, the army of the Northern Province, weary of the tyranny of one of their own race, declared for Boyer. The French part of the island was now once more under a single government: and Boyer turned his attention to the much larger Spanish territory, with the old capital of St. Domingo, where a Spaniard named Muñoz de Caceres, with the aid of the negroes, had now followed the example in the West, and proclaimed an independent government. The Dominicans, however, were still afraid of Spain, and were glad to put themselves under the wing of Hayti: Boyer was not unwilling to take possession of the Spanish colony, and thus it happened that in 1822 he united the whole island under his Presidency. In the same year he was elected President for life under the constitution of Pétion, whose general policy he maintained: but his government, especially in his later years, was almost as despotic as that of Christophe. Boyer was the first Haytian who united the blacks and mulattoes under his rule. It was mainly through confidence in him that the government of Hayti won the recognition of the European powers. . . . In 1825 its independence was formally recognised by France, on a compensation of 150,000,000 of francs being guaranteed to the exiled planters and to the home government. This vast sum was afterwards reduced: but it still weighed heavily on the impoverished state, and the discontents which the necessary taxation produced led to Boyer's downfall," in 1843, when he withdrew to Jamaica, and afterwards to Paris, where he died in 1850. A singular state of affairs ensued. The eastern, or Spanish, part of the island resumed its independence (1844), under a republican constitution resembling that of Venezuela, and with Pedro Santana for its President, and has been known since that time as the Republic of San Domingo, or the Dominican Republic. In the Western, or Haytian Republic, large numbers of the negroes, "under the names of Piquets and Zinglins, now formed themselves into armed bands, and sought to obtain a general division of property under some communistic monarch of their own race. The mulatto officials now cajoled the poor negroes by bribing some old negro, whose name was well known to the mass of the people as one of the heroes of the war of liberty, to allow himself to be set up as President. The Boyerists, as the mulatto oligarchy were called, thus succeeded in re-establishing their power," and their system (for describing which the word "gerontocracy" has been invented) was carried on for some years, until it resulted, in 1847, in the election to the Presidency of General Faustin Soulouque. "Soulouque was an illiterate negro whose recommendations to power were that he was old enough to have taken part in the War of Independence, having been a lieutenant under Pétion, and that he was popular with the negroes, being devotedly attached to

the strange mixture of freemasonry and fetish worship by which the Haytian blacks maintain their political organisation." The new President took his elevation more seriously than was expected, and proved to be more than a match for the mulattoes who thought to make him their puppet. He gathered the reins into his own hands, and crushed the mulattoes at Port-au-Prince by a general massacre. He then "caused himself to be proclaimed Emperor, by the title of Faustinus the First (1849)," and established a grotesque imperial court, with a fantastic nobility, in which a Duke de Lemonade figured by the side of a Prince Tape-à-l'œil. This lasted until December 1858, when Soulouque was dethroned and sent out of the country, to take refuge in Jamaica, and the republic was restored, with Fabre Nicholas Geffrard, a mulatto general, at its head. Geffrard held the Presidency for eight years, when he followed his predecessor into exile in Jamaica, and was succeeded by General Salnave, a negro, who tried to re-establish the Empire and was shot, 1869. Since that time revolutions have been frequent and nothing has been constant except the disorder and decline of the country. Meantime, the Dominican Republic has suffered scarcely less, from its own disorders and the attacks of its Haytian neighbors. In 1861 it was surrendered by a provisional government to Spain, but recovered independence three years later. Soon afterwards one of its parties sought annexation to the United States, and in 1869 the President of the latter republic, General Grant, concluded a treaty with the Dominican government for the cession of the peninsula of Samana, and for the placing of San Domingo under American protection. But the Senate of the United States refused to ratify the treaty.—E. J. Payne, *Hist. of European Colonies*, ch. 15.

A. D. 1346-1504.—The Lords of the Isles.—In 1346, the dominion of most of the Hebrides became consolidated under John, son of Ronald or Angus Oig, of Islay, and he assumed the title of "Lord of the Isles." The Lords of the Isles became substantially independent of the Scottish crown until the battle of Harlaw, in 1411 (see HARLAW, BATTLE OF). The lordship was extinguished in 1504 (see SCOTLAND: A. D. 1502-1504).—*Historical Tales of the Wars of Scotland*, pp. 65-72.

HEBRON.—In the settlement of the tribes of Israel, after the conquest of Canaan, Caleb, one of the heroes of Judah, "took possession of the territory round the famous old city of Hebron, and thereby gained for his tribe a seat held sacred from Patriarchal times. . . . Beginning with Hebron, he acquired for himself a considerable territory, which even in David's time was named simply Caleb, and was distinguished from the rest of Judah as a peculiar district. . . . Hebron remained till after David's time celebrated as the main seat and central point of the entire tribe, around which it is evident that all the rest of Judah gradually clustered in good order."—H. Ewald, *Hist. of Israel*, bk. 2, sect. 3, A.—"Hebron was a little city, the centre of an ancient civilization, which to some extent had been inherited by the tribe of Judah. It was undoubtedly the capital of Judah, a city of the highest religious character full of recollections and traditions. It could boast of fine public buildings, good water, and a vast and well-kept pool. The unification of Israel had just been accomplished there. It was only natural that Hebron should become the capital of the new kingdom [of David]. . . . It is not easy to say what induced David to leave a city which had such ancient and evident claims for a hamlet like Jebus [Jerusalem], which did not yet belong to him. It is probable that he found Hebron too exclusively Judahite."—E. Renan, *Hist. of the People of Israel*, bk. 2, ch. 18.—See, also, ZOAN; and JEWS: THE CHILDREN OF ISRAEL IN EGYPT.

HECANA, Kingdom of.—One of the small, short-lived kingdoms of the Angles in early England. Its territory was in modern Herefordshire.—W. Stubbs, *Const. Hist. of Eng.*, ch. 7, sect. 70.—See ENGLAND: A. D. 547-633.

HEERBAN, The.—The "heerban" was a military system instituted by Charlemagne, which gave way to the feudal system under his successors. "The basis of the heerban system was the duty of every fighting man to answer directly the call of the king to arms. The free-man, not only of the Franks, but of all the subject peoples, owed military service to the king alone. This duty is insisted upon in the laws of Charlemagne with constant repetition. The summons (heerban) was issued at the spring meeting, and sent out by the counts or missi. The soldier was obliged to present himself at the given time, fully armed and equipped with all provision for the campaign, except fire, water, and fodder for the horses."—E. Emerton, *Introduction to the Study of the Middle Ages*, ch. 14.

HELIÆA, The.—Under Solon's constitution for the government of Athens, "a body of 6,000 citizens was every year created by lot to form a supreme court, called Heliæa, which was divided into several smaller ones, not limited to any precise number of persons. The qualifications required for this were the same with those which gave admission into the general assembly, except that the members of the former might not be under the age of thirty. It was, therefore, in fact, a select portion of the latter, in which the powers of the larger body were concentrated and exercised under a judicial form."—C. Thirlwall, *Hist. of Greece*, ch. 11.

HELLAS.—**HELLENES**.—**GRAIKOI**.—**GREEKS**.—"To the Greek of the historical ages the idea of Hellas was not associated with any definite geographical limits. Wherever a Greek settlement existed, there for the colonists was Hellas. . . . Of a Hellas lying within certain specified bounds, and containing within it only Greek inhabitants, they knew nothing."—G. W. Cox, *Hist. of Greece*, bk. 1, ch. 1.—"Their language was, . . . from the beginning, the token of recognition among the Hellenes. . . . Where this language was spoken—in Asia, in Europe, or in Africa—there was Hellas. . . . A considerable number of the Greek tribes which immigrated by land [from Asia] into the European peninsula [of Greece] followed the tracks of the Italicans, and, taking a westward route through Pæonia and Macedonia, penetrated through Illyria into the western half of the Alpine country of Northern Greece, which the formation of its hill ranges and valleys renders more easily accessible from the north than Thessaly in its secluded hollow. The numerous rivers, abounding in water, which flow close by one another through long gorges into the Ionian Sea, here facilitated an advance into the south; and the rich pasture-land invited immigration; so that Epirus became the dwelling-place of a dense crowd of population, which commenced its civilized career in the fertile lowlands of the country. Among them three main tribes were marked out, of which the Chaones were regarded as the most ancient. . . . Farther to the south the Thesprotians had settled, and more inland, in the direction of Pindus, the Molossians. A more ancient appellation than those of this triple division is that of the Greeks (Graikoi), which the Hellenes thought the earliest designation of their ancestors. The same name of Græci (Greeks) the Italicans applied to the whole family of peoples with whom they had once dwelt together in these districts. This is the first collective name of the Hellenic tribes in Europe. . . . Far away from the coast, in the seclusion of the hills, where lie closely together the springs of the Thyamis, Aous, Aracthus, and Achelous, extends at the base of Tomarus the lake Ioannina, on the thickly wooded banks of which, between fields of corn and damp meadows, lay Dodona, a chosen seat of the Pelasgian Zeus, the invisible God, who announced his presence in the rustling of the oaks, whose altar was surrounded by a vast circle of tripods, for a sign that he was the first to unite the domestic hearths and civic communities into a great association centering in himself. This Dodona was the central seat of the Græci; it was a sacred centre of the whole district before the Italicans commenced their westward journey; and at the same time the place where the subsequent national name of the Greeks can be first proved to have prevailed; for the chosen of the people, who administered the worship of Zeus, were called Selli or Helli, and after them the

surrounding country Hellopia or Hellas."—E. Curtius, *Hist. of Greece*, bk. 1, ch. 1 and 4 (v. 1).

HELLENIC GENIUS AND INFLUENCE.—HELLENIC AND HELLENISTIC CULTURE.—HELLENISM.—"It was the privilege of the Greeks to discover the sovereign efficacy of reason. They entered on the pursuit of knowledge with a sure and joyous instinct. Baffled and puzzled they might be, but they never grew weary of the quest. The speculative faculty which reached its height in Plato and Aristotle, was, when we make due allowance for time and circumstance, scarcely less eminent in the Ionian philosophers; and it was Ionia that gave birth to an idea, which was foreign to the East, but has become the starting-point of modern science,—the idea that Nature works by fixed laws. A fragment of Euripides speaks of him as 'happy who has learned to search into causes,' who 'discerns the deathless and ageless order of nature, whence it arose, the how and the why.' The early poet-philosophers of Ionia gave the impulse which has carried the human intellect forward across the line which separates empirical from scientific knowledge; and the Greek precocity of mind in this direction, unlike that of the Orientals, had in it the promise of uninterrupted advance in the future,—of great discoveries in mathematics, geometry, experimental physics, in medicine also and physiology. . . . By the middle of the fifth century B. C. the general conception of law in the physical world was firmly established in the mind of Greek thinkers. Even the more obscure phenomena of disease were brought within the rule. Hippocrates writing about a malady which was common among the Scythians and was thought to be preternatural says: 'As for me I think that these maladies are divine like all others, but that none is more divine or more human than another. Each has its natural principle and none exists without its natural cause.' Again, the Greeks set themselves to discover a rational basis for conduct. Rigorously they brought their actions to the test of reason, and that not only by the mouth of philosophers, but through their poets, historians, and orators. Thinking and doing—clear thought and noble action—did not stand opposed to the Greek mind. The antithesis rather marks a period when the Hellenic spirit was past its prime, and had taken a one-sided bent. The Athenians of the Periclean age—in whom we must recognise the purest embodiment of Hellenism—had in truth the peculiar power, which Thucydides claims for them, of thinking before they acted and of acting also. . . . To Greece . . . we owe the love of Science, the love of Art, the love of Freedom: not Science alone, Art alone, or Freedom alone, but these vitally correlated with one another and brought into organic union. And in this union we recognise the distinctive features of the West. The Greek genius is the European genius in its first and brightest bloom. From a vivifying contact with the Greek spirit Europe derived that new and mighty impulse which we call Progress. Strange it is to think that these Greeks, like the other members of the Indo-European family, probably had their cradle in the East; that behind Greek civilisation, Greek language, Greek mythology, there is that

Eastern background to which the comparative sciences seem to point. But it is no more than a background. In spite of all resemblances, in spite of common customs, common words, common syntax, common gods, the spirit of the Greeks and of their Eastern kinsmen—the spirit of their civilisation, art, language, and mythology—remains essentially distinct. . . . From Greece came that first mighty impulse, whose far-off workings are felt by us to-day, and which has brought it about that progress has been accepted as the law and goal of human endeavour. Greece first took up the task of equipping man with all that fits him for civil life and promotes his secular wellbeing; of unfolding and expanding every inborn faculty and energy, bodily and mental; of striving restlessly after the perfection of the whole, and finding in this effort after an unattainable ideal that by which man becomes like to the gods. The life of the Hellenes, like that of their Epic hero Achilles, was brief and brilliant. But they have been endowed with the gift of renewing their youth. Renan, speaking of the nations that are fitted to play a part in universal history, says 'that they must die first that the world may live through them;' that 'a people must choose between the prolonged life, the tranquil and obscure destiny of one who lives for himself, and the troubled stormy career of one who lives for humanity. The nation which revolves within its breast social and religious problems is always weak politically. Thus it was with the Jews, who in order to make the religious conquest of the world must needs disappear as a nation.' 'They lost a material city, they opened the reign of the spiritual Jerusalem.' So too it was with Greece. As a people she ceased to be. When her freedom was overthrown at Chaeronea, the page of her history was to all appearance closed. Yet from that moment she was to enter on a larger life and on universal empire. Already during the last days of her independence it had been possible to speak of a new Hellenism, which rested not on ties of blood but on spiritual kinship. This presentiment of Isocrates was marvellously realised. As Alexander passed conquering through Asia, he restored to the East, as garnered grain, that Greek civilisation whose seeds had long ago been received from the East. Each conqueror in turn, the Macedonian and the Roman, bowed before conquered Greece and learnt lessons at her feet. To the modern world too Greece has been the great civiliser, the oecumenical teacher, the disturber and regenerator of slumbering societies. She is the source of most of the quickening ideas which re-make nations and renovate literature and art. If we reckon up our secular possessions, the wealth and heritage of the past, the larger share may be traced back to Greece. One half of life she has made her domain,—all, or well-nigh all, that belongs to the present order of things and to the visible world."—S. H. Butcher, *Some Aspects of the Greek Genius*, pp. 9-43.—"The part assigned to [the Greeks] in the drama of the nations was to create forms of beauty, to unfold ideas which should remain operative when the short bloom of their own existence was over, and thus to give a new impulse, a new direction, to the whole current of human life. The prediction which Thucydides puts into the mouth of the Athenian orator has been fulfilled, though not in the sense literally conveyed: 'Assuredly

we shall not be without witnesses,' says Pericles; 'there are mighty documents of our power, which shall make us the wonder of this age, and of ages to come.' He was thinking of those wide-spread settlements which attested the empire of Athens. But the immortal witnesses of his race are of another kind. Like the victims of the war, whose epitaph he was pronouncing, the Hellenes have their memorial in all lands, graven, not on stone, but in the hearts of mankind. . . . Are we not warranted by what we know of Greek work, imperfect though our knowledge is, in saying that no people has yet appeared in the world whose faculty for art, in the largest sense of the term, has been so comprehensive? And there is a further point that may be noted. It has been said that the man of genius sometimes is such in virtue of combining the temperament distinctive of his nation with some gift of his own which is foreign to that temperament; as in Shakespeare the basis is English, and the individual gift a flexibility of spirit which is not normally English. But we cannot apply this remark to the greatest of ancient Greek writers. They present certainly a wide range of individual differences. Yet so distinctive and so potent is the Hellenic nature that, if any two of such writers be compared, however wide the individual differences may be, — as between Aristophanes and Plato, or Pindar and Demosthenes, — such individual differences are less significant than those common characteristics of the Hellenic mind which separate both the men compared from all who are not Hellenes. If it were possible to trace the process by which the Hellenic race was originally separated from their Aryan kinsfolk, the physiological basis of their qualities might perhaps be traced in the mingling of different tribal ingredients. As it is, there is no clue to these secrets of nature's alchemy: the Hellenes appear in the dawn of their history with that unique temperament already distinct: we can point only to one cause, and that a subordinate cause, which must have aided its development, namely, the geographical position of Greece. No people of the ancient world were so fortunately placed. Nowhere are the aspects of external nature more beautiful, more varied, more stimulating to the energies of body and mind. A climate which, within three parallels of latitude, nourishes the beeches of Pindus and the palms of the Cyclades; mountain-barriers which at once created a framework for the growth of local federations, and encouraged a sturdy spirit of freedom; coasts abounding in natural harbors; a sea dotted with islands, and notable for the regularity of its wind-currents; ready access alike to Asia and to the western Mediterranean, — these were circumstances happily congenial to the inborn faculties of the Greek race, and admirably fitted to expand them."—R. C. Jebb, *The Growth and Influence of Classical Greek Poetry*, pp. 27-31.—"The sense of beauty which the Greeks possessed to a greater extent than any other people could not fail to be caught by the exceptionally beautiful natural surroundings in which they lived; and their literature, at any rate their poetry, bears abundant testimony to the fact. Small though Greece is, it contains a greater variety, both in harmony and contrast, of natural beauty than most countries, however great. Its latitude gives it a southern climate, while its mountains allow

of the growth of a vegetation found in more northern climes. Within a short space occur all the degrees of transition from snow-topped hills to vine-clad fountains. And the joy with which the beauty of their country filled the Greeks may be traced through all their poetry. . . . The two leading facts in the physical aspect of Greece are the sea and the mountains. As Europe is the most indented and has relatively the longest coast-line of all the continents of the world, so of all the countries of Europe the land of Greece is the most interpenetrated with arms of the sea. . . .

'Two voices are there: one is of the Sea,

One of the Mountains; each a mighty voice:

In both from age to age thou didst rejoice;

They were thy chosen music, Liberty!'

Both voices spoke impressively to Greece, and her literature echoes their tones. So long as Greece was free and the spirit of freedom animated the Greeks, so long their literature was creative and genius marked it. When liberty perished, literature declined. The field of Chæroneia was fatal alike to the political liberty and to the literature of Greece. The love of liberty was indeed pushed even to an extreme in Greece; and this also was due to the physical configuration of the country. Mountains, it has been said, divide; seas unite. The rise and the long continuance in so small a country of so many cities, having their own laws, constitution, separate history, and independent existence, can only be explained by the fact that in their early growth they were protected, each by the mountains which surrounded it, so effectually, and the love of liberty in this time was developed to such an extent, that no single city was able to establish its dominion over the others. . . . Every one of the numerous states, whose separate political existence was guaranteed by the mountains, was actually or potentially a separate centre of civilisation and of literature. In some one of these states each kind of literature could find the conditions appropriate or necessary to its development. Even a state which produced no men of literary genius itself might become the centre at which poets collected and encouraged the literature it could not produce, as was the case with Sparta, to which Greece owed the development of choral lyric. . . . The eastern basin of the Mediterranean has deserved well of literature, for it brought Greece into communication with her colonies on the islands and on the surrounding coasts, and enabled the numerous Greek cities to co-operate in the production of a rich and varied literature, instead of being confined each to a one-sided and incomplete development. The process of communication began in the earliest times, as is shown by the spread of epic literature. Originating in Ionia, it was taken up in Cyprus, where the epic called the Cypria was composed, and at the beginning of the sixth century it was on the coast of Africa in the colony of Cyrene. The rapid spread of elegiac poetry is even more strikingly illustrated, for we find Solon in Athens quoting from his contemporary Mimnermus of Colophon. Choral lyric, which originated in Asia Minor, was conveyed to Sparta by Aleman, and by Simonides of Ceos all over the Greek world. But although in early times we find as much interchange and reaction in the colonies amongst themselves as between the colonies and the mother-country, with the advance of time we find the centripetal

tendency becoming dominant. The mother-country becomes more and more the centre to which all literature and art gravitates. At the beginning of the sixth century Sparta attracted poets from the colonies in Asia Minor, but the only form of literature which Sparta rewarded and encouraged was choral lyric. No such narrowness characterised Athens, and when she established herself as the intellectual capital of Greece, all men of genius received a welcome there, and we find all forms of literature deserting their native homes, even their native dialects, to come to Athens. . . . As long as literature had many centres, there was no danger of all falling by a single stroke; but when it was centralised in Athens, and the blow delivered by Philip at Cheronæa had fallen on Athens, classical Greek literature perished in a generation. It is somewhat difficult to distinguish race-qualities from the characteristics impressed on a people by the conditions under which it lives, since the latter by accumulation and transmission from generation to generation eventually become race-qualities. Thus the Spartans possessed qualities common to them and the Dorians, of whom they were a branch, and also qualities peculiar to themselves, which distinguished them from other Dorians. . . . The ordinary life of a Spartan citizen was that of a soldier in camp or garrison, rather than that of a member of a political community, and this system of life was highly unfavourable to literature. . . . Other Dorians, not hemmed in by such unfavourable conditions as the Spartans, did provide some contributions to the literature of Greece, and in the nature of their contributions we may detect the qualities of the race. The Dorians in Sicily sowed the seeds of rhetoric and carried comedy to considerable perfection. Of imagination the race seems destitute: it did not produce poets. On the other hand, the race is eminently practical as well as prosaic, and their humour was of a nature which corresponded to these qualities. . . . The Æolians form a contrast both to the Spartans and to the Athenians. The development of individuality is as characteristic of the Æolians as its absence is of the Spartans. But the Æolians, first of all Greeks, possessed a cavalry, and this means that they were wealthy and aristocratic. . . . This gives us the distinction between the Æolians and the Athenians: among the former, individuality was developed in the aristocracy alone; among the latter, in all the citizens. The Æolians added to the crown of Greek literature one of the brightest of its jewels—lyric poetry, as we understand lyric in modern times, that is, the expression of the poet's feelings, on any subject whatever, as his individual feeling. . . . But it was the Ionians who rendered the greatest services to Greek literature. They were a quick-witted race, full of enterprise, full of resources. In them we see reflected the character of the sea, as in the Dorians the character of the mountains. The latter partook of the narrowness and exclusiveness of their own homes, hemmed in by mountains, and by them protected from the incursion of strangers and strange innovations. The Ionians, on the other hand, were open as the sea, and had as many moods. They were eminently susceptible to beauty in all its forms, to the charm of change and to novelty. They were ever ready to put any belief or institution

to the test of discussion, and were governed as much by ideas as by sentiments. Keeness of intellect, taste in all matters of literature and art, grace in expression, and measure in everything distinguished them above all Greeks. The development of epic poetry, the origin of prose, the cultivation of philosophy, are the proud distinction of the Ionian race. In Athens we have the qualities of the Ionian race in their finest flower." —F. B. Jevons, *A History of Greek Literature*, pp. 485–490. — **Hellenism and the Jews.**—"The Jewish region . . . was, in ancient times as well as in the Graeco-Roman period, surrounded on all sides by heathen districts. Only at Jamnia and Joppa had the Jewish element advanced as far as the sea. Elsewhere, even to the west, it was not the sea, but the Gentile region of the Philistine and Phœnician cities, that formed the boundary of the Jewish. These heathen lands were far more deeply penetrated by Hellenism, than the country of the Jews. No reaction like the rising of the Maccabees had here put a stop to it, besides which heathen polytheism was adapted in quite a different manner from Judaism for blending with Hellenism. While therefore the further advance of Hellenism was obstructed by religious barriers in the interior of Palestine, it had attained here, as in all other districts since its triumphant entry under Alexander the Great, its natural preponderance over Oriental culture. Hence, long before the commencement of the Roman period, the educated world, especially in the great cities in the west and east of Palestine, was, we may well say, completely Hellenized. It is only with the lower strata of the populations and the dwellers in rural districts, that this must not be equally assumed. Besides however the border lands, the Jewish districts in the interior of Palestine were occupied by Hellenism, especially Scythopolis . . . and the town of Samaria, where Macedonian colonists had already been planted by Alexander the Great . . . while the national Samaritans had their central point at Sichem. The victorious penetration of Hellenistic culture is most plainly and comprehensively shown by the religious worship. The native religions, especially in the Philistine and Phœnician cities, did indeed in many respects maintain themselves in their essential character; but still in such wise, that they were transformed by and blended with Greek elements. But besides these the purely Greek worship also gained an entrance, and in many places entirely supplanted the former. Unfortunately our sources of information do not furnish us the means of separating the Greek period proper from the Roman; the best are afforded by coins, and these for the most part belong to the Roman. On the whole however the picture, which we obtain, holds good for the pre-Roman period also, nor are we entirely without direct notices of this age. . . . In the Jewish region proper Hellenism was in its religious aspect triumphantly repulsed by the rising of the Maccabees; it was not till after the overthrow of Jewish nationality in the wars of Vespasian and Hadrian, that an entrance for heathen rites was forcibly obtained by the Romans. In saying this however we do not assert, that the Jewish people of those early times remained altogether unaffected by Hellenism. For the latter was a civilising power, which extended itself to every department of life. It fashioned in a peculiar manner the organization of the state,

legislation, the administration of justice, public arrangements, art and science, trade and industry, and the customs of daily life down to fashion and ornaments, and thus impressed upon every department of life, wherever its influence reached, the stamp of the Greek mind. It is true that Hellenistic is not identical with Hellenic culture. The importance of the former on the contrary lay in the fact, that by its reception of the available elements of all foreign cultures within its reach, it became a world-culture. But this very world-culture became in its turn a peculiar whole, in which the preponderant Greek element was the ruling keynote. Into the stream of this Hellenistic culture the Jewish people was also drawn; slowly indeed and with reluctance, but yet irresistibly, for though religious zeal was able to banish heathen worship and all connected therewith from Israel, it could not for any length of time restrain the tide of Hellenistic culture in other departments of life. Its several stages cannot indeed be any longer traced. But when we reflect that the small Jewish country was enclosed on almost every side by Hellenistic regions, with which it was compelled, even for the sake of trade, to hold continual intercourse, and when we remember, that even the rising of the Maccabees was in the main directed not against Hellenism in general, but only against the heathen religion, that the later Asmonaeans bore in every respect a Hellenistic stamp—employed foreign mercenaries, minted foreign coins, took Greek names, etc., and that some of them, e. g. Aristobulus I., were direct favourers of Hellenism,—when all this is considered, it may safely be assumed, that Hellenism had, notwithstanding the rising of the Maccabees, gained access in no inconsiderable measure into Palestine even before the commencement of the Roman period.”—E. Schürer, *Hist. of the Jewish People in the Time of Christ*, div. 2, v. 1, pp. 29–30.—**Hellenism and the Romans.**—“In the Alexandrian age, with all its close study and imitation of the classical models, nothing is more remarkable than the absence of any promise that the Hellenic spirit which animated those masterpieces was destined to have any abiding influence in the world. . . . And yet it is true that the vital power of the Hellenic genius was not fully revealed, until, after suffering some temporary eclipse in the superficially Greek civilizations of Asia and Egypt, it emerged in a new quality, as a source of illumination to the literature and the art of Rome. Early Roman literature was indebted to Greece for the greater part of its material; but a more important debt was in respect to the forms and moulds of composition. The Latin language of the third century B. C. was already in full possession of the qualities which always remained distinctive of it; it was clear, strong, weighty, precise, a language made to be spoken in the imperative mood, a fitting interpreter of government and law. But it was not flexible or graceful, musical or rapid; it was not suited to express delicate shades of thought or feeling; for literary purposes, it was, in comparison with Greek, a poor and rude idiom. The development of Latin into the language of Cicero and Virgil was gradually and laboriously accomplished under the constant influence of Greece. That finish of form, known as classical, which Roman writers share with Greek, was a lesson which Greece slowly impressed upon Rome. . . . A close and

prolonged study of the Greek models could not end in a mere discipline of form; the beauty of the best Greek models depends too much on their vital spirit. Not only was the Roman imagination enriched, but the Roman intellect, through literary intercourse with the Greek, gradually acquired a flexibility and a plastic power which had not been among its original gifts. Through Roman literature the Greek influence was transmitted to later times in a shape which obscured, indeed, much of its charm, but which was also fitted to extend its empire, and to win an entrance for it in regions which would have been less accessible to a purer form of its manifestation.”—R. C. Jebb, *The Growth and Influence of Classical Greek Poetry*, ch. 8.—“Italy had been subject to the influence of Greece, ever since it had a history at all. . . . But the Hellenism of the Romans of the present period [second century B. C.] was, in its causes as well as its consequences, something essentially new. The Romans began to feel the lack of a richer intellectual life, and to be startled as it were at their own utter want of mental culture; and, if even nations of artistic gifts, such as the English and Germans, have not disdained in the pauses of their own productiveness to avail themselves of the paltry French culture for filling up the gap, it need excite no surprise that the Italian nation now flung itself with eager zeal on the glorious treasures as well as on the vile refuse of the intellectual development of Hellas. But it was an impulse still more profound and deep-rooted which carried the Romans irresistibly into the Hellenic vortex. Hellenic civilization still assumed that name, but it was Hellenic no longer; it was, it fact, humanistic and cosmopolitan. It had solved the problem of moulding a mass of different nations into one whole completely in the field of intellect, and to a certain degree in that of politics, and, now when the same task on a wider scale devolved on Rome, she entered on the possession of Hellenism along with the rest of the inheritance of Alexander the Great. Hellenism therefore was no longer a mere stimulus, or subordinate influence; it penetrated the Italian nation to the very core. Of course, the vigorous home life of Italy strove against the foreign element. It was only after a most vehement struggle that the Italian farmer abandoned the field to the cosmopolite of the capital; and, as in Germany the French coat called forth the national Germanic frock, so the reaction against Hellenism aroused in Rome a tendency, which opposed the influence of Greece on principle in a style to which earlier centuries were altogether unaccustomed, and in doing so fell not unfrequently into downright follies and absurdities. No department of human action or thought remained unaffected by this struggle between the new fashion and the old. Even political relations were largely influenced by it. The whimsical project of emancipating the Hellenes, . . . the kindred, likewise Hellenic, idea of combining republics in a common opposition to kings, and the desire of propagating Hellenic polity at the expense of eastern despotism—which were the two principles that regulated, for instance, the treatment of Macedonia—were fixed ideas of the new school, just as dread of the Carthaginians was the fixed idea of the old; and, if Cato pushed the latter to a ridiculous excess, Philhellenism now and then indulged in extravagances at least

as foolish. . . . But the real struggle between Hellenism and its national antagonists during the present period was carried on in the field of faith, of manners, and of art and literature. . . . If Italy still possessed—what had long been a mere antiquarian curiosity in Hellas—a national religion, it was already visibly beginning to be ossified into theology. The torpor creeping over faith is nowhere perhaps so distinctly apparent as in the alterations in the economy of divine service and of the priesthood. The public service of the gods became not only more tedious, but above all more and more costly. . . . An augur like Lucius Paullus, who regarded the priesthood as a science and not as a mere title, was already a rare exception; and could not but be so, when the government more and more openly and unhesitatingly employed the auspices for the accomplishment of its political designs, or, in other words, treated the national religion in accordance with the view of Polybius as a superstition useful for imposing on the public at large. Where the way was thus paved, the Hellenistic irreligious spirit found free course. In connection with the incipient taste for art the sacred images of the gods began even in Cato's time to be employed, like other furniture, to embellish the chambers of the rich. More dangerous wounds were inflicted on religion by the rising literature. . . . Thus the old national religion was visibly on the decline; and, as the great trees of the primeval forest were uprooted, the soil became covered with a rank growth of thorns and briars and with weeds that had never been seen before. Native superstitions and foreign impostures of the most various hues mingled, competed and conflicted with each other. . . . The Hellenism of that epoch, already denationalized and pervaded by Oriental mysticism, introduced not only unbelief but also superstition in its most offensive and dangerous forms to Italy; and these vagaries, moreover, had a special charm, precisely because they were foreign. . . . Rites of the most abominable character came to the knowledge of the Roman authorities: a secret nocturnal festival in honour of the god Bacchus had been first introduced into Etruria by a Greek priest, and spreading like a cancer, had rapidly reached Rome and propagated itself over all Italy, everywhere corrupting families and giving rise to the most heinous crimes, unparalleled unchastity, falsifying of testaments, and murdering by poison. More than 7,000 men were sentenced to punishment, most of them to death, on this account, and rigorous enactments were issued as to the future. . . . The ties of family life became relaxed with fearful rapidity. The evil of grisettes and boy-favourites spread like a pestilence. . . . Luxury prevailed more and more in dress, ornaments and furniture, in the buildings and on the tables. Especially after the expedition to Asia Minor, which took place in 564, [B. C. 190] Asiatic-Hellenic luxury, such as prevailed at Ephesus and Alexandria, transferred its empty refinement and its petty trifling, destructive alike of money, time, and pleasure, to Rome. . . . As a matter of course, this revolution in life and manners brought an economic revolution in its train. Residence in the capital became more and more coveted as well as more costly. Rents rose to an unexampled height. Extravagant prices were paid for the new articles of luxury. . . . The influences which stimulated

the growth of Roman literature were of a character altogether peculiar and hardly paralleled in any other nation. . . . By means of the Italian slaves and freedmen, a very large portion of whom were Greek or half Greek by birth, the Greek language and Greek knowledge to a certain extent reached even the lower ranks of the population, especially in the capital. The comedies of this period indicate that even the humbler classes of the capital were familiar with a sort of Latin, which could no more be properly understood without a knowledge of Greek than Sterne's English or Wieland's German without a knowledge of French. Men of senatorial families, however, not only addressed a Greek audience in Greek, but even published their speeches. . . . Under the influence of such circumstances Roman education developed itself. It is a mistaken opinion, that antiquity was materially inferior to our own times in the general diffusion of elementary attainments. Even among the lower classes and slaves there was considerable knowledge of reading, writing, and counting. . . . Elementary instruction, as well as instruction in Greek, must have been long ere this period imparted to a very considerable extent in Rome. But the epoch now before us initiated an education, the aim of which was to communicate not merely an outward expertness, but a real mental culture. The internal decomposition of Italian nationality had already, particularly in the aristocracy, advanced so far as to render the substitution of a broader human culture for that nationality inevitable; and the craving after a more advanced civilization was already powerfully stirring men's minds. The study of the Greek language as it were spontaneously met this craving. The classical literature of Greece, the *Iliad* and still more the *Odyssey*, had all along formed the basis of instruction; the overflowing treasures of Hellenic art and science were already by this means spread before the eyes of the Italians. Without any outward revolution, strictly speaking, in the character of instruction the natural result was, that the empirical study of the language became converted into a higher study of the literature; that the general culture connected with such literary studies was communicated in increased measure to the scholars; and that these availed themselves of the knowledge thus acquired to dive into that Greek literature which most powerfully influenced the spirit of the age—the tragedies of Euripides and the comedies of Menander. In a similar way greater importance came to be attached to the study of Latin. The higher society of Rome began to feel the need, if not of exchanging their mother-tongue for Greek, at least of refining it and adapting it to the changed state of culture. . . . But a Latin culture presupposed a literature, and no such literature existed in Rome. . . . The Romans desired a theatre, but the pieces were wanting. On these elements Roman literature was based; and its defective character was from the first and necessarily the result of such an origin. . . . Roman poetry in particular had its immediate origin not in the inward impulse of the poet, but in the outward demands of the school, which needed Latin manuals, and of the stage, which needed Latin dramas. Now both institutions—the school and the stage—were thoroughly anti-Roman and revolutionary. . . . The school and the theatre became the most effective levers in the hands of

the new spirit of the age, and all the more so that they used the Latin tongue. Men might perhaps speak and write Greek, and yet not cease to be Romans; but in this case they were in the habit of speaking in the Roman language, while the whole inward being and life were Greek. It is one of the most pleasing, but it is one of the most remarkable and in a historical point of view most instructive, facts in this brilliant era of Roman conservatism, that during its course Hellenism struck root in the whole field of intellect not immediately political, and that the school-master and the maître de plaisir of the great public in close alliance created a Roman literature."—T. Mommsen, *The History of Rome*, bk. 3, ch. 13 (v. 2).—Panætius was the founder of "that Roman Stoicism which plays so prominent a part in the history of the Empire. He came from Rhodes, and was a pupil of Diogenes at Athens. The most important part of his life was, however, spent at Rome, in the house of Scipio Æmilianus, the centre of the Scipionic circle, where he trained up a number of Roman nobles to understand and to adopt his views. He seems to have taken the place of Polybius, and to have accompanied Scipio in his tour to the East (143 B. C.). He died as head of the Stoic school in Athens about 110 B. C. This was the man who, under the influence of the age, really modified the rigid tenets of his sect to make it the practical rule of life for statesmen, politicians, magistrates, who had no time to sit all day and dispute, but who required something better than effete polytheism to give them dignity in their leisure, and steadfastness in the day of trial. . . . With the pupils of Panætius begins the long roll of Roman Stoics. . . . Here then, after all the dissolute and disintegrating influences of Hellenism,—its *comœdia palliata*, its parasites, its panders, its minions, its chicanery, its mendacity—had produced their terrible effect, came an antidote which, above all the human influences we know, purified and ennobled the world. It affected, unfortunately, only the higher classes at Rome; and even among them, as among any of the lower classes that speculated at all, it had as a dangerous rival that cheap and vulgar Epicureanism, which puffs up common natures with the belief that their trivial and coarse reflections have some philosophic basis, and can be defended with subtle arguments. But among the best of the Romans Hellenism produced a type seldom excelled in the world's history, a type as superior to the old Roman model as the nobleman is to the burgher in most countries—a type we see in Rutilius Rufus, as compared with the elder Cato. . . . It was in this way that Hellenistic philosophy made itself a home in Italy, and acquired pupils who in the next generation became masters in their way, and showed in Cicero and Lucretius no mean rivals of the contemporary Greek. . . . Till the poem of Lucretius and the works of Cicero, we may say nothing in Latin worth reading existed on the subject. Whoever wanted to study philosophy, therefore, down to that time (60 B. C.) studied it in Greek. Nearly the same thing may be said of the arts of architecture, painting, and sculpture. There were indeed distinctly Roman features in architecture, but they were mere matters of building, and whatever was done in the way of design, in the way of adding beauty to strength, was done wholly under the advice and direction of Greeks. The subservience to Hel-

lenism in the way of internal household ornament was even more complete. . . . And with the ornaments of the house, the proper serving of the house, especially the more delicate departments—the cooking of state dinners, the attendance upon guests, the care of the great man's intimate comforts—could only be done fashionably by Greek slaves. . . . But of course these lower sides of Hellenism had no more potent effect in civilising Rome than the employing of French cooks and valets and the purchase of French ornaments and furniture had in improving our grandfathers. Much more serious was the acknowledged supremacy of the Greeks in literature of all kinds, and still more their insistence that this superiority depended mainly upon a careful system of intellectual education. . . . This is the point where Polybius, after his seventeen years' experience of Roman life, finds the capital flaw in the conduct of public affairs. In every Hellenistic state, he says, nothing engrosses the attention of legislators more than the question of education, whereas at Rome a most moral and serious government leaves the training of the young to the mistakes and hazards of private enterprise. That this was a grave blunder as regards the lower classes is probably true. . . . But when Rome grew from a city controlling Italy to an empire directing the world, such men as Æmilius Paullus saw plainly that they must do something more to fit their children for the splendid position they had themselves attained, and so they were obliged to keep foreign teachers of literature and art in their houses as private tutors. The highest class of these private tutors was that of the philosophers, whom we have considered, and while the State set itself against their public establishments, great men in the State openly encouraged them and kept them in their houses. . . . As regards literature, however, in the close of the second century B. C. a change was visible, which announced the new and marvellous results of the first. . . . Even in letters Roman culture began to take its place beside Greek, and the whole civilised world was divided into those who knew Greek letters and those who knew Roman only. There was no antagonism in spirit between them, for the Romans never ceased to venerate Greek letters or to prize a knowledge of that language. But of course there were great domains in the West beyond the influence of the most western Greeks, even of Massilia, where the first higher civilisation introduced was with the Roman legions and traders, and where culture assumed permanently a Latin form. In the East, though the Romans asserted themselves as conquerors, they always condescended to use Greek, and there were prætors proud to give their decisions at Roman assize courts in that language."—J. P. Mahaffy, *The Greek World under Roman sway*, ch. 5.

HELLENION, The. See **NAUKRATIS**.

HELLESPONT, The.—The ancient Greek name of what is now called the straits of The Dardanelles, the channel which unites the Sea of Marmora with the Ægean. The name (Sea of Helle) came from the myth of Helle, who was said to have been drowned in these waters.

HELVETIAN REPUBLIC, The.—Switzerland is sometimes called the Helvetic Republic, for no better reason than is found in the fact that the country occupied by the Helvetii of Cæsar is embraced in the modern Swiss Confederacy. But the original confederation, out of which grew the federal republic of Switzerland, did not touch Helvetic ground. See SWITZERLAND: THE THREE FOREST CANTONS, and A. D. 1332-1460.

HELVETIC REPUBLIC OF 1798, The. See SWITZERLAND: A. D. 1792-1798.

HELVETII, The arrested migration of the.—"The Helvetii, who inhabited a great part of modern Switzerland, had grown impatient of the narrow limits in which they were crowded together, and harassed at the same time by the encroachments of the advancing German tide. The Alps and Jura formed barriers to their diffusion on the south and west, and the population thus confined outgrew the scanty means of support afforded by its mountain valleys. . . . The Helvetii determined to force their way through the country of the Allobroges, and to trust either to arms or persuasion to obtain a passage through the [Roman] province and across the Rhone into the centre of Gaul. . . . Having completed their preparations, [they] appointed the 28th day of March [B. C. 58] for the meeting of their combined forces at the western outlet of the Lake Lemanus. The whole population of the assembled tribes amounted to 368,000 souls, including the women and children; the number that bore arms was 92,000. They cut themselves off from the means of retreat by giving ruthlessly to the flames every city and village of their land; twelve of one class and four hundred of the other were thus sacrificed, and with them all their superfluous stores, their furniture, arms and implements." When the news of this portentous movement reached Rome, Cæsar, then lately appointed to the government of the two Gauls, was raising levies, but had no force ready for the field. He flew to the scene in person, making the journey from Rome to Geneva in eight days. At Geneva, the frontier town of the conquered Allobroges, the Romans had a garrison, and Cæsar quickly gathered to that point the one legion stationed in the province. Breaking down the bridge which had spanned the river and constructing with characteristic energy a ditch and rampart from the outlet of the lake to the gorge of the Jura, he held the passage of the river with his single legion and forced the migratory horde to move off by the difficult route down the right bank of the Rhone. This accomplished, Cæsar hastened back to Italy, got five legions together, led them over the Cottian Alps, crossed the Rhone above Lyons, and caught up with the Helvetii before the last of their cumbrous train had got beyond the Saone. Attacking and cutting to pieces this rear-guard (it was the tribe of the Tigurini, which the Romans had encountered disastrously half a century before), he bridged the Saone and crossed it to pursue the main body of the enemy. For many days he followed them, refusing to give battle to the great barbarian army until he saw the moment opportune. His blow was struck at last in the neighborhood of the city of Bibracte, the capital of the Ædui—modern Autun. The defeat of the Helvetii was complete, and, although a great body of them escaped, they were set upon by the Gauls of the country and

were soon glad to surrender themselves unconditionally to the Roman proconsul. Cæsar compelled them—110,000 survivors, of the 368,000 who left Switzerland in the spring—to go back to their mountains and rebuild and reoccupy the homes they had destroyed.—C. Merivale, *Hist. of the Romans*, ch. 6 (v. 1).

HERACLEA.—The earliest capital of the Venetians. See VENICE: A. D. 697-810.

HERACLEA, Battle of (B. C. 280). See ROME: B. C. 282-275.

HERACLEA PONTICA, Siege of.—Heraclea, a flourishing town of Greek origin on the Phrygian coast, called Heraclea Pontica to distinguish it from other towns of like name, was besieged for some two years by the Romans in the Third Mithridatic War. It was surrendered through treachery, B. C. 70, and suffered so greatly from the ensuing pillage and massacre that it never recovered. The Roman commander, Cotta, was afterwards prosecuted at Rome for appropriating the plunder of Heraclea, which included a famous statue of Hercules, with a golden club.—G. Long, *Decline of the Roman Republic*, v. 3, ch. 5.

HERACLEIDÆ, OR HERAKLEIDS, The.—Among the ancient Greeks the reputed descendants of the demi-god hero, Herakles, or Hercules, were very numerous. "Distinguished families are everywhere to be traced who bear his patronymic and glory in the belief that they are his descendants. Among Achæans, Kadmeians, and Dorians, Hēraklēs is venerated: the latter especially treat him as their principal hero—the Patron Hero-God of the race: the Hērakleids form among all Dorians a privileged gens, in which at Sparta the special lineage of the two kings was included."—G. Grote, *Hist. of Greece*, pt. 1, ch. 4 (v. 1).—"The most important, and the most fertile in consequences, of all the migrations of Grecian races, and which continued even to the latest periods to exert its influence upon the Greek character, was the expedition of the Dorians into Peloponnesus. . . . The traditional name of this expedition is 'the Return of the Descendants of Hercules' [or 'the Return of the Heracleidæ']. Hercules, the son of Zeus, is (even in the *Iliad*), both by birth and destiny, the hereditary prince of Tiryns and Mycenæ, and ruler of the surrounding nations. But through some evil chance Eurystheus obtained the precedence and the son of Zeus was compelled to serve him. Nevertheless he is represented as having bequeathed to his descendants his claims to the dominion of Peloponnesus, which they afterwards made good in conjunction with the Dorians; Hercules having also performed such actions in behalf of this race that his descendants were always entitled to the possession of one-third of the territory. The heroic life of Hercules was therefore the mythical title, through which the Dorians were made to appear, not as unjustly invading, but merely as reconquering, a country which had belonged to their princes in former times."—C. O. Müller, *Hist. and Antiq.*

of the Doric Race, bk. 1, ch. 3.—See, also, DORIANS AND IONIANS.

HERACLEIDÆ OF LYDIA.—The second dynasty of the kings of Lydia—so-called by the Greeks as reputed descendants of the sun-god. The dynasty is represented as ending with Candaules.—M. Duncker, *Hist. of Antiquity*, bk. 4, ch. 17.

HERCYNIAN FOREST, The.—"The Hercynian Forest was known by report to Eratosthenes and some other Greeks, under the name Orcynia. The width of this forest, as Caesar says (B. G. vi. 25), was nine days' journey to a man without any incumbrance. It commenced at the territory of the Helvetii [Switzerland] . . . and following the straight course of the Danube reached to the country of the Daci and the Anartes. Here it turned to the left in different directions from the river, and extended to the territory of many nations. No man of western Germany could affirm that he had reached the eastern termination of the forest even after a journey of six days, nor that he had heard where it did terminate. This is all that Caesar knew of this great forest. . . . The nine days' journey, which measures the width of the Hercynian forest, is the width from south to north; and if we assume this width to be estimated at the western end of the Hercynia, which part would be the best known, it would correspond to the Schwarzwald and Odenwald, which extend on the east side of the Rhine from the neighbourhood of Bâle nearly as far north as Frankfort on the Main. The eastern parts of the forest would extend on the north side of the Danube along the Rauhe Alp and the Boehmerwald and still farther east. Caesar mentions another German forest named Bacenis (B. G. vi. 10), but all that he could say of it is this: it was a forest of boundless extent, and it separated the Suevi and the Cherusci; from which we may conclude that it is represented by the Thüringerwald, Erzgebirge, Riesengebirge, and the mountain ranges farther east, which separate the basin of the Danube from the basins of the Oder and the Vistula."—G. Long, *Decline of the Roman Republic*, v. 4, ch. 2.

HERRINGS, The Battle of the (1429).—In February, 1429, while the English still held their ground in France, and while the Duke of Bedford was besieging Orleans [see FRANCE: A. D. 1429-1431], a large convoy of Lenten provisions, salted herring in the main, was sent away from Paris for the English army. It was under the escort of Sir John Fastolfe, with 1,500 men. At Rouvray en Beausse the convoy was attacked by 5,000 French cavalry, including the best knights and warriors of the kingdom. The English entrenched themselves behind their wagons and repelled the attack, with great slaughter and humiliation of the French chivalry; but in the mêlée the red-herrings were scattered thickly over the field. This caused the encounter to be named the Battle of the Herrings.—C. M. Yonge, *Cameos from Eng. Hist.*, 2d series, c. 35.

HERRNHUT. See MORAVIAN OR BOHEMIAN BRETHREN.

HERULI, The.—The Heruli were a people closely associated with the Goths in their history and undoubtedly akin to them in blood. The great piratical expedition of A. D. 267 from the

Crimea, which struck Athens, was made up of Herules as well as Goths. The Heruli passed with the Goths under the yoke of the Huns. After the breaking up of the empire of Attila, they were found occupying the region of modern Hungary which is between the Carpathians, the upper Theiss, and the Danube. The Herules were numerous among the barbarian auxiliaries of the Roman army in the last days of the empire.—H. Bradley, *Story of the Goths*.

HIDALGO.—"Originally written 'fijodalgo,' son of something. Later applied to gentlemen, country gentlemen perhaps more particularly. . . . In the Dic. Univ. authorities are quoted showing that the word 'hidalgo' originated with the Roman colonists of Spain, called 'Italicos,' who were exempt from imposts. Hence those enjoying similar benefits were called 'Italicos,' which word in lapse of time became 'hidalgo.'"—H. H. Bancroft, *Hist. of the Pacific States*, v. 1, p. 252, foot-note.

HIDATSA INDIANS, The. See AMERICAN ABORIGINES: HIDATSA.

HIDE OF LAND.—CARUCATE.—VIRGATE.—"In the [Hundred] rolls for Hunting-

donshire [England] a series of entries occurs, describing, contrary to the usual practice of the compilers, the number of acres in a virgate, and the number of virgates in a hide, in several manors. . . . They show clearly—(1) That the bundle of scattered strips called a virgate did not always contain the same number of acres. (2) That the hide did not always contain the same number of virgates. But at the same time it is evident that the hide in Huntingdonshire most often contained 120 acres or thereabouts. . . . We may gather from the instances given in the Hundred Rolls for Huntingdonshire, that the 'normal' hide consisted as a rule of four virgates of about thirty acres each. The really important consequence resulting from this is the recognition of the fact that as the virgate was a bundle of so many scattered strips in the open fields, the hide, so far as it consisted of actual virgates in villenage, was also a bundle—a compound and fourfold bundle—of scattered strips in the open fields. . . . A trace at least of the original reason of the varying contents and relations of the hide and virgate is to be found in the Hundred Rolls, as, indeed, almost everywhere else, in the use of another word in the place of hide, when, instead of the anciently assessed hidage of a manor, its modern actual taxable value is examined into and expressed. This new word is 'carucate'—'the land of a plough or plough team,'—'caruca' being the mediæval Latin term for both plough and plough team. . . . In some cases the carucate seems to be identical with the normal hide of 120 acres, but other instances show that the carucate varied in area. It is the land cultivated by a plough team; varying in acreage, therefore, according to the lightness or heaviness of the soil, and according to the strength of the team. . . . In pastoral districts of England and Wales the Roman tribute may possibly have been, if not a hide from each plough team, a hide from every family holding cattle. . . . The supposition of such an origin of the connexion of the word 'hide' with the 'land of a family,' or of a plough team, is mere conjecture; but the fact of the connexion is clear."—F. Seebohm, *English Village Community*, ch. 2, sect. 4, and ch. 10, sect. 6.

HIERATIC WRITING. See **HIEROGLYPHICS**.

HIERODULI, The.—In some of the early Greek communities, the Hieroduli, or ministers of the gods, "formed a class of persons bound to certain services, duties, or contributions to the temple of some god, and . . . sometimes dwelt in the position of serfs on the sacred ground. They appear in considerable numbers, and as an integral part of the population only in Asia, as, e. g., at Comana in Cappadocia, where in Strabo's time there were more than 6,000 of them attached to the temple of the goddess Ma, who was named by the Greeks Enyo, and by the Romans Bellona. In Sicily too the Erycinian Aphrodite had numerous ministers, whom Cicero calls Venerii, and classes with the ministers of Mars (Martiales) at Larinum in South Italy. In Greece we may consider the Craugallidæ as Hieroduli of the Delphian Apollo. They belonged apparently to the race of Dryopes, who are said to have been at some former time conquered by Heracles, and dedicated by him to the god. The greater part of them, we are told, were sent at

the command of Apollo to the Peloponnese, whilst the Craugallidæ remained behind. . . . At Corinth too there were numerous Hieroduli attached to Aphrodite, some of whom were women, who lived as Hetærae and paid a certain tax from their earnings to the goddess."—G. Schömann, *Antiq. of Greece: The State*, pt. 2, ch. 4.—See, also, *DORIS AND DRYOPIS*.

HIEROGLYPHICS, Egyptian.—"The Greeks gave the name of Hieroglyphics, that is, 'Sacred Sculpture,' to the national writing of the Egyptians, composed entirely of pictures of natural objects. Although very inapplicable, this name has been adopted by modern writers, and has been so completely accepted and used that it cannot now be replaced by a more appropriate appellation. . . . For a long series of ages the decipherment of the hieroglyphics, for which the classical writers furnish no assistance, remained a hopeless mystery. The acute genius of a Frenchman at last succeeded, not fifty years since, in lifting the veil. By a prodigious effort of induction, and almost divination, Jean François Champollion, who was born at Figeac (Lot) on the 23d of December, 1790, and died at Paris on the 4th of March, 1832, made the greatest discovery of the nineteenth century in the domain of historical science, and succeeded in fixing on a solid basis the principle of reading hieroglyphics. Numerous scholars have followed the path opened by him. . . . It would . . . be very far from the truth to regard hieroglyphics as always, or even generally, symbolical. No doubt there are symbolical characters among them, generally easy to understand; as also there are, and in very great number, figurative characters directly representing the object to be designated; but the majority of the signs found in every hieroglyphic text are characters purely phonetic; that is, representing either syllables (and these are so varied as to offer sometimes serious difficulties) or the letters of an only moderately complicated alphabet. These letters are also pictures of objects, but of objects or animals whose Egyptian name commenced with the letter in question, while also the syllabic characters (true rebusses) represented objects designated by that syllable."—F. Lenormant and E. Chevallier, *Manual of the Ancient History of the East*, bk. 3, ch. 5 (v. 1).—"The system of writing employed by the people called Egyptians was probably entirely pictorial either at the time when they first arrived in Egypt, or during the time that they still lived in their original home. We, however, know of no inscription in which pictorial characters alone are used, for the earliest specimens of their writing known to us contain alphabetical characters. The Egyptians had three kinds of writing—Hieroglyphic, Hieratic, and Demotic. . . . Hieroglyphics . . . were commonly employed for inscriptions upon temples, tombs, coffins, statues, and stele, and many copies of the Book of the Dead were written in them. The earliest hieroglyphic inscription at present known is found on the monument of SHERA, parts of which are preserved in the Ashmolean Museum at Oxford and in the Glézel Museum; it dates from the IInd dynasty. Hieroglyphics were used in Egypt for writing the names of Roman Emperors and for religious purposes until the third century after Christ, at least. Hieratic . . . was a style of cursive writing much used by the priests in copying literary

compositions on papyrus; during the XIth or XIIth dynasty wooden coffins were inscribed in hieratic with religious texts. The oldest document in hieratic is the famous Prisse papyrus, which records the counsels of Ptah-hetep to his son; the composition itself is about a thousand years older than this papyrus, which was probably inscribed about the XIth dynasty. Drafts of inscriptions were written upon flakes of calcareous stone in hieratic, and at a comparatively early date hieratic was used in writing copies of the Book of the Dead. Hieratic was used until about the fourth century after Christ. Demotic . . . is a purely conventional modification of hieratic characters, which preserve little of their original form, and was used for social and business purposes; in the early days of Egyptian decipherment it was called enchorial. . . . The Demotic writing appears to have come into use about B. C. 900, and it survived until about the fourth century after Christ. In the time of the Ptolemies three kinds of writing were inscribed side by side upon documents of public importance, hieroglyphic, Greek, and Demotic; examples are the stele of Canopus, set up in the ninth year of the reign of Ptolemy III. Evergetes I., B. C. 247-222, at Canopus, to record the benefits which this king had conferred upon his country, and the famous Rosetta Stone, set up at Rosetta in the eighth year of the reign of Ptolemy V. Epiphanes (B. C. 205-182), likewise to commemorate the benefits conferred upon Egypt by himself and his family, etc. . . . A century or two after the Christian era Greek had obtained such a hold upon the inhabitants of Egypt, that the native Christian population, the disciples and followers of Saint Mark, were obliged to use the Greek alphabet to write down the Egyptian, that is to say Coptic, translation of the books of the Old and New Testaments, but they borrowed six signs from the demotic forms of ancient Egyptian characters to express the sounds which they found unrepresented in Greek."—E. A. Wallis Budge, *The Mummy*, pp. 353-354.—See, also, ROSETTA STONE.

HIEROGLYPHICS, Mexican (so-called). See AZTEC AND MAYA PICTURE-WRITING.

HIERONYMITES, The.—"A number of solitaries residing among the mountains of Spain, Portugal, and Italy, gradually formed into a community, and called themselves Hieronymites, either because they had compiled their Rule from the writings of St. Jerome, or because, adopting the rule of St. Augustine, they had taken St. Jerome for their patron. . . . The community was approved by Gregory XI., in 1374. The famous monastery of Our Lady of Guadalupe, in Estremadura; the magnificent Escorial, with its wealth of literary treasures, and the monastery of St. Just, where Charles V. sought an asylum in the decline of his life, attest their wonderful energy and zeal."—J. Alzog, *Manual of Universal Church Hist.*, v. 3, p. 149.

HIGHER LAW DOCTRINE, The.—William H. Seward, speaking in the Senate of the United States, March 11, 1850, on the question of the admission of California into the Union as a Free State, used the following language: "'The Constitution,' he said, 'regulates our stewardship; the Constitution devotes the domain to union, to justice, to defence, to welfare, and to liberty. But there is a higher law than the Constitution, which regulates our authority over the domain, and devotes it to the same noble purposes. The territory is a part, no inconsiderable part, of the common heritage of mankind, bestowed upon them by the Creator of the universe. We are His stewards, and must so discharge our trust as to secure in the highest attainable degree their happiness.' This public recognition by a Senator of the United States that the laws of the Creator were 'higher' than those of human enactment excited much astonishment and indignation, and called forth, in Congress and out of it, measureless abuse upon its author."—H. Wilson, *Hist. of the Rise and Fall of the Slave Power in Am.*, v. 2, p. 262-263.—In the agitations that followed upon the adoption of the Fugitive Slave Law, and the other compromise measures attending the admission of California, this Higher Law Doctrine was much talked about.

HIMATION, The.—An article of dress in the nature of a cloak, worn by both men and women among the ancient Greeks. It "was arranged so that the one corner was thrown over the left shoulder in front, so as to be attached to the body by means of the left arm. On the back the dress was pulled toward the right side, so as to cover it completely up to the right shoulder, or, at least, to the armpit, in which latter case the right shoulder remained uncovered. Finally, the himation was again thrown over the left shoulder, so that the ends fell over the back. . . . A second way of arranging the himation, which left the right arm free, was more picturesque, and is therefore usually found in pictures."—E. Guhl and W. Koner, *Life of the Greeks and Romans*, sect. 42.

HIPPODROME.—**STADION**.—**THEATER**.—"The arts practised in the gymnasia were publicly displayed at the festivals. The buildings in which these displays took place were modified according to their varieties. The races both on horseback and in chariots took place in the hippodrome; for the gymnastic games of the pen-

tathlon served the stadion; while for the acme of the festivals, the musical and dramatic performances, theatres were erected."—E. Guhl and W. Koner, *Life of the Greeks and Romans* (tr. by Hueffer), sect. 28-30.

HIPPOTOXOTÆ, The. See SCYTHIANS, OR SCYTHIÆ, OF ATHENS.

HIRA.—"The historians of the age of Justinian represent the state of the independent Arabs, who were divided by interest or affection in the long quarrel of the East [between the Romans and Persians—3rd to 7th century]: the tribe of Gassan was allowed to encamp on the Syrian territory; the princes of Hira were permitted to form a city about 40 miles to the southward of the ruins of Babylon. Their service in the field was speedy and vigorous; but their friendship was venal, their faith inconstant, their enmity capricious: it was an easier task to excite than to disarm these roving barbarians; and, in the familiar intercourse of war, they learned to see and to despise the splendid weakness both of Rome and of Persia."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 50 (p. 5).—"The dynasty of Palmyra and the western tribes embraced Christianity in the time of Constantine; to the east of the desert the religion was later of gaining ground, and indeed was not adopted by the court of Hira till near the end of the 6th century. Early in the 7th, Hira fell from its dignity as an independent power, and became a satrapy of Persia."—Sir William Muir, *Life of Mahomet*, introd., ch. 1.—In 633 Hira was overwhelmed by the Mahometan conquest, and the greater city of Kufa was built only 3 miles distant from it. See MAHOMETAN CONQUEST: A. D. 632-651; also, BUSSORAH AND KUFÄ.

HISPALIS.—The name of Seville under the Romans. See SEVILLE.

HISPANIA CITERIOR AND HISPANIA ULTERIOR. See SPAIN: B. C. 218-25.

HISPANIOLA.—The name given by Columbus to the island now divided between the Republics of Hayti and San Domingo. See AMERICA: A. D. 1492; 1493-1496, and after; and HAYTI.

HISSARLIK.—The site of ancient Troy, as supposed to be identified by the excavations of Dr. Schliemann. See ASIA MINOR: THE GREEK COLONIES; also, TROJA, and HOMER.

HISTORY.

Definitions.—"With us the word 'history,' like its equivalents in all modern languages, signifies either a form of literary composition or the appropriate subject or matter of such composition—either a narrative of events, or events which may be narrated. It is impossible to free the term from this doubleness and ambiguity of meaning. Nor is it, on the whole, to be desired. The advantages of having one term which may, with ordinary caution, be innocuously applied to two things so related, more than counterbalances the dangers involved in two things so distinct having the same name. . . . Since the word history has two very different meanings, it obviously cannot have merely one definition. To define an order of facts and a form of literature in the same terms—to suppose that when either of them is defined the other is defined—is so absurd that one would probably not believe it could be

seriously done were it not so often done. But to do so has been the rule rather than the exception. The majority of so-called definitions of history are definitions only of the records of history. They relate to history as narrated and written, not to history as evolved and acted; in other words, although given as the only definitions of history needed, they do not apply to history itself, but merely to accounts of history. They may tell us what constitutes a book of history, but they cannot tell us what the history is with which all books of history are occupied. It is, however, with history in this latter sense that a student of the science or philosophy of history is mainly concerned. . . . If by history be meant history in its widest sense, the best definition of history as a form of literature is, perhaps, either the very old one, 'the narration of events,' or W. von Humboldt's, 'the exhibition of what has

happened' (die Darstellung des Geschehenen). The excellence of these definitions lies in their clear and explicit indication of what history as effectuated or transacted is. It consists of events; it is das Geschehene. It is the entire course of events in time. It is all that has happened precisely as it happened. Whatever happens is history. Eternal and unchanging being has no history. Things or phenomena considered as existent, connected, and comprehended in space, compose what is called nature as distinguished from history. . . . Probably Droysen has found a neater and terser formula for it in German than any which the English language could supply. Nature he describes as 'das Nebeneinander des Seienden,' and history as 'das Nacheinander des Gewordenen.' . . . The only kind of history with which we have here directly to deal is that kind of it to which the name is generally restricted, history par excellence, human history, what has happened within the sphere of human agency and interests, the actions and creations of men, events which have affected the lives and destinies of men, or which have been produced by men. This is the ordinary sense of the word history. . . . To attempt further to define it would be worse than useless. It would be unduly to limit, and to distort and pervert, its meaning. In proof of this a few brief remarks on certain typical or celebrated definitions of history may perhaps be of service. The definition given in the Dictionary of the French Academy—'l'histoire est le récit des choses dignes de mémoire'—is a specimen of a very numerous species. According to such definitions history consists of exceptional things, of celebrated or notorious events, of the lives and actions of great and exalted men, of conspicuous achievements in war and politics, in science and art, in religion and literature. But this is a narrow and superficial conception of history. History is made up of what is little as well as of what is great, of what is common as well as of what is strange, of what is counted mean as well as of what is counted noble. . . . Dr. Arnold's definition—'history is the biography of a society'—has been often praised. Nor altogether undeservedly. For it directs attention to the fact that all history accords with biography in supposing in its subject a certain unity of life, work, and end. . . . It does not follow, however, that biography is a more general notion than history, and history only a species of biography. In fact, it is not only as true and intelligible to say that biography is the history of an individual as to say that history is the biography of a society, but more so. It is the word biography in the latter case which is used in a secondary and analogical sense, not the word history in the former case. . . . According to Mr. Freeman, 'history is past politics and politics are present history.' This is not a mode of definition which any logician will be found to sanction. It is equivalent to saying that politics and history are the same, and may both be divided into past and present; but it does not tell us what either is. To affirm that this was that and that is this is not a definition of this or that, but only an assertion that something may be called either this or that. Besides, the identification of history with politics proceeds, as has been already indicated, on a view of history which is at once narrow and arbitrary. Further, it is just as true that mathematical history is past

mathematics and mathematics are present history, as that political history is past politics and politics are present history. . . . The whole of man's past was once present thought, feeling, and action. There is nothing peculiar to politics in this respect."—R. Flint, *History of the Philosophy of History: France, etc.*, pp. 5-10.

The subjects and objects of History.—"The position for which I have always striven is this, that history is past politics, that politics are present history. The true subject of history, of any history that deserves the name, is man in his political capacity, man as the member of an organized society, governed according to law. History, in any other aspect, hardly rises above antiquarianism, though I am far from holding that even simple antiquarianism, even the merest scraping together of local and genealogical detail, is necessarily antiquarian rubbish. I know not why the pursuits of the antiquary should be called rubbish, any more than the pursuits of the seeker after knowledge of any other kind. Still, the pursuits of the antiquary, the man of local and special detail, the man of buildings or coins or weapons or manuscripts, are not in themselves history, though they are constantly found to be most valuable helps to history. The collections of the antiquary are not history; but they are materials for history, materials of which the historian makes grateful use, and without which he would often be sore put to in doing his own work. . . . It is not too much to say that no kind of knowledge, of whatever kind, will be useless to the historian. There is none, however seemingly distant from his subject, which may not stand him in good stead at some pinch, sooner or later. But his immediate subject, that to which all other things are secondary, is man as the member of a political community. Rightly to understand man in that character, he must study him in all the forms, in all the developments, that political society has taken. Effects have to be traced up to their causes, causes have to be traced up to their effects; and we cannot go through either of those needful processes if we confine our studies either to the political societies of our own day or to political societies on a great physical scale. The object of history is to watch the workings of one side, and that the highest side, of human nature in all its shapes; and we do not see human nature in all its shapes, unless we follow it into all times and all circumstances under which we have any means of studying it. . . . In one sense it is perfectly true that history is always repeating itself; in another sense it would be equally true to say that history never repeats itself at all. No historical position can be exactly the same as any earlier historical position, if only for the reason that the earlier position has gone before it. . . . Even where the reproduction is unconscious, where the likeness is simply the result of the working of like causes, still the two results can never be exactly the same, if only because the earlier result itself takes its place among the causes of the later result. Differences of this kind must always be borne in mind, and they are quite enough to hinder any two historical events from being exact doubles of one another. . . . We must carefully distinguish between causes and occasions. It is one of the oldest and one of the wisest remarks of political philosophy that great events commonly arise from great causes, but

from small occasions. A certain turn of mind, one which is more concerned with gossip, old or new, than with real history, delights in telling us how the greatest events spring from the smallest causes, how the fates of nations and empires are determined by some sheer accident, or by the personal caprice or personal quarrel of some perhaps very insignificant person. A good deal of court-gossip, a good deal of political gossip, passes both in past and present times for real history. Now a great deal of this gossip is sheer gossip, and may be cast aside without notice; but a good deal of it often does contain truth of a certain kind. Only bear in mind the difference between causes and occasions, and we may accept a good many of the stories which tell us how very trifling incidents led to very great events. . . . When I speak of causes and occasions, when I speak of small personal caprices and quarrels, as being not the causes of great events, but merely the occasions, I wish it to be fully understood that I do not at all place the agency of really great men among mere occasions: I fully give it its place among determining causes. In any large view of history, we must always be on our guard against either under-rating or overrating the actions of individual men. History is something more than biography; but biography is an essential and a most important part of history. We must not think, on the one hand, that great men, heroes, or whatever we please to call them, can direct the course of history according to their own will and pleasure, perhaps according to their mere caprice, with no danger of their will being thwarted, unless it should run counter to the will of some other great man or hero of equal or greater power. . . . On the other hand, we must not deem that the course of history is so governed by general laws, that it is so completely in bondage to almost mechanical powers, that there is no room for the free agency of great men and of small men too. For it is of no little importance that, while we talk of the influence of great men on the history of the world, we should not forget the influence of the small men. Every man has some influence on the course of history."—E. A. Freeman, *The Practical Bearings of European History (Lectures to American Audiences)*, pp. 207-215.

The Philosophy of History.—"The philosophy of history is not a something separate from the facts of history, but a something contained in them. The more a man gets into the meaning of them, the more he gets into it, and it into him; for it is simply the meaning, the rational interpretation, the knowledge of the true nature and essential relations of the facts. And this is true of whatever species or order the facts may be. Their philosophy is not something separate and distinct from, something over and above, their interpretation, but simply their interpretation. He who knows about any people, or epoch, or special development of human nature, how it has come to be what it is and what it tends to, what causes have given it the character it has, and what its relation is to the general development of humanity, has attained to the philosophy of the history of that people, epoch, or development. Philosophical history is sometimes spoken of as a kind of history, but the language is most inaccurate. Every kind of history is philosophical which is true and thorough; which goes

closely and deeply enough to work; which shows the what, how, and why of events as far as reason and research can ascertain. History always participates in some measure of philosophy, for events are always connected according to some real or supposed principle either of efficient or final causation."—R. Flint, *Philosophy of History*, introd.

The possibility of a Science of History.—**Mr. Buckle's theory.**—"The believer in the possibility of a science of history is not called upon to hold either the doctrine of predestined events, or that of freedom of the will; and the only positions which, in this stage of the inquiry, I shall expect him to concede are the following: That when we perform an action, we perform it in consequence of some motive or motives; that those motives are the results of some antecedents; and that, therefore, if we were acquainted with the whole of the antecedents, and with all the laws of their movements, we could with unerring certainty predict the whole of their immediate results. This, unless I am greatly mistaken, is the view which must be held by every man whose mind is unbiased by system, and who forms his opinions according to the evidence actually before him. . . . Rejecting, then, the metaphysical dogma of free will and, the theological dogma of predestined events, we are driven to the conclusion that the actions of men, being determined solely by their antecedents, must have a character of uniformity, that is to say, must, under precisely the same circumstances, always issue in precisely the same results. And as all antecedents are either in the mind or out of it, we clearly see that all the variations in the results—in other words, all the changes of which history is full, all the vicissitudes of the human race, their progress or their decay, their happiness or their misery—must be the fruit of a double action; an action of external phenomena upon the mind, and another action of the mind upon the phenomena. These are the materials out of which a philosophic history can alone be constructed. On the one hand, we have the human mind obeying the laws of its own existence, and, when uncontrolled by external agents, developing itself according to the conditions of its organization. On the other hand, we have what is called Nature, obeying likewise its laws; but incessantly coming into contact with the minds of men, exciting their passions, stimulating their intellect, and therefore giving to their actions a direction which they would not have taken without such disturbance. Thus we have man modifying nature, and nature modifying man; while out of this reciprocal modification all events must necessarily spring. The problem immediately before us is to ascertain the method of discovering the laws of this double modification."—H. T. Buckle, *Hist. of Civilization in England*, ch. 1.—"Buckle is not the first who has attempted to treat the unscientific character of History, the 'methodless matter,' as an ancient writer names it, by the method of exhibiting vital phenomena under points of view analogous to those which are the starting-point of the exact sciences. But a notion which others have incidentally broached under some formula about 'natural growth,' or carried out in the very inadequate and merely figurative idea of the inorganic; what still others, as Comte in his attractive 'Philosophie Positive,' have developed

speculatively, Buckle undertakes to ground in a comprehensive historical exposition. . . . He purposes to raise History to a science by showing how to demonstrate historical facts out of general laws. He paves the way for this by setting forth that the earliest and rudest conceptions touching the course of human destiny were those indicated by the ideas of chance and necessity, that 'in all probability' out of these grew later the 'dogmas' of free-will and predestination, that both are in a great degree 'mistakes,' or that, as he adds, 'we at least have no adequate proof of their truth.' He finds that all the changes of which History is full, all the vicissitudes which have come upon the human race, its advance and its decline, its happiness and its misery, must be the fruit of a double agency, the working of outer phenomena upon our nature, and the working of our nature upon outer phenomena. He has confidence that he has discovered the 'laws' of this double influence, and that he has therefore elevated the History of mankind to a science. . . . Buckle does not so much leave the freedom of the will, in connection with divine providence, out of view, but rather declares it an illusion and throws it overboard. Within the precincts of philosophy also something similar has recently been taught. A thinker whom I regard with personal esteem says: 'If we call all that an individual man is, has and performs A, then this A arises out of $a + x$, a embracing all that comes to the man from his outer circumstances: from his country, people, age, etc., while the vanishingly little x is his own contribution, the work of his free will.' However vanishingly small this x may be, it is of infinite value. Morally and humanly considered it alone has value. The colors, the brush, the canvas which Raphael used were of materials which he had not created. He had learned from one and another master to apply these materials in drawing and painting. The idea of the Holy Virgin and of the saints and angels, he met with in church tradition. Various cloisters ordered pictures from him at given prices. That this incitement alone, these material and technical conditions and such traditions and contemplations, should 'explain' the Sistine Madonna, would be, in the formula $A = a + x$, the service of the vanishing little x . Similarly everywhere. Let statistics go on showing that in a certain country so and so many illegitimate births occur. Suppose that in the formula $A = a + x$ this a includes all the elements which 'explain' the fact that among a thousand mothers twenty, thirty, or whatever the number is, are unmarried; each individual case of the kind has its history, how often a touching and affecting one. Of those twenty or thirty who have fallen is there a single one who will be consoled by knowing that the statistical law 'explains' her case? Amid the tortures of conscience through nights of weeping, many a one of them will be profoundly convinced that in the formula $A = a + x$ the vanishing little x is of immeasurable weight, that in fact it embraces the entire moral worth of the human being, his total and exclusive value. No intelligent man will think of denying that the statistical method of considering human affairs has its great worth; but we must not forget how little, relatively, it can accomplish and is meant to accomplish. Many and perhaps all human relations have a legal side; yet no one

will on that account bid us seek for the understanding of the *Eroica* or of Faust among jurists' definitions concerning intellectual property."—J. G. Droysen, *Outline of the Principles of History*, pp. 62-64 and 77-79.

History as the root of all Science.—Lost History.—"History, as it lies at the root of all science, is also the first distinct product of man's spiritual nature; his earliest expression of what can be called Thought. It is a looking both before and after; as, indeed, the coming Time already waits, unseen, yet definitely shaped, predetermined and inevitable, in the Time come; and only by the combination of both is the meaning of either completed. The Sibylline Books, though old, are not the oldest. Some nations have prophecy, some have not; but of all mankind, there is no tribe so rude that it has not attempted History, though several have not arithmetic enough to count Five. History has been written with quipo-threads, with feather-pictures, with wampum-belts; still oftener with earth-mounds and monumental stone-heaps, whether as pyramid or cairn; for the Celt and the Copt, the Red man as well as the White, lives between two eternities, and warring against Oblivion, he would fain unite himself in clear conscious relation, as in dim unconscious relation he is already united, with the whole Future and the whole Past. A talent for History may be said to be born with us, as our chief inheritance. In a certain sense all men are historians. Is not every memory written quite full with Annals, wherein joy and mourning, conquest and loss manifoldly alternate; and, with or without philosophy, the whole fortunes of one little inward Kingdom, and all its politics, foreign and domestic, stand ineffaceably recorded? Our very speech is curiously historical. Most men, you may observe, speak only to narrate; not in imparting what they have thought, which indeed were often a very small matter, but in exhibiting what they have undergone or seen, which is a quite unlimited one, do talkers dilate. Cut us off from Narrative, how would the stream of conversation, even among the wisest, languish into detached handfuls, and among the foolish utterly evaporate! Thus, as we do nothing but enact History, we say little but recite it: nay rather, in that widest sense, our whole spiritual life is built thereon. For, strictly considered, what is all Knowledge too but recorded Experience, and a product of History; of which, therefore, Reasoning and Belief, no less than Action and Passion, are essential materials? . . . Social Life is the aggregate of all the individual men's Lives who constitute society; History is the essence of innumerable Biographies. But if one Biography, nay our own Biography, study and recapitulate it as we may, remains in so many points unintelligible to us; how much more must these million, the very facts of which, to say nothing of the purport of them, we know not, and cannot know! . . . Which was the greatest innovator, which was the more important personage in man's history, he who first led armies over the Alps, and gained the victories of Cannæ and Thrasymene; or the nameless boor who first hammered out for himself an iron spade? When the oak-tree is felled, the whole forest echoes with it; but a hundred acorns are planted silently by some unnoticed breeze. Battles and tumults, which for the time din every ear, and

with joy or terror intoxicate every heart, pass away like tavern-brawls; and, except some few Marathons and Morgartens, are remembered by accident, not by desert. Laws themselves, political Constitutions, are not our Life, but only the house wherein our Life is led: nay they are but the bare walls of the house; all whose essential furniture, the inventions and traditions, and daily habits that regulate and support our existence, are the work not of Dracos and Hampdens, but of Phœniciañ mariners, of Italian masons and Saxon metallurgists, of philosophers, alchemists, prophets, and all the long-forgotten train of artists and artisans; who from the first have been jointly teaching us how to think and how to act, how to rule over spiritual and over physical Nature. Well may we say that of our History the more important part is lost without recovery."—T. Carlyle, *On History (Critical and Miscellaneous Essays, v. 2)*.

Interpretation of the Past by the Present.—"But how, it may be asked, are we to interpret the Past from the Present, if there are no institutions in the present answering to those in the past? We have no serfs, for example, in England at the present time, how then are we to understand a state of Society of which they were a component element? The answer is—by analogy, by looking at the essence of the relation. Between a modern master and his lackeys and dependents, the same essential relation subsists as between the lord and serf of feudal times. If we realise to ourselves the full round of this relationship, deepen the shades to correspond with the more absolute power possessed by a lord in early times, allow for a more aristocratic state of opinion and belief, the result will be the solution desired. This method of interpreting the Past from the Present has been followed by Shakespeare in his great historical dramas, with such success as we all know. He wishes, for example, to give us a picture of old Roman times. He gets from Plutarch and other sources the broad historical facts, the form of Government and Religion, the distribution of Power and Authority: this is the skeleton to which he has to give life and reality. How does he proceed? He simply takes his stand on the times in which he himself lived; notes the effects existing institutions have on his own and other minds; allows for the differences in custom, mode of life, and political and religious forms; and the result is a drama or dramas more real and lifelike, more true and believable, an insight into the working of Roman life more subtle and profound, than all the husks with which the historians have furnished us."—J. B. Crozier, *Civilization and Progress, p. 35*.

The Moral lessons of History.—"Gibbon believed that the era of conquerors was at an end. Had he lived out the full life of man, he would have seen Europe at the feet of Napoleon. But a few years ago we believed the world had grown too civilized for war, and the Crystal Palace in Hyde Park was to be the inauguration of a new era. Battles bloody as Napoleon's are now the familiar tale of every day; and the arts which have made greatest progress are the arts of destruction. . . . What, then, is the use of History, and what are its lessons? If it can tell us little of the past, and nothing of the future, why waste our time over so barren a study? First, it is a voice forever sounding across the

centuries the laws of right and wrong. Opinions alter, manners change, creeds rise and fall, but the moral law is written on the tablets of eternity. For every false word or unrighteous deed, for cruelty and oppression, for lust or vanity, the price has to be paid at last; not always by the chief offenders, but paid by some one. Justice and truth alone endure and live. Injustice and falsehood may be long-lived, but doomsday comes at last to them, in French revolutions and other terrible ways. That is one lesson of History. Another is that we should draw no horoscopes; that we should expect little, for what we expect will not come to pass."—J. A. Froude, *Short Studies on Great Subjects, pp. 27-28*.

The Educational and Practical value of History.—"It is, I think, one of the best schools for that kind of reasoning which is most useful in practical life. It teaches men to weigh conflicting probabilities, to estimate degrees of evidence, to form a sound judgment of the value of authorities. Reasoning is taught by actual practice much more than by any a priori methods. Many good judges—and I own I am inclined to agree with them—doubt much whether a study of formal logic ever yet made a good reasoner. Mathematics are no doubt invaluable in this respect, but they only deal with demonstrations; and it has often been observed how many excellent mathematicians are somewhat peculiarly destitute of the power of measuring degrees of probability. But History is largely concerned with the kind of probabilities on which the conduct of life mainly depends. There is one hint about historical reasoning which I think may not be unworthy of your notice. When studying some great historical controversy, place yourself by an effort of the imagination alternately on each side of the battle; try to realise as fully as you can the point of view of the best men on either side, and then draw up upon paper the arguments of each in the strongest form you can give them. You will find that few practices do more to elucidate the past, or form a better mental discipline."—W. E. H. Lecky, *The Political Value of History, pp. 47-49*.—"He who demands certainties alone as the sphere of his action must retire from the activities of life, and confine himself to the domain of mathematical computation. He who is unwilling to investigate and weigh probabilities can have no good reason to hope for any practical success whatever. It is strictly accurate to say that the highest successes in life, whether in statesmanship, in legislation, in war, in the civic professions, or in the industrial pursuits, are attained by those who possess the greatest skill in the weighing of probabilities and the estimating of them at their true value. This is the essential reason why the study of history is so important an element in the work of improving the judgment, and in the work of fitting men to conduct properly the larger interests of communities and states. It is a study of humanity, not in an ideal condition, but as humanity exists. The student of history surveys the relations of life in essentially the same manner as the man of business surveys them. Perhaps it ought rather to be said that the historical method is the method that must be used in the common affairs of every-day life. The premises from which the man of business has to draw his conclusions are always more or less

involved and uncertain. The gift which insures success, therefore, is not so much the endowment of a powerful reasoning faculty as that other quality of intelligence, which we call good judgment. It is the ability to grasp what may be called the strategic points of a situation by instinctive or intuitive methods. It reaches its conclusions not by any very clearly defined or definable process, but rather by the method of conjecturing the value and importance of contingent elements. It is the ability to reach correct conclusions when the conditions of a strictly logical process are wanting. To a man of affairs this is the most valuable of all gifts; and it is acquired, so far as it comes by effort, not by studying the rigid processes of necessary reasoning, but by a large observance and contemplation of human affairs. And it is precisely this method of studying men that the historical student has to use. His premises are always more or less uncertain, and his conclusions, therefore, like the conclusions of every day life, are the product of his judgment rather than the product of pure reason. It is in the light of this fact that we are to explain the force of Guizot's remark, that nothing tortures history more than logic. Herein also is found the reason why the study of history is so necessary a part of a good preparation for the affairs of politics and statesmanship. Freeman has said that history is simply past politics, and politics are simply present history. If this be true—and who can deny it?—the study of history and the study of politics are much the same. The kind of involved and contingent reasoning necessary for the successful formation of political judgments is unquestionably the kind of reasoning which, of all studies, history is best adapted to give. It may also be said that the most important elements of success are the same in all practical vocations. The conditions, whether those of statesmanship or those of industry and commerce, have been essentially the same in all ages. Society is, and has been, from its first existence, a more or less complicated organism. It is a machine with a great number of wheels and springs. No part is independent. Hence it is that no man can be completely useful if he is out of gear with his age, however perfect he may be in himself.”—C. K. Adams, *A Manual of Historical Literature*, pp. 15-16.—“To turn for a moment to the general question. I should not like to be thought to be advocating my study on the mere grounds of utility; although I believe that utility, both as regards the training of the study and the information attained in it, to be the highest, humanly speaking, of all utilities; it helps to qualify a man to act in his character of a politician as a Christian man should. But this is not all; beyond the educational purpose, beyond the political purpose, beyond the philosophical use of history and its training, it has something of the preciousness of everything that is clearly true. In common with Natural Philosophy it has its value, I will not say as Science, for that would be to use a term which has now become equivocal, but it has a value analogous to the value of science; a value as something that is worth knowing and retaining in the knowledge for its own and for the truth's sake. And in this consists its especial attraction for its own votaries. It is not the pleasure of knowing something that the world does not know,—that doubtless is a

motive that weighs with many minds, a motive to be accepted as a fact, though it may not be worth analysis. It is not the mere pleasure of investigating and finding with every step of investigation new points of view open out, and new fields of labour, new characters of interest;—that investigating instinct of human nature is not one to be ignored, and the exercise of it on such inexhaustible materials as are before us now is a most healthy exercise, one that cannot but strengthen and develop the whole mind of the man who uses it, urging him on to new studies, new languages, new discoveries in geography and science. But even this is not all. There is, I speak humbly, in common with Natural Science, in the study of living History, a gradual approximation to a consciousness that we are growing into a perception of the workings of the Almighty Ruler of the world. . . . The study of History is in this respect, as Coleridge said of Poetry, its own great reward, a thing to be loved and cultivated for its own sake. . . . If man is not, as we believe, the greatest and most wonderful of God's works, he is at least the most wonderful that comes within our contemplation; if the human will, which is the motive cause of all historical events, is not the freest agent in the universe, it is at least the freest agency of which we have any knowledge; if its variations are not absolutely innumerable and irreducible to classification, on the generalisations of which we may formulate laws and rules, and maxims and prophecies, they are far more diversified and less reducible than any other phenomena in those regions of the universe that we have power to penetrate. For one great insoluble problem of astronomy or geology there are a thousand insoluble problems in the life, in the character, in the face of every man that meets you in the street. Thus, whether we look at the dignity of the subject-matter, or at the nature of the mental exercise which it requires, or at the inexhaustible field over which the pursuit ranges, History, the knowledge of the adventures, the development, the changeable career, the varied growths, the ambitions, aspirations, and, if you like, the approximating destinies of mankind, claims a place second to none in the roll of sciences.”—W. Stubbs, *Seventeen Lectures on the Study of Medieval and Modern History*, lect. 1 and 4.—“There is a passage in Lord Bacon so much to this purpose that I cannot forbear quoting it. ‘Although’ (he says) ‘we are deeply indebted to the light, because by means of it we can find our way, ply our tasks, read, distinguish one another; and yet for all that the vision of the light itself is more excellent and more beautiful than all these various uses of it; so the contemplation and sight of things as they are, without superstition, without imposture, without error, and without confusion, is in itself worth more than all the harvest and profit of inventions put together.’ And so may I say of History; that useful as it may be to the statesman, to the lawyer, to the schoolmaster, or the annalist, so far as it enables us to look at facts as they are, and to cultivate that habit within us, the importance of History is far beyond all mere amusement or even information that we may gather from it.”—J. S. Brewer, *English Studies*, p. 382.—“To know History is impossible; not even Mr. Freeman, not Professor Ranke himself, can be said to know History. . . . No one, therefore,

should be discouraged from studying History. Its greatest service is not so much to increase our knowledge as to stimulate thought and broaden our intellectual horizon, and for this purpose no study is its equal."—W. P. Atkinson, *On History and the Study of History*, p. 107.

The Writing of History.—Macaulay's view.—"A history in which every particular incident may be true may on the whole be false. The circumstances which have most influence on the happiness of mankind, the changes of manners and morals, the transition of communities from poverty to wealth, from knowledge to ignorance, from ferocity to humanity—these are, for the most part, noiseless revolutions. Their progress is rarely indicated by what historians are pleased to call important events. They are not achieved by armies, or enacted by senates. They are sanctioned by no treaties and recorded in no archives. They are carried on in every school, in every church, behind ten thousand counters, at ten thousand firesides. The upper current of society presents no certain criterion by which we can judge of the direction in which the under current flows. We read of defeats and victories. But we know that nations may be miserable amidst victories and prosperous amidst defeats. We read of the fall of wise ministers and of the rise of profligate favourites. But we must remember how small a proportion the good or evil effected by a single statesman can bear to the good or evil of a great social system. . . . The effect of historical reading is analogous, in many respects, to that produced by foreign travel. The student, like the tourist, is transported into a new state of society. He sees new fashions. He hears new modes of expression. His mind is enlarged by contemplating the wide diversities of laws, of morals, and of manners. But men may travel far and return with minds as contracted as if they had never stirred from their own market-town. In the same manner, men may know the dates of many battles and the genealogies of many royal houses, and yet be no wiser. . . . The perfect historian is he in whose work the character and spirit of an age is exhibited in miniature. He relates no fact, he attributes no expression to his characters, which is not authenticated by sufficient testimony. But, by judicious selection, rejection, and arrangement, he gives to truth those attractions which have been usurped by fiction. In his narrative a due subordination is observed: some transactions are prominent; others retire. But the scale on which he represents them is increased or diminished, not according to the dignity of the persons concerned in them, but according to the degree in which they elucidate the condition of society and the nature of man. He shows us the court, the camp, and the senate. But he shows us also the nation. He considers no anecdote, no peculiarity of manner, no familiar saying, as too insignificant for his notice which is not too insignificant to illustrate the operation of laws, of religion, and of education, and to mark the progress of the human mind. Men will not merely be described, but will be made intimately known to us."—Lord Macaulay, *History (Essays, v. 1)*.

The Writing of History.—Truthfulness in Style.—"That man reads history, or anything else, at great peril of being thoroughly misled, who has no perception of any truthfulness except that which can be fully ascertained by reference

to facts; who does not in the least perceive the truth, or the reverse, of a writer's style, of his epithets, of his reasoning, of his mode of narration. In life our faith in any narration is much influenced by the personal appearance, voice, and gesture of the person narrating. There is some part of all these things in his writing; and you must look into that well before you can know what faith to give him. One man may make mistakes in names, and dates, and references, and yet have a real substance of truthfulness in him, a wish to enlighten himself and then you. Another may not be wrong in his facts, but have a declamatory, or sophistical, vein in him, much to be guarded against. A third may be both inaccurate and untruthful, caring not so much for any thing as to write his book. And if the reader cares only to read it, sad work they make between them of the memories of former days."—Sir A. Helps, *Friends in Council, v. 1, pp. 199–200*.

Historical Romance and Romantic History.—Sir Walter Scott.—"The prodigious addition which the happy idea of the historical romance has made to the stories of elevated literature, and through it to the happiness and improvement of the human race, will not be properly appreciated, unless the novels most in vogue before the immortal creations of Scott appeared are considered. . . . Why is it that works so popular in their day, and abounding with so many traits of real genius, should so soon have palled upon the world? Simply because they were not founded upon a broad and general view of human nature; because they were drawn, not from real life in the innumerable phases which it presents to the observer, but imaginary life as it was conceived in the mind of the composer; because they were confined to one circle and class of society, and having exhausted all the natural ideas which it could present, its authors were driven, in the search of variety, to the invention of artificial and often ridiculous ones. Sir Walter Scott, as all the world knows, was the inventor of the historical romance. As if to demonstrate how ill founded was the opinion, that all things were worked out, and that originality no longer was accessible for the rest of time, Providence, by the means of that great mind, bestowed a new art, as it were, upon mankind—at the very time when literature to all appearance was effete, and invention, for above a century, had run in the cramped and worn-out channels of imitation. Gibbon was lamenting that the subjects of history were exhausted, and that modern story would never present the moving incidents of ancient story, on the verge of the French Revolution and the European war—of the Reign of Terror and the Moscow retreat. Such was the reply of Time to the complaint that political incident was worn out. Not less decisive was the answer which the genius of the Scottish bard afforded to the opinion, that the treasures of original thought were exhausted, and that nothing now remained for the sons of men. In the midst of that delusion he wrote 'Waverley'; and the effect was like the sun bursting through the clouds."—*Historical Romance (Blackwood's Magazine, Sept., 1845)*.—"Those sticklers for truth, who reproach Scott with having falsified history because he wilfully confused dates, forget the far greater truth which that wonderful writer generally presented. If,

for his purposes, he disarranged the order of events a little; no grave historian ever succeeded better in painting the character of the epoch. He committed errors of detail enough to make Mrs. Markham shudder. He divined important historical truth which had escaped the sagacity of all historians. A great authority, Augustin Thierry, has pronounced Scott the greatest of all historical diviners.—G. H. Lewes, *Historical Romance* (*Westminster Rev.*, Mar., 1846).—"The novel of *Ivanhoe* places us four generations after the invasion of the Normans, in the reign of Richard, son of Henry Plantagenet, sixth king since the conqueror. At this period, at which the historian Hume can only represent to us a king and England, without telling us what a king is, nor what he means by England, Walter Scott, entering profoundly into the examination of events, shows us classes of men, distinct interests and conditions, two nations, a double language, customs which repel and combat each other; on one side tyranny and insolence, on the other misery and hatred, real developments of the drama of the conquest, of which the battle of Hastings had been only the prologue. . . . In the midst of the world which no longer exists, Walter Scott always places the world which does and always will exist, that is to say, human nature, of which he knows all the secrets. Everything peculiar to the time and place, the exterior of men, the aspect of the country and of the habitations, costumes, and manners, are described with the most minute truthfulness; and yet the immense erudition which has furnished so many details is nowhere to be perceived. Walter Scott seems to have for the past that second sight, which in times of ignorance, certain men attributed to themselves for the future. To say that there is more real history in his novels on Scotland and England than in the philosophically false compilations which still possess that great name, is not advancing any thing strange in the eyes of those who have read and understood 'Old Mortality,' 'Waverley,' 'Rob Roy,' the 'Fortunes of Nigel,' and the 'Heart of Mid-Lothian.'—A. Thierry, *Narratives of the Merovingian Era, Historical Essays, etc.*, essay 9.—"We have all heard how the romances of Walter Scott brought history home to people who would never have looked into the ponderous volumes of professed historians, and many of us confess to ourselves that there are large historical periods which would be utterly unknown to us but for some story either of the great romancer or one of his innumerable imitators. Writers, as well as readers, of history were awakened by Scott to what seemed to them the new discovery that the great personages of history were after all men and women of flesh and blood like ourselves. Hence in all later historical literature there is visible the effort to make history more personal, more dramatic than it had been before. We can hardly read the interesting *Life of Lord Macaulay* without perceiving that the most popular historical work of modern times owes its origin in a great measure to the *Waverley Novels*. Macaulay grew up in a world of novels; his conversation with his sisters was so steeped in reminiscences of the novels they had read together as to be unintelligible to those who wanted the clue. His youth and early manhood witnessed the appearance of the *Waverley Novels* themselves. . . . He became naturally possessed

by the idea which is expressed over and over again in his essays, and which at last he realized with such wonderful success, the idea that it was quite possible to make history as interesting as romance. . . . Macaulay is only the most famous of a large group of writers who have been possessed with the same idea. As Scott founded the historical romance, he may be said to have founded the romantic history. And to this day it is an established popular opinion that this is the true way of writing history, only that few writers have genius enough for it. . . . It must be urged against this kind of history that very few subjects or periods are worthy of it. Once or twice there have appeared glorious characters whose perfection no eloquence can exaggerate; once or twice national events have arranged themselves like a drama, or risen to the elevation of an epic poem. But the average of history is not like this; it is indeed much more ordinary and monotonous than is commonly supposed. The serious student of history has to submit to a disenchantment like that which the experience of life brings to the imaginative youth. As life is not much like romance, so history when it is studied in original documents looks very unlike the conventional representation of it which historians have accustomed us to."—J. R. Seeley, *History and Politics* (*Macmillan's Magazine*, Aug., 1879).

How to study History.—"The object of the historical student is to bring before his mind a picture of the main events and the spirit of the times which he studies. The first step is to get a general view from a brief book; the second step is to enlarge it from more elaborate books, reading more than one, and to use some system of written notes keeping them complete. The next step is to read some of the contemporary writers. Having done these three things carefully, the historical student carries away an impression of his period which will never be effaced."—Prof. A. B. Hart, *How to Study History* (*Chautauquan*, Oct., 1893).

The Importance of a knowledge of Universal History.—"When I was a schoolmaster, I never considered a pupil thoroughly educated unless he had read Gibbon through before he left me. I read it through myself before I was eighteen, and I have derived unspeakable advantage from this experience. Gibbon's faults of style and matter have very slight effect on the youthful mind, whereas his merits, his scholarship, his learning, his breadth of view, his imagination, and his insight, afford a powerful stimulus to study. . . . I . . . wish to urge the claims of two subjects on your attention which have hitherto been unaccountably neglected. The first of them is universal history, the general course of the history of the world. It seems natural to think that no subject could be more important for the consideration of any human being than the knowledge of the main lines which the race has followed since the dawn of history in reaching the position which it has now attained. The best way of understanding any situation is to know how affairs came into that position. Besides the satisfaction of legitimate curiosity, it is only thus that we can be wise reformers, and distinguish between what is a mere survival of the past and an institution which is inherent in the character of the community. Our German cousins are fully aware

of this truth; a German parlour, however meagrely furnished, always contains two books, a Bible and a Weltgeschichte. I suppose that during the present century from a hundred to a hundred and fifty of these universal histories have made their appearance in Germany. In England I only know of two. In Germany, Italy, and Austria, and, I believe, in France, universal history forms an essential part of education for nearly all classes. It is taken as a subject under certain conditions in the Abiturienten-Examen. I once had the privilege of reading the notes of a viva voce examination of a student in this subject who did not pass. It covered the whole range of ancient, mediæval, and modern history. I was astonished at what the student did know, and still more at what he was expected to know. I should like to see the subject an essential part of all secondary education in England, just as the knowledge of Bible history was in my young days and may be still. If proper text-books were forthcoming, to which I again direct the attention of enterprising publishers, there would be no difficulty in making this subject an accompaniment of nearly every literary lesson. . . . The advantage would be the enlargement of the mind by the contemplation of the majestic march of human events and the preparation for any future course of historical study. 'Boys come to us,' said a German professor once to me, 'knowing their centuries.' How few English boys or even English men have any notion of their centuries! The dark ages are indeed dark to them. I once asked a boy at Eton, who had given me a date, whether it was B. C. or A. D. Being hopelessly puzzled, he replied that it was B. D. Many of us, if we were honest, would give a similar answer."—O. Browning, *The Teaching of Hist. in Schools* (*Royal Hist. Soc., Transactions, new series, v. 4*).

The Importance of Local History.—"From a variety of considerations, the writer is persuaded that one of the best introductions to history that can be given in American high schools, and even in those of lower grade, is through a study of the community in which the school is placed. History, like charity, begins at home. The best American citizens are those who mind home affairs and local interests. 'That man's the best cosmopolite who loves his native country best.' The best students of universal history are those who know some one country or some one subject well. The family, the hamlet, the neighborhood, the community, the parish, the village, town, city, county, and state are historically the ways by which men have approached national and international life. It was a preliminary study of the geography of Frankfort-on-the-Main that led Carl Ritter to study the physical structure of Europe and Asia, and thus to establish the new science of comparative geography. He says: 'Whoever has wandered through the valleys and woods, and over the hills and mountains of his own state, will be the one capable of following a Herodotus in his wanderings over the globe.' And we may say, as Ritter said of the science of geography, the first step in history is to know thoroughly the district where we live. . . . American local history should be studied as a contribution to national history. This country will yet be viewed and reviewed as an organism of historic growth, de-

veloping from minute germs, from the very protoplasm of state life. And some day this country will be studied in its international relations, as an organic part of a larger organism now vaguely called the World State, but as surely developing through the operation of economic, legal, social, and scientific forces as the American Union, the German and British Empires are evolving into higher forms. American history in its widest relations is not to be written by any one man nor by any one generation of men. Our history will grow with the nation and with its developing consciousness of internationality. The present possibilities for the real progress of historic and economic science lie, first and foremost, in the development of a generation of economists and practical historians, who realize that history is past politics and politics present history; secondly, in the expansion of the local consciousness into a fuller sense of its historic worth and dignity, of the cosmopolitan relations of modern local life, and of its wholesome conservative power in these days of growing centralization. National and international life can best develop upon the constitutional basis of local self-government in church and state. . . . If young Americans are to appreciate their religious and political inheritance, they must learn its intrinsic worth. They must be taught to appreciate the common and lowly things around them. They should grow up with as profound respect for town and parish meetings as for the State legislature, not to speak of the Houses of Congress. They should recognize the majesty of the law, even in the parish constable as well as the high sheriff of the country. They should look on selectmen as the head men of the town, the survival of the old English reeve and four best men of the parish. They should be taught to see in the town common or village green a survival of that primitive institution of land-community upon which town and state are based. They should be taught the meaning of town and family names; how the word 'town' means, primarily, a place hedged in for the purposes of defence; how the picket-fences around home and house-lot are but a survival of the primitive town idea; how home, hamlet, and town live on together in a name like Hampton, or Home-town. They should investigate the most ordinary thing for these are often the most archaic. . . . It would certainly be an excellent thing for the development of historical science in America if teachers in our public schools would cultivate the historical spirit in their pupils with special reference to the local environment. . . . A multitude of historical associations gather around every old town and hamlet in the land. There are local legends and traditions, household tales, stories told by grandfathers and grandmothers, incidents remembered by 'the oldest inhabitants.' But above all in importance are the old documents and manuscript records of the first settlers, the early pioneers, the founders of our towns. Here are sources of information more authentic than tradition, and yet often entirely neglected. . . . In order to study history it is not necessary to begin with dead men's bones, with Theban dynasties, the kings of Assyria, the royal families of Europe, or even with the presidents of the United States. These subjects have their importance in certain connections, but for beginners in history there are perhaps other subjects of greater

interest and vitality. The most natural entrance to a knowledge of the history of the world is from a local environment through widening circles of interest, until, from the rising ground of the present, the broad horizon of the past comes clearly into view. . . . A study of the community in which the student dwells will serve to connect that community, not only with

the origin and growth of the State and Nation, but with the mother-country, with the German fatherland, with village communities throughout the Aryan world,—from Germany and Russia to old Greece and Rome; from these classic lands to Persia and India."—H. B. Adams, *Methods of Historical Study* (Johns Hopkins University Studies, Second Series, 1-2), pp. 16-21.

HITTITES, The.—The Hittites mentioned in the Bible were known as the Khita or Khatta to the Egyptians, with whom they were often at war. Recent discoveries indicate that they formed a more civilized and powerful nation and played a more important part in the early history of Western Asia than was previously supposed. Many inscriptions and rock sculptures in Asia Minor and Syria which were formerly inexplicable are now attributed to the Hittites. The inscriptions have not yet been deciphered, but scholars are confident that the key to their secret will be found. The two chief cities of the Hittites were Kadesh on the Orontes and Carchemish on the Euphrates; so that their seat of empire was in northern Syria, but their power was felt from the extremity of Asia Minor to the confines of Egypt. It is conjectured that these people were originally from the Caucasus. "Their descendants," says Prof. Sayce, "are still to be met with in the defiles of the Taurus and on the plateau of Kappadokia, though they have utterly forgotten the language or languages their forefathers spoke. What that language was is still uncertain, though the Hittite proper names which occur on the monuments of Egypt and Assyria show that it was neither Semitic nor Indo-European."—A. H. Sayce, *Fresh Light from the Ancient Monuments*, ch. 5.—"We may . . . rest satisfied with the conclusion that the existence of a Hittite empire extending into Asia Minor is certified, not only by the records of ancient Egypt, but also by Hittite monuments which still exist. In the days of Ramses II., when the children of Israel were groaning under the tasks allotted to them, the enemies of their oppressors were already exercising a power and a domination which rivalled that of Egypt. The Egyptian monarch soon learned to his cost that the Hittite prince was as 'great' a king as himself, and could summon to his aid the inhabitants of the unknown north. Pharaoh's claim to sovereignty was disputed by adversaries as powerful as the ruler of Egypt, if indeed not more powerful, and there was always a refuge among them for those who were oppressed by the Egyptian king. When, however, we speak of a Hittite empire, we must understand clearly what that means. It was not an empire like that of Rome, where the subject provinces were consolidated together under a central authority, obeying the same laws and the same supreme head. It was not an empire like that of the Persians, or of the Assyrian successors of Tiglath-pileser III., which represented the organised union of numerous states and nations under a single ruler. . . . Before the days of Tiglath-pileser, in fact, empire in Western Asia meant the power of a prince to force a foreign people to submit to his rule. The conquered provinces had to be subdued again and again; but as long as this could be

done, as long as the native struggles for freedom could be crushed by a campaign, so long did the empire exist. It was an empire of this sort that the Hittites established in Asia Minor. How long it lasted we cannot say. But so long as the distant races of the West answered the summons to war of the Hittite princes, it remained a reality. The fact that the tribes of the Troad and Lydia are found fighting under the command of the Hittite kings of Kadesh, proves that they acknowledged the supremacy of their Hittite lords, and followed them to battle like the vassals of some feudal chief. If Hittite armies had not marched to the shores of the Ægean, and Hittite princes been able from time to time to exact homage from the nations of the far west, Egypt would not have had to contend against the populations of Asia Minor in its wars with the Hittites, and the figures of Hittite warriors would not have been sculptured on the rocks of Karabel. There was a time when the Hittite name was feared as far as the western extremity of Asia Minor, and when Hittite satraps had their seat in the future capital of Lydia. Traditions of this period lingered on into classical days."—A. H. Sayce, *The Hittites*, ch. 4.

HOHENZOLLERN: Rise of the House of.—"Hohenzollern lies far south in Schwaben (Suabia), on the sunward slope of the Rauhe-Alp Country; no great way north from Constance and its Lake; but well aloft, near the springs of the Danube; its back leaning on the Black Forest; it is perhaps definable as the southern summit of that same huge old Hercynian Wood, which is still called the Schwarzwald (Black Forest), though now comparatively bare of trees. Fanciful Dryasdust, doing a little etymology, will tell you the name 'Zollern' is equivalent to 'Tollery' or Place of Tolls. Whereby 'Hohenzollern' comes to mean the 'High' or Upper 'Tollery';—and gives one the notion of antique pedlars climbing painfully, out of Italy and the Swiss valleys, thus far; unstrapping their packhorses here, and chaffering in unknown dialect about 'toll.' Poor souls;—it may be so, but we do not know, nor shall it concern us. This only is known: That a human kindred, probably of some talent for coercing anarchy and guiding mankind, had, centuries ago, built its 'Burg' there, and done that function in a small but creditable way ever since."—T. Carlyle, *Frederick the Great*, bk. 2, ch. 5.—"The title, Count of Zollern, was conferred by Henry IV. in the eleventh century. . . . In 1190 Henry VI. appointed the Count of Zollern to the imperial office of Burgrave of Nuremberg. By fortunate marriages and prudent purchases, his descendants, who retained the office, gradually acquired extensive estates in Franconia, Moravia, and Burgundy, and their wisdom and growing power steadily increased their weight in the councils of the German princes. . . . Frederick VI. was enriched by Sigismund with large gifts of money, and was made his deputy in Brandenburg in 1411. The marches were in utter confusion, under the feuds and ravages of the unrestrained knight-hood. Frederick reduced them to order, and at the Council of Constance, in 1417, received from Sigismund the margraviate of Brandenburg with the dignity of Elector."—C. T. HOLY ALLIANCE, The.—"The document called the Holy Alliance was originally sketched at Paris [during the occupation of the French capital by the Allies, after Waterloo, in 1815], in the French language, by [the Czar] Alexander's own hand, after a long and animated conversation with Madame de Krüdener and Bergasse. It was suggested, perhaps, by words spoken by the king of Prussia after the battle of Bautzen, but was chiefly the result of the influence, upon a mind always inclined to religious ideas, of the conversation of Madame de Krüdener and of the philosopher Bader, the admirer of Tauler, Jacob Boehm, and St. Martin, the deadly foe of Kant and his successors in Germany. . . . The Czar dreamt of founding a Communion of states, bound together by the first principles of Christianity. . . . The king of Prussia signed the paper from motives of friendship for the Czar, without attaching much importance to what he did. . . . The emperor of Austria, the least sentimental of mankind, at first declined to sign, 'because,' he said, 'if the secret is a political one, I must tell it to Metternich; if it is a religious one, I must tell it to my confessor.' Metternich

accordingly was told, and observed scornfully, 'C'est du verbiage.' Indeed no one of the princes who adhered to the Holy Alliance, with the single exception of Alexander himself, ever took it seriously. It was doomed from its birth. As M. de Bernhardt observes: 'It sank without leaving a trace in the stream of events, never became a reality, and never had the slightest real importance.' What had real importance was the continuance of the good understanding between the powers who had put down Napoleon, and their common fear of France. This good understanding and that common fear led to the treaty of the 20th November 1815, by which it was stipulated that the Powers should, from time to time, hold Congresses with a view to regulating the welfare of nations and the peace of Europe. It was these Congresses, and not the Holy Alliance, which kept up close relations between the rulers of Russia, Prussia, and Austria, and enabled them, when the liberal movement on the Continent, which followed the conclusion of the war, began to be alarming, to take measures for a combined system of repression."—M. E. G. Duff, *Studies in European Politics*, ch. 2.—The text of the Treaty is as follows: "In the name of the Most Holy and Indivisible Trinity: Holy Alliance of Sovereigns of Austria, Prussia, and Russia. Their Majesties the Emperor of Austria, the King of Prussia, and the Emperor of Russia, having, in consequence of the great events which have marked the course of the three last years in Europe, and especially of the blessings which it has pleased Divine Providence to shower down upon those States which place their confidence and their hope on it alone, acquired the intimate conviction of the necessity of settling the steps to be observed by the Powers, in their reciprocal relations, upon the sublime truths which the Holy Religion of our Saviour teaches; They solemnly declare that the present Act has no other object than to publish, in the face of the whole world, their fixed resolution, both in the administration of their respective States, and in their political relations with every other Government, to take for their sole guide the precepts of that Holy Religion, namely, the precepts of Justice, Christian Charity, and Peace, which, far from being applicable only to private concerns, must have an immediate influence on the councils of Princes, and guide all their steps, as being the only means of consolidating human institutions and remedying their imperfections. In consequence, their Majesties have agreed on the following Articles:—Art. I. Conformably to the words of the Holy Scriptures, which command all men to consider each other as brethren, the Three contracting Monarchs will remain united by the bonds of a true and indissoluble fraternity, and considering each other as fellow countrymen, they will, on all occasions and in all places, lend each other aid and assistance; and, regarding themselves towards their subjects and armies as fathers of families, they will lead them, in the same spirit of fraternity with which they are animated, to protect Religion, Peace, and Justice. Art II. In consequence, the sole principle of force, whether between the said Governments or between their Subjects, shall be that of doing each other reciprocal service, and of testifying by unalterable good will the mutual affection with which they ought to be animated, to

consider themselves all as members of one and the same Christian nation; the three allied Princes looking on themselves as merely delegated by Providence to govern three branches of the One family, namely, Austria, Prussia, and Russia, thus confessing that the Christian world, of which they and their people form a part, has in reality no other Sovereign than Him to whom alone power really belongs, because in Him alone are found all the treasures of love, science, and infinite wisdom, that is to say, God, our Divine Saviour, the Word of the Most High, the Word of Life. Their Majesties consequently recommend to their people, with the most tender solicitude, as the sole means of enjoying that Peace which arises from a good conscience, and which alone is durable, to strengthen themselves every day more and more in the principles and exercise of the duties which the Divine Saviour has taught to mankind. Art. III. All the Powers who shall choose solemnly to avow, the sacred principles which have dictated the present Act, and shall acknowledge how important it is for the happiness of nations, too long agitated, that these truths should henceforth exercise over the destinies of mankind all the influence which belongs to them, will be received with equal ardour and affection into this Holy Alliance. Done in triplicate, and signed at Paris, the year of Grace 1815, 4th September." "It is stated in 'Martens' Treaties' that the greater part of the Christian Powers acceded to this Treaty. France acceded to it in 1815; the Netherlands and Wurtemberg did so in 1816; and Saxony, Switzerland, and the Hansa Towns in 1817. But neither the Pope nor the Sultan were invited to accede."—E. Hertslet, *Map of Europe by Treaty*, v. 1, no. 36, pp. 317-319.—"The Treaty of the Holy Alliance was not graced with the name of the Prince Regent [of Great Britain], but the Czar received a letter declaring that his principles had the personal approval of this great authority on religion and morality. The Kings of Naples and Sardinia were the next to subscribe, and in due time the names of the witty glutton, Louis XVIII., and of the abject Ferdinand of Spain were added."—C. A. Fyffe, *Hist. of Modern Europe*, v. 2, ch. 1.—"Metternich, the worldly-wise, smiled at this manifesto as 'nothing more than a philanthropic aspiration clothed in a religious garb.' He suspected that the evil-minded would misinterpret and that the jokers would ridicule it, but none knew better than he the flimsiness of diplomatic agreements, and accordingly he consented to it. Christianity has had many crimes committed in its name; the Holy Alliance made Christianity the cloak under which the kings of Europe conspired to perpetuate the helotage of their subjects. Metternich found it all the easier to direct kings whose common interest it was to uphold the paternal system therein approved. He exerted his influence over each of them separately; if the monarch were obdurate, he wheedled his minister; if the minister were wary, he prejudiced the monarch against him. Now by flattery, and now by specious argument, he won his advantage. . . . Like a trickster at cards, he marked every card in the pack and could always play the ace. . . . He told the truth when he knew it would not be believed; he prevaricated when he intended his falsehood should pass for truth. This was diplomacy, these the 'Christian precepts' by which

one hundred and fifty millions of Europeans were governed. In a society where every one lies, falsehoods of equal cunning nullify each other. Metternich took care that his should excel in verisimilitude and in subtlety. It was an open battle of craft; but his craft was as superior to that of his competitors as a slow, undetectable poison is more often fatal than the hasty stab of a bravo. He fished both with hooks and nets; if one broke, the other held. . . . He was, we may affirm, sincerely insincere; strongly attached to the Hapsburg dynasty, and patriotic in so far as the aggrandizement of that House corresponded with the interests of the Austrian State. But the central figure in his perspective was always himself, whom he regarded as the savior of a social order whose preservation held back the world from chaos. . . . He spoke of his mission as an 'apostolate. . . . To resist all change,—that was his policy; to keep the surface smooth,—that was his peace. . . . He likened himself to a spider, spinning a vast web. 'I begin to know the world well,' he said, 'and I believe that the flies are eaten by the spiders only because they die naturally so young that they have no time to gain experience, and do not know what is the nature of a spider's web.' How many flies he caught during his forty years' spinning! but his success, he admitted, was due quite as much to their blindness as to his cunning. . . . He seemed to delight in royal conferences in order that he might have the excitement of manipulating Alexander and Frederick William; for his own Emperor, Francis, was as pliable as putty in his hands. Such was Metternich, 'the most worldly, the most dexterous, the most fortunate of politicians,' the embodiment of that Old Régime strangely interpolated in the nineteenth century. Knowing him, we shall know the nature of the resistance which checked every patriotic impulse, every effort towards progress in Italy, between 1815 and 1848. Few names have been hated as his was hated, or feared as his was feared. The Italians pictured to themselves a monster, a worse than Herod, who gloated over human suffering, and spent his time in inventing new tortures for his victims. He regarded them, and all liberals, as natural enemies to the order in which he flourished; and he had no more mercy for them than the Spanish Inquisitors had for heretics."—W. R. Thayer, *The Dawn of Italian Independence*, bk. 2, ch. 1 (v. 1).

HOLY BROTHERHOOD, OR HERMANDAD, The.—Before the close of the 13th century, there first arose in Spain "an anomalous institution peculiar to Castile, which sought to secure the public tranquillity by means scarcely compatible themselves with civil subordination. I refer to the celebrated Hermandad, or Holy Brotherhood, as the association was sometimes called,—a name familiar to most readers in the lively fictions of Le Sage, though conveying there no very adequate idea of the extraordinary functions which it assumed at the period under review [13th-14th centuries]. Instead of a regularly organized police, it then consisted of a confederation of the principal cities, bound together by a solemn league and covenant for the defence of their liberties in seasons of civil anarchy. Its affairs were conducted by deputies, who assembled at stated intervals for this purpose, transacting their business under a common seal, en-

acting laws which they were careful to transmit to the nobles and even the sovereign himself, and enforcing their measures by an armed force. . . . One hundred cities associated in the Hermandad of 1315. In that of 1295, were thirty-four. The knights and inferior nobility frequently made part of the association. . . . In one of [the articles of confederation] it is declared that if any noble shall deprive a member of the association of his property, and refuse restitution, his house shall be razed to the ground. In another, that if any one, by command of the king, shall attempt to collect an unlawful tax, he shall be put to death on the spot." Under the government of Ferdinand and Isabella, among the measures adopted for checking the license and disorder which had become prevalent in Castile, and restoring a more effective administration of justice, was one for a reorganization of the Santa Hermandad. "The project for the reorganization of this institution was introduced into the cortes held, the year after Isabella's accession, at Madrigal, 1476. . . . The new institution differed essentially from the ancient hermandades, since, instead of being partial in its extent, it was designed to embrace the whole kingdom; and, instead of being directed, as had often been the case, against the crown itself, it was set in motion at the suggestion of the latter, and limited in its operation to the maintenance of public order. The crimes reserved for its jurisdiction were all violence or theft committed on the highways or in the open country, and in cities by such offenders as escaped into the country; house-breaking; rape; and resistance of justice. . . . An annual contribution of 18,000 maravedis was assessed on every 100 vecinos or householders, for the equipment and maintenance of a horseman, whose duty it was to arrest offenders and enforce the sentence of the law. On the flight of a criminal, the tocsins of the villages through which he was supposed to have passed were sounded, and the cuadrilleros or officers of the brotherhood, stationed on the different points, took up the pursuit with such promptness as left little chance of escape. A court of two alcaldes was established in every town containing thirty families, for the trial of all crimes within the jurisdiction of the hermandad; and an appeal lay from them in specified cases to a supreme council. A general junta, composed of deputies from the cities throughout the kingdom was annually convened for the regulation of affairs, and their instructions were transmitted to provincial juntas, who superintended the execution of them. . . . Notwithstanding the popular constitution of the hermandad, and the obvious advantages attending its introduction at this juncture, it experienced so decided an opposition from the nobility, who discerned the check it was likely to impose on their authority, that it required all the queen's address and perseverance to effect its general adoption. . . . The important benefits resulting from the institution of the hermandad secured its confirmation by successive cortes, for the period of 22 years, in spite of the repeated opposition of the aristocracy. At length, in 1498, the objects for which it was established having been completely obtained, it was deemed advisable to relieve the nation from the heavy charges which its maintenance imposed. The great salaried officers were dismissed; a few subordinate functionaries were retained for the administration of justice, over

HOLY BROTHERHOOD.

whom the regular courts of criminal law possessed appellate jurisdiction; and the magnificent apparatus of the Santa Hermandad, stripped of all but the terrors of its name, dwindled into an ordinary police, such as it has existed, with various modifications of form, down to the present century."—W. H. Prescott, *Hist. of the Reign of Ferdinand and Isabella*, introd., sect. 1, with foot-note, and pt. 1, ch. 6.

HOMER AND THE HOMERIC POEMS.—"When we use the word Homer, we do not mean a person historically known to us, like Pope or Milton. We mean in the main the author, whoever or whatever he was, of the wonderful

HOMER AND THE HOMERIC POEMS.

poems called respectively, not by the author, but by the world, the 'Iliad' and the 'Odyssey.' His name is conventional, and its sense in etymology is not very different from that which would be conveyed by our phrase, 'the author.' . . . At the first dawn of the historic period, we find the poems established in popular renown; and so prominent that a school of minstrels takes the name of 'Homeridae' from making it their business to preserve and to recite them. Still, the question whether the poems as we have them can be trusted, whether they present substantially the character of what may be termed original documents, is one of great but gradually diminishing difficulty. It is also of importance, because of the nature of their contents. In the first place, they give a far greater amount of information than is to be found in any other literary production of the same compass. In the second place, that information, speaking of it generally, is to be had nowhere else. In the third place, it is information of the utmost interest, and even of great moment. It introduces to us, in the very beginnings of their experience, the most gifted people of the world, and enables us to judge how they became such as in later times we know them. . . . And this picture is exhibited with such a fulness both of particulars and of vital force, that perhaps never in any country has an age been so completely placed upon record. . . . We are . . . probably to conceive of Homer as of a Bard who went from place to place to earn his bread by his profession, to exercise his knowledge in his gift of song, and to enlarge it by an ever-active observation of nature and experience of men. . . . It has . . . been extensively believed that he was a Greek of Asia Minor. And as there were no Greeks of Asia Minor at the time of the Trojan War, nor until a wide and searching revolution in the peninsula had substituted Dorian manners for those of the earlier Achaian age, which Homer sang, this belief involves the further proposition that the poet was severed by a considerable interval of time from the subjects of his verse. The last-named opinion depends very much upon the first; and the first chiefly, if not wholly, upon a perfectly vague tradition, which has no pretence to an historical character. . . . The question . . . has to be decided . . . by the internal evidence of the poems. This evidence, I venture to say, strongly supports the belief that Homer was an European, and if an European, then certainly also an Achaian Greek: a Greek, that is to say, of the pre-Doric period, when the Achaian name prevailed and principally distinguished the race. . . . Until the 18th century of our era was near its close, it may be said that all generations had believed Troy was actually Troy, and Homer in the main Homer; neither taking the one for a fable, or (quaintest of all dreams) for a symbol of solar phenomena, nor resolving the other into a multiform assemblage of successive bards, whose verses were at length pieced together by a clever literary tailor. . . . After slighter premonitory movements, it was Wolf that made, by the publication of his 'Prolegomena' in 1795, the serious attack. . . . Wolf maintained that available writing was not known at, or till long after, the period of their composition; and that works of such length, not intrusted to the custody of written characters, could not have been transmitted through a course of generations with any approach to fidelity.

Therefore they could only be a number of separate songs, brought together at a later date."—W. E. Gladstone, *Homer (Literature Primers)*, ch. 1-2.—"Homeric geography is entirely pre-Dorian. Total unconsciousness of any such event as the Dorian invasion reigns both in the *Iliad* and *Odyssey*. . . . A silence so remarkable can be explained only by the simple supposition that when they were composed the revolution in question had not yet occurred. Other circumstances confirm this view."—A. M. Clerke, *Familiar Studies in Homer*, ch. 1.—"It is . . . in the discoveries of Dr. Schliemann that we have the impulse which seems to be sending the balance over towards the belief in the European instead of in the Asiatic origin of the poems. We now know that at the very point which Homer makes the chief royal city of Greece there did, in fact, exist a civilisation which did, in fact, offer just the conditions for the rise of a poetry such as the Homeric—a great city 'rich in gold,' with a cultivation of the material arts such as is wont to go hand in hand with the growth of poetry [see GREECE: MYCENÆ AND ITS KINGS]. . . . It is no longer possible to doubt that the world which the poems describe was one which really existed in the place where they put it. Even in details the poems have received striking illustration from the remains of Mykenai. . . . It appears that we may date the oldest part of the *Iliad* at least to some time before the Dorian invasion, which, according to the traditional chronology, took place about 1000 B. C. . . . But the poems can hardly be much earlier than the invasion; for there are various signs which indicate that the civilisation which they depict had made some advance beyond that of which we find the material remains in the 'shaft tombs,' discovered by Dr. Schliemann in the Acropolis of Mykenai. . . . And the date of these has now been fixed by Mr. Petrie, from comparison with Egyptian remains, at about 1150. We can therefore hardly be far wrong, if the poems were composed in Achaian Greece, in dating their origin at about 1050 B. C. There still remains the question of the historical basis which may underlie the story of the *Iliad*. The poem may give us a true picture of Achaian Greece and its civilisation, and yet be no proof that the armies of Agamemnon fought beneath the walls of Troy. But here again the discoveries of recent years, and notably those of Schliemann at Hissarlik, have tended on the whole to confirm the belief that there is a historic reality behind the tale of Troy. . . . The hypothesis that the *Iliad* and *Odyssey* are the work of more than one poet . . . is one which has been gaining ground ever since it was seriously taken up and argued at length by Wolf in his famous 'Prolegomena,' just a century ago. But it has from the first encountered strong opposition, and is still regarded, in England at least, as the heretical view."—W. Leaf, *Companion to the Iliad*, introd.—"It seems clear that the author or authors of the *Iliad* and *Odyssey* lived long before the time when Æolian, Ionian, Dorian, were the three great tribal names of Greece, and far from the coast on which these three names were attached to successive portions of territory. If we are to decide the ancient controversy about the birthplace of Homer, we must turn away from Asia, and set ourselves to consider the claims of three districts of Greece proper: Thessaly, the home of the chief hero and the most ancient worship; Boeotia, the

ancient seat of the Muses, and the first in the very ancient (if not actually Homeric) muster-roll of the ships; and Argolis, the seat of Achaean empire."—D. B. Monro, *Homer and the Early History of Greece (English Historical Rev., Jan., 1886)*.—"I hold that the original nucleus of the *Iliad* was due to a single Achaean poet, living in Thessaly before the immigration which partly displaced the primitive Hellenes there. This primary *Iliad* may have been as old as the eleventh century B. C. It was afterwards brought by Achaean emigrants to Ionia, and there enlarged by successive Ionian poets. The original nucleus of the *Odyssey* was also composed, probably, in Greece proper, before the Dorian conquest of the Peloponnesus; was carried to Ionia by emigrants whom the conquerors drove out; and was there expanded into an epic which blends the local traits of its origin with the spirit of Ionian adventure and Ionian society."—R. C. Jebb, *The growth and influence of Classical Greek Poetry*, p. 14.—The same, *Homer: An Introduction to the Iliad and the Odyssey*.—"We accept the *Iliad* as one epic by one hand. The inconsistencies which are the basis of the opposite theory seem to us reconcilable in many places, in others greatly exaggerated. . . . To us the hypothesis of a crowd of great harmonious poets, working for centuries at the *Iliad*, and sinking their own fame and identity in Homer's, appears more difficult of belief than the opinion that one great poet may make occasional slips and blunders." As for the *Odyssey*, "we have . . . to deal with critics who do not recognise the unity, the marshalling of incidents towards a given end. We have to do with critics who find, in place of unity, patchwork and compilation, and evident traces of diverse dates, and diverse places of composition. Thus argument is inefficient, demonstration is impossible, and the final judge must be the opinion of the most trustworthy literary critics and of literary tradition. These are unanimous, as against the 'microscope-men,' in favor of the unity of the *Odyssey*."—A. Lang, *Homer and the Epic*, ch. 7 and 13.

HOSPES.—HOSPITES.—HOSPITIUM.

—"In the earlier stages of society, especially in Greece and Italy, where the population consisted of numerous independent tribes constantly at variance with each other, every stranger was looked upon with suspicion. . . . Hence it became common for a person who was engaged in commerce, or any other occupation which might compel him to visit a foreign country, to form previously a connection with a citizen of that country, who might be ready to receive him as a friend and act as his protector. Such a connection was always strictly reciprocal. . . . An alliance of this description was termed *Hospitium*, the parties who concluded it were termed *Hospites* in relation to each other, and thus the word *Hospes* bore a double signification, denoting, according to circumstances, either an entertainer or a guest. The obligations imposed by the covenant were regarded as of the most sacred character. . . . The league of *Hospitium*, when once formed, was hereditary. . . . The parties interchanged tokens, by which they or their descendants might recognise each other. This token, called 'tessera hospitalis,' was carefully preserved. . . . In process of time, among both the Greeks and Romans, it became common for a state, when it desired to pay a marked compliment to any individual, to pass a resolution declaring him the *Hospes* of the whole community."—W. Ramsay, *Manual of Roman Antiq.*, ch. 3.

HOSPITALERS OF ST. JOHN OF

JERUSALEM, The Knights: A. D. 1118-1310.—The origin and rise of the order.—"Some citizens of Amalfi, in Italy, who traded to the East, had [some time before the first crusade], with the permission of the Egyptian khaleefeh, built a convent near the church of the Resurrection [at Jerusalem], which was dedicated to the Virgin, and named Santa Maria de Latina, whose abbot and monks were to receive and entertain pilgrims from the West. A nunnery was afterwards added, and as the confluence of pilgrims increased, a new 'hospitium' was erected, dedicated to St. John Eleemon ('compassionate'), a former patriarch of Alexandria, or, as is asserted, with perhaps more probability, to St. John the Baptist. This hospital was supported by the bounty of the abbot of Sta. Maria and the alms of the faithful, and the sick and poor of the pilgrims here met with attention and kindness. At the time of the taking of Jerusalem, Gerhard, a native of Provence, presided over the hospital; and the care taken by him and his brethren of the sick and wounded of the crusaders won them universal favour. Godfrey bestowed on them his domain of Monboire, in Brabant; his example was followed by others, and the brethren of the Hospital soon found themselves rich enough to separate from the monastery. They adopted the

rule of the Augustinian canons, and assumed for their habit a black mantle, with a white cross of eight points on the left breast. Many knights who had come to Asia to combat the Infidels now laid aside their swords, and, as brethren of the Hospital, devoted themselves to the tending of the sick and relieving of the poor. Among these was a knight of Dauphiné, named Raymond Dupuy, who, on the death of Gerhard, was chosen to be his successor in office. Raymond, in the year 1118, gave the order its first regular organization."—T. Keightley, *The Crusaders*, ch. 2.—To Raymond Dupuy "the Order owed its distinctly military character, and that wonderful organization, combining the care of the sick and poor with the profession of arms, which characterized the Knights of St. John during all their subsequent history. . . . A new and revised constitution was drawn up, by which it was provided that there should be three classes of members. First, the Knights, who should bear arms and form a military body for service in the field against the enemies of Christ in general, and of the kingdom of Jerusalem in particular. These were to be of necessity men of noble or gentle birth. Secondly, the Clergy, or Chaplains. . . . Thirdly, the Serving Brethren, who were not required to be men of rank, and who acted as Esquires to the Knights, and assisted in the care of the hospitals. All persons of these three classes were considered alike members of the Order, and took the usual three monastic vows, and wore the armorial bearings of the Order, and enjoyed its rights and privileges. As the Order spread and the number of its members and convents increased, it was found desirable to divide it further into nations or 'Langes' [tongues, or languages], of which there were ultimately seven, viz., those of Provence, Auvergne, France, Italy, Aragon, Germany, and England. The habit was a black robe with a cowl, having a cross of white linen of eight points upon the left breast. This was at first worn by all Hospitaliers, to whichever of the three classes they belonged; but Pope Alexander IV. afterwards ordered that the Knights should be distinguished by a white cross upon a red ground. . . . It was not long before the new Order found a field for the exercise of its arms. . . . From this time the Hospitaliers were always found in the ranks of the Christian army in every battle that was fought with the Moslems, and the fame of their gallantry and bravery soon spread far and wide, and attracted fresh recruits to their ranks from the noblest families of every country of Europe. They became the right hand of the King of Jerusalem," sharing the fortunes of the nominal kingdom for nearly two centuries, and almost sharing its ultimate fate. The handful who escaped from Acre in 1291 (see JERUSALEM: A. D. 1291) took refuge in Cyprus and rallied there the Knights scattered in other lands. Rebuilding and fortifying the town of Limisso, they made that their citadel and capital for a few years, finding a new vocation for their pious valor. They now took up war upon the naval side, and turned their arms specially against the Moslem pirates of the Mediterranean. They fitted out armed ships "which began to cruise between Palestine and European ports, conveying pilgrims, rescuing captives, and engaging and capturing the enemy's galleys." But not finding in Cyprus the independence they desired, the Knights, ere long, established them-

selves in a more satisfactory home on the island of Rhodes.—F. C. Woodhouse, *Military Religious Orders of the Middle Ages*, pt. 1, ch. 3-8.

A. D. 1310.—Conquest and occupation of Rhodes.—"The most important conquest of the time . . . was that of Rhodes, by the Knights Hospitaliers of St. John of Jerusalem, both from its durability and from the renown of the conquerors. The knights had settled in Cyprus after they had been expelled from Acre, but they were soon discontented to remain as vassals of the King of Cyprus. They aspired to form a sovereign state, but it was not easy to make any conquests from the Infidels in a position which they could hope to maintain for any length of time. They therefore solicited permission from the Pope to turn their arms against the Greeks. His Holiness applauded their Christian zeal, and bestowed on them innumerable blessings and indulgences, besides nine thousand ducats to aid their enterprise. Under the pretext of a crusade for the recovery of Christ's tomb, the knights collected a force with which they besieged Rhodes. So great was their contempt for the Greek emperor that they sent an embassy to Constantinople, requiring Adrianus to withdraw his garrisons, and cede the island and its dependencies to them as feudatories, offering to supply him with a subsidiary force of three hundred cavalry. Adrianus dismissed the ambassadors, and sent an army to raise the siege; but his troops were defeated, and the knights took the city of Rhodes on the 15th August, 1310. As sovereigns of this beautiful island, they were long the bulwark of Christian Europe against the Turkish power; and the memory of the chivalrous youth who for successive ages found an early tomb at this verge of the Christian world, will long shed a romantic colouring on the history of Rhodes. They sustained the declining glory of a state of society that was hastening to become a vision of the past; they were the heroes of a class of which the Norse sea-kings had been the demigods. The little realm they governed as an independent state consisted of Rhodes, with the neighbouring islands of Kos, Kalymnos, Syme, Leros, Nisyros, Telos, and Chalke; on the opposite continent they possessed the classic city of Halicarnassus, and several strong forts, of which the picturesque ruins still overhang the sea."—G. Finlay, *Hist. of the Byzantine and Greek Empires*, bk. 4, ch. 2 (v. 2).

A. D. 1482.—Treatment of the Turkish Prince Jemshid or Zizim. See TURKS: A. D. 1481-1520.

A. D. 1522.—Siege and surrender of Rhodes to the Turks.—In 1522, the Turkish sultan, Solymán the Magnificent, "turned his victorious arms against the island of Rhodes, the seat at that time of the Knights of St. John of Jerusalem. This small state he attacked with such a numerous army as the lords of Asia have been accustomed, in every age, to bring into the field. Two hundred thousand men, and a fleet of 400 sail, appeared against a town defended by a garrison consisting of 5,000 soldiers and 600 knights, under the command of Villiers de L'Isle Adam,

the grand-master, whose wisdom and valour rendered him worthy of that station at such a dangerous juncture. No sooner did he begin to suspect the destination of Solyman's vast armaments than he despatched messengers to all the Christian courts, imploring their aid against the common enemy. But though every prince in that age acknowledged Rhodes to be the great bulwark of Christendom in the East, and trusted to the gallantry of its knights as the best security against the progress of the Ottoman arms, — though Adrian, with a zeal which became the head and father of the Church, exhorted the contending powers to forget their private quarrels, and, by uniting their arms, to prevent the infidels from destroying a society which did honour to the Christian name, — yet so violent and implacable was the animosity of both parties [in the wars of the Emperor Charles V. and Francis I. of France], that, regardless of the danger to which they exposed all Europe, . . . they suffered Solyman to carry on his operations against Rhodes without disturbance. The grand-master, after incredible efforts of courage, of patience, and of military conduct, during a siege of six months, — after sustaining many assaults, and disputing every post with amazing obstinacy, — was obliged at last to yield to numbers; and, having obtained an honourable capitulation from the sultan, who admired and respected his virtue, he surrendered the town, which was reduced to a heap of rubbish, and destitute of every resource. Charles and Francis, ashamed of having occasioned such a loss to Christendom by their ambitious contests, endeavoured to throw the blame of it on each other, while all Europe, with greater justice, imputed it equally to both. The emperor, by way of reparation, granted the Knights of St. John the small island of Malta, in which they fixed their residence, retaining, though with less power and splendour, their ancient spirit and implacable enmity to the infidels." — W. Robertson, *Hist. of the Reign of Charles V.*, bk. 2 (v. 1).

ALSO IN: C. Torr, *Rhodes in Modern Times*, ch. 1. — J. S. Brewer, *The Reign of Henry VIII.*, ch. 19 (v. 1).

A. D. 1530-1565.—Occupation of Malta.—Improvement and fortification of the island.—The great siege.—The Turks repelled.—"Malta, which had been annexed by Charles [the Fifth's] predecessors to Sicily, had descended to that monarch as part of the dominions of the crown of Aragon. In . . . ceding it to the Knights of St. John, the politic prince consulted his own interests quite as much as those of the order. He drew no revenue from the rocky isle, but, on the contrary, was charged with its defence against the Moorish corsairs, who made frequent descents on the spot, wasting the country, and dragging off the miserable people into slavery. By this transfer of the island to the military order of St. John, he not only relieved himself of all further expense on its account, but secured a permanent bulwark for the protection of his own dominions. . . . In October, 1530, L'Isle Adam and his brave associates took possession of their new domain. . . . It was not very long before the wilderness before them was to blossom like the rose, under their diligent culture. Earth was brought in large quantities, and at great cost, from Sicily. Terraces to receive it were hewn in the steep sides of the rock; and the

soil, quickened by the ardent sun of Malta, was soon clothed with the glowing vegetation of the South. . . . In a short time, too, the island bristled with fortifications, which, combined with its natural defences, enabled its garrison to defy the attacks of the corsair. To these works was added the construction of suitable dwellings for the accommodation of the order. But it was long after, and not until the land had been desolated by the siege on which we are now to enter, that it was crowned with the stately edifices that eclipsed those of Rhodes itself, and made Malta the pride of the Mediterranean. . . . Again their galleys sailed forth to battle with the corsairs, and returned laden with the spoils of victory. . . . It was not long before the name of the Knights of Malta became as formidable on the southern shores of the Mediterranean as that of the Knights of Rhodes had been in the East." At length the Turkish sultan, Solyman the Magnificent, "resolved to signalize the close of his reign by driving the knights from Malta, as he had the commencement of it by driving them from Rhodes," and he made his preparations on a formidable scale. The grand-master of Malta, Jean Parisot de la Valette, had his spies at Constantinople, and was not long in ignorance of the Turkish project. He, too, prepared himself for the encounter with prodigious energy and forethought. He addressed appeals for help to all the Christian powers. "He summoned the knights absent in foreign lands to return to Malta, and take part with their brethren in the coming struggle. He imported large supplies of provisions and military stores from Sicily and Spain. He drilled the militia of the island, and formed an effective body of more than 3,000 men; to which was added a still greater number of Spanish and Italian troops. . . . The fortifications were put in repair, strengthened with outworks, and placed in the best condition for resisting the enemy. . . . The whole force which La Valette could muster in defence of the island amounted to about 9,000 men. This included 700 knights, of whom about 600 had already arrived [when the siege began]. The remainder were on their way, and joined him at a later period of the siege." The Turkish fleet made its appearance on the 18th of May, 1565. It comprised 130 royal galleys, with fifty of lesser size, and a number of transports. "The number of soldiers on board, independently of the mariners, and including 6,000 janizaries, was about 30,000,—the flower of the Ottoman army. . . . The command of the expedition was intrusted to two officers. One of these, Piali, was the same admiral who defeated the Spaniards at Gelves [see BARBARY STATES: A. D. 1543-1560]. He had the direction of the naval operations. The land forces were given to Mustapha, a veteran nearly 70 years of age. . . . The Turkish armada steered for the southeastern quarter of the island, and cast anchor in the port of St. Thomas. The troops speedily disembarked, and spread themselves in detached bodies over the land, devastating the country. . . . It was decided, in the Turkish council of war, to begin operations with the siege of the castle of St. Elmo"—a small but strong fort, built at the point of a promontory which separates Port Musiette, on the west, from what is now known as Valetta harbor, then called the Great Port. The heroic defense of St. Elmo, where a mere handful of knights and soldiers withstood the whole army

and navy of the Turks for an entire month, is one of the grand episodes of war in the 16th century. The few surviving defenders were overwhelmed in the final assault, which took place on the 23d of June. "The number of Christians who fell in this siege amounted to about 1,500. Of these 123 were members of the order, and among them several of its most illustrious warriors. The Turkish loss is estimated at 8,000, at the head of whom stood Dragut," the famous pasha of Tripoli, who had joined the besiegers, with ships and men, and who had received a mortal wound in one of the assaults. After the loss of St. Elmo, "the strength of the order was . . . concentrated on the two narrow slips of land which run out from the eastern side of the Great Port. . . . The northern peninsula, occupied by the town of Il Borgo, and at the extreme point by the castle of St. Angelo, was defended by works stronger and in better condition than the fortifications of St. Elmo. . . . The parallel slip of land was crowned by the fort of St. Michael." Early in July, the Turks opened their batteries on both St. Angelo and St. Michael, and on the 15th they attempted the storming of the latter, but were bloodily repulsed, losing 3,000 or 4,000 men, according to the Christian account. Two weeks later they made a general assault and were again repelled. On the 25th of August, the valiant knights, wasted and worn with watching and fighting, were relieved by long-promised re-enforcements from Sicily, and the disheartened Turks at once raised the siege. "The arms of Solymán II., during his long and glorious reign, met with no reverse so humiliating as his failure in the siege of Malta. . . . The waste of life was prodigious, amounting to more than 30,000 men. . . . Yet the loss in this siege fell most grievously on the Christians. Full 200 knights, 2,500 soldiers, and more than 7,000 inhabitants,—men, women, and children,—are said to have perished."—W. H. Prescott, *Hist. of the Reign of Philip II.*, bk. 4, ch. 2-5.

ALSO IN: W. Porter, *Hist. of the Knights of Malta*, ch. 15-18 (v. 2).—S. Lane-Poole, *Story of the Barbary Corsairs*, ch. 13.

A. D. 1565-1879.—Decline and practical disappearance of the order.—"The Great Siege of 1565 was the last eminent exploit of the Order of St. John. From that time their fame rested rather on the laurels of the past than the deeds of the present. Rest and affluence produced gradually their usual consequences—diminished vigour and lessened independence. The 'esprit de corps' of the Knights became weaker after long years, in which there were no events to bind them together in united sympathies and common struggles. Many of them had become susceptible of bribery and petty jealousies. In 1789 the French Revolution burst out and aroused all European nations to some decided policy. The Order of St. John had received special favours from Louis XVI., and now showed their grateful appreciation of his kindness by cheerfully contributing a large portion of their revenue to assist him in his terrible emergencies. For this they suffered the confiscation of all the property of the Order in France, when the revolutionists obtained supreme power."—W. Tallack, *Malta*, sect. 8.—"In September, 1792, a decree was passed, by which the estates and property of the Order of St. John in France were annexed to the state. Many of the knights were seized, im-

prisoned, and executed as aristocrats. The principal house of the Order in Paris, called the Temple, was converted into a prison, and there the unfortunate Louis XVI. and his family were incarcerated. The Directory also did its best to destroy the Order in Germany and Italy. . . . All this time the Directory had agents in Malta, who were propagating revolutionary doctrines, and stirring up the lowest of the people to rebellion and violence. There were in the island 332 knights (of whom many, however, were aged and infirm), and about 6,000 troops. On June 9, 1798, the French fleet appeared before Malta, with Napoleon himself on board, and a few days after troops were landed, and began pillaging the country. They were at first successfully opposed by the soldiers of the Grand Master, but the seeds of sedition, which had been so freely sown, began to bear fruit, and the soldiers mutinied, and refused to obey their officers. All the outlying forts were taken, and the knights who commanded them, who were all French, were dragged before Napoleon. He accused them of taking up arms against their country, and declared that he would have them shot as traitors. Meanwhile sedition was rampant within the city. The people rose and attacked the palace of the Grand Master, and murdered several of the knights. They demanded that the island should be given up to the French, and finally opened the gates, and admitted Napoleon and his troops. After some delay, articles of capitulation were agreed upon, Malta was declared part of France, and all the knights were required to quit the island within three days. Napoleon sailed for Egypt on June 19, taking with him all the silver, gold, and jewels that could be collected from the churches and the treasury. . . . In the following September, 1798, Nelson besieged, and quickly obtained possession of the island, which has ever since remained in the hands of the English. In this way the ancient Order of St. John ceased to be a sovereign power, and practically its history came to an end. The last Grand Master, Baron Ferdinand von Hompesch, after the loss of Malta, retired to Trieste, and shortly afterwards abdicated and died at Montpellier, in 1805. Many of the knights, however, had in the mean time gone to Russia, and before the abdication of Hompesch, they elected the Emperor Paul Grand Master, who had for some time been protector of the Order. This election was undoubtedly irregular and void. By the terms of the Treaty of Amiens, in 1802, it was stipulated that Malta should be restored to the Order, but that there should be neither French nor English knights. But before the treaty could be carried into effect Napoleon returned from Elba, and war broke out again. By the treaty of Paris, in 1814, Malta was ceded to England. . . . In 1801, the assembly of the Knights at St. Petersburg . . . petitioned Pope Pius VII. to select a Grand Master from certain names which they sent. This he declined to do, but, some time afterwards, at the request of the Emperor Alexander, and the King of Naples, and without consulting the knights, the Pope appointed Count Giovanni di Tommasi Grand Master. He died in 1803, and no Grand Master has been since appointed. On his death-bed, Tommasi nominated the bailiff, Guevara Suardo, Lieutenant Master. . . . [Such] lieutenants have presided over an association of

titular knights at Rome, which is styled 'the Sacred Council.' In 1814, the French knights assembled at Paris and elected a capitulary commission for the government of the Order. . . . In or about the year 1826, the English 'Lange' of the Order of the Knights of Malta was revived. . . . A regular succession of Priors has been continued to the present time [1879], and the Duke of Manchester is the present Prior. The members of the Order devote themselves to relieving the poor, and assisting hospitals."—F. C. Woodhouse, *Military Religious Orders of the Middle Ages*, pt. 1, ch. 20.

HOUSECARLS.—"No English King or Ealdorman had hitherto kept a permanent military force in his pay. But Cnut [or Canute, A. D. 1018-1035] now organized a regular paid force, kept constantly under arms, and ready to march at a moment's notice. These were the famous Thingmen, the Housecarls, of whom we hear so much under Cnut and under his successors. . . . The Housecarls were in fact a standing army, and a standing army was an institution which later Kings and great Earls, English as well as Danish, found it to be their interest to continue. Under Cnut they formed a sort of military guild with the king at their head."—E. A. Freeman, *Norman Conquest*, ch. 6, sect. 2, and app., note kkk (v. 1).

HUNDRED, The.—“The union of a number of townships for the purpose of judicial administration, peace, and defence, formed what is known as the ‘hundred,’ or ‘wapentake’; a district answering to the ‘pagus’ of Tacitus, the ‘hærrad’ of Scandinavia, the ‘huntari’ or ‘gau’ of Germany. . . . The name of the hundred, which, like the wapentake, first appears in the laws of Edgar, has its origin far back in the remotest antiquity, but the use of it as a geographical expression is discoverable only in comparatively late evidences. The ‘pagus’ of the Germania sent its hundred warriors to the host, and appeared by its hundred judges in the court of the ‘princeps.’ The Lex Salica contains abundant evidence that in the fifth century the administration of the hundred was the chief, if not the only, machinery of the Frank judicial system; and the word in one form or other enters into the constitution of all the German nations. It may be regarded then as a certain vestige of primitive organisation. But the exact relation of the territorial hundred to the hundred of the Germania is a point which is capable of, and has received, much discussion. It has been regarded as denoting simply a division of a hundred hides of land; as the district which furnished a hundred warriors to the host; as representing the original settlement of the hundred warriors; or as composed of a hundred hides, each of which furnished a single warrior. The question is not peculiar to English history, and the same result may have followed from very different causes as probably as from the same causes, here and on the continent. It is very probable, as already stated, that the colonists of Britain arranged themselves in hundreds of warriors; it is not probable that the country was carved into equal districts. The only conclusion that seems reasonable is that, under the name of geographical hundreds, we have the variously sized pagi or districts in which the hundred warriors settled. . . . The hundred-gemot, or wapentake court, was held every month; it was called six days before the day of meeting, and could not be held on Sunday. It was attended by the lords of lands within the hundred, or their stewards representing them, and by the parish priest, the reeve, and four best men of each township. . . . The criminal jurisdiction of the hundred is perpetuated in the manorial court leet.”—W. Stubbs, *Const. Hist. of Eng.*, ch. 5, sect. 45 (v. 1).—“By the 13th century the importance of the hundred had much diminished. The need for any such body, intermediate between township and county, ceased to be felt, and the functions of the hundred were gradually absorbed by the county. Almost everywhere in England, by the reign of Elizabeth, the hundred had fallen into decay. It is curious that its name and some of its peculiarities should have been brought to America, and should in one state have remained to the present day. Some of the early settlements in Virginia were called hundreds, but they were practically nothing more than parishes, and the name soon became obsolete, except upon

the map, where we still see, for example, Bermuda Hundred. But in Maryland the hundred flourished and became the political unit, like the township in New England. The hundred was the militia district, and the district for the assessment of taxes. In the earliest times it was also the representative district. . . . The hundred had also its assembly of all the people, which was in many respects like the New England town-meeting. These hundred-meetings enacted by-laws, levied taxes, appointed committees, and often exhibited a vigorous political life. But after the Revolution they fell into disuse, and in 1824 the hundred became extinct in Maryland; its organization was swallowed up in that of the county. In Delaware, however, the hundred remains to this day.”—J. Fiske, *Civil Government in the U. S.*, ch. 4, sect. 1.

HUNGARIANS, The.—“Gibbon is correct in connecting the language of the Hungarians with that of the Finnish or Tschudish race. The original abode of the Hungarians was in the country called Ugria or Jugoria, in the southern part of the Uralian mountains, which is now inhabited by the Voguls and Ostiaks, who are the eastern branches of the Finnish race, while the most important of the western branches are the Finns and Lappes. Ugria is called Great Hungary by the Franciscan monk Piano Carpini, who travelled in 1246 to the court of the Great Khan. From Ugria the Hungarians were expelled by the Turkish tribes of Petcheneges and Chazars, and sought refuge in the plains of the Lower Danube, where they first appeared in the reign of the Greek Emperor Theophilus, between 829 and 842. They called themselves Magyars, but the Russians gave them the name of Ugri, as originating from Ugria; and this name has been corrupted into Ungri and Hungarians. Although it is difficult to believe that the present Magyars, who are the foremost people in Eastern Europe, are of the same race as the degraded Voguls and Ostiaks, this fact is not only attested by historical authority, and the unerring affinity of language; but, when they first appeared in the central parts of Europe, the description given of them by an old chronicler of the ninth century (quoted by Zeuss, p. 746) accords precisely with that of the Voguls and Ostiaks.”—Dr. W. Smith, *Note to Gibbon's Decline and Fall of the Roman Empire*, ch. 55.—“That a Majiar female ever made her way from the Ural Mountains to Hungary is more than I can find; the presumptions being against it. Hence it is just possible that a whole-blooded Majiar was never born on the banks of the Danube. Whether the other elements are most Turk or most Slavonic is more than I venture to guess.”—R. G. Latham, *Ethnology of Europe*, ch. 11.—“According to their own primitive traditions, the ruling caste, the main body of the nation, were the children of Mogor the son of Magog. The Hebrew name Mogor signifies ‘Terror’; and slightly varied by the Orientals into Magyar became the rallying

ery of the once-splendid Hungarian nationality."—Sir F. Palgrave, *Hist. of Normandy and Eng.*, bk. 1, ch. 3 (v. 1).

ALSO IN: A. J. Patterson, *The Magyars*, v. 1, ch. 1.

Ravages in Europe and settlement in Hungary.—"The Magyars (the idiomatic synonym for Hungarians, and probably the proper name of one of their tribes), driven by internal dissensions from their native deserts, found a home for centuries around the Caucasus and along the barren shores of the Volga. About the end of the 9th century they suddenly struck their tents, and pressed irresistibly forward to the very heart of Europe. . . . Immediately after crossing the eastern frontier (A. D. 889), the Magyars elected for their chief Arpad, the son of Almos, who conducted them to the frontiers of Hungary. The latter did not survive to see the conquest. The whole body under Arpad's guidance consisted of about a million, numbering among them about 200,000 warriors, and divided into seven tribes, each having its chief. The country which they prepared to take possession of, and the central part of which was then called Pannonia, was broken up into small parts, and inhabited by races dissimilar in origin and language; as Sclavonians, Wallachians, a few Huns and Avars, as well as some Germans. . . . Arpad soon descended with his followers on those wide plains, whence Attila, four centuries before, swayed two parts of the globe. Most dexterous horsemen, armed with light spears and almost unerring bows, these invaders followed their leader from victory to victory, soon rendering themselves masters of the land lying between the Theiss and the Danube, carrying at the same time their devastations, on the one hand, to the Adriatic, and, on the other, towards the German frontiers. Having achieved the conquest, Arpad took up his residence on the Danubian isle, Csepel, though the seat of the court was Buda or Attelburg. . . . The love of their new dominion was far from curbing the passion of the Magyars for distant bloody adventure and plunder. The most daring deeds were undertaken by single chiefs, during the reign of Zoltan and his successor Taksony, which filled up the first part of the tenth century. The enervated and superstitious population of Europe thought the Magyars to be the scourge of God, directly dropped down from heaven; the very report of their approach was sufficient to drive thousands into the recesses of mountains and depths of forests, while the priests increased the common panic by mingling in their litanies the words, 'God preserve us from the

Magyars.' . . . The irruptions of the Magyars were simultaneously felt on the shores of the Baltic, among the inhabitants of the Alps, and at the very gates of Constantinople. The emperors of the East and of Germany were repeatedly obliged to purchase momentary peace by heavy tributes; but Germany, as may be conceived from her geographical position, was chiefly exposed to the ravages of these new neighbours."—E. Szabad, *Hungary, Past and Present*, pt. 1, ch. 1.—See GERMANY: A. D. 911-936.

A. D. 900-924.—**Ravages in Italy.** See ITALY: A. D. 900-924.

A. D. 934-955.—**Repulse from Germany.**—"The deliverance of Germany and Christendom was achieved by the Saxon princes, Henry the Fowler and Otho the Great, who, in two memorable battles, forever broke the power of the Hungarians." Twenty years after their defeat by Henry the Fowler (A. D. 934) the Hungarians invaded the empire of his son (A. D. 955), "and their force is defined, in the lowest estimate, at 100,000 horse. They were invited by domestic faction; the gates of Germany were treacherously unlocked, and they spread, far beyond the Rhine and the Meuse, into the heart of Flanders. But the vigour and prudence of Otho dispelled the conspiracy; the princes were made sensible that, unless they were true to each other, their religion and country were irrecoverably lost; and the national powers were reviewed in the plains of Augsburg. They marched and fought in eight legions, according to the division of provinces and tribes [Bavarians, Franconians, Saxons, Swabians, Bohemians]. . . . The Hungarians were expected in the front; they secretly passed the Lech, a river of Bavaria that falls into the Danube, turned the rear of the Christian army, plundered the baggage, and disordered the legions of Bohemia and Swabia. The battle [near Augsburg, Aug. 10, 955] was restored by the Franconians, whose duke, the valiant Conrad, was pierced with an arrow as he rested from his fatigues; the Saxons fought under the eyes of their king, and his victory surpassed, in merit and importance, the triumphs of the last two hundred years. The loss of the Hungarians was still greater in the flight than in the action; they were encompassed by the rivers of Bavaria; and their past cruelties excluded them from the hope of mercy."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 55.

A. D. 972-1114.—**Christianization of the Magyars.**—Kingship conferred on the Duke by the Pope.—**Annexation of Croatia and conquest of Dalmatia.**—"King Geiza [of the house of Arpad—see HUNGARIANS: RAVAGES IN EUROPE] (972-997) was the first pacific ruler of pagan Hungary. . . . Hungary was enclosed within limits which she was never again able to cross, and even within these limits the Magyars were

not the only inhabitants; in almost every part they were surrounded by Slavs, whose language and laws were to exercise over them a lasting influence, and on the south-east they touched on that Romance or Wallachian element which, from the time of the Roman colonies of Trajan, had continued to develop there. Numerous marriages with these neighbours gradually modified the primitive type of the Magyars. . . . Geiza I. had married as his second wife a sister of the duke of Poland, Mieczyslaw. She had been converted to Christianity, and, like Clotilde

of France, this princess knew how to use her influence in favour of her religion. She persuaded her husband to receive the missionaries who came to preach the Gospel in the country of the Magyars, and Pilgrim, archbishop of Lorch, undertook the systematic conversion of the nation. The mention of him in the 'Nibelungen Lied' in connection with Etzel (Attila), king of the Huns, is doubtless due to the memory of this mission. He sent priests from his diocese into Hungary, and in 974 he was able to announce to the pope 5,000 conversions. . . . The great Chekh apostle, St. Adalbert or Wojtech, bishop of Prague, continued the work begun by Pilgrim. About 994, he went to Gran (Esztergom), where the duke of Hungary then dwelt, and solemnly baptized the son of Geiza, to whom he gave the name of Stephen. Henceforth the court of the duke became the resort of knights from all the neighbouring countries, but especially from Germany, and these knights, entering into intimate relations with the native nobility, drew Hungary and the empire into still closer union. Prince Stephen, heir presumptive to the throne, married the princess Gisella, daughter of the duke of Bavaria, while one of the daughters of Geiza became the wife of the Polish duke Boleslaw, and another married Urseolus, doge of Venice. Through these alliances, Hungary obtained for itself a recognized place among European states, and the work begun so well by Geiza was completed by Stephen, to whom was reserved the honour of establishing the position of his kingdom in Europe and of completing its conversion. . . . 'Hungary became Catholic,' says a Magyar historian, 'not through apostolic teaching, nor through the invitation of the Holy See, but through the laws of king Stephen' (Verböczy). He was not always content to use persuasion alone to lead his subjects to the new faith; he hesitated not to use threats also. . . . Stephen sent an ambassador to Rome, to treat directly with pope Sylvester, who graciously received the homage done by him for his kingdom, and, by a letter dated the 27th of March, 1000, announced that he took the people of Hungary under the protection of the Church. By the same brief he granted the royal crown to Stephen. . . . Besides this, he conferred on him the privilege of having the cross always borne before him, as a symbol of the apostolic power which he granted to him. The authenticity of this pontifical letter has indeed been disputed; but, however that may be, the emperor of Austria, king of Hungary, still bears the title of Apostolic Majesty. . . . Under this great king, Hungary became a completely independent kingdom between the two empires of the East and West. . . . The laws of Stephen are contained in 56 articles divided into two books. His ideas on all matters of government are also to be found in the counsels which he wrote, or caused to be written, for his son Emerich. . . . The son for whom the great king had written his maxims died before his father, in 1031, and is honoured as a saint by the Church. The last years of king Stephen were harassed by rivalries and plots. He died on the 15th of August, 1038. . . . Stephen had chosen as his successor his nephew Peter, the son of the doge Urseolus." But Peter was driven out and sought help in Germany, bringing war into the country. The Hungarians chose for their king, Samuel Ala, a tribal chief; but

soon deposed him and elected Andrew, son of Ladislas the Bald (1046). Andrew was dethroned by his brother Bela, in 1061. Both Andrew and Bela had bitter struggles with revived paganism, which was finally suppressed. Bela died in 1063. "According to the Asiatic custom, which still prevails in Turkey, he was succeeded by his nephew Solomon. . . . This prince was only twelve years of age, and the emperor, Henry IV., took advantage of his youth to place him in a humiliating position of tutelage. . . . The enemies of Solomon accused him of being the creature of the Germans, and reproached him for having done homage to the emperor for a state which belonged to St. Peter. Pope Gregory VII., who was then struggling against the emperor [see PAPACY: A. D. 1056-1123], encouraged the rebels. 'The kingdom of Hungary,' he said, 'owes obedience to none but the Church.' Prince Geiza was proclaimed king in the place of Solomon, but he died without having reigned. He was succeeded by Ladislas the Holy (1077), who was able to make himself equally independent of emperor and pope. . . . The dying Ladislas chose his nephew Koloman as his successor. . . . The most important act of this reign [Koloman's, 1095-1114] was the annexation of Croatia. In 1090, St. Ladislas had been elected to the throne of Croatia, and he, on his death, left the government of it to his nephew Almos, who very soon made himself unpopular. Koloman drove him out of Croatia, and had himself proclaimed king. He next set about the conquest of Dalmatia from the Venetians, seized the principal towns, Spalato (Spljet), Zara (Zadar), and Trogir (Trau), and granted them full power of self-government. Then (1102) he had himself crowned, at Belgrade, king of Croatia and Dalmatia. From this time the position of Croatia, as regarded Hungary, was very much the same as the position of Hungary in regard to Austria in later times."—L. Leger, *Hist. of Austro-Hungary*, ch. 5-6.—See BALKAN AND DANUBIAN STATES, 9TH-16TH CENTURIES (BOSNIA, SERBIA, ETC.).

A. D. 1096.—Hostilities with the first Crusaders. See CRUSADES: A. D. 1096-1099.

A. D. 1114-1301.—The Golden Bull of King Bela.—Invasion and frightful devastation by the Tartars.—The end of the Arpad dynasty.—"Koloman was succeeded on the throne by his son Stephen, who, after a short reign, was succeeded by Bela the Blind. The most important event of these reigns was the war with Venice about the possession of Dalmatia, and the annexation to the Hungarian crown of Rama, a part of Servia. In 1141, Geisa II. ascended the throne of St. Stephen. His reign was marked by several important events. Having entirely reduced Transylvania, he invited many Saxons and Flemish into his kingdom, some of whom settled in the Banat, in the south of Hungary, and others in Transylvania. In this principally the German settlers received from the king a separate district, being, besides, exempted from many taxes and endowed with particular privileges. . . . The following years of the 12th century, filled up by the reigns of Stephen III., Bela III., and Emerich, are marked by the continuance of the Venetian war, but present no incidents deserving of particular notice. More important was the reign of Andrew II., who ascended the throne in 1205. . . . Andrew, by the

advice of the Pope, set out with a large army to the Holy Land [1216—see CRUSADES: A. D. 1216-1229], nominating the Ban, called Banko, viceroy of Hungary. While the Hungarian king spent his time in Constantinople, and afterwards in operations round Mount Tabor, Hungary became a scene of violence and rapine, aggravated by the careless and unconstitutional administration of the queen's foreign favourites, as well as by the extortions committed by the oligarchy on their inferiors. Receiving no support from the king of Jerusalem, Andrew resolved on returning home. On his arrival in Hungary, he had the mortification of finding, in addition to a disaffected nobility, a rival to the throne in the person of his son Bela. As the complaints of the nobles became daily louder, . . . the king resolved to confirm the privileges of the country by a new charter, called The Golden Bull. This took place in the year 1222. The chief provisions of this charter were as follows:—1st, That the states were henceforth to be annually convoked either under the presidency of the king or the palatine; 2d, That no nobleman was to be arrested without being previously tried and legally sentenced; 3d, That no contribution or tax was to be levied on the property of the nobles; 4th, That if called to military service beyond the frontiers of the country, they were to be paid by the king; 5th, That high offices should neither be made hereditary nor given to foreigners without the consent of the Diet. The most important point, however, was article 31st, which conferred on the nobles the right of appealing to arms in case of any violation of the laws by the crown. Other provisions contained in this charter refer to the exemption of the lower clergy from the payment of taxes and tolls, and to the determination of the tithes to be paid by the cultivators of the soil. . . . Andrew died soon after the promulgation of the charter, and was succeeded by his son Bela IV. The beginning of this prince's reign was troubled with internal dissensions caused by the Cumans [an Eastern tribe which invaded Hungary in the later half of the 11th century—see COSSACKS], who, after having been vanquished by St. Ladislaus, settled in Hungary between the banks of the Theiss and Marosch. But a greater and quite unexpected danger, which threatened Hungary with utter destruction, arose from the invasion of the Tartars. Their leader Batu, after having laid waste Poland and Silesia, poured with his innumerable bands into the heart of Hungary [see MONGOLS: A. D. 1229-1294]. Internal dissensions facilitated the triumph of the foe, and the battle fought on the banks of the river Sajó (A. D. 1241) terminated in the total defeat of the Hungarians. The Tartar hordes spread with astonishing rapidity throughout the whole country, which in a few weeks was converted into a chaos of blood and flames. Not contented with wholesale massacre, the Tartar leader devised snares to destroy the lives of those who succeeded in making their escape into the recesses of the mountains and the depths of the forests. Among those who perished in the battle of Sajó was the Hungarian chancellor, who carried with him the seal of state. Batu having got possession of the seal, caused a proclamation to be made in the name of the Hungarian king [calling the people back to their homes], to which he affixed the royal stamp. . . . Trusting to this appeal, the miser-

able people issued from their hiding-places, and returned to their homes. The cunning barbarian first caused them to do the work of harvest in order to supply his hordes with provisions, and then put them to an indiscriminate death. The king Bela, in the meantime, succeeded in making his way through the Carpathian Mountains into Austria; but instead of receiving assistance from the arch-duke Frederick, he was retained as a prisoner. Having pledged three counties of Hungary to Frederick, Bela was allowed to depart. . . . In the meantime Batu was as prompt in leaving Hungary, in consequence of the death of the Tartar khan. . . . Bela was succeeded on the throne by his son Stephen, in the year 1270." The reign of Stephen was short. He was followed by Ladislaus IV., who allied himself with Rudolph of Hapsburg in the war which overthrew and destroyed Ottocar or Ottocar, king of Bohemia (see AUSTRIA: A. D. 1246-1282). "The reign of this prince, called the Cuman, was, besides, troubled by most devastating internal dissensions, caused by the Cumans, whose numbers were continually augmented by fresh arrivals . . . from their own tribe as well as from the Tartars." Ladislaus, dying in 1290, was succeeded by Andrew III., the last Hungarian king of the house of Arpad. "This prince had to dispute his throne with Rudolph of Hapsburg, who coveted the crown of Hungary for his son Albert. The appearance, however, of the Hungarian troops before the gates of Vienna compelled the Austrian emperor to sue for peace, which was cemented by a family alliance, Andrew having espoused Agnes, daughter of Albert. . . . Nor did this matrimonial alliance with Austria secure peace to Hungary. Pope Nicholas IV. was bent upon gaining the crown of St. Stephen for Charles Martel, son of Charles d'Anjou of Naples, who put forward his claims to the Hungarian crown in virtue of his mother, Mary, daughter of king Stephen V.," transferring them at his death to Charles Robert, nephew of the king of Naples. Andrew III., the last Arpad, died in 1301.—E. Szabad, *Hungary, Past and Present*, pt. 1, ch. 2.

A. D. 1285.—Wallachian struggle for independence. See BALKAN AND DANUBIAN STATES, 14TH-18TH CENTURIES (ROUMANIA, etc.).

A. D. 1301-1442.—The House of Anjou and the House of Luxembourg.—Conquests of Louis the Great.—Beginning of wars with the Turks.—The House of Austria and the disputed crown.—On the extinction of the ancient race of kings, in the male line of descent, by the death of Andrew III., in 1301, the crown was "contested by several competitors, and at length fell into the hands of the House of Anjou, the reigning family of Naples [see ITALY (SOUTHERN): A. D. 1343-1389]. Charles Robert, grandson of Charles II. King of Naples, by Mary of Hungary, outstripped his rivals [1310], and transmitted the crown to his son Louis, surnamed the Great [1342]. This prince, characterized by his eminent qualities, made a distinguished figure among the Kings of Hungary. He conquered from the Venetians the whole of Dalmatia, from the frontiers of Istria, as far as Durazzo; he reduced the princes of Moldavia, Wallachia, Bosnia and Bulgaria to a state of dependence; and at length mounted the throne of Poland, on the death of his uncle, Casimir the Great. Mary, his eldest daughter, succeeded

him in the kingdom of Hungary (1382). This princess married Sigismund of Luxembourg [afterwards Emperor, 1411-1437—see GERMANY: A. D. 1347-1493], who thus united the monarchy of Hungary to the Imperial crown. The reign of Sigismund in Hungary was most unfortunate. . . . He had to sustain the first war against the Ottoman Turks; and, with the Emperor of Constantinople as his ally, he assembled a formidable army, with which he undertook the siege of Nicopolis in Bulgaria [see TURKS (THE OTTOMANS): A. D. 1389-1403]. In his retreat he was compelled to embark on the Danube, and directed his flight towards Constantinople. This disaster was followed by new misfortunes. The malecontents of Hungary offered their crown to Ladislaus, called the Magnanimous, King of Naples, who took possession of Dalmatia, which he afterwards surrendered to the Venetians. Desirous to provide for the defence and security of his kingdom, Sigismund acquired, by treaty with the Prince of Serbia, the fortress of Belgrade (1425), which, by its situation at the confluence of the Danube and the Save, seemed to him a proper bulwark to protect Hungary against the Turks. He transmitted the crown of Hungary [in 1437, when he died] to his son-in-law, Albert of Austria, who reigned only two years.”—C. W. Koch, *The Revolutions of Europe, period 5*.—“Albert, afterwards the Emperor Albert II., was the first prince of the House of Habsburg that enjoyed the crowns of Hungary and Bohemia, which he owed to his father-in-law, the Emperor Sigismund, whose only daughter, Elizabeth, he had married. Elizabeth was the child of Barbara von Cilly, Sigismund’s second wife, whose notorious vices had procured for her the odious epithets of the ‘Bad,’ and the ‘German Messalina.’ Barbara had determined to supplant her daughter, to claim the two crowns as her dowry, and to give them, with her hand, to Wladislaus, the young King of Poland, who, though 40 years her junior, she had marked out for her future husband. With this view she was courting the Hussite party in Bohemia: but Sigismund, a little before his death, caused her to be arrested; and, assembling the Hungarian and Bohemian nobles at Znaim, in Moravia, persuaded them, almost with his dying breath, to elect Albert as his successor. Sigismund expired the next day (Dec. 9th, 1437). Albert was soon after recognised as king by the Hungarian diet, and immediately released his mother-in-law Barbara, upon her agreeing to restore some fortresses which she held in Hungary. He did not so easily obtain possession of the Bohemian crown. . . . The short reign of Albert in Hungary was disastrous both to himself and to the country. Previously to his fatal expedition against the Turks in 1439, . . . the Hungarian diet, before it would agree to settle the succession to the throne, forced him to accept a constitution which destroyed all unity and strength of government. By the famous ‘*Decretum Alberti Regis*,’ he reduced himself to be the mere shadow of a king; while by exalting the Palatine [a magistrate next to the king in rank, who presided over the legal tribunals, and discharged the functions of the king in the absence of the latter], the clergy, and the nobles, he perpetuated all the evils of the feudal system. . . . The most absurd and pernicious regulations were now adopted respecting the military system of the kingdom, and such as

rendered it almost impossible effectually to resist the Turks. . . . On the death of Albert, Wladislaus [Ladislaus] III., King of Poland [the second Polish king of the dynasty of Jagellon], was . . . elected to the throne of Hungary. . . . Albert, besides two daughters, had left his wife Elizabeth pregnant; and the Hungarians, dreading a long minority in case she should give birth to a son, compelled her to offer her hand to Wladislaus, agreeing that the crown should descend to their issue; but at the same time engaging that if Elizabeth’s child should prove a male, they would endeavour to procure for him the kingdom of Bohemia and the duchy of Austria; and that he should moreover succeed to the Hungarian throne in case Wladislaus had no issue by Elizabeth. . . . Scarcely had the Hungarian ambassador set off for the court of Wladislaus with these proposals, when Elizabeth brought forth a son, who, from the circumstances of his birth, was christened Ladislaus Posthumus. Elizabeth now repented of the arrangement that had been made; and the news having arrived that the archduke Frederick had been elected Emperor of Germany, she was induced to withdraw her consent to marry the King of Poland. Messengers were despatched to recall the Hungarian ambassadors; but it was too late—Wladislaus had accepted her hand, and prepared to enter Hungary with an army. . . . The party of the King of Poland, especially as it was headed by John of Hunyad, proved the stronger. Elizabeth was compelled to abandon Lower Hungary and take refuge at Vienna, carrying with her the crown of St. Stephen, which, with her infant son, she intrusted to the care of the Emperor Frederick III. (August 3rd, 1440). . . . In November 1442, Elizabeth and Wladislaus had an interview at Raab, when a peace was agreed upon, the terms of which are unknown; but it is probable that one of the chief conditions was a marriage between the contracting parties. The sudden death of Elizabeth, Dec. 24th, 1442, not without suspicion of poison, prevented the ratification of a treaty which had never been agreeable to the great party led by John of Hunyad, whose recent victories over the Turks gave him enormous influence.”—T. H. Dyer, *Hist. of Modern Europe, introd. (v. 1)*.

A. D. 1442-1458.—The minority of Ladislaus Posthumus.—Regency of Huniades.—His defeat of the Turks and his death.—His son Matthias chosen king on the death of Ladislaus.—Peace between the factions was brought about by an agreement that “the Polish king should retain the government of Hungary until Ladislaus attained his majority; that he should be possessed of the throne in case the young prince died without issue; and the compact was sealed by affiancing the two daughters of Elizabeth to the King of Poland and his brother Casimir. The young Ladislaus was also acknowledged as King of Bohemia; and the administration during his minority vested in two

Regents: Mainard, Count of Neuhaus, chosen on the part of the Catholics; and Henry Ptarsko, and after his death George Podiebrad, on that of the Hussites. The death of Ladislaus in the memorable battle of Warna again left Hungary without a ruler; and as Frederic III. persisted in retaining the young Ladislaus and the crown of St. Stephen, the Hungarians entrusted the government to John Corvinus Huniades, the redoubted defender of their country." In 1452, when the Emperor Frederic returned from Italy into Germany, "he found himself involved in a dispute with the Austrians, the Bohemians, and the Hungarians, in respect to the custody of the young Ladislaus. . . . As Ladislaus had now arrived at the age of thirteen, his subjects, but more particularly the Austrians, grew impatient of the detention of their sovereign at the imperial court. Whilst Podiebrad continued regent of Bohemia, and Huniades of Hungary, the affairs of Austria were directed by Frederic; and the unpopularity of his government caused a general anxiety for a change. But to give up the custody of his ward was contrary to the policy of the Emperor, and in the hope of silencing the Austrians he marched with a force against them. His enemies, however, proved too numerous; he was himself endangered by a siege in Neustadt; and compelled to purchase his deliverance by resigning the person of Ladislaus. The states of Austria, Bohemia, and Hungary then assembled at Vienna; Podiebrad and Huniades were confirmed in their regencies; and the administration of Austria, together with the custody of Ladislaus, was confided to his maternal great-uncle, Ulric, Count of Cilli. The resentment of Frederic does not appear to have been vehement; for in the following year [1453] he raised Austria to an archduchy, and by a grant of especial privileges placed the Duke of the province on a level with the Electors. After being crowned King of Bohemia at Prague, Ladislaus was invited by his Hungarian subjects to visit that kingdom. But the Count of Cilli, jealous of the power of Huniades, so far worked upon the young king's mind as to create in him suspicions of the regent's integrity. An attempt was made to seize Huniades by enticing him to Vienna; but he eluded the snare, exposed the treachery of Ulric, and prevailed on Ladislaus to visit his people. At Buda, an apparent reconciliation took place between the count and the regent; but Ulric still persisted in his design of ruining the credit of a man whom he regarded as a dangerous rival. In the moment of danger, the brave spirit of Huniades triumphed over his insidious traducer; the siege of Belgrade by the Turks [1456], under Mahomed II., threw Hungary into consternation; the royal pupil and his crafty guardian abandoned the Hungarians to their fate and precipitately fled to Vienna; whilst Huniades was left to encounter the fury of the storm. . . . The undaunted resistance of that renowned captain preserved Belgrade; the Turks, after a desperate struggle, were compelled to abandon the siege; their loss amounted to 30,000 men; and the Sultan himself was severely wounded [see *Turks*: A. D. 1451-1481]. The great defender did not long survive his triumph; dying, soon after the retreat of the enemy, of a fever occasioned by his extraordinary exertions. Huniades left two sons, Ladislaus and Matthias Corvinus, who were as much the idols

of their country as they were objects of jealousy to Ulric and the King. The latter, indeed, took care to treat them with every mark of external respect; but the injurious behaviour of the count provoked Ladislaus Corvinus to open violence; and, in a personal encounter, Ulric received a mortal wound. Enraged at the death of his favourite yet dreading the vengeance of the people, King Ladislaus resorted to treachery; and the brothers being lured into his power, the younger was beheaded as a murderer [1457]. Matthias was preserved from death by the menaces of the indignant Hungarians; the terrified monarch fled with his prisoner to Prague; and being there attacked by a malignant disease, was consigned to a premature grave after suffering for only a few hours. The death of Ladislaus Posthumus plunged the Emperor into new difficulties. His succession to the Austrian territory was opposed by his brother Albert VI., whose hostility had long troubled his repose. The Bohemians rejected his claim to their throne, and conferred the crown on the more deserving Podiebrad [1458]. The Hungarians testified their regard for the memory of Huniades Corvinus by electing his son Matthias, who purchased his liberty from Podiebrad for 40,000 ducats. Thus baffled in his views, Frederic consoled himself with his retention of the crown of St. Stephen; and his pertinacity in respect to this sacred relique involved him in a war with the new King of Hungary."—Sir R. Comyn, *Hist. of the Western Empire*, ch. 28 (v. 2).

A. D. 1468-1471.—King Matthias joins the crusade against George Podiebrad of Bohemia and claims the Bohemian crown. See *BOHEMIA*: A. D. 1458-1471.

A. D. 1471-1487.—The wars of Matthias with Bohemia, Poland, the emperor and the Turks.—Conquest and occupation of Austria.—Ladislaus, elected to the throne of Bohemia on the death of George Podiebrad, was supported by all the forces of his father, the king of Poland, and Matthias of Hungary was now involved in war with both. Meanwhile, "his whole kingdom was agitated by intestine commotions, and a strong party of nobles breaking out into insurrection, had offered the crown to Casimir, prince of Poland. At the same time, the Turks having subdued Transylvania, and ravaged Dalmatia and Croatia, built the fortress of Szabatch on the Save, and from thence harassed Hungary with perpetual inroads. From these impending dangers, Matthias extricated himself by his courage, activity, and prudence. While he carried the war into Bohemia and Silesia, he averted, by his presence, his rebellious subjects, conciliated by degrees the disaffected nobles, expelled the Poles, and, by an important victory in the vicinity of Breslau, over the united armies of Poles and Bohemians, forced the two sovereigns, in 1474, to conclude an armistice for three years and a half. He availed himself of the suspension of arms to repel the Turks. He supported Stephen Bathori, hospodar of Wallachia, who had shaken off the Ottoman yoke, by a reinforcement of troops, enabled him to defeat Mahomet himself [on the plain of Kenyer-Mesö, October, 1479], at the head of 100,000 men, and soon afterwards secured his frontiers on the side of the Danube by the

capture of Szabatch. Having in consequence of these successes delivered his dominions from the aggressions of the Turks, he hastened to gratify his vengeance against the emperor, whose conduct had afforded so many causes of complaint. After instigating Matthias to make war on George Podiebrad, Frederic had abandoned him in the midst of the contest, had refused to fulfil his promise of investing him with the kingdom of Bohemia, had concluded an alliance with the kings of Poland and Bohemia, and, on the 10th of June, 1477, formally conferred on Ladislaus the investiture of the crown." Matthias, as soon as he had freed himself from the Turks (1479), declared war against the emperor and invaded Austria. "Frederic, left without a single ally, was unable to make the smallest resistance, and in less than a month Matthias overran the greater part of Lower Austria, invested the capital, and either besieged or captured all the fortresses of the Danube, as far as Krems and Stein. Frederic fled in dismay to Lintz, and, to save his capital, was reduced to accept the conditions imposed by the conqueror," which included a promised payment of 100,000 ducats. This payment the shifty emperor evaded, when Matthias became involved anew, as he presently did, in hostilities with Bohemia and Poland. "Matthias, irritated by his conduct, concluded a peace with Ladislaus, by which he acknowledged him as king of Bohemia, and agreed that Moravia, Silesia, and Lusatia [which had been surrendered to him in 1475] should revert to the crown of Bohemia, in case of his death without issue. He then again invaded Austria; but his arms were not attended with the same rapid success as on the former invasion. . . . It was not till after a contest of four years, which called forth all the skill and perseverance of the warlike monarch and his most experienced generals, that they obtained possession of the capital [1485] and the neighbouring fortresses, and completed the subjugation of Lower Austria, by the capture of Newstadt, the favourite residence of the emperor. Frederic, driven from his hereditary dominions, at first took refuge at Gratz; and, on the approach of danger, wandered from city to city, and from convent to convent." After many appeals, he persuaded Albert, duke of Saxony, to take the field in his behalf; but Albert, with the small force at his command, could only retard the progress of the invader, and he soon concluded an armistice with him. "In consequence of this agreement, he [Albert of Saxony], in November, 1487, abandoned Austria, and Matthias was permitted to retain possession of the conquered territories, until Frederic had discharged his former engagement, and reimbursed the expenses of the war; should Matthias die before that period, these states were to revert to their sovereign."—W. Coxe, *Hist. of the House of Austria*, ch. 18 (v. 1).

A. D. 1487-1526.—Death of Matthias.—Election of Wladislaw, or Ladislaus, of the Polish house of Jagellon.—Union of the crowns of Hungary and Bohemia.—Loss of the Austrian provinces.—Treaty of Succession with Maximilian.—Insurrection of the Kurucs.—Loss of Belgrade.—Great Turkish invasion and ruinous battle of Mohacs.—The end of Hungarian independence.—"When once the archduchy of Austria was conquered, Matthias, who was already master of Moravia and Silesia, had in his power

a state almost as large as the Austria of the present time, if we except from it Galicia and Bohemia. But his power had no solid foundation. While the influence of the house of Austria had been increased by marriage, Matthias Corvinus had no legitimate heir. He made several attempts to have his natural son, John Corvinus, born in Silesia, recognized as his successor; but he died suddenly (1490) at the age of 50, without having arranged anything definitely for the future of his kingdom. . . . Hungary reached her highest point in the reign of Matthias Corvinus, and from this time we shall have to watch her hopeless decay. The diet, divided by the ambition of rival barons, could decide on no national king, and so turned to a foreigner. Wladyslaw II., of the [Polish] house of Jagellon, was elected, and thus a king of Bohemia, and an old rival of Matthias, united the two crowns of St. Vacsav and St. Stephen—a union which had been so ardently hoped for by Matthias, and for which he had waged the miserable war against Bohemia. . . . The beginning of the new reign was not fortunate. Maximilian [son of the Emperor Frederic] recovered the Austrian provinces, and John of Poland declared war against his brother, Wladyslaw, and obliged him to cede part of Silesia to him. Maximilian invaded the west of Hungary, . . . whence he only consented to retire after Wladyslaw had agreed to a treaty, which secured Hungary to the house of Austria, in case of Wladyslaw dying without children. This treaty, in which the king disposed of the country without consulting the diet, roused universal indignation. . . . Meanwhile, the Turks thronged round the southern frontier of the kingdom. Bajazet II. had failed to capture Belgrade in 1492, but he could not be prevented from forcing his way into the valley of the Save, and beating the Hungarian army, which was badly paid and badly disciplined. . . . Wladyslaw had one son, Louis. Surrounded by the net of Austrian diplomacy, he had affianced this son in his cradle to Mary of Austria, the sister of Charles V., and later on he undertook, in defiance of public opinion, to leave the crown to his daughter Anne, who was betrothed to Ferdinand of Austria, if Louis should die without heirs. . . . To add to the miseries of his reign, a peasant rising, a terrible Jacquerie, took place. . . . In 1513, Cardinal Bacracz came from Rome, bringing with him the papal bull for a crusade against the infidels; whereupon the peasants armed themselves, as if they were about to march against the Turks, and then turned their arms against the nobles. This terrible insurrection is called in Hungarian history the insurrection of the Kurucs (Kouroutses, cruciati) crusaders. . . . The chief leader of the insurrection, the peasant Dosza, was one of the Szeklers of Transylvania. . . . Dosza was beaten in a battle near Temesvar, and fell into the hands of his enemies. Their vengeance was terrible. The king of the peasants was seated on a throne of fire, and crowned by the executioner with a red-hot crown. He bore his frightful sufferings with a courage that astonished his adversaries. . . . The feeble Wladyslaw died in 1515, and the reign of the child-king, Louis II., may be summed up in two catastrophes, the loss of Belgrade and the defeat at Mohacs. The young king, married in his cradle, was corrupt and dissolute, and quite incapable of governing,

and his guardians could not rise to the height of the occasion. The finances of the kingdom were in great disorder, and the leading barons quarrelled continually over the shreds of sovereignty still left. . . . This state of things was of the greatest use to the Turks, for while Hungary was sinking ever deeper into anarchy, Turkey was ruled by the great sovereign who was called Soliman the Magnificent. It was not long before he found a pretext for war in the arrest of one of his subjects as a spy, and assembled his troops at Sophia, captured Shabats [Szabatch], laid siege to Belgrade and took it, making it thenceforward a Mussulman fortress (1521). The key of the Danube was now in the hands of the Turks. . . . King Louis begged for help on every side. . . . The Austrian princes were ready to help him from interested motives; but even when joined with Hungary they were too feeble to conquer the armies of 'the Magnificent.' On the 25th of April, 1526, Soliman quitted Constantinople, bringing with him 100,000 men and 300 cannon, taking up arms not only against Hungary, but against the empire. One of the pretexts for his expedition was the captivity of Francis I.; he wished, he said, to save 'the key of France' from the hands of the Germans and their allies the Hungarians. He crossed the Save near Osiek (Essek), captured Peterwardin, and came up with the Hungarians at Mohacs, on the right bank of the Danube (August 26, 1526). The Magyar army was commanded by the king in person, assisted by Paul Tomory, archbishop of Kalocsa, one of the warlike bishops of whom Hungary gives us so many examples; by George Szapolyai, and by Peter Perenyi, bishop of Nagy-Varad (Great Varadin). Perenyi wished to treat with the Turks, in order to gain time for help to reach them from Croatia and Transylvania, but the impetuosity of Tomory decided on immediate battle. . . . At first, it seemed as if the battle was in favour of the Magyars; but Soliman had commanded that the front ranks of his army should give way before the Hungarian cavalry, and that then the main body of his troops should close around them. When the Magyars were thus easily within reach, they were overwhelmed by the Turkish artillery and forced to retreat. They took refuge in some marshy land, in which many of them lost their lives. The king had disappeared; Tomory was slain; seven bishops, 22 barons, and 22,000 men were left upon the field. The road to Buda lay open before the invaders, and after having laid waste the whole country on their way, they reached the capital, where the treasures which Mathias Corvinus had collected in his palace and his library were either carried off or committed to the flames. . . . Then the tide of invasion gradually retired, leaving behind it a land covered with ruins. The independent existence of Hungary ended with Louis II."—L. Leger, *Hist. of Austro-Hungary*, ch. 15.

ALSO IN: L. Felbermann, *Hungary and its People*, ch. 3.

A. D. 1526-1567.—Election of John Zapolya to the throne.—Rival candidacy and election of Ferdinand of Austria.—Zapolya's appeal to the Turks.—Great invasion by Soliman.—Siege of Vienna.—The sultan master of the greater part of the country.—Progress of the Reformation.—Soliman's last invasion.—"No sooner was the corpse of Louis II. found lying in

a marsh, under his mangled steed, than the necessity of speedily electing a new monarch was powerfully felt. Louis left no heir to the throne, while his wife Mary, archduchess of Austria, far from trying to possess herself of the helm of the state, was already on her way to Vienna, even before the results of the battle of Mohacs had become fully known. The vacant throne found thus an aspirant in John Zapolya, waivod of Transylvania and count of the Zips, who lay encamped with a mighty army at Szegedin, on his march to the plain of Mohacs. . . . The Diet, which met on the plain of Rakos (1526), proclaimed Zapolya king. . . . The day of coronation was soon fixed, the waivod receiving his royal unction at Weisenburg. Stephen Batory, the palatine, however, actuated by envy rather than ambition, first attempted to oppose to the new king the interests of the widow of Louis II. But the Austrian archduchess, unwilling to enter the field as a competitor for the crown, handed over her role to her brother Ferdinand I. of Austria, who was married to Anne, sister of the late Hungarian king. Ferdinand soon repaired to Presburg, a town beyond the reach of Zapolya's arms, where he was elected king of Hungary by an aristocratic party, headed by the palatine Batory, Francis Batthany, Ban of Croatia, and Nadasy." After a fruitless conference between representatives of the rival kings, they proceeded to war. Zapolya was "master of the whole country, except some parts beyond the Danube," but he remained inactive at Buda until the Austrians surprised him there and forced him to evacuate the capital. "Not able to make head against the foreign mercenaries of Ferdinand, Zapolya was soon obliged to confine himself to the northern frontiers, till he left the kingdom for Poland, there to solicit help and concert measures for the renewal of the war (1528)." Receiving no encouragement from the king of Poland, Zapolya at length addressed himself to the great enemy of Hungary, the sultan Soliman, and there he met no rebuff. The Ottoman conqueror made instant preparations to enter Hungary as the champion of its native king. Thereupon "Zapolya organized a small army, and crossed the frontiers. His army was soon swelled to thousands, and he had possessed himself of the greatest part of Upper, before Soliman began to pour down on Lower Hungary. . . . Proclaiming to the people that his army was not come to conquer, but to assist their elected native king, Soliman marched onwards, took Buda, Gran, and Raab, all of them shamelessly given up by Ferdinand's mercenaries, and moved on unopposed to the walls of Vienna [1529]. Ferdinand, in his distress, invoked the assistance of Germany; but his brother [the] emperor, as well as the Diet of Spire, engrossed with Luther and his followers, . . . were not forward to render their assistance. Vienna, however, though neglected by the German emperor, was momentarily saved by the advanced state of the season; for winter being at hand, the Turks, according to their usage at that season, took their way home. [The besieging army of Turks is said to have numbered 250,000 men; while the river swarmed with 400 Turkish boats. Twenty fierce assaults were made upon the defenses of the city, in as many days. The suburbs were destroyed and the surrounding country terribly ravaged. Before raising the siege,

the baffled Turk massacred thousands of captives, under the walls, only carrying away into slavery the young and fair of both sexes. The repulse of Soliman is "an epoch in the history of the world."—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 9.] . . . Zapolya, having taken up his position in Buda, ruled over the greatest part of Hungary; while Croatia submitted to Ferdinand. . . . A useless war was thus for a while carried on between the two rival sovereigns, in the midst of which Buda had to sustain a heavy siege conducted by General Roggendorf; but the garrison, though reduced so far as to be obliged to eat horseflesh, succeeded in repelling and routing the Austrian besiegers (1530)." Ferdinand now humbled himself to the sultan, beseeching his friendship and support, but in vain. The war of the rival kings went on until 1538, when it was suspended by what is known as the Treaty of Grosswardein, which conceded to each party possession of the parts of the country which he then occupied; which gave the whole to Zapolya if Ferdinand died without male issue, and the whole to Ferdinand if Zapolya died before him, even though Zapolya should leave an heir—but the heir, in this latter case, was to marry Ferdinand's daughter. This treaty produced immense indignation in the country. "That the never-despairing and ambitious Zapolya meant that step rather as a means of momentary repose, may safely be assumed; but the development of his schemes was arrested by the hand of death (1540), which removed the weary warrior from these scenes of blood, at the very moment when his ears were gladdened by the news that he had become the father of a son." Ferdinand now claimed the undivided sovereignty, according to the terms of the Treaty of Grosswardein; but the queen-dowager Isabella, wife of John Zapolya, maintained the rights of her infant son. She was supported by a strong party, animated and led by one George Martinussius, a priest of extraordinary powers. Both Ferdinand and Isabella appealed to the sultan, as to an acknowledged suzerain. He declared for young Zapolya, and sent an army to Buda to establish his authority, while another Turkish army occupied Transylvania. "Soliman soon followed in person, made his entry into Buda [1541], which he determined to keep permanently occupied during the minority of Sigismund; and assuring Isabella of his affection to the son of John, bade her retire with the child to Transylvania; a piece of advice which she followed not without some reluctance and distrust. Buda was thus henceforward governed by a pasha; the army of Ferdinand was ruined, and Soliman, under the title of an ally, became absolute lord of the country." After a few years "new complications and difficulties arose in Transylvania, when Martinussius, who was confirmed by Soliman in his capacity of guardian to the young Sigismund and regent of that country, began to excite the suspicion of queen Isabella. Ferdinand, aware of these circumstances, marched an army into Transylvania, headed by Costaldo, who was instructed to gain over the monk-tutor." Martinussius was won by the promise of a cardinal's hat; with his help the queen-dowager was coerced into abdicating in behalf of her son. Having brought this about, Ferdinand basely procured the assassination of the monk Martinussius. "Far from gaining by an act that stamped his own name

with eternal shame, Ferdinand was soon driven by the Turks from Transylvania, and lost even the places occupied by his troops in Hungary." . . . Transylvania owned the sway of Sigismund Zapolya, while Ferdinand, in spite of the crown of the German empire, recently conferred upon him, . . . was fain to preserve in Hungary some small districts, contiguous to his Austrian dominions. . . . In the year 1563, Ferdinand convoked his party at Presburg," and prevailed upon them to go through the form of electing his son Maximilian to the Hungarian throne. "Ferdinand soon after died (1564), leaving three sons. Of these, Maximilian succeeded his father in Austria; Ferdinand inherited the Tyrol; and Charles, the youngest son, got possession of Styria. Maximilian, who, in addition to his Austrian dominions, succeeded to the throne of Bohemia and to that of the German empire, proved as impotent in Hungary as his father had been. The Pasha of Buda ruled the greater part of Hungary proper; Sigismund Zapolya continued to maintain his authority in Transylvania. . . . His [Maximilian's] reign left Hungary much the same as it was under his predecessor, although much credit is due to the neutral line of conduct he observed in regard to religious affairs. Unlike the rise and progress of the Reformation in the rest of Europe, religious reform in Hungary was rather an additional element in the political conflict than its originator. . . . By the battle of Mohacs, the Reformation was freed from a bigoted king and many persecuting prelates; while Ferdinand, conniving at the Protestant party in Germany, was withheld from persecuting it in Hungary, the more so from the dread that his rival might win the Protestant party to his interest. The Protestants thus increased in number amid the din of arms. . . . The sectarian spirit, though somewhat later than elsewhere, found also its way into this land of blood, and Hungary was soon possessed of considerable bodies of Lutherans and Calvinists, besides a smaller number of Anabaptists and Socinians. . . . Calvin's followers were mostly Magyars, while Lutheranism found its centre point in the German population of Transylvania." In 1566, Maximilian, encouraged by some subsidies obtained from his German subjects, began hostilities against the Turks and against Sigismund in Transylvania. This provoked another formidable invasion by the great sultan Soliman. The progress of the Turk was stopped, however, at the fortress of Szigeth, by a small garrison of 3,000 men, commanded by Nicholas Zriny. These devoted men resisted the whole army of the Moslems for nearly an entire month, and perished, every one, without surrendering their trust. Soliman, furious at the loss of 20,000 men, and the long delay which their obstinate valor caused him, died of apoplexy while the siege went on. This brought the expedition to an end, and Maximilian "bought a new peace at the hands of Selim II., son of Soliman, for a tribute of 30,000 ducats (1567). Shortly after, Maximilian was also relieved of his rival, John Sigismund Zapolya, who died a sudden death."—E. Szabad, *Hungary, Past and Present*, pt. 2, ch. 1.

A. D. 1567-1604.—Successive disturbances in Transylvania.—Cession of the principality

to the House of Austria, and consequent revolt.—Religious persecutions of Rodolph.—Successful rebellion of Botskai.—Continued war with the Turks.—John Sigismund Zapolya refused at first to be included in the peace which Maximilian arranged with the Turks, and endeavored to stir up an insurrection in Hungary; but his scheme failed, and “he had no resource but to accept the terms of peace offered by Maximilian, which were advantageous to both parties. He engaged not to assume the title of king of Hungary, except in his correspondence with the Turks, and to acknowledge the emperor as king, his superior and master; in addition to Transylvania, as an hereditary principality, he was to retain for life the counties of Bihar and Marmarosch, with Crasna and Zolnok, and whatever territories he could recover from the Turks. In return, the emperor promised to confer on him one of his nieces in marriage, and to cede to him Oppelen in Silesia, if expelled from Transylvania. On the death of John Sigismund without issue male, Transylvania was to be considered as an elective principality, dependent on the crown of Hungary. The intended marriage did not take place, for John Sigismund dying on the 16th of March, 1571, soon after the peace, all his possessions in Hungary reverted to Maximilian. The diet of Transylvania chose Stephen Bathori, who had acted with great reputation as the general and minister of John Sigismund; and Maximilian, although he had recommended another person, prudently confirmed the choice. . . . The new waivode was accordingly confirmed, both by Maximilian and the Turks, took the oath of fidelity to the crown of Hungary, and continued to live on terms of friendship and concord with the emperor. . . . Maximilian being of a delicate constitution, and declining in health, employed the last years of his reign in taking precautions to secure his dignities and possessions for his descendants. Having first obtained the consent of the Hungarian states, his eldest son Rhodolph was, in 1572, crowned king of Hungary, in a diet at Presburgh.” Subsequently, the election of Rhodolph by the Bohemian diet was likewise procured, and he was crowned king of Bohemia on the 22d of September, 1575. A few weeks later, the same son was chosen and crowned king of the Romans, which secured his succession to the imperial dignity. This latter crown fell to him the following year, when his father died. Educated in Spain and by the Jesuits, the new emperor was easily persuaded to reverse the tolerant policy of his father, and to adopt measures of repression and persecution against the Protestants, in the Austrian provinces, in Hungary and in Bohemia, which could not long be endured without resistance. “The first object of Rhodolph had been to secure his dominions in Hungary against the Turks. In order to diminish the enormous expense of defending the distant fortresses on the side of Croatia, he transferred that country, as a fief of the empire, to his uncle Charles, duke of Styria, who, from the contiguity of his dominions, was better able to provide for its security. Charles accordingly constructed the fortress of Carlstadt, on the Kulpa, which afterwards became the capital of Croatia, and a military station of the highest importance. He also divided the ceded territory into numerous tures, which he conferred on freebooters and adventurers of every nation, and thus formed a

singular species of military colony. This feudal establishment gradually extended along the frontiers of Slavonia and Croatia, and not only contributed, at the time, to check the incursions of the Turks, but afterwards supplied that lawless and irregular, though formidable military force . . . who, under the names of Croats, Pandours, and other barbarous appellations, spread such terror among the enemies of Austria on the side of Europe. . . . Notwithstanding the armistice concluded with the Sultan by Maximilian, and its renewal by Rhodolph in 1584 and 1591, a predatory warfare had never ceased along the frontiers.” The truce of 1591 was quickly broken in a more positive way by Sultan Amurath, whose forces invaded Croatia and laid siege to Siseck. They were attacked there and driven from their lines, with a loss of 12,000 men. “Irritated by this defeat, . . . Amurath published a formal declaration of war, and poured his numerous hordes into Hungary and Croatia. The two following years were passed in various sieges and engagements, attended with alternate success and defeat; but the advantage ultimately rested on the side of the Turks, by the capture of Siseck and Raab. In 1595, a more favourable though temporary turn was given to the Austrian affairs, by the defection of the prince of Transylvania from the Turks. On the elevation of Stephen Bathori to the throne of Poland, his brother Christopher succeeded him as waivode of Transylvania, and, dying in 1582, left an infant son, Sigismund, under the protection of the Porte. Sigismund, who possessed the high spirit and talents of his family, had scarcely assumed the reins of government before he liberated himself from the galling yoke of the Turks, and in 1595 concluded an offensive alliance with the house of Austria. . . . He was to retain Transylvania as an independent principality, the part of Hungary which he still held, and Moldavia and Wallachia. . . . The conquests of both parties were to be equally divided. . . . By this important alliance the house of Austria was delivered from an enemy who had always divided its efforts, and made a powerful diversion in favour of the Turks. Sigismund signalled himself by his heroic courage and military skill; uniting with the waivodes of Moldavia and Wallachia, he defeated the grand vizir, Sinan, took Turgovitch by storm, and drove the Turks back in disgrace towards Constantinople. Assisted by this diversion, the Austrians in Hungary were likewise successful, and not only checked the progress of the Turks, but distinguished their arms by the recovery of Gran and Vissegrad. This turn of success roused the sultan Mahomet, the son and successor of Amurath. . . . He put himself, in 1596, at the head of his forces, led them into Hungary, took Erlau, and defeating the Austrians under the archduke Maximilian, the lateness of the season alone prevented him from carrying his arms into Austria and Upper Hungary, which were exposed by the loss of Raab and Erlau. As Mahomet could not a second time tear himself from the seraglio, the war was carried on without vigour, and the season passed rather in truces than in action. But this year, though little distinguished by military events, was memorable for the cession of Transylvania to Rhodolph, by the brave yet fickle Sigismund, in exchange for the lordships of Ratibor and Oppelen in Silesia, with an annual pension.” The capri-

cious Sigismund, however, soon repenting of his bargain, reclaimed and recovered his Transylvanian dominion, but only to resign it again, in 1599, to his uncle, and again to repossess it. Not until 1602, after much fighting and disorder, was the fickle-minded and troublesome prince sent finally to retirement, in Bohemia. Transylvania was then placed under the government of the imperial general Basta. "His cruel and despotic administration driving the natives to despair, they found a chief in Moses Tzekeli, who, with other magnates, after ineffectually opposing the establishment of the Austrian government, had sought a refuge among the Turks. Tzekeli, at the head of his fellow exiles, assisted by bodies of Turks and Tartars, entered the country, was joined by numerous adherents, and, having obtained possession of the capital and the adjacent fortresses, was elected and inaugurated prince of Transylvania. His reign, however, was scarcely more permanent than that of his predecessor; for, before he could expel the Germans, he was, in 1603, defeated by the new waivode of Wallachia, and killed in the confusion of the battle. In consequence of this disaster, his followers dispersed, and Basta again recovered possession of the principality. During these revolutions in Transylvania, Hungary had been the scene of incessant warfare between the Austrians and the Turks, which exhausted both parties with little advantage to either. . . . Rhodolph had long lost the confidence of his Hungarian subjects. . . . He treated the complaints and remonstrances of his subjects with contempt and indifference; and the German troops being free from control, filled the country with devastation and pillage. While, however, he abandoned the civil and military affairs to chance, or to the will of his officers, he laboured to fetter his subjects with religious restrictions, and the most intolerant edicts were issued against the Protestants, in various parts of the kingdom. . . . The disaffected increasing in numbers, soon found a leader in Stephen Botskai, the principal magnate of Upper Hungary, uncle of Sigismund Bathori. . . . The discontents in Transylvania, arising from the same causes as the rebellion in Hungary, greatly contributed to the success of Botskai. . . . Being in 1604 assisted by a Turkish army, which the new sultan, Achmet, despatched into Transylvania, he soon expelled the Austrians, and was formally inaugurated sovereign. . . . But Botskai as too disinterested or too prudent to accept the regal dignity [as king of Hungary, which the grand vizier of the sultan proclaimed him]. . . . He acted, however, with the same vigour and activity as if he had a crown to acquire; before the close of the campaign he conquered all Upper Hungary, almost to the walls of Presburgh; at the same time the Turks reduced Gran, Vissegrad and Novigrad."—W. Coxe, *Hist. of the House of Austria*, ch. 38-42 (v. 2).

A. D. 1595-1606.—The Turkish war.—Great defeat at Ceresstes.—The Peace of Sitvatorok.—'The disasters which the Turkish arms were now experiencing in Wallachia and Hungary made the Sultan's best statesmen anxious that the sovereign should, after the manner of his great ancestors, head his troops in person, and endeavour to give an auspicious change to the fortune of the war. . . . The Imperialists, under

the Archduke Maximilian and the Hungarian Count Pfalfy, aided by the revolted princes of the Danubian Principalities, dealt defeat and discouragement among the Ottoman ranks, and wrung numerous fortresses and districts from the empire. The cities of Gran, Wissgrad, and Baboeca, had fallen; and messengers in speedy succession announced the loss of Ibrail, Varna, Kilic, Ismail, Silistria, Rustchuk, Bucharest, and Akerman. These tidings at last roused the monarch in his harem. . . . Mahomet III. left his capital for the frontier in the June of 1596. . . . The display of the sacred standard of the Prophet, which now for the first time was unfurled over a Turkish army, excited . . . the zeal of the True Believers. . . . The Grand Vizier, Ibrahim Pacha, Hassan Sokolli Pacha, and Cicala Pacha, were the principal commanders under the Sultan. . . . The Archduke Maximilian, who commanded the Imperialists, retired at first before the superior numbers of the great Ottoman army; and the Sultan besieged and captured Erlau. The Imperialists now having effected a junction with the Transylvanian troops under Prince Sigismund, advanced again, though too late to save Erlau; and on October 23rd, 1596, the two armies were in presence of each other on the marshy plain of Ceresstes, through which the waters of the Cincia ooze towards the river Theiss. There were three days of battle at Ceresstes." Repeatedly, the effeminate Sultan wished to order a retreat, or to betake himself to flight; but was persuaded by his counsellors to remain on the field, though safely removed from the conflict. On the third day the battle was decided in favor of the Turks by a charge of their cavalry under Cicala. "Terror and flight spread through every division of the Imperialists; and in less than half an hour from the time when Cicala began his charge, Maximilian and Sigismund were flying for their lives, without a single Christian regiment keeping their ranks, or making an endeavour to rally and cover the retreat. 50,000 Germans and Transylvanians perished in the marshes or beneath the Ottoman sabre. . . . Mahomet III. eagerly returned after the battle to Constantinople, to receive felicitations and adulation for his victory, and to resume his usual life of voluptuous indolence. The war in Hungary was prolonged for several years, until the peace of Sitvatorok [November 11, 1606] in the reign of Mahomet's successor. . . . No change of importance was made in the territorial possessions of either party, except that the Prince of Transylvania was admitted as party to the treaty, and that province became to some extent, though not entirely, independent of the Ottoman Empire."—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 12.

A. D. 1606-1660.—The Pacification of Vienna.—Gabriel Bethlen of Transylvania and the Bohemian revolt.—Participation and experience in the Thirty Years War.—In 1606, the Archduke Mathias—who had lately been appointed to the governorship of Hungary, and who had been acknowledged, by a secret compact among the members of the Hapsburg family as the head of their House—arranged the terms of a peace with Botskai. This treaty, called the "Pacification of Vienna," restored the religious toleration that had been practised by Ferdinand and Maximilian; provided that Mathias should be lieutenant-general of the kingdom; gave to

Botskai the title of Prince of Transylvania and part of Hungary; and stipulated that on the failure of his male issue these territories should revert to the House of Austria. "This treaty, at last, restored peace to Hungary, but at the expense of her unity and independence. Some idea may be formed of the state of weakness and lassitude to which these long wars had reduced the country . . . by a statement of the divisions into which it had been split up by the various factions. Hungary, with Croatia, Slavonia, and the frontiers, was then reckoned to cover an area of 4,427 square miles, and Transylvania one of 736. Of these 5,163 miles, Turkey possessed 1,859; Botskai in Hungary 1,346, in Transylvania 736=2,082; and Austria only 1,222. Botskai died in 1606, and was succeeded by Sigismund Rakoczi, who, however, soon abdicated in favour of Gabriel Bathori." At this time the plans of the Austrian family for taking the reins of power out of the feeble and careless hands of the Emperor Rodolph, and giving them to his more energetic brother, the Archduke Mathias, came to a head (see GERMANY: A. D. 1556-1609). Mathias "marched into Bohemia: and Rodolph, after a feeble resistance, found himself abandoned by all his supporters, and compelled to resign into the hands of Mathias Hungary, Austria and Moravia, and to guarantee to him the succession to the crown of Bohemia; Mathias in the meantime bearing the title of king elect of that kingdom, with the consent of the states. Rodolph at the same time delivered up the Hungarian regalia, which for some time past had been kept at Prague." Before his coronation, Mathias was required by the Hungarian diet to sign a compact, guaranteeing religious liberty; stipulating that the Hungarian Chamber of Finances should be independent of that of Austria, that all offices and employments should be filled by natives, and that the Jesuits should possess no real property in the country. The peace of the country was soon disturbed by another revolution in Transylvania. "Gabriel Bathori, who had succeeded Sigismund Bathori on the throne of the principality, had suffered his licentiousness to tempt him into insulting the wives of some of the nobles, who instantly fell upon him and murdered him; and in his place Gabriel Bethlem, a brave warrior and an able statesman, was unanimously elected, with the consent and approbation of the sultan. Under his government his dominions enjoyed a full measure of peace and tranquillity, and began to recover from the horrible devastations of preceding years. He did not, however, assume his dignity without dispute. Transylvania had been secured to the house of Austria on the death of Botskai, by the Pacification of Vienna, and Mathias was, of course, now anxious to enforce his rights, and he considered the present opportunity (1617) favourable, as the Turks were engaged in wars on the side of Asia and Poland. He therefore summoned a diet of the empire, to the throne of which he had succeeded in 1612 by the death of Rodolph. . . . But the diet refused all aid," and he was forced to conclude a peace with the sultan for the further period of twenty years. "No mention being made in it of Transylvania, the rights of Gabriel Bethlem were thus tacitly recognised. Mathias died soon after, in 1619, leaving his crown to his cousin, Ferdinand II." Then followed the renewed attempt of an im-

perial bigot to crush Protestantism in his dominions, and the Bohemian revolt (see BOHEMIA: A. D. 1611-1618) which kindled the flames of the "Thirty Years War." Hungary and Transylvania were in sympathy with Bohemia. "Gabriel Bethlem entered Hungary, in answer to the call of the Protestants of that country, at the head of a large army—took Cassau, Tiernan, Newhasel, dispersed the imperial forces under Homonai, sent 18,000 men to enforce Count Thurn, got possession of Presburg by treachery, and seized upon the regalia." The cause of the Bohemians was lost at the battle of the White Mountain, before Prague; but "Gabriel Bethlem for a long time supported the prestige acquired by his earlier successes. He was proclaimed king of Hungary, and obtained considerable advantages over two generals of ability and reputation." But a treaty of peace was concluded at length, according to which Gabriel surrendered the crown and royal title, receiving the duchies of Oppelen and Ratibor in Silesia, and seven counties of Hungary, together with Cassau, Tokay, and other towns. Ferdinand promised complete toleration to the Protestants, but was not faithful to his promise, and war was soon resumed. Bethlem "collected an army of 45,000 men, joined his forces with those of Mansfeldt, the general of the confederacy [the Protestant Union], after his victory over the imperialists at Presburg; and at the same time the Bashaw of Buda entered Lower Hungary at the head of a large force, captured various fortresses in the district of Gran, and laid siege to Novigrad. They were opposed by two able generals, the famous Wallenstein and Swartzemberg, but without checking their progress. Wallenstein, however, followed Mansfeldt into Hungary, where the two armies remained for some time inactive in the presence of one another; but famine, disease, and the approach of winter at last brought the contest to a close. The king of Denmark had been defeated, and Gabriel Bethlem began to fear that the whole force of the Austrians would now be directed against him, and concluded a truce. The bashaw of Buda feared the winter, and followed his example; and Mansfeldt, finding himself thus abandoned, disbanded his soldiers [see GERMANY: A. D. 1624-1626]. . . . The treaty of peace was again renewed, the truce with the Turks prolonged." Gabriel Bethlem, or Bethlem Gabor, died in 1629. "The Transylvanians elected George Rakotski to fill his place, and during nearly four years Hungary and Transylvania enjoyed the blessings of peace." Then they were again disturbed by attempts of Ferdinand to reduce Transylvania to the state of an Austrian province, and by hostile measures against the Protestants. The latter continued after the death of Ferdinand II. (1637), and under his son Ferdinand III. Rakotski inspired an insurrection of the Hungarians which became formidable, and which, joining in alliance with the Swedes, then warring in Germany, extorted from the emperor a very favorable treaty of peace (1647). "At the same time Ferdinand caused his son of the same name, and elder brother of Leopold, to be elected and crowned king. During his short reign, the country was tranquil; but in 1654 he died, leaving his rights to Leopold. The reign of Leopold [1655-1697] was a period which witnessed events more important to Hungary than any which preceded it,

or have followed it, save only the revolutionary years, 1848 and 1849. No monarch of the house of Austria had ever made so determined attacks upon Hungarian liberty, and to none did the Hungarians oppose a braver and more strenuous resistance. Nothing was left untried on the one side to overthrow the constitution; nothing was left untried on the other to uphold and defend it."—E. L. Godkin, *Hist. of Hungary*, ch. 15-17.

A. D. 1660-1664.—Turkish attacks on Upper Hungary.—The battle of St. Gothard.—Liberation of Transylvania.—A twenty years truce.

—"Hostilities had recommenced, in 1660, between the Ottoman empire and Austria, on account of Transylvania. The Turk was suzerain of Transylvania, and directly held Buda and the part of Hungary on the west and south of the Danube, projecting like a wedge between Upper Hungary, Styria, and Vienna. George Rakoczi, Prince of Transylvania, having perished in combat against the Sultan, his suzerain, the Turks had pursued the House of Rakoczi into the domains which it possessed in Upper Hungary. The Rakoczis, and the new prince elected by the Transylvanians, Kemeni, invoked the aid of the emperor. The Italian, Montecuculi, the greatest military chieftain in the service of the House of Austria, expelled the Turks from a part of Transylvania, but could not maintain himself there; Kemeni was killed in a skirmish. The Turks installed their protégé, Michael Abaffi, in his place, and renewed their attacks against Upper Hungary (1661-1662). The secret of these alternations lay in the state of feeling of the Hungarians and Transylvanians, who, continually divided between two oppressors, the Turk and the Austrian, and too weak to rid themselves of either, always preferred the absent to the present master. . . . Religious distrust also complicated political distrust; Protestantism, crushed in Bohemia, remained powerful and irritated in Hungary. The emperor demanded the assistance of the Germanic Diet and all the Christian states against the enemy of Christianity. . . . Louis XIV., at the first request of Leopold, supported by the Pope, replied by offers so magnificent that they appalled the Emperor. Louis proposed not less than 60,000 auxiliaries, half to be furnished by France, half by the Alliance of the Rhine; that is, by the confederates of France in Germany. . . . The Emperor . . . would have gladly been able to dispense with the aid of France and his confederates; but the more pressing danger prevailed over the more remote. The Turks had made a great effort during the summer of 1663. The second of the Kiouprouglis, the Vizier Ahmet, taking Austrian Hungary in the rear, had crossed the Danube at Buda with 100,000 fighting men, invaded the country between the Danube and the Carpathians, and hurled his Tartars to the doors of Presburg and Olmütz. Montecuculi had with great difficulty been able to maintain himself on the island of Schütt, a species of vast intrenched camp formed by nature in front of Presburg and Vienna. The fortified towns of Upper Hungary fell one after another, and the Germanic Diet, which Leopold had gone to Ratisbon to meet, replied with maddening dilatoriness to the urgent entreaties of the head of the Empire. The Diet voted no effective aid until February, 1664; but the Alliance of the Rhine, in particular, had already accorded 6,500 soldiers, on condition that the Diet

should decide, before separating, certain questions relative to the interpretation of the Treaty of Westphalia. The Pope, Spain, and the Italian States furnished subsidies. Louis persisted in offering nothing but soldiers, and Leopold resigned himself to accept 6,000 Frenchmen. He had no reason to repent it. . . . When the junction was effected [July, 1664], the position of the Imperialists was one of great peril. They had resumed the offensive on the south of the Danube in the beginning of the year; but this diversion, contrary to the advice of Montecuculi, had succeeded ill. The Grand Vizier had repulsed them, and, after carrying back his principal forces to the right bank of the Danube, threatened to force the passage of the Raab and invade Styria and Austria. The Confederate army was in a condition to stand the shock just at the decisive moment. An attempt of the Turks to cross the Raab at the bridge of Kerment was repulsed by Coligny [commanding the French], July 26, 1664. The Grand Vizier reascended the Raab to St. Gothard, where were the headquarters of the Confederates, and, on August 1, the attack was made by all the Mussulman forces. The janizaries and spahis crossed the river and overthrew the troops of the Diet and a part of the Imperial regiments; the Germans rallied, but the Turks were continually reinforced, and the whole Mussulman army was soon found united on the other side of the Raab. The battle seemed lost, when the French moved. It is said that Achmet Kiouprougli, on seeing the young noblemen pour forth, with their uniforms decked with ribbons, and their blond perukes, asked, 'Who are these maidens?' The 'maidens' broke the terrible janizaries at the first shock; the mass of the Turkish army paused and recoiled on itself; the Confederate army, reanimated by the example of the French, rushed forward and charged on the whole line; the Turks fell back, at first slowly, their faces towards the enemy, then lost footing and fled precipitately to the river to recross it under the fire of the Christians; they filled it with their corpses. The fatigue of the troops, the night that supervened, the waters of the Raab, swelled the next day by a storm, and above all the lack of harmony among the generals, prevented the immediate pursuit of the Turks, who had rallied on the opposite bank of the river and had preserved the best part of their cavalry. It was expected, nevertheless, to see them expelled from all Hungary, when it was learned with astonishment that Leopold had hastened to treat, without the approbation of the Hungarian Diet, on conditions such that he seemed the conquered rather than the conqueror. A twenty years' truce was signed, August 10, in the camp of the Grand Vizier. Transylvania became again independent under its elective princes, but the protégé of the Turks, Abaffi, kept his principality; the Turks retained the two chief towns which they had conquered in Upper Hungary, and the Emperor made the Sultan a 'present,' that is, he paid him 200,000 florins tribute."—H. Martin, *Hist. of France: Age of Louis XIV.*, v. 1, ch. 4.

A. D. 1668-1683.—Increased religious persecution and Austrian oppression.—Tekeli's revolt.—The Turks again called in.—Kara Mustapha's great invasion and siege of

Vienna.—Deliverance of the city by John Sobieski.—In Hungary, "the discontent caused by the oppressive Government and the fanatical persecution of Protestantism by the Austrian Cabinet had gone on increasing. At length, the Austrian domination had rendered itself thoroughly odious to the Hungarians. To hinder the progress of Protestantism, the Emperor Leopold, in the excess of his Catholic zeal, sent to the galleys a great number of preachers and ministers; and to all the evils of religious persecution were added the violence and devastations of the generals and the German administrators, who treated Hungary as a conquered province. The Hungarians in vain invoked the charters which consecrated their national liberties. To their most legitimate complaints Leopold replied by the infliction of punishments; he spared not even the families of the most illustrious; several magnates perished by the hands of the executioner. Such oppression was certain to bring about a revolt. In 1668 a conspiracy had been formed against Leopold by certain Hungarian leaders, which, however, was discovered and frustrated; and it was not till 1677, when the young Count Emmerich Tekeli, having escaped from prison, placed himself at the head of the malcontents, that these disturbances assumed any formidable importance. . . . Tekeli, who possessed much military talent, and was an uncompromising enemy of the House of Austria, having entered Upper Hungary with 12,000 men, defeated the Imperial forces, captured several towns, occupied the whole district of the Carpathian Mountains, and compelled the Austrian generals, Counts Wurmb and Leslie, to accept the truce he offered." In 1681 the Emperor made some concessions, which weakened the party of independence, while, at the same time, the Peace of Nimwegen, with France, allowed the House of Austria to employ all its forces against the rebels. "In this conjuncture Tekeli turned for aid towards the Turks, making an appeal to Mahomet IV.; and after the conclusion of the Turkish and Russian war in 1681, Kara Mustapha [the Grand Vizier] determined to assist the insurgents openly, their leader offering, in exchange, to acknowledge the suzerainty of the Porte. Tekeli sought also succour from France. Louis XIV. gave him subsidies, solicited the Sultan to send an army into Hungary, and caused an alliance between the Hungarians, Transylvanians, and Wallachians to be concluded against Austria (1682). The truce concluded in 1665 between Austria and Turkey had not yet expired," but the Sultan was persuaded to break it. "The Governor of Buda received orders to support Tekeli, who took the title of King. . . . Early in the spring of 1683 Sultan Mahomet marched forth from his capital with a large army, which at Belgrade he transferred to the command of Kara Mustapha. Tekeli formed a junction with the Turks at Essek."—S. Menzies, *Turkey, Old and New*, bk. 2, ch. 9, sect. 3 (v. 1).—"The strength of the regular forces, which Kara Mustapha led to Vienna, is known from the muster-roll which was found in his tent after the siege. It amounted to 275,000 men. The attendants and camp-followers cannot be reckoned; nor can any but an approximate speculation be made as to the number of the Tartar and other irregular troops that joined the Vizier. It is probable that not less than half a million of men were set in motion in

this last great aggressive effort of the Ottomans against Christendom. The Emperor Leopold had neither men nor money sufficient to enable him to confront such a deluge of invasion; and, after many abject entreaties, he obtained a promise of help from King Sobieski of Poland, whom he had previously treated with contumely and neglect. . . . The Turkish army proceeded along the western side of the Danube from Belgrade, and reached Vienna without experiencing any serious check, though a gallant resistance was made by some of the strong places which it besieged during its advance. The city of Vienna was garrisoned by 11,000 men under Count Stahrenberg, who proved himself a worthy successor of the Count Salm, who had fulfilled the same duty when the city was besieged by Sultan Solymán. The second siege of Vienna lasted from the 15th July to the 12th September, 1683, during which the most devoted heroism was displayed by both the garrison and the inhabitants. . . . The garrison was gradually wasted by the numerous assaults which it was called on to repulse, and in the frequent sorties, by which the Austrian commander sought to impede the progress of the besiegers. Kara Mustapha, at the end of August, had it in his power to carry the city by storm, if he had thought fit to employ his vast forces in a general assault, and to continue it from day to day, as Amurath IV. had done when Bagdad fell. But the Vizier kept the Turkish troops back out of avarice, in the hope that the city would come into his power by capitulation; in which case he would himself be enriched by the wealth of Vienna, which, if the city were taken by storm, would become the booty of the soldiery. . . . Sobieski had been unable to assemble his troops before the end of August; and, even then, they only amounted to 20,000 men. But he was joined by the Duke of Lorraine and some of the German commanders, who were at the head of a considerable army, and the Polish King crossed the Danube at Tulln, above Vienna, with about 70,000 men. He then wheeled round behind the Kalemberg Mountains to the north-west of Vienna, with the design of taking the besiegers in the rear. The Vizier took no heed of him; nor was any opposition made to the progress of the relieving army through the difficult country which it was obliged to traverse. On the 11th of September the Poles were on the summit of the Mount Kalemberg, overlooking the vast encampment of the besiegers. Sobieski "saw instantly the Vizier's want of military skill, and the exposure of the long lines of the Ottoman camp to a sudden and fatal attack. 'This man,' said he, 'is badly encamped: he knows nothing of war; we shall certainly beat him.' . . . The ground through which Sobieski had to move down from the Kalemberg was broken by ravines; and was so difficult for the passage of the troops that Kara Mustapha might, by an able disposition of part of his forces, have long kept the Poles in check, especially as Sobieski, in his hasty march, had brought but a small part of his artillery to the scene of action. But the Vizier displayed the same infatuation and imbecility that had marked his conduct throughout the campaign. . . . Unwilling to resign Vienna, Mustapha left the chief part of his Janissary force in the trenches before the city, and led the rest of his army towards the hills, down which Sobieski and his troops were

advancing. In some parts of the field, where the Turks had partially intrenched the roads, their resistance to the Christians was obstinate; but Sobieski led on his best troops in person in a direct line for the Ottoman centre, where the Vizier's tent was conspicuous; and the terrible presence of the victor of Khoczin was soon recognised. 'By Allah! the King is really among us,' exclaimed the Khan of the Crimea, Selim Ghirai; and turned his horse's head for flight. The mass of the Ottoman army broke and fled in hopeless rout, hurrying Kara Mustapha with them from the field. The Janissaries, who had been left in the trenches before the city, were now attacked both by the garrison and the Poles and were cut to pieces. The camp, the whole artillery, and the military stores of the Ottomans became the spoil of the conquerors; and never was there a victory more complete, or signalised by more splendid trophies. The Turks continued their panic flight as far as Raab. . . . The great destruction of the Turks before Vienna was rapturously hailed throughout Christendom as the announcement of the approaching downfall of the Mahometan Empire in Europe."—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 16.—"It was cold comfort to the inhabitants of Vienna, or to the King of Poland, to know that even if St. Stephen's had shared the fate of St. Sophia and become a mosque of Allah, and if the Polish standards had been borne in triumph to the Bosphorus, yet that, nevertheless, the undisciplined Ottomans would infallibly have been scattered by French, German and Swedish armies on the fields of Bavaria or of Saxony. Vienna would have been sacked; Poland would have been a prey to internal anarchy and to Tartar invasion. The ultimate triumph of their cause would have consoled few for their individual destruction. . . . So cool and experienced a diplomatist as Sir William Temple did indeed believe, at the time, that the fall of Vienna would have been followed by a great and permanent increase of Turkish power. Putting this aside, however, there were other results likely to spring from Turkish success. The Turks constantly made a powerful diversion in favour of France and her ambitious designs. Turkish victories upon the one side of Germany meant successful French aggressions upon the other, and Turkish schemes were promoted with that object by the French. . . . 'If France would but stand neutral, the controversy between Turks and Christians might soon be decided,' says the Duke of Lorraine. But France would not stand neutral."—H. E. Malden, *Vienna*, 1683, ch. 1.

A. D. 1683-1687.—End of the insurrection of Tekeli.—Bloody vengeance of the Austrian.—The crown made hereditary in the House of Hapsburg.—The defeat of the Turks was likewise a defeat for the insurgent Tekeli, or Tököli, "whom they called the king of the Kurucz, and after it he found himself reduced to guerilla warfare. The victory over the Turks was followed by the capture of some of the chief Magyar towns . . . and in the end [1686] Buda itself, which was at last recovered after so long an occupation. . . . Kara Mustapha attributed his defeat to Tököli, and had his former ally arrested and imprisoned in Belgrade. His captivity put an end to the party of the king of the

Kurucz. . . . An amnesty was proclaimed and immediately afterwards violated, the Italian general, Caraffa, becoming the merciless executioner of imperial vengeance. He established a court at Eperjes, and the horrors of this tribunal recall the most atrocious deeds of the Spaniards in the Low Countries. . . . After having terrorized Hungary, Leopold thought he had the right to expect every sort of concession. Notwithstanding persecution, up to this date the monarchy had remained elective. He was determined it should now become hereditary; and the diet of 1687, in conformity with the wishes of the sovereign, made the crown hereditary in the male line of the house of Habsburg."—L. Leger, *Hist. of Austro-Hungary*, ch. 20.

A. D. 1683-1699.—Expulsion of the Turks.—Battle of Zenta.—Peace of Carlowitz.—After the great defeat of the Turks before Vienna, their expulsion from Hungary was only a question of time. It began the same autumn, in October, by the taking of Gran. In 1684, the Imperialists under the Duke of Lorraine captured Visegrad and Waitzen, but failed in a siege of Ofen, although they defeated a Turkish army sent to its relief in July. In 1685 they took Nenhäusel by storm, and drove the Turks from Gran, which these latter had undertaken to recover. Next year they laid siege again to Ofen, investing the city on the 21st of June and carrying it by a final assault on the 2d of September. "Ofen, after having been held by the Porte, and regarded as the third city in the Ottoman Empire, for 145 years, was restored to the sway of the Habsburgs." Before the year closed the Austrians had acquired Szegedin, and several lesser towns. The great event of the campaign of 1687 was a battle on the field of Mohacs, where, in 1526, the Turks became actual masters of Hungary, for the most part, while the House of Austria acquired nominally the right to its crown. On this occasion the fortune of 1526 was reversed. "The defeat became a rout as decisive against the Turks as the earlier battle on the same spot had proved to the Jagellons." Transylvania and Slavonia were occupied as the consequence, and Erlau surrendered before the close of the year. In 1688, what seemed the crowning achievement of these campaigns was reached in the recovery of Belgrade, after a siege of less than a month. A Turkish army in Bosnia was destroyed; another was defeated near Nissa, and that city occupied; and at the end of 1689 the Turks held nothing north of the Danube except Temeswar and Grosswardein (Great Waradein); while the Austrians had made extensive advances, on the south of the river, into Bosnia and Servia. Then occurred a great rally of Ottoman energies, under an able Grand Vizier. In 1690, both Nissa and Belgrade were retaken, and the Austrians were expelled from Servia. But next year fortune favored the Austrians once more and the Turks were severely beaten, by Louis of Baden, on the field of Salankament. They still held Belgrade, however, and the Austrians suffered heavily in another attempt to regain that stronghold. For several years little progress in the war was made on either side; until Prince Eugene of Savoy received the command, in 1697, and wrought a speedy change in the military situation. The Sultan, Mustapha II., had taken the Turkish command in person, "with the finest army the Osmanli had raised

since their defeat at Mohacs." Prince Eugene attacked him, September 11, at Zenta, on the Theiss, and destroyed his army almost literally. "When the battle ceased about 20,000 Osmanli lay on the ground; some 10,000 had been drowned; scarcely 1,000 had reached the opposite bank. There were but few prisoners. Amongst the slain were the Grand Vizier and four other Viziers. . . . By 10 o'clock at night not a single living Osmanli remained on the right bank of the Theiss. . . . The booty found in the camp surpassed all . . . expectations. Everything had been left by the terror-stricken Sultan. There was the treasury-chest, containing 3,000,000 piastres. . . . The cost of these spoils had been to the victors only 300 killed and 200 wounded. . . . The battle of Zenta, . . . regarded as part of the warfare which had raged for 200 years between the Osmanli and the Imperialists, . . . was the last, the most telling, the decisive blow." It was followed by a period of inaction, during which England and Holland undertook to mediate between the Porte and its several Christian enemies. Their mediation resulted in the meeting of a Congress at Carlowitz, or Karlowitz, on the Danube, which was attended by representatives of the Sultan, the Emperor, the Czar of Russia, the King of Poland, and the republic of Venice. "Here, after much negotiation, lasting seventy-two days, was concluded, the 26th January, 1699, the famous Peace of Carlowitz. The condition that each party should possess the territories occupied by each at the moment of the meeting of the congress formed its basis. By the treaty, then, the frontier of Hungary, which, when the war broke out, extended only to within a short distance of the then Turkish towns of Gran and Neuhausel, was pushed forward to within a short distance of Temeswar and Belgrade. Transylvania and the country of Bacska, between the Danube and the Theiss, were yielded to the Emperor. To Poland were restored Kaminitz, Podolia, and the supremacy over the lands watered by the Ukraine, the Porte receiving from her in exchange, Soczava, Nemos, and Soroka; to Venice, who renounced the conquests she had made in the gulfs of Corinth and Ægina, part of the Morea, and almost all Dalmatia, including the towns of Castelnovo and Cattaro; to Russia, the fortress and sea of Azof." By the Peace of Carlowitz "the Ottoman Power lost nearly one-half of its European dominions, and ceased to be dangerous to Christendom. Never more would the discontented magnates of Hungary be able to find a solid supporter in the sultan."—G. B. Malleeson, *Prince Eugene of Savoy*, ch. 2 and 4.

A. D. 1699-1718.—The revolt of Rakoczy and its suppression.—The Treaty of Szathmar.—Recovery of Belgrade and final expulsion of the Turks.—Peace of Passarowitz.—"The peace of Carlowitz, which disposed of the Hungarian territory without the will or knowledge of the Hungarian States, in utter contempt of repeatedly confirmed laws, was in itself a deep source of new discontent,—which was considerably increased by the general policy continually pursued by the Court of Vienna. Even

after the coronation of Joseph I., a prince who, if left to himself, might have perhaps followed a less provoking line of conduct, Leopold, the real master of Hungary, did not relinquish his design of entirely demolishing its institutions. . . . The high clergy were ready to second any measure of the government, provided they were allowed full scope in their persecutions of the Protestants. . . . Scarcely had three years passed since the peace of Carlowitz was signed, when Leopold, just embarking in the war of the Spanish succession, saw the Hungarians suddenly rise up as one man in arms. . . . The head and soul of this new struggle in Hungary was Francis Rakoczy II., the son of Helen Zriny, by her first husband, after the death of whom she became the wife of Tököli." Rakoczy entered the country from Poland, with a few hundred men, in 1703, and issued a proclamation which brought large numbers to his support. The Austrian forces had been mostly drawn away, by the war of the Spanish succession, into Italy and to the Rhine, and during the first year of the insurrection the Hungarian patriot became master of the greater part of the country. Then there occurred a suspension of hostilities, while the English government made a fruitless effort at mediation. On the reopening of warfare, the Austrians were better prepared and more encouraged by the circumstances of the larger contest in which they were engaged; while the Hungarians were correspondingly discouraged. They had promises of help from France, and France failed them; they had expectations from Russia, but nothing came of them. "The fortune of war decidedly turned in favour of the imperialists, in consequence of which numerous families, to escape their fury, left their abodes to seek shelter in the national camp; a circumstance which, besides clogging the military movements, contributed to discourage the army and spread general consternation." In 1710 Rakoczy went to Poland, where he was long absent, soliciting help which he did not get. "Before his departure, the chief command of the troops was entrusted to Karoly, who, tired of Rakoczy's prolonged and useless absence in Poland, assembled the nobles at Szathmar, and concluded, in 1711, a peace known as the Treaty of Szathmar. By this treaty the emperor engaged to redress all grievances, civil and religious, promising, besides, amnesty to all the adherents of Rakoczy, as well as the restitution of many properties illegally confiscated. Rakoczy protested from Poland against the peace concluded by Karoly; but of what effect could be the censure and remonstrance of a leader who, in the most critical emergency, had left the scene of action in quest of foreign assistance, which, he might have foreseen, would never be accorded. . . . After the peace of Szathmar, Hungarian history assumes a quite different character." Revolts are at an end for more than a century, and "Hungary, without producing a single man of note, lay in a state of deep lethargy." In 1714, the Emperor Charles VI. (who, as King of Hungary, was Charles III.) began a new war against the Porte, with Prince Eugene again commanding in Hungary. "The sultan Achmet III., anticipating the design of the imperial general [to concentrate his troops on the Danube], marched his army across the Save, and, as will be seen, to his own destruction. After a small

success gained by Palfy, Eugene routed the Turks at Peterwardein [August 13, 1716], and captured besides nearly all their artillery. Profiting by the general consternation of the Turks, Eugene sent Palfy and the Prince of Wurtemberg to lay siege to the fortress of Temesvar, which commands the whole Banat, and which was surrendered by the Turks after a heavy siege. By these repeated disasters the Mussulmans lost all confidence in the success of their arms; and in the year 1717 they opened the gates of Belgrade to the imperial army. The present campaign paved the way for the peace of Passarowitz, a little town in Servia,—a peace concluded between the Porte and the Emperor in 1718. In virtue of the provisions of this treaty, the Porte abandoned the Banat, the fortress of Belgrade, and a part of Bosnia, on the hither side of the Unna, promising besides the free navigation of the Danube to the people of the Austrian empire."—E. Szabad, *Hungary, Past and Present*, pt. 2, ch. 5-6.

A. D. 1780-1790.—Irritations of the reign of Joseph II.—Illiberality of the Hungarian nobles.—"The reign of Joseph II. is described by the historians of Hungary and Bohemia as a disastrous time for the two countries. Directly he ascended the throne he began to carry out a series of measures which deeply irritated the Magyars. With his philosophical ideas, the crown of Hungary was to him nothing more than a Gothic bauble, and the privileges of the nation only the miserable remains of an age of barbarism; the political opinions of the Hungarians were as distasteful to him as their customs, and he amused himself with ridiculing the long beards and the soft boots of the great nobles. He never would be crowned. He annoyed the bishops by his laws against convents, while his tyrannical tolerance never succeeded in contenting the Protestants. . . . On the 7th of April, 1784, he ordered that the holy crown should be brought to him in Vienna and placed in the imperial treasury. To confiscate this symbol of Hungarian independence was, in the eyes of the Magyars, an attempt at the suppression of the nation itself, and the affront was deeply resented. Up to this time the official language of the kingdom had been Latin, a neutral tongue among the many languages in use in the various parts of Hungary. Joseph believed he was proving his liberal principles in substituting German, and that language took the place of Latin. . . . Joseph II. soon learned that it is not wise to attack the dearest prejudices of a nation. The edict which introduced a foreign language was the signal for the new birth of Magyar. . . . At the time of the death of Joseph II. Hungary was in a state of violent disturbance.

The 'comitat' of Pesth proclaimed that the rule of the Hapsburgs was at an end, and others threatened to do the same unless the national liberties were restored by the new sovereign. All united in demanding the convocation of the diet in order that the long-suppressed wishes of the people might be heard. The revolutionary wind which had passed over France had been felt even by the Magyars, but there was this great difference in its effect upon France and Hungary—in France, ideas of equality had guided the revolution; in Hungary, the great nobles and the squirearchy who formed the only political element claimed, under the name of liberties, privileges which were for the most part absolutely opposed to the ideas of the Revolution of 1789. . . . Among the late reforms only one had found favour in the eyes of the Magyars, and that was toleration towards Protestants, and the reason of this was to be found in the fact that the small landowners of Hungary were themselves to a large extent Protestant; yet a democratic party was gradually coming into existence which appealed to the masses. . . . When France declared war against Francis II. the Magyar nobles showed themselves quite ready to support their sovereign; they asked for nothing better than to fight the revolutionary democrats of Paris. Francis was crowned very soon after his accession, and was able to obtain both men and money from the diet; but before long, the reactionary measures carried by Thugut his minister, lost him all the popularity which had greeted him at the beginning of his reign. The censorship of the press, the employment of spies, and the persecution of the Protestants—a persecution, however, in which the Hungarian Catholics themselves took an active part—all helped to create discontent."—L. Leger, *Hist. of Austro-Hungary*, ch. 23 and 28.

A. D. 1815-1844.—The wakening of the national spirit.—Patriotic labors of Szechenyi and Kossuth.—"The battle of Waterloo, in 1815, put an end to the terrible struggle by which every country in Europe had for twenty years been agitated. The sovereigns of the continent now breathed freely . . . and their first act was to enter into a league against their deliverers, to revoke all their concessions, and break all their promises. . . . The most audacious of all those who joined in framing the Holy Alliance was the emperor of Austria. The Hungarians reminded him, in 1815, of his repeated promises to redress their grievances, while they were voting him men and money to defend his capital against the assaults of Napoleon. He could not deny the promises, but he emphatically declined to fulfil them. They asked him to convocate the diet, but he . . . determined to dispense with it for the future. . . . At last the popular ferment reached such a pitch, that the government found it absolutely necessary to yield the point in dispute. In 1825, Francis I. convoked the diet, and from that moment the old struggle, which the wars with France had suspended, was renewed. . . . The session was . . . rendered for ever memorable by an incident, in itself of trifling importance, but of vast significance when viewed in connexion with subsequent events. It was in it that Count Stephen Szechenyi made his first

speech in the Magyar language. The life of this extraordinary man is more remarkable as an instance of what may be achieved by well-directed energy, labouring in obedience to the dictates of patriotism, than for any brilliant triumphs of eloquence or diplomacy. . . . He was no great orator; so that his influence over the Magyars—an influence such as no private individual has ever acquired over a people, except, perhaps, Kossuth and O'Connell—must be looked upon rather as the triumph of practical good sense and good intentions than of rhetorical appeals to prejudices or passion. . . . The first object to which his attention was directed was the restoration of the Magyar language, which, under the Germanizing efforts of Austria, had fallen into almost total disuse amongst the higher classes. He knew how intimately the use of the national language is connected with the feeling of nationality. . . . But the Magyar was now totally neglected by the Magyar gentlemen. Latin was the language of the diet, and of all legal and official documents, and German and French were alone used in good society. Szechenyi, as the first step in his scheme of reformation, set about rescuing it from the degradation and disuse into which it had fallen; and as the best of all ways to induce others to do a thing is to do it oneself first, he rose in the diet of 1825, and, contrary to previous usage, made a speech in Magyar. His colleagues were surprised; the magnates were shocked; the nation was electrified. . . . The diet sat for two years, and during the whole of that period Szechenyi continued his use of the native language, in which he strenuously opposed the designs of the court, and was soon considered the leader of the opposition or liberal party, which speedily grew up around him. His efforts were so successful, that before the close of the session, Francis was compelled to acknowledge the illegality of his previous acts, formally to recognize the independence of the country, and promise to convoke the diet at least once in every three years. . . . He [Szechenyi] soon had the satisfaction of seeing the Hungarian language growing to general use, but he was still vexed to see the total want of unity, co-operation, and communion which prevailed amongst the nobles, owing to the want of a newspaper press, or of any place of re-union where political subjects could be discussed amongst men of the same party with freedom and confidence. This he remedied by the establishment of the casino, at Pesth, upon the plan of the London clubs. He next turned his attention to the establishment of steam navigation on the Danube. . . . He . . . rigged out a boat, sailed down the Danube right to the Black Sea, explored it thoroughly, found it navigable in every part, went over to England, studied the principles of the steam-engine as applied to navigation, brought back English engineers, formed a company, and at last confounded the multitude of sceptics, who scoffed at his efforts, by the sight of a steam-boat on the river in full work. This feat was accomplished in October, 1830. . . . In the interval which followed the dissolution of the diet, Szechenyi still followed up his plan of reform with unwearied diligence, and owing to his exertions, a party was now formed which sought not merely the strict observance of the existing laws, but the reform of them, the abolition of the unjust privileges of the

nobles, the emancipation of the peasantry, the establishment of a system of education, the equal distribution of the taxes, the equality of all religious sects, the improvement of the commercial code and of internal communication, and though last, not least, the freedom of the press. These projects were all strenuously debated, but on this occasion without any practical result. The next meeting was for a long time delayed, upon one pretext or another. At last it was convened in 1832, and proved in many respects one of the most important that had ever assembled. . . . The man who in future struggles was destined to play so prominent a part, during the whole of these . . . proceedings, was merely an intent and diligent looker-on. . . . He was a gentleman of noble origin, of course, but his whole fortune lay in his talents, which at that period were devoted to journalism—a profession which the Hungarians had not yet learned to estimate at its full value. He was still but thirty years of age, and within the diet he was known as a promising young man, although, amongst the world without, his name—the name of Louis Kossuth, which has since become a household word in two hemispheres—had never yet been heard. . . . Whether from the jealousy of the government or the apathy of the Magyars, no printed reports of the parliamentary proceedings had ever yet been published. . . . To supply this defect, Kossuth resolved to devote the time, which would otherwise have been wasted in idle listening, to carefully reporting everything that took place, and circulated it all over the country on a small printed sheet. The importance of the proceedings which then occupied the attention of the diet caused it to be read with extraordinary eagerness, and Kossuth rendered it still more attractive by amplifying, and often even embellishing, the speeches. The cabinet, however, soon took the alarm, and although the censorship was unknown to the Hungarian law, prohibited the printing and publication of the reports. This was a heavy blow, but Kossuth was not baffled. He instantly gathered round him a great number of young men to act as secretaries, who wrote out a great number of copies of the journal, which were then circulated in manuscript throughout Hungary. The government was completely foiled, and new ardour was infused into the liberal party. When the session was at an end he resolved to follow up his plan by reporting the meetings of the county assemblies, which were then the scenes of fiery debates. . . . The government stopped his journal in the post-office. He then established a staff of messengers and carriers, who circulated it from village to village. The enthusiasm of the people was fast rising to a flame. A crisis was imminent. It was resolved to arrest Kossuth. . . . He was seized, and shut up in the Neuhaus, a prison built at Pesth by Joseph II. He was, however, not brought to trial till 1839, and was then sentenced to four years' imprisonment. The charge brought against him was, that he had circulated false and inaccurate reports; but the real ground of offence was, as everyone knew, that he had circulated any reports at all. . . . Kossuth, after his liberation from prison, had taken up his abode for a short period at a watering place called Parad, for the purpose of recruiting his shattered health, and for a time wholly abstained from taking any part in public affairs. On the first of January, 1841, however, a printer in

Pesth, named Landerer, obtained permission to publish a journal entitled 'Pesthi Hirlap,' or the Pesth Gazette. He offered the editorship to Kossuth, who accepted it, but only on condition that he should be perfectly untrammelled in the expression of his opinions. . . . Kossuth . . . soon raised the circulation of his paper to 10,000 copies—an immense number in a country where the newspaper press had hitherto hardly had a footing. He made vigorous onslaughts upon the privileges of the noblesse, and pleaded the cause of the middle and lower classes unanswerably. . . . In 1844, owing to a change of ministry which threw the liberals out of office, he lost the editorship of the Gazette; but he had kindled a flame which now blazed fiercely enough of itself."—E. L. Godkin, *History of Hungary*, ch. 21.

A. D. 1847-1849.—The struggle for National Independence and its failure.—"A strong spirit of nationality had been growing up for many years, greatly fostered by Louis Kossuth, a newspaper editor. The old Magyar language, which had been treated as barbarous, was cultivated. Books and papers were printed in the tongue, all with the spirit of independence as a country and a race apart from that of the Austrians. In November, 1847, Ferdinand V. had opened the Diet in person, and proposed reforms in the Constitution were put before him. Count Batthyani, Prince Esterhazy, Kossuth, and others, drew up a scheme which was laid before the Emperor in the April of 1848, amid the crash of revolutions, and was assented to by him. But the other tribes within the kingdom of Hungary, the Rascians and Croats, began to make separate demands, and to show themselves stronger than the Magyars and Germans scattered among them. It was strongly suspected that they were encouraged by the Austrian powers in order to break down the new Hungarian constitution. The Hungarian council applied to have their national troops recalled from Lombardy, where, under Radetzky, they were preserving the Emperor's power; but this could not be granted, and only a few foreign regiments, whom they distrusted, were sent them. Disturbances broke out, and at the same time the Wallachians in Transylvania rose, and committed ravages on the property of Hungarians. The confusion was great, for these insurgents called the constitutional government of Hungary rebels, and professed to be upholding the rights of the Emperor, and, on the other hand, the Hungarian government viewed them as rebels. . . . Meantime a high-spirited Croatian officer, Baron Jellachich, had been appointed Ban of Croatia, and collected forces from among his wild countrymen to put down the Hungarian rule. . . . Jellachich advanced upon Pesth, and thus showed the Government there that in Ferdinand's eyes they were the rebels. Batthyani resigned, and Kossuth set himself to raise the people. Jellachich was defeated, and entered the Austrian states, appearing to menace Vienna. The effect of this was a tremendous insurrection of the Viennese, who seized Latour, the minister at war, savagely murdered him, and hung his body, stripped naked, to a lamp-post. The Viennese, under the command of the Polish General Bem, now prepared for a siege, while Windischgrätz and Jellachich collected a large army of Austrians and Croats, besieged the city, stormed it on the 30th of October, and made an entrance, when

all the ringleaders of the rebellion were treated with great severity. Jellachich then prepared to lead his Croats into Hungary, which was a very different matter, since the constitutional government there had been formed under the sanction and encouragement of Ferdinand. Kossuth and the rest of the ministry therefore thought themselves justified in naming a committee of public safety, and voting the raising of an army of 200,000 men. Ferdinand V., now an old man, felt himself no longer capable of coping with all the discordant forces of the empire; a family council was held at Olmütz, whither the Court had retired, and it was decided that he should abdicate, and that his next brother, Francis Charles, should waive his right in favour of his son, Francis Joseph, a promising and amiable young man of twenty, who, it was hoped, would conciliate matters. On December 2d, 1848, the change was made, and the new Emperor put forth a proclamation, promising constitutional government, liberty of the press, and all that could conduce to true freedom, but called on all faithful subjects to repress the rebellions that were raging in the provinces. Both in Lombardy and in Hungary this was taken as defiance; indeed, the Magyars considered that neither the abdication of Ferdinand, nor the accession of Francis Joseph to their throne, was valid without the consent of the Diet. Prince Windischgrätz was sent to reduce them with a considerable army, while Kossuth showed remarkable ability in getting together supplies for the Hungarian force, which was commanded by Generals Bem and Görgei. The difficulties of passing the mountains in the winter told much against the Austrians, though a corps of Russians was sent to their assistance. Five considerable battles were fought in the early spring of 1849, and in April Windischgrätz was fairly driven across the Danube out of the country."—C. M. Yonge, *Landmarks of Recent History*, ch. 3, pt. 5.—"On the 4th of March [1849] a new Imperial Charter was promulgated at Olmütz, containing many excellent provisions, but having this fatal defect, that in it Hungary was merged completely in the Austrian Empire, and all its ancient institutions obliterated. On the 14th of April the Imperial Decree was answered by the Declaration of Independence, in which the Hapsburg dynasty was proclaimed to have forfeited all right to the Hungarian throne, and to be banished for ever from the country. Kossuth was appointed Governor, and a new Ministry was chosen, under the Premiership of M. Szemere, the late Minister for Home Affairs in the Batthyány Government. For a while the national army was victorious. . . . But the despotic princes of Europe were now recovering from the panic that had demoralised them and their principles in 1848; the time had come for absolutism to rally its forces and reassert itself after the old fashion. Acting on the maxim that 'La raison du plus fort est toujours la meilleure,' the Emperor of Austria, after previous arrangement with his imperial brother in St. Petersburg, felt at liberty to disavow and ignore the arguments for constitutional government which had seemed so cogent to his predecessor. . . . In July the Czar's troops a second time entered Hungary, this time with no disavowal of political motives, but on the ground that 'His majesty, having always reserved to himself entire freedom of action whenever

revolutions in neighboring States should place his own in danger, was now convinced that the internal security of his empire was menaced by what was passing and preparing in Hungary. . . . In August, Görgei, the commander-in-chief of the national army, who had been nominated Dictator in the place of Kossuth, was invested with full powers to treat for a peace, and instructed to act according to the best of his ability to save the national existence of Hungary. At Világos, on the 13th of August, the Hungarian army, by order of the new Dictator, laid down their arms, and surrendered—not to the Austrians, but to the Russian general Rudiger. Thanks to the united efforts of 300,000 of the flower of the Austrian and Russian troops, the Hungarian rebellion was at an end. . . . General Haynau presided over the Bloody Assizes of Pesth and Arad, and the long roll of Hungarian patriots condemned to death at the hands of the Austrian hangman was headed by such names as Count Batthyány and General Damjanics, the wounded leader of the 'Redcaps,' the famous student brigade. Those who escaped death found a refuge in England, America, or Turkey, whither they carried with them bitter memories of wrong and suffering inflicted, and an undying love for the country of their birth. Those bitter memories have happily died away, under the healing influence of time, and still more of that great work of reconciliation which a wise generosity on both sides has effected between the two countries."—*Francis Deak, Hungarian Statesman: a memoir*, ch. 14.—See, also, AUSTRIA: A. D. 1848-1849.

A. D. 1856-1868.—Recovery of nationality.—Formation of the dual Austro-Hungarian empire.—In 1856, the Emperor, Francis Joseph, "proclaimed an amnesty against the political offenders, and in the following year he decreed the restoration of their estates, and further steps were taken to study the wishes of the Hungarians. In 1859 other concessions were made, notably as to provincial Governments in Hungary, and they were given free administration as to their educational and religious rites in the Magyar tongue. In 1860 the 'Curia Regia' were reinstated, and finally, in 1861, the whole Constitution was restored to Hungary and its dependencies, Transylvania, Croatia, and Slavonia. The Hungarian Parliament, which had been closed for so many years, reopened its gates. These concessions, however, did not satisfy the Magyars, who wanted perfect autonomy for their country. . . . The Hungarians refused to pay taxes, which therefore had to be collected by military aid. In 1865 the Hungarian Parliament was opened by the Emperor in person, who gave his assent to the Self-Government of Hungary, but further details had still to be arranged, and the war which broke out between Austria, Prussia and Italy in 1866 prevented these from being carried out. On the strength of the Emperor's promise to accede to the wishes of his Hungarian subjects, the Hungarians

fought most bravely in Germany and in Italy for the Austrian cause, but the disorganized system that then existed in the Austrian army was the cause of their defeat, and the dissolution of the German confederation, over which Austria presided for so many years. The final result of this was that a perfect autonomy for Hungary was reinstated in 1867, and the Dual System was introduced, by which Hungary received perfect freedom and independence as to the administration of its affairs without any interference from Austria, and became, so to say, a partner in the newly-formed Austro-Hungarian Monarchy. The Austro-Hungarian Dual Monarchy, as also described in the able 'Memoir' on Francis Deák, to which Sir Mountstuart E. Grant-Duff wrote a preface, is constituted as follows: I. The Common Ministry for the Austro-Hungarian monarchy consists of a Minister for Foreign Affairs, for War, and for Finance. II. In each half of the monarchy there is a separate Ministry of Worship, of Finance, Commerce, Justice, Agriculture, and National Defence, headed respectively by a Minister-President of the Council. III. The Lower House in the Austrian Reichsrath consists of 353 members, in the Hungarian Diet of 444, now chosen in both cases by direct election. IV. The Delegations, composed respectively of sixty members from each half of the monarchy, are elected annually from amongst their parliamentary representatives of the majority in each province by the members of the two Houses of the Austrian and Hungarian Legislatures. V. The two Delegations, who meet alternately at Vienna and Budapest, deliberate separately, their discussions being confined strictly to affairs of common interest, with regard to which the Delegations have the right to interpellate the Common Minister and to propose laws or amendments. In case of disagreement between the two Delegations the question of policy at issue is discussed by an interchange of written messages, drawn up in the official language—German or Hungarian—of the Delegation sending the message, and accompanied by an authorized translation in the language of the Delegation to which it is addressed. VI. If, after the interchange of three successive notes, an agreement between the two bodies is not arrived at, the question is put to the vote by ballot without further debate. The Delegates, of whom in a plenary session there must be an equal number present from each Delegation, vote individually, the Emperor-King having the casting vote. VII. By virtue of the present definition of common affairs, the cost of the diplomatic service and the army, except the Honvéds (militia), is defrayed out of the Imperial revenues, to which Hungary contributes a proportion of 30 per 100. VIII. With reference to the former, it is stipulated that all international treaties be submitted to the two Legislatures by their respective Ministries; with reference to the latter, that whilst the appointment to the military command of the whole army, as also to that of the national force of Hungary, is in the hands of the Sovereign, the settlement of matters affecting the recruiting, length of service, mobilization, and pay of the Honvéd army (the militia) remains with the Hungarian Legislature. IX. Those matters which it is desirable should be subject to the same legislation, such as customs, indirect taxation, currency, etc., etc., are

regulated by means of treaties, subject to the approval of the two Legislatures. In cases where the two parties are unable to come to an agreement, each retains the right to decide such questions in accordance with their own special interests. X. In common affairs, the decisions arrived at by the Delegations (within the scope of their powers), and sanctioned by the Sovereign, become thenceforth fundamental laws; each Ministry is bound to announce them to its respective National Legislature, and is responsible for their execution. It should be here mentioned that the late great and lamented Hungarian statesman, Deák, and also the late Count Beust, have by their personal efforts contributed a great deal to these concessions being granted. The Hungarian Parliament was reopened in 1867, and the late Count Julius Andrassy, . . . who escaped to England from the noose of the hangman, became its Prime Minister. . . . In 1868 the Emperor and Empress entered in great state the town of Buda, and were crowned with the greatest pomp with the

HUNS, Gothic account of the.—"We have ascertained that the nation of the Huns, who surpassed all others in atrocity, came thus into being. When Filimer, fifth king of the Goths after their departure from Sweden, was entering Scythia, with his people, as we have before described, he found among them certain sorcerers-women, whom they call in their native tongue Alorumnas (or Al-runas), whom he suspected and drove forth from the midst of his army into the wilderness. The unclean spirits that wander up and down in desert places, seeing these women, made concubines of them; and from this union sprang that most fierce people (of the Huns) who were at first little, foul, emaciated creatures, dwelling among the swamps, and possessing only the shadow of human speech by way of language. . . . Nations whom they would never have vanquished in fair fight fled horrified from those frightful—faces I can hardly call them, but rather—shapeless black collops of flesh, with little points instead of eyes. No hair on their cheeks or chins gives grace to adolescence or dignity to age, but deep furrowed scars instead, down the sides of their faces, show the impress of the iron which with characteristic ferocity they apply to every male child that is born among them. . . . They are little in stature, but lithe and active in their motions, and especially skilful in riding, broad-shouldered, good at the use of the bow and arrows, with sinewy necks, and always holding their heads high in their pride."—Jornandes, *De Rebus Geticis*, trans. by T. Hodgkin in *Italy and Her Invaders*, bk. 1, ch. 1.

A. D. 1894.—Death of Kossuth.—Louis Kossuth, the leader of the revolutionary movement of 1848, died at Turin on the 20th of March, 1894, aged ninety-two years. He had refused to the end of his life to be reconciled to the Austro-Hungarian government, or to countenance the acceptance by the Hungarians of the dual nationality established by the constitution of 1867, and remained an exile in Italy. After his death his remains were brought to Budapest, and their burial, which took place on Sunday, April 1st, was made the occasion of a great national demonstration of respect.

something more than a generation. They were hovering, meantime, on the eastern frontiers of the empire "taking part like other barbarians in its disturbances and alliances. Emperors paid them tribute, and Roman generals kept up a politic or a questionable correspondence with them. Stilicho had detachments of Huns in the armies which fought against Alaric; the greatest Roman soldier after Stilicho,—and, like Stilicho, of barbarian parentage,—Aetius, who was to be their most formidable antagonist, had been a hostage and a messmate in their camps. . . . About 433, Attila, the son of Mundzucki, like Charles the Great, equally famous in history and legend, became their king. Attila was the exact prototype and forerunner of the Turkish chiefs of the house of Othman. In his profound hatred of civilized men, in his scorn of their knowledge, their arts, their habits and religion, and, in spite of this, in his systematic use of them as his secretaries and officers, in his rapacity combined with personal simplicity of life, in his insatiate and indiscriminate destructiveness, in the cunning which veiled itself under rudeness, in his extravagant arrogance, and audacious pretensions, in his sensuality, in his unscrupulous and far-reaching designs, in his ruthless cruelty joined with capricious displays of generosity, mercy, and good faith, we see the image of the irreclaimable Turkish barbarians who ten centuries later were to extinguish the civilization of [eastern?] Europe. The attraction of Attila's daring character, and his genius for the war which nomadic tribes delight in, gave him absolute ascendancy over his nation, and over the Teutonic and Slavonic tribes near him. Like other conquerors of his race, he imagined and attempted an empire of ravage and desolation, a vast hunting ground and preserve, in which men and their works should supply the objects and zest of the chase."—R. W. Church, *Beginning of the Middle Ages*, ch. 1.—"He [Attila] was truly the king of kings; for his court was formed of chiefs, who, in offices of command, had learned the art of obedience. There were three brothers of the race of the Amales, all of them kings of the Ostrogoths; Ardaric, king of the Gepidae, his principal confidant; a king of the Merovingian Franks; kings

of the Burgundians, Thuringians, Rugians, and Heruli, who commanded that part of their nation which had remained at home, when the other part crossed the Rhine half a century before."—J. C. L. de Sismondi, *Fall of the Roman Empire*, ch. 7 (v. 1).—"The amount of abject, slavish fear which this little swarthy Kalmuck succeeded in instilling into millions of human hearts is not to be easily matched in the history of our race. Whether he had much military talent may be doubted, since the only great battle in which he figured was a complete defeat. The impression left upon us by what history records of him is that of a gigantic bully, holding in his hands powers unequalled in the world for ravage and spoliation. . . . Some doubt has recently been thrown on the received accounts of the wide extent of Attila's power. . . . The prince who felt China on his left, who threatened Persepolis, Byzantium, Ravenna in front, who ruled Denmark and its islands in his rear, and who ultimately appeared in arms on the soil of Champagne on his right, was no minor monarch, and had his empire been as deep as it was widespread, he might worthily have taken rank with Cyrus and Alexander. At the same time it is well to remember that over far the larger part of this territory Attila's can have been only an over-lordship, Teutonic, Slavonic, and Tartar chieftains of every name bearing rule under him. His own personal government, if government it can be called, may very likely have been confined nearly within the limits of the modern Hungary and Transylvania."—T. Hodgkin, *Italy and Her Invaders*, bk. 2, ch. 2 (v. 2).—"As far as we may ascertain the vague and obscure geography of Priscus, this [Attila's] capital appears to have been seated between the Danube, the Theiss [Teyss] and the Carpathian hills, in the plains of Upper Hungary, and most probably in the neighbourhood of Jazberin, Agria, or Tokay. In its origin it could be no more than an accidental camp, which, by the long and frequent residence of Attila, had insensibly swelled into a huge village."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 34.

A. D. 441-446.—Attila's attack on the Eastern Empire.—Attila's first assault upon the Roman power was directed against the Eastern Empire. The court at Constantinople had been duly obsequious to him, but he found a pretext for war. "It was pretended that the Roman bishop of Margus had surreptitiously introduced himself into the sepulchre of the Hunnic kings and stolen from it the buried treasure. The Huns immediately fell upon a Roman town during the time of a fair, and pillaged everything before them, slaying the men and carrying off the women. To all complaints from Constantinople the answer was, 'The bishop, or your lives.' The emperor thought, and with reason, that to give up an innocent man to be massacred would be displeasing to Heaven, would alienate the clergy, and only appease for a moment the demands of his merciless enemy. He refused, though timidly and in vague terms. The Huns replied by scouring Pannonia, laying Sirmium, its capital, in ruins, and extending their ravages far south of the Danube to the cities of Naissa and Sardica, upon both of which they wrought the extremity of their vengeance. A truce of four years only increased their fury and aggravated its effects. The war was suddenly recom-

menced. This time they reached Thessaly, and renewed with a somewhat similar result the famed passage of Thermopylæ by the hordes of Xerxes. Two Roman armies were put to complete rout, and seventy cities levelled to the ground. Theodosius purchased the redemption of his capital by the cession of territory extending for fifteen days' journey south of the Danube, by an immediate payment of 6,000 pounds of gold, and the promise of 2,000 more as an annual tribute."—J. G. Sheppard, *Fall of Rome*, lect. 4.

A. D. 451.—Attila's invasion of Gaul.—In the spring of the year 451 Attila moved the great host which he had assembled in the Hungarian plains westward toward the Rhine and the provinces of Gaul. He hesitated, it was said, between the Eastern and Western Empires as the objects of his attack. But the East had found an emperor, at last, in Marcian, who put some courage into the state,—who refused tribute to the insolent Hun and showed a willingness for war. The West, under Valentinian III. and his mother Placidia, with the Goths, Vandals, Burgundians and Franks in the heart of its provinces, seemed to offer the most inviting field of conquest. Hence Attila turned his horses and their savage riders to the West. "The kings and nations of Germany and Scythia, from the Volga perhaps to the Danube, obeyed the warlike summons of Attila. From the royal village in the plains of Hungary his standard moved towards the West, and after a march of seven or eight hundred miles he reached the conflux of the Rhine and the Neckar, where he was joined by the Franks who adhered to his ally, the elder of the sons of Clodion. . . . The Hercynian forest supplied materials for a bridge of boats, and the hostile myriads were poured with resistless violence into the Belgic provinces." At Metz, the Huns "involved in a promiscuous massacre the priests who served at the altar and the infants who, in the hour of danger, had been providently baptized by the bishop; the flourishing city was delivered to the flames, and a solitary chapel of St. Stephen marked the place where it formerly stood. From the Rhine and the Moselle, Attila advanced into the heart of Gaul, crossed the Seine at Auxerre, and, after a long and laborious march, fixed his camp under the walls of Orleans."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 35.—Meantime the energy of the unscrupulous but able Count Aetius, who ruled the court and commanded the resources of the Western Empire, had brought about a general combination of the barbarian forces in Gaul with those of the Romans. It included, first in importance, the Goths of the kingdom of Toulouse, under their king Theodoric, and with them the Burgundians, the Alans, a part of the Franks, and detachments of Saxons, Armoricans and other tribes. There were Goths, too, and Franks and Burgundians in the host of the Hun king. The latter laid siege to Orleans and the walls of the brave city were already crumbling under his battering rams when the banners of Aetius and Theodoric came in sight. Attila retreated beyond the Seine and took a position somewhere within the wide extent of what were anciently called the Catalaunian fields, now known as the Champagn country surrounding Chalons. There, in the early days of July, A. D. 451, was fought the great and terrible battle which rescued Europe from the all-conquering Tartar. The

number of the slain, according to one chronicler, was 162,000; according to others 300,000. Neither army could claim a victory; both feared to renew the engagement. The Goths, whose king Theodoric was slain, withdrew in one direction, to their own territory; the Huns retreated in the other direction and quitted Gaul forever. The wily Roman, Aetius, was probably best satisfied with a result which crippled both Goth and Hun. As for the battle, its latest historian says: "Posterity has chosen to call it the battle of Chalons, but there is good reason to think that it was fought fifty miles distant from Chalons-sur-Marne, and that it would be more correctly named the battle of Troyes, or, to speak with complete accuracy, the battle of Mery-sur-Seine."—T. Hodgkin, *Italy and Her Invaders*, bk. 2, ch. 3 (v. 2).—"It was during the retreat from Orleans that a Christian hermit is reported to have approached the Hunnish king, and said to him, 'Thou art the Scourge of God for the chastisement of Christians.' Attila instantly assumed this new title of terror, which thenceforth became the appellation by which he was most widely and most fearfully known."—Sir E. Creasy, *Fifteen Decisive Battles of the World*, ch. 6.

A. D. 452.—Attila's invasion of Italy.—In the summer of 451 Attila, retreating from the bloody plain of Chalons, recrossed the Rhine and returned to his quarters in Hungary. There, through the following autumn and winter, he nursed his chagrin and his wrath, and in the spring of 452 he set his host in motion again, directing its march to the Julian Alps and through their passes into Italy. The city of Aquileia, then prominent in commerce, and prosperous and rich, was the first to obstruct the savage invasion. The defence of the city proved so obstinate that Attila was at the point of abandoning his siege, when a flight of storks, which his shrewdness construed favorably as an omen, encouraged the Huns to one more irresistible assault and the doomed town was carried by storm. "In proportion to the stubbornness of the defence was the severity of the punishment meted out to Aquileia. The Roman soldiers were, no doubt, all slain. Attila was not a man to encumber himself with prisoners. The town was absolutely given up to the rage, the lust, and the greed of the Tartar horde who had so long chafed around its walls. . . . When the barbarians could plunder no more, they probably used fire, for the very buildings of Aquileia perished, so that, as Jornandes tells us, in his time, a century later than the siege, scarcely the vestiges of it yet remained. A few houses may have been left standing, and others must have slowly gathered round them, for the Patriarch of Aquileia retained all through the middle ages considerable remains of his old ecclesiastical jurisdiction, and a large and somewhat stately cathedral was reared there in the eleventh century. But the City of the North Wind never really recovered from the blow. . . . The terrible invaders, made more wrathful and more terrible by the resistance of Aquileia, streamed on through the trembling cities of Venetia." Patavium (modern Padua), Altinum and Julia Concordia, were blotted out of existence. At Vicenza, Verona, Brescia, Bergamo, Pavia and Milan, the towns were sacked, but spared destruction, and the inhabitants who did not escape were carried away into captivity. Many of the fugitives from these towns escaped

the Huns by hiding in the islands and fens of the neighboring Adriatic coast, and out of the poor fishing villages that they formed there grew, in time, the great commercial city and republic of Venice. "The valley of the Po was now wasted to the heart's content of the invaders. Should they cross the Appennines and blot out Rome as they had blotted out Aquileia from among the cities of the world? This was the great question that was being debated in the Hunnish camp, and strange to say, the voices were not all for war. Already Italy began to strike that strange awe into the hearts of her northern conquerors which so often in later ages has been her best defence. The remembrance of Alaric, cut off by a mysterious death immediately after his capture of Rome, was present in the mind of Attila, and was frequently insisted upon by his counsellors." So, the grim Hun was prepared by his superstitions to listen to the embassy from Rome which met him at the Ticino, praying for peace. At the head of the embassy was the venerable bishop of Rome, Leo I.—the first of the great Popes. To his influence the pacific disposition into which Attila was persuaded has been commonly ascribed. At all events, the king of the Huns consented to peace with the Romans, and withdrew beyond the Danube in fulfilment of the treaty, leaving Italy a desert to the Appennines, but not beyond.—T. Hodgkin, *Italy and Her Invaders*, bk. 2, ch. 4 (v. 2).

ALSO IN: E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 35.—See, also, VENICE: A. D. 452.

A. D. 453.—Death of Attila and fall of his empire.—Attila died suddenly and mysteriously in his sleep, after a drunken debauch, some time in the early months of the year 453, and his death was the end of the "reign of terror" under which he had reduced half the world. "Immediately after his death, the Germans refused to submit to the divided rule of his sons. The army of Attila split up into two great camps; on the one side were the Gepidae and Ostrogoths, with the majority of the Teutonic nations; on the other the Huns, the Alans, the Sarmatians or Slavonians, and the few Germans who still owned allegiance to the memory of Attila. A vast plain between the Drave and the Danube was selected to decide this vital struggle, known as the battle of Netad, which, though less famous in history, may perhaps claim equal importance with that of Chalons, as an arbiter of the destinies of civilization. . . . Fortune at first seemed to favour the Huns; but German steadfastness prevailed; Goths and Gepidae scattered the less-disciplined bands of Asia; and Ardaric, the king of the latter tribe for the time, established himself in the royal residence of Attila, and assumed the leading position in the barbarian world."—J. G. Sheppard, *Fall of Rome*, lect. 4.—"Thirty thousand of the Huns and their confederates lay dead upon the field, among them Ellak, Attila's first-born. . . . The rest of his nation fled away across the Dacian plains, and over the Carpathian mountains to those wide steppes of Southern Russia in which at the commencement of our history we saw the three Gothic nations taking up their abode. Ernak, Attila's darling, ruled tranquilly under Roman protection in the district between the lower Danube and the Black Sea, which we now call the Dobrudscha, and which was then 'the lesser Scythia.' Others of

his family maintained a precarious footing higher up the stream. . . . There is nothing in the after-history of these fragments of the nation with which any one need concern himself. . . . Dacia, that part of Hungary which lies east and north of the Danube, and which had been the heart of Attila's domains, fell to the lot of the Gepidae, under the wise and victorious Ardaric. Pannonia, that is the western portion of Hungary, with Slavonia, and parts of Croatia, Styria and Lower Austria, was ruled over by the three Amal-descended kings of the Ostrogoths."—T. Hodgkin, *Italy and Her Invaders*, bk. 3, ch. 1 (v. 2).

Attila in Teutonic legend.—"Short as was the sway of Attila (from 434 to 453), the terror it had inspired and the great commotion it had brought over the whole Teutonic and Roman world, were not . . . soon forgotten. . . . The memory of the great chieftain hovered for a long time, like a bloody phantom, in the Roman annals and in the German sagas. . . . When we compare the historical Attila, before whose piercing glance Rome and Constantinople trembled, with Etzel of the Nibelungen Lied, we find that the latter bears but a slight resemblance to the former. It is true that Attila's powerful sway is still reflected in the Nibelungen Lied, as Kriemhild at her arrival in the land of the Huns is surprised at seeing so many nations submitted to his sceptre. Yet upon the whole Etzel plays in the German epic the part of a weak and sometimes even contemptible king, while glimpses of his real might can be detected only at rare intervals, fluttering as it were in the far-distant background of a by-gone time. . . . The Eddas and the Volunga Saga bear the impress of the early Teutonic era, when the king was little more than the chosen leader in war; and the Northern people for a long time had in their political institutions nothing by which the conception of a great monarchy, or still less of a far-stretching realm like that of Attila, could be expressed."—G. T. Dippold, *Great Epics of Medieval Germany*, ch. 4.

HUNS, The White.—"It was during the reign of this prince [Varahran V., king of Persia, A. D. 420-440] that those terrible struggles commenced between the Persians and their neighbours upon the north-east which continued, from the early part of the fifth till the middle of the sixth century, to endanger the very existence of the empire. Various names are given to the people with whom Persia waged her wars during this period. They are called Turks, Huns, sometimes even Chinese; but these terms seem to be used in a vague way, as 'Scythian' was by the ancients; and the special ethnic designation of the people appears to be quite a different name from any of them. It is a name the Persian form of which is 'Haithal,' or 'Haithaleh,' the Armenian 'Hephthagh,' and the Greek 'Ephthalites,' or sometimes 'Nephthalites.' . . . All that we know of the Ephthalites is, that they were established in force, during the fifth and sixth centuries of our era, in the regions east of the Caspian, especially in those beyond the Oxus river, and that they were generally regarded as belonging to the Scythic or Finno-Turkic population, which, at any rate from B. C. 200, had become powerful in that region. They were called 'White Huns' by some of the Greeks; but it is admitted that they

were quite distinct from the Huns who invaded Europe under Attila. . . . They were a light-complexioned race, whereas the Huns were decidedly swart; they were not ill-looking, whereas the Huns were hideous; they were an agricultural people, while the Huns were nomads; they had good laws, and were tolerably well civilised, but the Huns were savages. It is probable that they belonged to the Thibetic or Turkish stock."

—G. Rawlinson, *Seventh Great Oriental Monarchy*, ch. 14.—"We are able to distinguish the two great divisions of these formidable exiles [the Huns], which directed their march towards the Oxus and towards the Volga. The first of these colonies established their dominion in the fruitful and extensive plains of Sogdiana, on the eastern side of the Caspian, where they preserved the name of Huns, with the epithet of Euthalites [Ephthalites], or Nephthalites. Their manners were softened, and even their features were insensibly improved, by the mildness of the climate and their long residence in a flourishing province; which might still retain a faint impression of the arts of Greece. The White Huns, a name which they derived from the change of their complexion, soon abandoned the pastoral life of Scythia. Gorgo, which, under the appellation of Carizine, has since enjoyed a temporary splendour, was the residence of the king, who exercised a legal authority over an obedient people. Their luxury was maintained by the labour of the Sogdians."

HUSSARS.—Matthias, son of John Hunyadi, was elected king of Hungary in 1458. "The defence of the country chiefly engaged the attention of Matthias at the commencement of his reign. Measures of defence were accordingly carried on with the utmost speed, the most important of which was the establishment of regular cavalry; to levy which one man was enrolled out of every 20 families. This was the origin of the 'Hussar,' meaning in Hungarian the price or due of twenty."—E. Szabad, *Hungary, Past and Present*, p. 50.

HUSSEIN, Shah of Persia, A. D. 1694-1722.

HUSTINGS.—COURT OF HUSTING.—

"The 'hygh and auncient' Court of Husting of the City of London is of Anglo-Saxon, or, to speak more accurately, of Scandinavian origin, being a remarkable memorial of the sway once exercised over England by the Danes and other Northmen. The name of the Court is derived from [hus], 'a house,' and [dhing], a thing, 'cause,' or 'council,' and signifies, according to general acceptance, 'a court held in a house,' in contradistinction to other 'things,' or courts, which in Saxon times were usually held in the open air. . . . The term 'Husting' or, less correctly, 'Hustings' is commonly applied at the present day to open-air assemblies or temporary courts, usually held in some elevated position, for the purpose of electing members of Parliament in counties and boroughs, its strict etymological meaning being lost sight of. . . . [The Court of Husting] is the oldest court of record within the City, and at one time constituted the sole court for settling disputes between citizen and citizen."—R. R. Sharpe, *Introd. to Calendar of Wills, Court of Husting, London*.

HUTCHINSON, Mrs. Anne, and the Antinomian troubles. See MASSACHUSETTS: A. D. 1636–1638; and RHODE ISLAND: A. D. 1638–1640.

HUTCHINSON, Governor Thomas, and the outbreak of Revolution in Massachusetts. See MASSACHUSETTS: A. D. 1761; and UNITED STATES OF AM.: A. D. 1765, NEWS OF THE STAMP ACT: 1772–1773; 1774 (MAY–JUNE).

HWICCAS.—A name borne by the West Saxons who first settled in Gloucestershire and Worcestershire when that region was conquered. They led a revolt against the West Saxon king Ceawlin, in which they were joined by the Britons, or Welsh. The battle of Wanborough, fought A. D. 591, drove Ceawlin from the throne.—J. R. Green, *The Making of Eng.*, pp. 129–208.—See ENGLAND: A. D. 547–633.

HYACINTHIA, Feast of the.—"The feast of the Hyacinthia was held annually at Amyclæ [Lacedæmonia], on the longest day of the Spartan month Hecatombæus, corresponding to our June and July. . . . Hyacinthus, the beautiful youth slain accidentally by Apollo, was the chief object of the worship. He took his name from the flower, which was an emblem of death; and the original feast seems to have been altogether a mournful ceremony,—a lamentation over the destruction of the flowers of spring by the summer heat, passing on to a more general lament over death itself."—G. Rawlinson, *Hist. of Herodotus*, Note, bk. 9, sect. 7.

ALSO IN: E. Abbott, *Hist. of Greece*, v. 1, p. 222.

HYBLA.—"There was a Sikel goddess Hybla, whom the Greeks looked on as the same with several goddesses of their own mythology, here with one, there with another. Three towns in Sicily were called after her, one in the south-eastern part of the island, now Ragusa, another on the coast north of Syracuse, near the place where the Greek colony of Megara was afterwards planted. This gave its name to the Hyblaian hills not far off, famous for their honey; but there is no hill strictly called Mount Hybla. The third Hybla is inland, not far from Catania, and is now called Paterno."—E. A. Freeman, *Story of Sicily*, p. 33.

HYDASPES, The.—The ancient name of the river Jelum, or Jhelum, in the Punjab, on the banks of which the Indian king Porus made a

vain attempt to oppose the invasion of Alexander.—C. Thirlwall, *Hist. of Greece*, ch. 53.

HYDER ALI AND TIPPOO SAIB, English Wars with. See INDIA: A. D. 1767–1769; 1780–1783; and 1785–1793.

HY-IVAR, The. See NORMANS.—NORTHMEN: 8TH–9TH CENTURIES, and 10TH–13TH CENTURIES.

HYKSOS, The. See EGYPT: THE HYKSOS.

HYLLEANS, The.—"The Hylleans are never mentioned in any historical narrative, but always in mythical [Greek] legends; and they appear to have been known to the geographers only from mythological writers. Yet they are generally placed in the islands of Melita and Black-Coreyra, to the south of Liburnia."—C. O. Müller, *Hist. and Antiq. of the Doric Race*, v. 1, *introd.*

HYMETTUS.—One of the noted mountains of Attica, "celebrated for its excellent honey, and the broad belt of flowers at its base, which scented the air with their delicious perfume."—M. and R. P. Willson, *Mosaics of Grecian Hist.*, p. 9.

HY-NIALS AND EUGENIANS.—"As surnames were not generally used, either in Ireland or anywhere else, till after the 10th century, the great families are distinguishable at first only by their tribe or clan names. Thus, at the north we have the Ily-Nial race; in the south the Eugenic race, so called, from Nial and Eoghan, their mutual ancestors."—T. D. McGee, *Popular Hist. of Ireland*, bk. 1, ch. 2 (v. 1).

HYPERBOREANS, The.—A mythical people, supposed by the ancients to dwell beyond the north wind, and therefore to enjoy a perfect climate in the extreme north.

HYPHISIS, The.—The ancient name of the river Sutlej, in the Punjab, which was the limit of Alexander's march into India.

HYRCANIA.—HYRCANIAN SEA.—"The mountain-chain which skirts the Great Plateau [of Iran] on the north, distinguished in these pages by the name of Elburz, broadens out after it passes the south-eastern corner of the Caspian Sea till it covers a space of nearly three degrees (more than 200 miles). Instead of the single lofty ridge which separates the Salt Desert from the low Caspian region, we find between the 54th and 59th degrees of east longitude three or four distinct ranges, all nearly parallel to one another, having a general direction of east and west. . . . Here in Persian times was settled a people called Hyrcani; and from them the tract derived the name of Hyrcania (Vehrkana), while the lake [Caspian Sea] on which it adjoined came to be known as 'the Hyrcanian Sea.' The fertility of the region, its broad plains, shady woods, and lofty mountains were celebrated by the ancient writers."—G. Rawlinson, *Five Great Monarchies: Persia*, ch. 1.—"In the inscriptions of the Achæmenids their land [Hyrcania] is known as Varkana; the modern name is Jorjan. Here, according to the Greeks, the mountains were covered with forests of oaks, where swarms of wild bees had their hives; in the valleys vines and fig-trees flourished, and the soil down to the sea was so luxuriant that corn grew from the fallen grains without any special sowing."—M. Duncker, *Hist. of Antiquity*, bk. 7, ch. 1.—See, also, PARTHIA.

IAZYGES, OR JAZYGES, The. See LIM-GANTES.

IBERA, Battle at. See PUNIC WAR, THE SECOND.

IBERIANS, The eastern.—"The Sapeires [of Herodotus] appear to be the Iberians of later writers. The name is found under the various forms of Saspeires, Sapeires, Sabeires, or Sabeiri, and Abeires, whence the transition to Iberes is easy. They are always represented as adjoining on the Colchians to the east and south-east, so that they must evidently have inhabited the greater part of the modern province of Georgia. . . . There is reason to believe that the modern Georgians—still called 'Virk' by their neighbours—are their descendants, and preserve, in the original seat of the nation, a name and a nationality which have defied the destroying touch of time for more than twenty-four centuries."—G. Rawlinson, *Hist. of Herodotus*, bk. 7, app. 1.—See, also, ALARODIANS.—If these Iberians of the east were connected in race or origin of name with the Iberians of western Europe, the connection does not seem to have been traced. Iberia was devastated and subjugated by the Seljuk Turks in the 11th century. See TURKS (SELJUKS): A. D. 1063-1073.

IBERIANS, The western.—"The numerous skulls obtained from Basque cemeteries possess exactly those characters which have been remarked . . . in the Neolithic tombs and caves in Britain and on the Continent, and may therefore be taken to imply that the Basque-speaking peoples are to be looked upon as a fragment of the race which occupied the British Isles, and the area west of the Rhine and north of the Alps, in the Neolithic age. . . . Nor can there be any reasonable doubt as to this small, dark-haired people being identical with the ancient Iberians of history, who have left their name in the Iberian peninsula [Spain] as a mark of their former dominion in the west. . . . In ancient times they were spread through Spain as far to the south as the Pillars of Hercules, and as far to the north-east as Germany and Denmark. The Iberic population of the British Isles was apparently preserved from contact with other races throughout the whole of the Neolithic age. On the Continent, however, it is not so; a new set of men, differing in physical characteristics from them, make their appearance. . . . The new invader is identified by Thurnam and Huxley with the Celtæ of history. . . . These two races were in possession of Spain during the very earliest times recorded in history, the Iberians occupying the north-western region, and the Celts, or Gauls, extending in a broad band south of the Pyrenees along the Mediterranean shore. . . . In the north the Vascones then, as now, held the Basque provinces of Spain. The distribution of these two races in Gaul is similar to that which we have noted in Spain. . . . When Cæsar conquered Gaul, the Iberian Aquitani possessed the region bounded by the river Garonne, the Cevennes, and the Pyrenees. . . . An ethnological connection also between Aquitaine and Brittany (Armorica) may be inferred from the remark of Pliny, 'Aquitania Armorica ante dicta.' . . . Just as the Celts pushed back the Iberian popu-

lation of Gaul as far south as Aquitania, and swept round it into Spain, so they crossed the channel and overran the greater portion of Britain, until the Silures, identified by Tacitus with the Iberians, were left only in those fastnesses which were subsequently a refuge for the Welsh against the English invaders."—W. B. Dawkins, *Early Man in Britain*, ch. 9.

ICONOCLASTIC CONTROVERSY, The.—"Of the controversies that disquieted this age [the eighth century], the greatest and the most pernicious related to the worship of sacred images. Originating in Greece, it thence spread over the East, and the West, producing great harm both to the state and to the church. The first sparks of it appeared under Phillipicus Bardanes, who was emperor of the Greeks near the beginning of this century. With the consent of the patriarch John, in the year 712, he removed from the portico of the church of St. Sophia a picture representing the sixth general council, which condemned the Monothelites, whom the emperor was disposed to favour; and he sent his mandate to Rome, requiring all such pictures to be removed out of the churches. But Constantine, the Roman pontiff, not only protested against the emperor's edict, but . . . , having assembled a council at Rome, he caused the emperor himself to be condemned as an apostate from the true religion. These first commotions, however, terminated the next year, when the emperor was hurled from the throne. Under Leo the Isaurian, a very heroic emperor, another conflict ensued; which was far more terrific, severe, and lasting. Leo, unable to bear with the extravagant superstition of the Greeks in worshipping religious images, which rendered them a reproach both to the Jews and the Saracens; in order to extirpate the evil entirely, issued an edict in the year 726, commanding all images of saints, with the exception of that of Christ on the cross, to be

removed out of the churches, and the worship of them to be wholly discontinued and abrogated. . . . A civil war broke out; first in the islands of the Archipelago and a part of Asia, and afterwards in Italy. For the people, either spontaneously, or being so instructed by the priests and monks, to whom the images were productive of gain, considered the emperor as an apostate from true religion. . . . In Italy, the Roman pontiffs, Gregory II. and Gregory III., were the principal authors of the revolt. . . . The Romans and the other people of Italy who were subjects of the Greek empire, violated their allegiance, and either massacred or expelled the viceroys of Leo. Exasperated by these causes, the emperor contemplated making war upon Italy, and especially upon the pontiff: but circumstances prevented him. Hence in the year 730, fired with resentment and indignation, he vented his fury against images and their worshippers, much more violently than before. For having assembled a council of bishops, he deposed Germanus, bishop of Constantinople, who favoured images, and substituted Anastasius in his place; commanded that images should be committed to the flames, and inflicted various punishments upon the advocates of them. The consequence of this severity was, that the Christian church was unhappily rent into two parties; that of the Iconoduli or Iconolatras, who adored and worshipped images, and that of the Iconomachi or Iconoclastas, who would not preserve but destroyed them; and these parties furiously contended with mutual invectives, abuses, and assassinations. The course commenced by Gregory II. was warmly prosecuted by Gregory III., and although we cannot determine at this distance of time the precise degree of fault in either of these prelates, thus much is unquestionable, that the loss of their Italian possessions in this contest by the Greeks, is to be ascribed especially to the zeal of these two pontiffs in behalf of images. Leo's son Constantine, surnamed Copronymus by the furious tribe of Image-worshippers, after he came to the throne, A. D. 741, trod in his father's steps; for he laboured with equal vigour to extirpate the worship of images, in opposition to the machinations of the Roman pontiff and the monks. Yet he pursued the business with more moderation than his father had done: and being aware that the Greeks were governed entirely by the authority of councils in religious matters, he collected a council of eastern bishops at Constantinople in the year 754, to examine and decide this controversy. By the Greeks this is called the seventh general council. The bishops pronounced sentence, as was customary, according to the views of the emperor; and therefore condemned images. . . . Leo IV., who succeeded to the throne on the death of Constantine, A. D. 775, entertained the same views as his father and grandfather. For when he saw, that the abettors of images were not to be moved at all by mild and gentle measures, he coerced them with penal statutes. But Leo IV. being removed by poison, through the wickedness of his perfidious wife Irene, in the year 780, images became triumphant. For that guilty woman, who governed the empire during the minority of her son Constantine, with a view to establish her authority, after entering into a league with Hadrian the Roman pontiff, assembled a council at Nice in Bithynia in the year

786, which is known by the title of the second Nicene council. Here the laws of the emperors, together with the decrees of the council of Constantinople, were abrogated; the worship of images and of the cross was established. . . . In these contests most of the Latins,—as the Britons, the Germans, and the French, took middle ground between the contending parties; for they decided, that images were to be retained indeed, and to be placed in the churches, but that no religious worship could be offered to them without dishonouring the Supreme Being. In particular Charlemagne, at the suggestion of the French bishops who were displeased with the Nicene decrees, caused four Books concerning images to be drawn up by some learned man, and sent them in the year 790 to the Roman pontiff Hadrian, with a view to prevent his approving the decrees of Nice. In this work, the arguments of the Nicene bishops in defence of image-worship, are acutely and vigorously combated. But Hadrian was not to be taught by such a master, however illustrious, and therefore issued his formal confutation of the book. Charlemagne next assembled, in the year 794, a council of 300 bishops, at Frankfort on the Maine, in order to re-examine this controversy. This council approved the sentiments contained in the Books of Charlemagne, and forbid the worship of images."—J. L. von Mosheim, *Institutes of Ecclesiastical Hist.*, bk. 3, cent'y 8, pt. 2, ch. 3 (v. 2).

A. D. 1700-1750.—The "Illinois country" under the French.—"For many years the term 'Illinois country' embraced all the region east of the Upper Mississippi as far as Lake Michigan, and from the Wisconsin on the north to the Ohio on the south. The extent of the Illinois country under the French varied but little from the extent of the present State of Illinois. At a later date, its limits on the east were restricted by the 'Wabash country,' which was erected into a separate government, under the command of 'Post St. Vincent,' on the Wabash River. . . . The early French on the Illinois were remarkable for their talent of ingratiating themselves with the warlike tribes around them, and for their easy amalgamation in manners and customs, and blood. . . . Their settlements were usually in the form of small, compact, patriarchal villages, like one great family assembled around their old men and patriarchs."—J. W. Monette, *Hist. of the Discovery and Settlement of the Valley of the Mississippi*, v. 1, pp. 181-183.—See, also, **LOUISIANA:** A. D. 1719-1750.

A. D. 1751.—Settlements and population.—"Up to this time, the 'Illinois country,' east of the Upper Mississippi, contained six distinct settlements, with their respective villages. These were: 1. Cahokia, near the mouth of Cahokia Creek, and nearly five miles below the present site of St. Louis; 2. St. Philip, forty-five miles below the last, and four miles above Fort Chartres, on the east side of the Mississippi; 3. Fort Chartres, on the east bank of the Mississippi, twelve miles above Kaskaskia; 4. Kaskaskia, situated upon the Kaskaskia River, five miles above its mouth, upon a peninsula, and within two miles of the Mississippi River; 5. Prairie du Rocher, near Fort Chartres; 6. St.

Geneviève, on the west side of the Mississippi, and about one mile from its bank, upon Gabarre Creek. These are among the oldest towns in what was long known as the Illinois country. Kaskaskia, in its best days, under the French régime, was quite a large town, containing 2,000 or 3,000 inhabitants. But after it passed from the crown of France, its population for many years did not exceed 1,500 souls. Under the British dominion the population decreased to 460 souls, in 1773."—J. W. Monette, *Hist. of the Discovery and Settlement of the Mississippi Valley*, v. 1, pp. 167-168.—"The population of the French and Indian villages in the district of the Illinois, at the period of which we write, is largely a matter of conjecture and computation. Father Louis Vivier, a Jesuit missionary, in a letter dated June 8, 1750, and written from the vicinity of Fort Chartres, says: 'We have here whites, negroes, and Indians, to say nothing of the cross-breeds. There are five French villages, and three villages of the natives within a space of twenty-five leagues, situate between the Mississippi and another river called (Kaskaskia). In the French villages are, perhaps, eleven hundred whites, three hundred blacks, and sixty red slaves or savages. The three Illinois towns do not contain more than eight hundred souls, all told.' This estimate does not include the scattered French settlers or traders north of Peoria, nor on the Wabash. It is stated that the Illinois nation, then dwelling for the most part along the river of that name, occupied eleven different villages, with four or five fires at each village, and each fire warming a dozen families, except at the principal village, where there were three hundred lodges. These data would give us something near eight thousand as the total number of the Illinois of all tribes."—J. Wallace, *History of Illinois and Louisiana under the French Rule*, ch. 16.

A. D. 1763.—Cession to Great Britain.—See **SEVEN YEARS WAR.**

A. D. 1763.—The king's proclamation excluding settlers. See **NORTHWEST TERRITORY OF THE U. S. OF AM.:** A. D. 1763.

A. D. 1765.—Possession taken by the English.—"The French officers had, since the peace, been ready loyally to surrender the country to the English. But the Illinois, the Missouri, and the Osage tribes would not consent. At a council held in the spring of 1765, at Fort Chartres, the chief of the Kaskaskias, turning to the English officer, said: 'Go hence, and tell your chief that the Illinois and all our brethren will make war on you if you come upon our lands.' . . . But when Fraser, who arrived from Pittsburg, brought proofs that their elder brothers, the Senecas, the Delawares and the Shawnees, had made peace with the English, the Kaskaskias said: 'We follow as they shall lead.' 'I waged this war,' said Pontiac, 'because, for two years together, the Delawares and Shawnees begged me to take up arms against the English. So I became their ally, and was of their mind;' and, plighting his word for peace, he kept it with integrity. A just curiosity may ask how many persons of foreign lineage had gathered in the valley of the Illinois since its discovery by the missionaries. Fraser was told that there were of white men, able to bear arms, 700; of white women, 500; of their children, 850; of negroes of both sexes, 900. The banks of the Wabash, we learn from another source, were occupied by

about 110 French families, most of which were at Vincennes. Fraser sought to overawe the French traders with the menace of an English army that was to come among them; but they pointed to the Mississippi, beyond which they would be safe from English jurisdiction [France having ceded to Spain her territory on the western side of the river]. . . . With Croghan, an Indian agent, who followed from Fort Pitt, the Illinois nations agreed that the English should take possession of all the posts which the French formerly held; and Captain Stirling, with 100 men of the 42d regiment, was detached down the Ohio, to relieve the French garrison. At Fort Chartres, St. Ange, who had served for fifty years in the wilderness, gave them a friendly reception; and on the morning of the 10th of October he surrendered to them the left bank of the Mississippi. Some of the French crossed the river, so that at St. Genevieve there were at least five-and-twenty families, while St. Louis, whose origin dates from the 15th of February 1764, and whose skilfully chosen site attracted the admiration of the British commander, already counted about twice that number, and ranked as the leading settlement on the western side of the Mississippi. In the English portion of the distant territory, the government then instituted was the absolute rule of the British army, with a local judge to decide all disputes among the inhabitants according to the customs of the country, yet subject to an appeal to the military chief."—G. Bancroft, *Hist. of the United States (Author's last revision)*, v. 3, pp. 151-152.

A. D. 1765-1774.—Early years of English rule.—"Just before and during the first years of the English domination, there was a large exodus of the French inhabitants from Illinois. Such, in fact, was their dislike of British rule that fully one-third of the population, embracing the wealthier and more influential families, removed with their slaves and other personal effects, beyond the Mississippi, or down that river to Natchez and New Orleans. Some of them settled at Ste. Genevieve, while others, after the example set by St. Ange, took up their abode in the village of St. Louis, which had now become a depot for the fur company of Louisiana. . . . At the close of the year 1765, the whole number of inhabitants of foreign birth or lineage, in Illinois, excluding the negro slaves, and including those living at Post Vincent on the Wabash, did not much exceed two thousand persons; and, during the entire period of British possession, the influx of alien population hardly more than kept pace with the outflow. Scarcely any Englishmen, other than the officers and troops composing the small garrisons, a few enterprising traders and some favored land speculators, were then to be seen in the Illinois, and no Americans came hither, for the purpose of settlement, until after the conquest of the country by Colonel Clark. All the settlements still remained essentially French, with whom there was no taste for innovation or change. But the blunt and sturdy Anglo-American had at last gained a firm foot-hold on the banks of the great Father of Rivers, and a new type of civilization, instinct with energy, enterprise and progress, was about to be introduced into the broad and fertile Valley of the Mississippi. . . . Captain Thomas Stirling began the military government of the country on October 10, 1765, with fair and liberal concessions, calculated to secure the good-will and loyalty of

the French-Canadians, and to stay their further exodus; but his administration was not of long duration. On the 4th of the ensuing December, he was succeeded by Major Robert Farmer, who had arrived from Mobile with a detachment of the 34th British infantry. In the following year, after exercising an arbitrary authority over these isolated and feeble settlements, Major Farmer was displaced by Colonel Edward Cole, who had commanded a regiment under Wolfe, at Quebec. Colonel Cole remained in command at Fort Chartres about eighteen months; but the position was not congenial to him. . . . He was accordingly relieved at his own request, early in the year 1768. His successor was Colonel John Reed, who proved a bad exchange for the poor colonists. He soon became so notorious for his military oppressions of the people that he was removed, and gave place to Lieutenant-Colonel John Wilkins, of the 18th, or royal regiment of Ireland, who had formerly commanded at Fort Niagara. Colonel Wilkins arrived from Philadelphia and assumed the command September 5, 1768. He brought out with him seven companies of his regiment for garrison duty. . . . One of the most noticeable features of Colonel Wilkins' administration was the liberality with which he parceled out large tracts of the domain over which he ruled to his favorites in Illinois, Philadelphia, and elsewhere, without other consideration than requiring them to re-convey to him a certain interest in the same. Lieutenant-Colonel Wilkins' government of the Illinois country eventually became unpopular, and specific charges were preferred against him, including a misappropriation of the public funds. He asked for an official investigation, claiming that he was able to justify his public conduct. But he was deposed from office in September, 1771, and sailed for Europe in July of the following year. Captain Hugh Lord, of the 18th regiment, became Wilkins' successor at Fort Chartres, and continued in command until the year 1775. . . . On the 2d of June, 1774, Parliament passed an act enlarging and extending the province of Quebec to the Mississippi River so as to include the territory of the Northwest. . . . Who was the immediate successor of Captain Lord in command of the Illinois, is not positively determined."—J. Wallace, *History of Illinois and Louisiana under the French Rule*, ch. 20.

A. D. 1832.—The Black Hawk War.—"In 1830 a treaty was made with the tribes of Sacs and Foxes, by which their lands in Illinois were ceded to the United States. They were nevertheless unwilling to leave their country. . . . Black Hawk, a chief of the Sacs, then about 60 years of age, refused submission, and the next year returned with a small force. He was driven back by the troops at Rock Island, but in March, 1832, he reappeared, at the head of about 1,000 warriors,—Sacs, Foxes, and Winnebagos,—and penetrated into the Rock River valley, declaring that he came only to plant corn. But either he would not or could not restrain his followers, and the devastation of Indian warfare soon spread among the frontier settlements. . . . The force at Rock Island was sent out to stay these ravages, and Generals Scott and Atkinson ordered from Buffalo with a reinforcement, which on the way was greatly diminished by cholera and desertions. The Governor of Illinois called for volunteers, and an effective force of about 2,400 men was soon marched against the enemy. Black Hawk's band fled before it. General Whiteside, who was in command, burned the Prophet's Town, on Rock River, and pursued the Indians up that stream. . . . The Indians were overtaken and badly defeated on Wisconsin River; and the survivors, still retreating northward, were again overtaken near Bad Axe River, on the left bank of the Mississippi. . . . Many of the Indians were shot in the water while trying to swim the stream; others were killed on a little island where they sought refuge. Only about 50 prisoners were taken, and most of these were squaws and children. The dispersion was complete, and the war was soon closed by the surrender or capture of Black Hawk, Keokuk, and other chiefs."—W. C. Bryant and S. H. Gay, *Popular Hist. of the U. S.*, v. 4, ch. 12.

ILLYRIAN PROVINCES OF NAPOLEON. See GERMANY: A. D. 1809 (JULY—SEPTEMBER).

ILLYRIANS, The.—"Northward of the tribes called Epirotic lay those more numerous and widely extended tribes who bore the general name of Illyrians, bounded on the west by the Adriatic, on the east by the mountain-range of Skardus, the northern continuation of Pindus, and thus covering what is now called Middle and Upper Albania, together with the more northerly mountains of Montenegro, Herzegovina, and Bosnia. Their limits to the north and north-east cannot be assigned. . . . Appian and others consider the Liburnians and Istrians as Illyrian, and Herodotus even includes under that name the Eneti or Veneti at the extremity of the Adriatic Gulf. . . . The Illyrians generally were poor, rapacious, fierce and formidable in battle. They

shared with the remote Thracian tribes the custom of tattooing their bodies and of offering human sacrifices: moreover, they were always ready to sell their military service for hire, like the modern Albanian Schkipetars, in whom probably their blood yet flows, though with considerable admixture from subsequent immigrations. Of the Illyrian kingdom on the Adriatic coast, with Skodra (Scutari) for its capital city, which became formidable by its reckless piracies in the third century B. C., we hear nothing in the flourishing period of Grecian history."—G. Grote, *Hist. of Greece*, pt. 2, ch. 25 (v. 3).

ILLYRICUM OF THE ROMANS.—"The provinces of the Danube soon acquired the general appellation of Illyricum, or the Illyrian frontier, and were esteemed the most warlike of the empire; but they deserve to be more particularly considered under the names of Rhætia, Noricum, Pannonia, Dalmatia, Dacia, Moesia, Thrace, Macedonia, and Greece. . . . Dalmatia, to which the name of Illyricum more properly belonged, was a long but narrow tract, between the Save and the Adriatic. . . . The inland parts have assumed the Slavonian names of Croatia and Bosnia."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 1.—See, also, ROME: A. D. 394-395.

IMAMS.—THE IMAMATE.—"When an assembly of Moslems meet together for prayer, an Imam is chosen, who leads the prayer, and the congregation regulate their motions by his, prostrating themselves when he does so, and rising when he rises. In like manner, the khalif is set up on high as the Imam, or leader of the Faithful, in all the business of life. He must be a scrupulous observer of the law himself, and diligent in enforcing it upon others. The election of an Imam is imperative. . . . The qualities requisite in an Imam are four: knowledge, integrity, mental and physical soundness. . . . Among strict Moslems, it is a doctrine that Islam has been administered by only four veritable Imams—the 'rightly-guided khalifs': Abou Bekr, Omar, Othman, and Ali. But the Muhammadan world, in general, was not so exacting. They recognized the Commander of the Faithful in the prince who ruled with the title of khalif in Damascus or Baghdad, in Cordova or Kairo. The one condition absolutely essential was that the sovereign thus reigning should be a member of the tribe of Kuraish [or Koreish]."—R. D. Osborn, *Islam under the Khalifs of Baghdad*, pt. 3, ch. 1.—See, also, ISLAM.

IMPEACHMENT: Acquisition of the right by the English House of Commons. See ENGLAND: A. D. 1413-1422.

Revival of the right.—In the English Parliament of 1620-21 (reign of James I.), "on the

motion of the Ex-Chief Justice, Sir Edward Coke, a committee of inquiry into grievances had been early appointed. The first abuse to which their attention was directed was that of monopolies, and this led to the revival of the ancient right of parliamentary impeachment—the solemn accusation of an individual by the Commons at the bar of the Lords—which had lain dormant since the impeachment of the Duke of Suffolk in 1449. Under the Tudors impeachments had fallen into disuse, partly through the subservience of the Commons, and partly through the preference of those sovereigns for bills of attainder, or of pains and penalties. Moreover, the power wielded by the Crown through the Star Chamber enabled it to inflict punishment for many state offences without resorting to the assistance of Parliament. With the revival of the spirit of liberty in the reign of James I., the practice of impeachment revived also, and was energetically used by the Commons in the interest alike of public justice and of popular power.”—T. P. Taswell-Langmead, *English Const. Hist.*, ch. 13.

IMPERATOR.—“There can be no doubt that the title Imperator properly signifies one invested with Imperium, and it may very probably have been assumed in ancient times by every general on whom Imperium had been bestowed by a Lex Curiata. It is, however, equally certain, that in those periods of the republic with the history and usages of which we are most familiar, the title Imperator was not assumed as a matter of course by those who had received Imperium, but was, on the contrary, a much valued and eagerly coveted distinction. Properly speaking, it seems to have been in the gift of the soldiers, who hailed their victorious leader by this appellation on the field of battle; but occasionally, especially towards the end of the commonwealth, it was conferred by a vote of the Senate. . . . But the designation Imperator was employed under the empire in a manner and with a force altogether distinct from that which we have been considering. On this point we have the distinct testimony of Dion Cassius (xliii. 44, comp. liii. 17), who tells us that, in B. C. 46, the Senate bestowed upon Julius Cæsar the title of Imperator, not in the sense in which it had hitherto been applied, as a term of military distinction, but as the peculiar and befitting appellation of supreme power, and in this signification it was transmitted to his successors, without, however, suppressing the original import of the word. . . . Imperator, when used to denote supreme power, comprehending in fact the force of the titles Dictator and Rex, is usually, although not invariably, placed before the name of the individual to whom it is applied.”—W. Ramsay, *Manual of Roman Antiq.*, ch. 5.—See, also, ROME: B. C. 45–44.

Final Signification of the Roman title.—“When the Roman princes had lost sight of the senate and of their ancient capital, they easily forgot the origin and nature of their legal power. The civil offices of consul, of proconsul, of censor, and of tribune, by the union of which it had

been formed, betrayed to the people its republican extraction. Those modest titles were laid aside; and if they still distinguished their high station by the appellation of Emperor, or Imperator, that word was understood in a new and more dignified sense, and no longer denoted the general of the Roman armies, but the sovereign of the Roman world. The name of Emperor, which was at first of a military nature, was associated with another of a more servile kind. The epithet of Dominus, or Lord, in its primitive signification, was expressive, not of the authority of a prince over his subjects, or of a commander over his soldiers, but of the despotic power of a master over his domestic slaves. Viewing it in that odious light, it had been rejected with abhorrence by the first Cæsars. Their resistance insensibly became more feeble, and the name less odious; till at length the style of ‘our Lord and Emperor’ was not only bestowed by flattery, but was regularly admitted into the laws and public monuments.”—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 13.—See ROME: B. C. 31–A. D. 14.

INDEPENDENCE HALL.—The Liberty Bell.—The hall in the old State House of Pennsylvania, at Philadelphia, within which the Declaration of American Independence was adopted and promulgated by the Continental Congress, on the 4th of July, 1776. The venerable State House, which was erected between 1729 and 1734, is carefully preserved, and the “Hall of Independence is kept closed, except

when curious visitors seek entrance, or some special occasion opens its doors to the public. Nothing now remains of the old furniture of the hall except two antique mahogany chairs, covered with red leather, one of which was used by Hancock as president, and the other by Charles Thomson as secretary of Congress, when the Declaration of Independence was adopted. . . . I ascended to the steeple, where hangs, in silent grandeur, the Liberty Bell. It is four feet in diameter at the lip, and three inches thick at the heaviest part. Its tone is destroyed by a crack, which extends from the lip to the crown, passing directly through the names of the persons who cast it. An attempt was made to restore the tone by sawing the crack wider, but without success. . . . The history of this bell is interesting. In 1752, a bell for the State House was imported from England. On the first trial-ringing, after its arrival, it was cracked. It was recast by Pass and Stow, of Philadelphia, in 1753, under the direction of Isaac Norris, Esq., the then speaker of the Colonial Assembly. And that is the bell, 'the greatest in English America,' which now hangs in the old State House steeple and claims our reverence. Upon fillets around its crown, cast there twenty-three years before the Continental Congress met in the State House, are the words of Holy Writ: 'Proclaim liberty throughout all the land unto all the inhabitants thereof.' How prophetic! Beneath that very bell the representatives of the thirteen colonies 'proclaimed liberty.' Ay, and when the debates were ended, and the result was announced, on the 4th of July, 1776, the iron tongue of that very bell first 'proclaimed liberty throughout all the land, unto all the inhabitants thereof,' by ringing out the joyful annunciation for more than two hours."—B. J. Lossing, *Field-book of the Revolution*, v. 2, ch. 3.

INDEPENDENTS, OR SEPARATISTS: Their origin and opinions.—"The Puritans continued members of the church, only pursuing courses of their own in administering the ordinances, and it was not till about the middle of the reign of Elizabeth that the disposition was manifested among them to break away from the church altogether, and to form communities of their own. And then it was but a few of them who took this course; the more sober part remained in the church. The communities of persons who separated themselves were formed chiefly in London: there were very few in the distant counties, and those had no long continuance. It was not till the time of the Civil Wars that such bodies of Separatists, as they were called, or Congregationalists, or Independents, became numerous. At first they were often called Brownist churches, from Robert Brown, a divine of the time, who was for a while a zealous maintainer of the duty of separation."—J. Hunter, *The Founders of New Plymouth*, pp. 12–13.—"The peculiar tenet of Independency . . . consists in the belief that the only organization recognised in the primitive Church was that of the voluntary association of believers into local congregations, each choosing its own office-bearers and managing its own affairs, independently of

neighbouring congregations, though willing occasionally to hold friendly conferences with such neighbouring congregations, and to profit by the collective advice. Gradually, it is asserted, this right or habit of occasional friendly conference between neighbouring congregations had been mismanaged and abused, until the true independency of each voluntary society of Christians was forgotten, and authority came to be vested in Synods or Councils of the office-bearers of the churches of a district or province. This usurpation of power by Synods or Councils, it is said, was as much a corruption of the primitive Church-discipline as was Prelacy itself. . . . So, I believe, though with varieties of expression, English Independents argue now. But, while they thus seek the original warrant for their clews in the New Testament and in the practice of the primitive Church, . . . they admit that the theory of Independency had to be worked out afresh by a new process of the English mind in the 16th and 17th centuries, and they are content, I believe, that the crude immediate beginning of that process should be sought in the opinions propagated, between 1580 and 1590, by the erratic Robert Brown, a Rutlandshire man, bred at Cambridge, who had become a preacher at Norwich. . . . Though Brown himself had vanished from public view since 1590, the Brownists, or Separatists, as they were called, had persisted in their course, through execration and persecution, as a sect of outlaws beyond the pale of ordinary Puritanism, and with whom moderate Puritans disowned connexion or sympathy. One hears of considerable numbers of them in the shires of Norfolk and Essex, and throughout Wales; and there was a central association of them in London, holding conventicles in the fields, or shifting from meeting-house to meeting-house in the suburbs, so as to elude Whitgift's ecclesiastical police. At length, in 1592, the police broke in upon one of the meetings of the London Brownists at Islington. . . . There ensued a vengeance far more ruthless than the Government dared against Puritans in general. Six of the leaders were brought to the scaffold. . . . Among the observers of these severities was Francis Bacon, then rising into eminence as a politician and lawyer. His feeling on the subject was thus expressed at the time: 'As for those which we call Brownists, being, when they were at the most, a very small number of very silly and base people here and there in corners dispersed, they are now (thanks be to God), by the good remedies that have been used, suppressed and worn out, so as there is scarce any news of them.' . . . Bacon was mistaken in supposing that Brownism was extinguished. Hospitable Holland received and sheltered what England cast out."—D. Masson, *Life of John Milton*, v. 2, bk. 4, sect. 1–2.—"The name 'Brownist' had never been willingly borne by most of those who had accepted the distinguishing doctrine of the heresiarch to whom it related. Nor was it without reason that a distinction was alleged, and a new name preferred, when, relaxing the offensive severity of Brown's system, some who had adopted his tenet of the absolute independence of churches came to differ from him respecting the duty of avoiding and denouncing dissentients from it as rebellious, apostate, blasphemous, antichristian and accursed. To this amendment of 'Brownism' the

INDEPENDENTS.

mature reflections and studies of the excellent Robinson of Leyden conducted him; and with reference to it he and his followers were sometimes called 'Semi-separatists.' Such a deference to reason and to charity gave a new position and attractiveness to the sect, and appears to have been considered as entitling Robinson to the character of 'father of the Independents.' Immediately on the meeting of the Long Parliament [1640], 'the Brownists, or Independents, who had assembled in private, and shifted from house to house for twenty or thirty years, resumed their courage, and showed themselves in public.' During this period of the obscurity of a sect which, when arrived at its full vigor, was to give law to the mother country, the history of the progress of its principles is mainly to be sought in New England. . . . Their opponents and their votaries alike referred to Massachusetts as the source of the potent element which had made its appearance in the religious politics of England."—J. G. Palfrey, *Hist. of New Eng.*, bk. 2, ch. 2 (p. 2).

ALSO IN: D. Neal, *Hist. of the Puritans*, v. 2, ch. 1, 2 and 7.—L. Bacon, *Genesis of the New Eng. Churches*.—B. Hanbury, *Hist. Memorials of the Independents*, v. 1.—G. Punchard, *Hist. of Congregationalism*, v. 3.—H. M. Dexter, *The Congregationalism of the last 300 Years*, lect. 1-5.—See, also, ENGLAND: A. D. 1638-1640, and PURITANS: IN DISTINCTION FROM THE INDEPENDENTS, OR SEPARATISTS.

A. D. 1604-1617.—The church at Scrooby and its migration to Holland.—"The flimsiness of Brown's moral texture prevented him from becoming the leader in the Puritan exodus to New England. That honour was reserved for William Brewster, son of a country gentleman who had for many years been postmaster at Scrooby." After King James' Hampton Court Conference with the Puritan divines, in 1604, and his threatening words to them, nonconformity began to assume among the churches more decidedly the form of secession. "The key-note of the conflict was struck at Scrooby. Staunch Puritan as he was, Brewster had not hitherto favoured the extreme measures of the Separatists. Now he withdrew from the church, and gathered together a company of men and women who met on Sunday for divine service in his own drawing-room at Scrooby Manor. In organizing this independent Congregationalist society, Brewster was powerfully aided by John Robinson, a native of Lincolnshire. Robinson was then thirty years of age, and had taken his master's degree at Cambridge in 1600. He was a man of great learning and rare sweetness of temper, and was moreover distinguished for a broad and tolerant habit of mind too seldom found among the Puritans of that day. Friendly and unfriendly writers alike bear witness to his spirit of Christian charity and the comparatively slight value which he attached to orthodoxy in points of doctrine; and we can hardly be wrong in supposing that the comparatively tolerant behaviour of the Plymouth colonists, whereby they were contrasted with the settlers of Massachusetts, was in some measure due to the abiding influence of the teachings of this admirable man. Another important member of the Scrooby congregation was William Bradford, of the neighbouring village of Austerfield, then a lad of seventeen years, but already remarkable for

INDEPENDENTS.

maturity of intelligence and weight of character, afterward governor of Plymouth for nearly thirty years, he became the historian of his colony; and to his picturesque chronicle, written in pure and vigorous English, we are indebted for most that we know of the migration that started from Scrooby and ended in Plymouth. It was in 1606—two years after King James's truculent threat—that this independent church of Scrooby was organized. Another year had not elapsed before its members had suffered so much at the hands of officers of the law, that they began to think of following the example of former heretics and escaping to Holland. After an unsuccessful attempt in the autumn of 1607, they at length succeeded a few months later in accomplishing their flight to Amsterdam, where they hoped to find a home. But here they found the English exiles who had preceded them so fiercely involved in doctrinal controversies, that they decided to go further in search of peace and quiet. This decision, which we may ascribe to Robinson's wise counsels, served to keep the society of Pilgrims from getting divided and scattered. They reached Leyden in 1609, just as the Spanish government had suddenly abandoned the hopeless task of conquering the Dutch, and had granted to Holland the Twelve Years Truce. During eleven of these twelve years the Pilgrims remained in Leyden, supporting themselves by various occupations, while their numbers increased from 300 to more than 1,000. . . . In spite of the relief from persecution, however, the Pilgrims were not fully satisfied with their new home. The expiration of the truce with Spain might prove that this relief was only temporary; and at any rate, complete toleration did not fill the measure of their wants. Had they come to Holland as scattered bands of refugees, they might have been absorbed into the Dutch population, as Huguenot refugees have been absorbed in Germany, England, and America. But they had come as an organized community, and absorption into a foreign nation was something to be dreaded. They wished to preserve their English speech and English traditions, keep up their organization, and find some favoured spot where they might lay the corner-stone of a great Christian state. The spirit of nationality was strong in them; the spirit of self-government was strong in them; and the only thing which could satisfy these feelings was such a migration as had not been seen since ancient times, a migration like that of Phokaians to Massilia or Tyrians to Carthage. It was too late in the world's history to carry out such a scheme upon European soil. Every acre of territory there was appropriated. The only favourable outlook was upon the Atlantic coast of America, where English cruisers had now successfully disputed the pretensions of Spain, and where after forty years of disappointment and disaster a flourishing colony had at length been founded in Virginia."—J. Fiske, *The Beginnings of New England*, ch. 2.

A. D. 1617-1620.—Preparations for the exodus to New England.—"Upon their talk of

removing, sundry of the Dutch would have them go under them, and made them large offers'; but an inborn love for the English nation and for their mother tongue led them to the generous purpose of recovering the protection of England by enlarging her dominions. They were 'restless' with the desire to remove to 'the most northern parts of Virginia,' hoping, under the general government of that province, 'to live in a distinct body by themselves.' To obtain the consent of the London Company, John Carver, with Robert Cushman, in 1617, repaired to England. They took with them 'seven articles,' from the members of the church at Leyden, to be submitted to the council in England for Virginia. These articles discussed the relations which, as separatists in religion, they bore to their prince; and they adopted the theory which the admonitions of Luther and a century of persecution had developed as the common rule of plebeian sectaries on the continent of Europe. They expressed their concurrence in the creed of the Anglican church, and a desire of spiritual communion with its members. Toward the king and all civil authority derived from him, including the civil authority of bishops, they promised, as they would have done to Nero and the Roman pontifex, 'obedience in all things, active if the thing commanded be not against God's word, or passive if it be.' They denied all power to ecclesiastical bodies, unless it were given by the temporal magistrate. . . . The London company listened very willingly to their proposal, so that their agents 'found God going along with them'; and, through the influence of 'Sir Edwin Sandys, a religious gentleman then living,' a patent might at once have been taken, had not the envoys desired first to consult 'the multitude' at Leyden. On the 15th of December, 1617, the pilgrims transmitted their formal request, signed by the hands of the greatest part of the congregation. . . . The messengers of the pilgrims, satisfied with their reception by the Virginia company, petitioned the king for liberty of religion, to be confirmed under the king's broad seal. But here they encountered insurmountable difficulties. . . . Even while the negotiations were pending, a royal declaration constrained the Puritans of Lancashire to conform or leave the kingdom; and nothing more could be obtained for the wilds of America than an informal promise of neglect. On this the community relied, being advised not to entangle themselves with the bishops. 'If there should afterward be a purpose to wrong us,' thus they communed with themselves, 'though we had a seal as broad as the house-floor, there would be means enough found to recall or reverse it. We must rest herein on God's providence.' Better hopes seemed to dawn when, in 1619, the London company for Virginia elected

for their treasurer Sir Edwin Sandys, who from the first had befriended the pilgrims. Under his presidency, so writes one of their number, the members of the company in their open court 'demanded our ends of going; which being related, they said the thing was of God, and granted a large patent.' As it was taken in the name of one who failed to accompany the expedition [Mr. John Wincob], the patent was never of any service. And, besides, the pilgrims, after investing all their own means, had not sufficient capital to execute their schemes. In this extremity, Robinson looked for aid to the Dutch. He and his people and their friends, to the number of 400 families, professed themselves well inclined to emigrate to the country on the Hudson, and to plant there a new commonwealth under the command of the stadholder and the states general. The West India company was willing to transport them without charge, and to furnish them with cattle; but when its directors petitioned the states general to promise protection to the enterprise against all violence from other potentates, the request was found to be in conflict with the policy of the Dutch republic, and was refused. The members of the church of Leyden, ceasing 'to meddle with the Dutch, or to depend too much on the Virginia company,' now trusted to their own resources and the aid of private friends. The fisheries had commended American expeditions to English merchants; and the agents from Leyden were able to form a partnership between their employers and men of business in London. The services of each emigrant were rated as a capital of £10, and belonged to the company; all profits were to be reserved till the end of seven years, when the whole amount, and all houses and land, gardens and fields, were to be divided among the shareholders according to their respective interests. The London merchant, who risked £100, would receive for his money tenfold as much as the penniless laborer for his services. This arrangement threatened a seven years' check to the pecuniary prosperity of the community; yet, as it did not interfere with civil rights or religion, it was accepted. And now, in July, 1620, the English at Leyden, trusting in God and in themselves, made ready for their departure."—G. Bancroft, *Hist. of the U. S. (Author's last revision)*, pt. 1, ch. 12 (v. 1).

INDEX EXPURGATORIUS, The. See PAPACY: A. D. 1559-1595.

INDIA.

The name.—"To us . . . it seems natural that the whole country which is marked off from Asia by the great barrier of the Himalaya and the Sulciman range should have a single name. But it has not always seemed so. The Greeks had but a very vague idea of this country. To them for a long time the word India was for practical purposes what it was etymologically,

the province of the Indus. When they say that Alexander invaded India, they refer to the Punjab. At a later time they obtained some information about the valley of the Ganges, but little or none about the Deccan. Meanwhile in India itself it did not seem so natural as it seems to us to give one name to the whole region. For there is a very marked difference between the northern

and southern parts of it. The great Aryan community which spoke Sanscrit and invented Brahminism spread itself chiefly from the Punjab along the great valley of the Ganges; but not at first far southward. Accordingly the name Hindostan properly belongs to this northern region. In the South or peninsula we find other races and non-Aryan languages. . . . It appears then that India is not a political name, but only a geographical expression like Europe or Africa."

—J. R. Seeley, *The Expansion of England*, pp. 221-222.—"The name 'Hindustan' . . . is not used by the natives as it has been employed by writers of books and map-makers in Europe. . . . The word really means 'the land of the Hindus'; the northern part of the Peninsula, distinguished from the 'Deccan,' from which it is parted by the river Narbada. . . . The word 'Hindu' is of Zend (ancient Persian) origin, and may be taken to denote 'river-people,' so named, perhaps, from having first appeared on the line of the Indus, q. d., 'the river.'"—H. G. Keene, *Sketch of the Hist. of Hindustan*, p. 1.—"Sinde, India, and Hindu-stan are various representatives of the same native word. 'Hindu' is the oldest known form, since it occurs in one of the most ancient portions of the Zendavesta. The Greeks and Romans sometimes called the river Sindus, instead of Indus."—G. Rawlinson, *Five Great Monarchies: Persia*, ch. 1, note.

The aboriginal inhabitants.—"Our earliest glimpses of India disclose two races struggling for the soil. The one was a fair-skinned people, which had lately entered by the north-western passes,—a people who called themselves Aryan, literally of 'noble' lineage, speaking a stately language, worshipping friendly and powerful gods. These Aryans became the Brahmans and Rajputs of India. The other race was of a lower type, who had long dwelt in the land, and whom the lordly newcomers drove back into the mountains, or reduced to servitude on the plains. The comparatively pure descendants of these two races are now nearly equal in numbers; the intermediate castes, sprung chiefly from the ruder stock, make up the mass of the present Indian population. . . . The victorious Aryans called the early tribes Dasyus, or 'enemies,' and Dasas, or 'slaves.' The Aryans entered India from the colder north, and prided themselves on their fair complexion. Their Sanskrit word for 'colour' (varna) came to mean 'race' or 'caste.' The old Aryan poets, who composed the Veda at least 3,000 and perhaps 4,000 years ago, praised their bright gods, who, 'slaying the Dasyus, protected the Aryan colour; who, 'subjected the black-skin to the Aryan man.' They tell us of their own 'stormy deities, who rush on like furious bulls and scatter the black-skin.' Moreover, the Aryan, with his finely-formed features, loathed the squat Mongolian faces of the Aborigines. One Vedic poet speaks of the non-Aryans as 'noseless' or flat-nosed, while another praises his own 'beautiful-nosed' gods. . . . Nevertheless all the non-Aryans could not have been savages. We hear of wealthy Dasyus or non-Aryans; and the Vedic hymns speak of their 'seven castles' and 'ninety forts.' The Aryans afterwards made alliance with non-Aryan tribes; and some of the most powerful kingdoms of India were ruled by non-Aryan kings. . . . Let us now examine these primitive peoples as they exist at the present day. Thrust back by

the Aryan invaders from the plains, they have lain hidden away in the mountains, like the remains of extinct animals found in hill-caves. India thus forms a great museum of races, in which we can study man from his lowest to his highest stages of culture. . . . Among the rudest fragments of mankind are the isolated Andaman islanders, or non-Aryans of the Bay of Bengal. The Arab and early European voyagers described them as dog-faced man-eaters. The English officers sent to the islands in 1855 to establish a settlement, found themselves in the midst of naked cannibals; who daubed themselves at festivals with red earth, and mourned for their dead friends by plastering themselves with dark mud. . . . The Anamalai hills, in Southern Madras, form the refuge of many non-Aryan tribes. The long-haired, wild-looking Pullars live on jungle products, mice, or any small animals they can catch; and worship demons. Another clan, the Mundavars, have no fixed dwellings, but wander over the innermost hills with their cattle. They shelter themselves in caves or under little leaf sheds, and seldom remain in one spot more than a year. The thick-lipped, small-bodied Kaders, 'Lords of the Hills,' are a remnant of a higher race. They live by the chase, and wield some influence over the ruder forest-folk. These hills abound in the great stone monuments (kistvaens and dolmens) which the ancient non-Aryans erected over their dead. The Nairs, or hillmen of South-Western India, still keep up the old system of polyandry, according to which one woman is the wife of several husbands, and a man's property descends not to his own sons, but to his sister's children. This system also appears among the non-Aryan tribes of the Himalayas at the opposite end of India. In the Central Provinces, the non-Aryan races form a large part of the population. In certain localities they amount to one-half of the inhabitants. Their most important race, the Gonds, have made advances in civilisation; but the wilder tribes still cling to the forest, and live by the chase. . . . The Maris fly from their grass-built huts on the approach of a stranger. . . . Farther to the north-east, in the Tributary States of Orissa, there is a poor tribe, 10,000 in number, of Jnangs or Patuas, literally the 'leaf-wearers.' Until lately their women wore no clothes, but only a few strings of beads around the waist, with a bunch of leaves before and behind. . . . Proceeding to the northern boundary of India, we find the slopes and spurs of the Himalayas peopled by a great variety of rude non-Aryan tribes. Some of the Assam hillmen have no word for expressing distance by miles or by any land-measure, but reckon the length of a journey by the number of plugs of tobacco or pan which they chew upon the way. They hate work; and, as a rule, they are fierce, black, undersized, and ill-fed. . . . Many of the aboriginal tribes, therefore, remain in the same early stage of human progress as that ascribed to them by the Vedic poets more than 3,000 years ago. But others have made great advances, and form communities of a well-developed type. These higher races, like the ruder ones, are scattered over the length and breadth of India, and I must confine myself to a very brief account of two of them,—the Santals and the Kandhs. The Santals have their home among the hills which abut on the valley of the Ganges in Lower Bengal. They

dwelt in villages of their own, apart from the people of the plains, and number about a million. Although still clinging to many customs of a hunting forest tribe, they have learned the use of the plough, and settled down into skilful husbandmen. Each hamlet is governed by its own headman, who is supposed to be a descendant of the original founder of the village. . . . Until near the end of the last century, the Santals lived by plundering the adjacent plains. But under British rule they settled down into peaceful cultivators. . . . The Kandhs, literally 'The Mountaineers,' a tribe about 100,000 strong, inhabit the steep and forest-covered ranges which rise from the Orissa coast. Their idea of government is purely patriarchal. The family is strictly ruled by the father. The grown-up sons have no property during his life, but live in his house with their wives and children, and all share the common meal prepared by the grandmother. The head of the tribe is usually the eldest son of the patriarchal family. . . . The Kandh system of tillage represents a stage half way between the migratory cultivation of the ruder non-Aryan tribes and the settled agriculture of the Hindus. . . . Whence came these primitive peoples, whom the Aryan invaders found in the land more than 3,000 years ago, and who are still scattered over India, the fragments of a prehistoric world? Written annals they do not possess. Their traditions tell us little. But from their languages we find that they belong to three stocks. First, the Tibeto-Burman tribes, who entered India from the north-east, and still cling to the skirts of the Himalayas. Second, the Kolarians, who also seem to have entered Bengal by the north-eastern passes. They dwell chiefly along the north-eastern ranges of the three-sided tableland which covers the southern half of India. Third, the Dravidians, who appear, on the other hand, to have found their way into the Punjab by the north-western passes. They now inhabit the southern part of the three-sided tableland as far down as Cape Comorin, the southernmost point of India. As a rule, the non-Aryan races, when fairly treated, are truthful, loyal, and kind. Those in the hills make good soldiers; while even the thieving tribes of the plains can be turned into clever police. The non-Aryan castes of Madras supplied the troops which conquered Southern India for the British; and some of them fought at the battle of Plassey, which won for us Bengal. The gallant Gurkhas, a non-Aryan tribe of the Himalayas, now rank among the bravest regiments in our Indian army, and lately covered themselves with honour in Afghanistan."—W. W. Hunter, *Brief Hist. of the Indian People*, ch. 2-3.

The immigration and conquests of the Aryas.—The hymns and prayers of their religion.—**Vedism.**—**Brahmanism.**—**Hinduism.**—"The immigration of the Aryas into India took place from the west. They stand in the closest relation to the inhabitants of the table-land of Iran, especially the inhabitants of the eastern half. These also call themselves Aryas, though among them the word becomes Airya, or Ariya, and among the Greeks Arioi. The language of the Aryas is in the closest connection with that of the Avesta,

the religious books of Iran, and in very close connection with the language of the monuments of Darius and Xerxes, in the western half of that region. The religious conceptions of the Iranians and Indians exhibit striking traits of a homogeneous character. A considerable number of the names of gods, of myths, sacrifices, and customs, occurs in both nations, though the meaning is not always the same, and is sometimes diametrically opposed. Moreover, the Aryas in India are at first confined to the borders of Iran, the region of the Indus, and the Panjab. Here, in the west, the Aryas had their most extensive settlements, and their oldest monuments frequently mention the Indus, but not the Ganges. Even the name by which the Aryas denote the land to the south of the Vindhya, Dakshinapatha (Deccan), i. e., path to the right, confirms the fact already established, that the Aryas came from the west. From this it is beyond a doubt that the Aryas, descending from the heights of Iran, first occupied the valley of the Indus and the five tributary streams, which combine and flow into the river from the north-east, and they spread as far as they found pastures and arable land, i. e., as far eastward as the desert which separates the valley of the Indus from the Ganges. The river which irrigated their land, watered their pastures, and shaped the course of their lives they called Sindhu (in Pliny, Sindus), i. e., the river. It is, no doubt, the region of the Indus, with the Panjab, which is meant in the Avesta by the land hapta hindu (hendu), i. e., the seven streams. The inscriptions of Darius call the dwellers on the Indus Idhus. These names the Greeks render by Indos and Indoi. . . . Products of India, and among them such as do not belong to the land of the Indus, were exported from the land about 1000 B. C., under names given to them by the Aryas, and therefore the Aryas must have been settled there for centuries previously. For this reason, and it is confirmed by facts which will appear further on, we may assume that the Aryas descended into the valley of the Indus about the year 2000 B. C., i. e., about the time when the kingdom of Elam was predominant in the valley of the Euphrates and Tigris, when Assyria still stood under the dominion of Babylon, and the kingdom of Memphis was ruled by the Hyksos. . . . The oldest evidence of the life of the Aryas, whose immigration into the region of the Indus and settlement there we have been able to fix about 2000 B. C., is given in a collection of prayers and hymns of praise, the Rigveda, i. e., 'the knowledge of thanksgiving.' It is a selection or collection of poems and invocations in the possession of the priestly families, of hymns and prayers arising in these families, and sung and preserved by them. . . . We can ascertain with exactness the region in which the greater number of these poems grew up. The Indus is especially the object of praise; the 'seven rivers' are mentioned as the dwelling-place of the Aryas. This aggregate of seven is made up of the Indus itself and the five streams which unite and flow into it from the east—the Vitasta, Asikni, Iravati, Vipaca, Çatadru. The seventh river is the Sarasvati, which is expressly named 'the seven-sistered.' The land of the seven rivers is, as has already been remarked, known to the Iranians. The 'Sapta sindhava' of the Rigveda are, no doubt, the hapta hindu of the Avesta, and in the form Harahvaiti, the

Arachotus of the Greeks, we again find the Sarasvati in the east of the table-land of Iran. As the Yamuna and the Ganges are only mentioned in passing . . . and the Vindhya mountains and Narmadas are not mentioned at all, the conclusion is certain that, at the time when the songs of the Aryas were composed, the nation was confined to the land of the Panjab, though they may have already begun to move eastward beyond the valley of the Sarasvati. We gather from the songs of the Rigveda that the Aryas on the Indus were not one civic community. They were governed by a number of princes (raja). Some of these ruled on the bank of the Indus, others in the neighbourhood of the Sarasvati. They sometimes combined; they also fought not against the Dasyus only, but against each other."—M. Duncker, *Hist. of Antiquity*, bk. 5, ch. 1-2 (v. 4).—"When the Indian branch of the Aryan family settled down in the land of the seven rivers . . . now the Panjab, about the 15th century B. C., their religion was still nature-worship. It was still adoration of the forces which were everywhere in operation around them for production, destruction, and reproduction. But it was physiolatry developing itself more distinctly into forms of Theism, Polytheism, Anthropomorphism, and Pantheism. The phenomena of nature were thought of as something more than radiant beings, and something more than powerful forces. . . . They were addressed as kings, fathers, guardians, friends, benefactors, guests. They were invoked in formal hymns and prayers (mantras), in set metres (chandas). These hymns were composed in an early form of the Sanskrit language, at different times—perhaps during several centuries, from the 15th to the 10th B. C.—by men of light and leading (Rishis) among the Indo-Aryan immigrants, who were afterwards held in the highest veneration as patriarchal saints. Eventually the hymns were believed to have been directly revealed to, rather than composed by, these Rishis, and were then called divine knowledge (Veda), or the eternal word heard (sruti), and transmitted by them. These Mantras or hymns were arranged in three principal collections or continuous texts (Sambhitas). The first and earliest was called the Hymn-veda (Rig-veda). It was a collection of 1,017 hymns, arranged for mere reading or reciting. This was the first bible of the Hindu religion, and the special bible of Vedism. . . . Vedism was the earliest form of the religion of the Indian branch of the great Aryan family. . . . Brahmanism grew out of Vedism. It taught the merging of all the forces of Nature in one universal spiritual Being—the only real Entity—which, when unmanifested and impersonal, was called Brahmā (neuter); when manifested as a personal creator, was called Brahmā (masculine); and when manifested in the highest order of men, was called Brāhmana ('the Brāhmans'). Brahmanism was rather a philosophy than a religion, and in its fundamental doctrine was spiritual Pantheism. Hinduism grew out of Brahmanism. It was Brahmanism, so to speak, run to seed and spread out into a confused tangle of divine personalities and incarnations. . . . Yet Hinduism is distinct from Brahmanism, and chiefly in this—that it takes little account of the primordial, impersonal Being Brahmā, and wholly neglects its personal manifestation Brahmā, substituting, in place of both Brahmā and Brahmā, the two popular personal

deities Siva and Vishnu. Be it noted, however, that the employment of the term Hinduism is wholly arbitrary and confessedly unsatisfactory. Unhappily there is no other expression sufficiently comprehensive. . . . Hinduism is Brahmanism modified by the creeds and superstitions of Buddhists [see below: B. C. 312—] and Non-Aryan races of all kinds, including Dravidians, Kolarians, and perhaps pre-Kolarian aborigines. It has even been modified by ideas imported from the religions of later conquering races, such as Islam and Christianity."—M. Williams, *Religious Thought and Life in India*, pt. 1, ch. 1, and introd. * Also in: R. Mitra, *Indo-Aryans*.—F. Max Müller, *Hist. of Ancient Sanskrit Literature*.—The same, ed., *Sacred Books of the East*, v. 1, and others.—A. Barth, *Religions of India*.—*Rig-Veda Samhita*, tr. by H. H. Wilson.—See, also, ARYANS, 6th Century, B. C.—Invasion of Darius. See PERSIA: B. C. 521-493.

B. C. 327-312.—Invasion and conquests of Alexander the Great.—Expulsion of the Greeks.—Rise of the empire of Chandragupta.—"The year B. C. 327 marks an important era in the history of India. More than two centuries are supposed to have elapsed since the death of Gotama Buddha. The great empire of Magadha was apparently falling into anarchy, but Brahmanism and Buddhism were still expounding their respective dogmas on the banks of the Ganges. At this juncture Alexander of Macedonia was leading an army of Greeks down the Cabul river towards the river Indus, which at that time formed the western frontier of the Punjab [see MACEDONIA: B. C. 330-323]. . . . The design of Alexander was to conquer all the regions westward of the Indus, including the territory of Cabul, and then to cross the Indus in the neighbourhood of Attock, and march through the Punjab in a south-easterly direction, crossing all the tributary rivers on his way; and finally to pass down the valley of the Ganges and Jumna, via Delhi and Agra, and conquer the great Gangetic empire of Magadha or Pataliputra between the ancient cities of Prayaga and Gour. . . . After crossing the Indus, there were at least three kingdoms in the Punjab to be subdued one after the other, namely:—that of Taxiles between the Indus and the Jhelum; that of Porus the elder between the Jhelum and the Chenab; and that of Porus the younger between the Chenab and the Ravee. . . . When Alexander had fully established his authority in Cabul he crossed the Indus into the Punjab. Here he halted some time at the city of Taxila [Taxiles, the king, having submitted in advance], and then marched to the river Jhelum, and found that Porus the elder was encamped on the opposite bank with a large force of cavalry and infantry, together with chariots and elephants. The decisive battle which followed on the Jhelum is one of the most remarkable actions in ancient story. . . . Porus fought with a valour which excited the admiration of Alexander, but was at last wounded and compelled to fly. Ultimately he was induced to tender his submission. . . . The victory over Porus established the ascendancy of Alexander in the Punjab." It "not only decided the question between himself and Porus, but enabled him to open up a new communication with Persia, via the river Indus and the Indian Ocean. He sent out woodmen to cut timber for ship-building in the northern forests,

and to float it down the Jhelum; and he founded two cities, Bukephalia and Nikaia, one on each side of the Jhelum. . . . Whilst the fleet was being constructed, Alexander continued his march to the Chenab, and crossed that river into the dominions of Porus the younger," who fled at his approach, and whose kingdom was made over to the elder Porus, his uncle. "Alexander next crossed the Ravee, when he was called back by" a revolt in his rear, which he suppressed. "But meantime the Macedonians had grown weary of their campaign in India. . . . They . . . resisted every attempt to lead them beyond the Sutlej; and Alexander, making a virtue of necessity, at last consulted the oracles and found that they were unfavourable to an onward movement. . . . He returned with his army to the Jhelum, and embarked on board the fleet with a portion of his troops, whilst the remainder of his army marched along either bank. In this manner he proceeded almost due south through the Punjab and Scinde. . . . At last he reached the Indian Ocean, and beheld for the first time the phenomena of the tides; and then landed his army and marched through Beloochistan towards Susa, whilst Nearchos conducted the fleet to the Persian Gulf, and finally joined him in the same city. . . . Alexander had invaded the Punjab during the rainy season of B. C. 327, and reached the Indian Ocean about the middle of B. C. 326. Meantime Philip remained at Taxila as his lieutenant or deputy, and commanded a garrison of mercenaries and a body-guard of Macedonians. When Alexander was marching through Beloochistan, on his way to Susa, the news reached him that Philip had been murdered by the mercenaries, but that nearly all the murderers had been slain by the Macedonian body-guards. Alexander immediately despatched letters directing the Macedonian Eudemos to carry on the government in conjunction with Taxiles, until he could appoint another deputy; and this provisional arrangement seems to have been continued until the death of Alexander in B. C. 323. The political anarchy which followed this catastrophe can scarcely be realized. . . . India was forgotten. Eudemos took advantage of the death of Alexander to murder Porus; but was ultimately driven out of the Punjab with all his Macedonians by an adventurer who was known to the Greeks as Sandrokottos, and to the Hindus as Chandragupta. This individual is said to have delivered India from a foreign yoke only to substitute his own. . . . By the aid of banditti he captured the city of Patali-putra, and obtained the throne; and then drove the Greeks out of India, and established his empire over the whole of Hindustan and the Punjab."—J. T. Wheeler, *Hist. of India: Hindu, Buddhist and Brahmanical*, ch. 4.

ALSO IN: Arrian, *Anabasis of Alexander* (tr. by Clinnock), bk. 4-6.—T. A. Dodge, *Alexander*, ch. 38-43.

B. C. 312.—Chandragupta and Asoka.—**The spread of Buddhism and its Brahmanic absorption.**—"The first tolerably trustworthy date in Indian history is the era of Candragupta (=Sandrokottos) the founder of the Maurya dynasty, who, after making himself master of Pataliputra (Palibothra, Patna) and the kingdom of Magadha (Behar), extended his dominion over all Hindustan, and presented a determined front towards Alexander's successor Seleukos

Nikator, the date of the commencement of whose reign was about 312 B. C. When the latter contemplated invading India from his kingdom of Bactria, so effectual was the resistance offered by Candragupta that the Greek thought it politic to form an alliance with the Hindu king, and sent his own countryman Megasthenes as an ambassador to reside at his court. To this circumstance we owe the first authentic account of Indian manners, customs, and religious usages by an intelligent observer who was not a native, and this narrative of Megasthenes, preserved by Strabo, furnishes a basis on which we may found a fair inference that Brahmanism and Buddhism existed side by side in India on amicable terms in the fourth century B. C. There is even ground for believing that King Candragupta himself was in secret a Buddhist, though in public he paid homage to the gods of the Brahmans; at any rate, there can be little doubt that his successor Asoka did for Buddhism what Constantine did for Christianity—gave an impetus to its progress by adopting it as his own creed. Buddhism, then, became the state religion, the national faith of the whole kingdom of Magadha, and therefore of a great portion of India. This Asoka is by some regarded as identical with Candragupta; at any rate, their characters and much of their history are similar. He is probably the same as King Priyadarshi, whose edicts on stone pillars enjoining 'Dharma,' or the practice of virtue and universal benevolence, are scattered over India from Katak in the east and Gujarat in the west to Allahabad, Delhi, and Afghanistan on the north-west. What then is Buddhism? It is certainly not Brahmanism, yet it arose out of Brahmanism, and from the first had much in common with it. Brahmanism and Buddhism are closely interwoven with each other, yet they are very different from each other. Brahmanism is a religion which may be described as all theology, for it makes God everything, and everything God. Buddhism is no religion at all, and certainly no theology, but rather a system of duty, morality, and benevolence, without real deity, prayer or priest. The name Buddha is simply an epithet meaning 'the perfectly enlightened one,' or rather one who, by perfect knowledge of the truth, is liberated from all existence, and who, before his own attainment of Nirvana, or 'extinction,' reveals to the world the method of obtaining it. The Buddha with whom we are concerned was only the last of a series of Buddhas who had appeared in previous cycles of the universe. He was born at Kapila-vastu, a city and kingdom at the foot of the mountains of Nepal, his father Suddhodana being the king of that country, and his mother Maya-devi being the daughter of King Suprabuddha. Hence he belonged to the Kshatriya class, and his family name was Sakya, while his name of Gautama (or Gotama) was taken from that of his tribe. He is said to have arrived at supreme knowledge under the Bodhi tree, or 'tree of wisdom' (familiarily called 'the Bo tree'), at Gaya, in Behar (Magadha), about the year 588 B. C., and to have commenced propagating the new faith at Benares soon afterwards. . . . Buddhism was a protest against the tyranny of Brahmanism and caste. According to the Buddha, all men are equal. . . . We have five marked features of Buddhism: 1. disregard of all caste distinctions; 2. abolition of

animal sacrifice and of vicarious suffering; 3. great stress laid on the doctrine of transmigration; 4. great importance assigned to self-mortification, austerity, and abstract meditation, as an aid to the suppression of all action; 5. concentration of all human desires on the absolute extinction of all being. There is still a sixth, which is perhaps the most noteworthy of all; viz., that the Buddha recognized no supreme deity. The only god, he affirmed, is what man himself can become. A Buddhist, therefore, never really prays, he only meditates on the perfections of the Buddha and the hope of attaining Nirvana. . . . Brahmanism and Buddhism [in India] appear to have blended, or, as it were, melted into each other, after each had reciprocally parted with something, and each had imparted something. At any rate it may be questioned whether Buddhism was ever forcibly expelled from any part of India by direct persecution, except, perhaps, in a few isolated centres of Brahmanical fanaticism, such as the neighbourhood of Benares. Even in Benares the Chinese traveller, Hiouen T'sang, found Brahmanism and Buddhism flourishing amicably side by side in the 7th century of our era. In the South of India the Buddha's doctrines seem to have met with acceptance at an early date, and Ceylon was probably converted as early as B. C. 240, soon after the third Buddhist council held under King Asoka. In other parts of India there was probably a period of Brahmanical hostility, and perhaps of occasional persecution; but eventually Buddhism was taken by the hand, and drawn back into the Brahmanical system by the Brahmans themselves, who met it half way and ended by boldly adopting the Buddha as an incarnation of Vishnu. . . . Only a small section of the Buddhist community resisted all conciliation, and these are probably represented by the present sect of Jains [who are found in large numbers in various parts of India, especially on the western coast]. Be the actual state of the case as it may, nothing can be clearer than the fact that Buddhism has disappeared from India (the island of Ceylon being excepted), and that it has not done so without having largely contributed towards the moulding of Brahmanism into the Hinduism of the present day."—M. Williams, *Hinduism*, ch. 6.

A. D. 977-1290.—Under the Ghaznavide and Mameluke empires.—"Aryan civilisation was . . . germinating, but it was in uncongenial soil. Like the descendants of Abraham and Jacob, the invaders mingled with the heathen and learned their ways. The older inhabitants were barbarous, multilingual, indolent; worshippers less of many gods than of many devils. The fusion that ensued was not happy; though the origin and growth of the caste system prevented complete union, it facilitated some of its evils; the character of the Aryan settlers became disastrously affected; the want of commercial communication by land and sea tended to perpetuate stagnation. This was the state of things upon which the rising tide from Central Asia began to flow with resistless pertinacity after the Mongolo-Turkish power became established on the

Oxus and the Helmand. It was not to be wondered at if the Arabs made no wide or lasting Indian conquests in the early ages of the Muslim era. At a time when they were engaged with the Christian Empires of the East and the West, when they were spreading the power of the crescent from the borders of Khorasan to the Pillars of Hercules, the warriors of Islam had perhaps but little temptation to undertake further adventure. Certain it is that beyond the confines of Makran and a part of Sindh (occupied less than a hundred years after the Hijra)—the Arab conquests did not spread in India. It was Nasir-ud-Din Sabuktigin—certainly a Merv captive and popularly believed a scion of the Sassanian dynasty that once ruled Persia—by whom the first Muslim invasion of Hindustan was made in durable fashion. His master, Alptigin, having fled from the oppression of the Samani dynasty of Bukhara in 962 A. D., had founded a principality at Ghazni. Sabuktigin acquired his favour, and was able, soon after his death, to acquire the succession in 977 A. D. He established his power in the Punjab; and his armies are said to have penetrated as far as Benares. On his death, 997 A. D., his son, the celebrated Sultan Mahmud, succeeded to the Empire extending from Balkh to Lahore, if not to Hansi [see Turks: A. D. 999-1183]. During a reign of over thirty years he invaded Hindustan twelve times, inflicting terrible carnage on the Hindus, desecrating their idols, and demolishing their temples. Mathura, Kanauj, Somnath; to such distant and divergent points did his enterprises reach. Mahmud died 1030 A. D., and was buried at Ghazni, where his monument is still to be seen. For about one hundred years the dynasty continued to rule in the Punjab and Afghanistan, more and more troubled by the neighbouring tribe of Ghor, who in 1187 A. D. took Lahore and put an end to the Ghaznavide dynasty. A prince of the Ghorians—variously known, but whose name may be taken as Muhammad Bin Sam—was placed in a sort of almost independent viceroyalty at Ghazni. In 1191 A. D. he led an army against Sirhind, south of the Sutlej river. Rai Pithaura, or Pirthi Rai, a chief of the Chauhans (who had lately possessed themselves of Delhi), marched against the invaders and defeated them in a battle where Bin Sam had a narrow escape from being slain. But the sturdy mountaineers would not be denied. Next year they returned and defeated Pithaura. "The towrs of Mirat and Delhi fell upon his defeat; and their fall was followed a year later by that of Kanauj and Benares. The Viceroy's brother dying at this juncture, he repaired to his own country to establish his succession. He was killed in an expedition, 1206 A. D., and the affairs of Hindustan devolved upon his favourite Mameluke, Kutb-ud-din Aibak. . . . When Muhammad bin Sam had gone away, to rule and ultimately to perish by violence in his native highlands, his acquisitions in Hindustan came under the sway of Kutb-ud-din Aibak, a Mameluke, or Turkish slave, who had for a long time been his faithful follower. One of the Viceroy's first undertakings was to level to the ground the palaces and temples of the Hindus at Delhi, and to build, with the materials obtained by their destruction, a great Mosque for the worship of Allah. . . . From 1192 to 1206, the year of Bin Sam's death, Kutb-ud-din Aibak ruled as

Viceroy. But it is recorded that the next Emperor—feeling the difficulty, perhaps, of exercising any sort of rule over so remote a dependency—sent Aibak a patent as ‘Sultan,’ accompanied by a canopy of state, a throne and a diadem. Becoming Sultan of Hindustan, the distinguished and fortunate Mameluke founded what is known as ‘the Slave dynasty.’ . . . Aibak died at Lahore, in 1210, from an accident at a game now known as ‘polo.’ He was contemporaneous with the great Mughul leader Changiz Khan, by whom, however, he was not molested. The chief event of his reign is to be found in his successful campaigns in Behar and Northern Bengal. . . . The Musulman power was not universally and firmly established in the Eastern Provinces till the reign of Balban (circa 1282). At the death of Aibak the Empire was divided into four great portions. The Khiljis represented the power of Islam in Bihar and Bengal; the North-West Punjab was under a viceroy named Ilduz, a Turkman slave; the valley of the Indus was ruled by another of these Mamelukes, named Kabacha; while an attempt was made at Delhi to proclaim an incompetent lad, son of the deceased, as Sultan. But the Master of the Horse, a third Mameluke named Altimsh, was close at hand, and, hurrying up at the invitation of influential persons there, speedily put down the movement. . . . Altimsh, having deposed his feeble brother-in-law, became Suzerain of the Empire. His satraps were not disposed to obedience; and bloody wars broke out, into the details of which we need not enter. It will be sufficient to note that Ilduz was defeated and slain A. D. 1215. Two years later Kabacha came up from Sindh, and seems [to] have enlisted some of the Mughul hordes in his armies. These formidable barbarians, of whom more anon, were now in force in Khorasan, under Changiz in person, assisted by two of his sons [see *Mongols*: A. D. 1153-1227]. They drove before them the Sultan of Khwarizm (now Khiva), and occupied Afghanistan. The fugitive, whose adventures are among the most romantic episodes of Eastern history, attempted to settle himself in the Panjab; but he was driven out by Altimsh and Kabacha in 1223. Two years later Altimsh moved on the Khiljis in the Eastern Provinces, occupied Gaur, their capital; and proceeding from thence made further conquests south and north at the expense of the Hindus. In 1228 he turned against Kabacha, the mighty Satrap of Sindh, who was routed in battle near Bakkhar, where he committed suicide or was accidentally drowned. In 1232-3 the Sultan reduced Gwalior (in spite of a stout resistance on the part of the Hindus under Milak Deo); slaying 700 prisoners at the door of his tent. In 1234 he took the province of Malwa; where he demolished the great temples of Bhilsa and Ujain. In the following year this puissant warrior of the Crescent succumbed to the common conqueror, dying a natural death at Delhi, after a glorious reign of twenty-six (lunar) years. . . . His eldest son, who had conducted the war against the Khiljis, had died before him, and the Empire was assumed by a younger son, Rukn-ud-din Firoz. . . . [In 1241] Lahore was taken by the Mughols with terrific carnage. Troubles ensued; Delhi was besieged by the army that had been raised for its defence against the Mughols; in May 1242 the city was taken by storm and the new Sultan was slain. His successor, Ala-ud-

din I., was a grandson of Altimsh, incompetent and apathetic as young men in his position have usually been. The land was partitioned among Turkish satraps, and overrun by the Mughols, who penetrated as far as Gaur in Bengal. Another horde, led by Mangu, grandson of Changiz, and father of the celebrated Kiblai Khan, ravaged the Western Punjab. The Sultan marched against them and met with a partial success. This turned into evil courses the little intellect that he had, a plot was organised for his destruction. Ala-ud-din was slain, and his uncle Nasir-ud-din was placed upon the vacant throne in June 1246. Nasir's reign was long, and, so far as his personal exploits went, would have been uneventful. But the risings of the Hindus and the incursions of the Mughols kept the Empire in perpetual turmoil.” Nasir was succeeded in 1286-7 by his grandson, Kai Kobad. “This unfortunate young man was destined to prove the futility of human wisdom. Educated by his stern and serious grandfather, his lips had never touched those of a girl or a goblet. His sudden elevation turned his head. He gave himself up to debauchery, caused his cousin Khusrû to be murdered, and was himself ultimately killed in his palace at Kilokhari, while lying sick of the palsy. With his death (1290) came to an end the Mameluke Empire of Hindustan.”—H. G. Keene, *Sketch of the Hist. of Hindustan*, bk. 1, ch. 1-2.

A. D. 1290-1398.—From the Afghans to the Moghuls.—“In 1290 the last Sultan of the Afghan slave dynasty was assassinated, and a Sultan ascended the throne at Delhi under the name of Jelal-ud-din. He was an old man of seventy, and made no mark in history; but he had a nephew, named Ala-ud-din, who became a man of renown,” and who presently acquired the throne by murdering his uncle. “When Ala-ud-din was established on the throne at Delhi he sent an army to conquer Guzerat.” This conquest was followed by that of Rajputana. “Meanwhile the Moghuls [Mongols] were very troublesome. In the previous reign the uncle of Ala-ud-din had enlisted 3,000, and settled them near Delhi; but they were turbulent, refractory, and mixed up with every rebellion. Ala-ud-din ordered them to be disbanded, and then they tried to murder him. Ala-ud-din then ordered a general massacre. Thousands are said to have been put to death, and their wives and children were sold into slavery. Ala-ud-din was the first Muhammadan sovereign who conquered Hindu Rajas in the Dekhan and Peninsula. . . . Ala-ud-din sent his general Malik Kafur to invade these southern countries, ransack temples, and carry off treasure and tribute. The story is a dreary narrative of raid and rapine. . . . Ala-ud-din died in 1316. His death was followed by a Hindu revolt; indeed Hindu influences must have been at work at Delhi for many years previously. Ala-ud-din had married a Hindu queen; his son had married her daughter. Malik Kafur was a Hindu converted to Islam. The leader of the revolt at Delhi in 1316 was another Hindu convert to Islam. The proceedings of the latter rebel, however, were of a mixed character. He was proclaimed Sultan under a Muhammadan name, and slaughtered every male of the royal house. Meanwhile his Hindu followers set up idols in

the mosques, and seated themselves on Korans. The rebels held possession of Delhi for five months. At the end of that time the city was captured by the Turkish governor of the Punjab, named Tughlak. The conqueror then ascended the throne of Delhi, and founded the dynasty of Tughlak Sultans. The Tughlak Sultans would not live at Delhi; they probably regarded it as a Hindu volcano. They held their court at Tughlakabad, a strong fortress about an hour's drive from old Delhi. The transfer of the capital from Delhi to Tughlakabad is a standpoint in history. It shows that a time had come when the Turk began to fear the Hindu. The conqueror of Delhi died in 1325. He was succeeded by a son who has left his mark in history. Muhammad Tughlak was a Sultan of grand ideas, but blind to all experiences, and deaf to all counsels. He sent his armies into the south to restore the Muhammadan supremacy which had been shaken by the Hindu revolt. Meanwhile the Moghuls invaded the Punjab, and Muhammad Tughlak bribed them to go away with gold and jewels. Thus the imperial treasury was emptied of all the wealth which had been accumulated by Ala-ud-din. The new Sultan tried to improve his finances, but only ruined the country by his exactions. . . . Then followed rebellions and revolutions. Bengal revolted, and became a separate kingdom under an independent Sultan. The Rajas of the Dekhan and Peninsula withheld their tribute. The Muhammadan army of the Dekhan broke out into mutiny, and set up a Sultan of their own. Muhammad Tughlak saw that all men turned against him. He died in 1350, after a reign of twenty-five years. The history of Delhi fades away after the death of Muhammad Tughlak. A Sultan reigned from 1350 to 1388, named Firuz Shah. He is said to have submitted to the dismemberment of the empire, and done his best to promote the welfare of the subjects left to him; but it is also said that he destroyed temples and idols, and burnt a Brahman alive for perverting Muhammadan women. In 1398-99, ten years after the death of Firuz Shah, Timur Shah invaded the Punjab and Hindustan [see TIMOUR]. The horrors of the Tartar invasion are indescribable; they teach nothing to the world, and the tale of atrocities may well be dropped into oblivion. It will suffice to say that Timur came and plundered, and then went away. He left officers to rule in his name, or to collect tribute in his name. In 1450 they were put aside by Afghans;—turbulent Muhammadan fanatics whose presence must have been hateful to the Hindus. At last, in 1525, a descendant of Timur, named the Baber, invaded India, and conquered the Punjab and Hindustan.”—J. T. Wheeler, *Short Hist. of India*, pt. 2, ch. 1.

A. D. 1398-1399.—Timour's invasion of the Punjab. See TIMOUR.

A. D. 1399-1605.—The Saiyid and the Lodi dynasties.—The founding of the Moghul Empire by Babar and Akbar.—“The invasion of Taimur . . . dealt a fatal blow to an authority already crumbling. The chief authority lingered indeed for twelve years in the hands of the then representative, Sultan Malmud. It then passed for a time into the hands of a family which did not claim the royal title. This family, known in

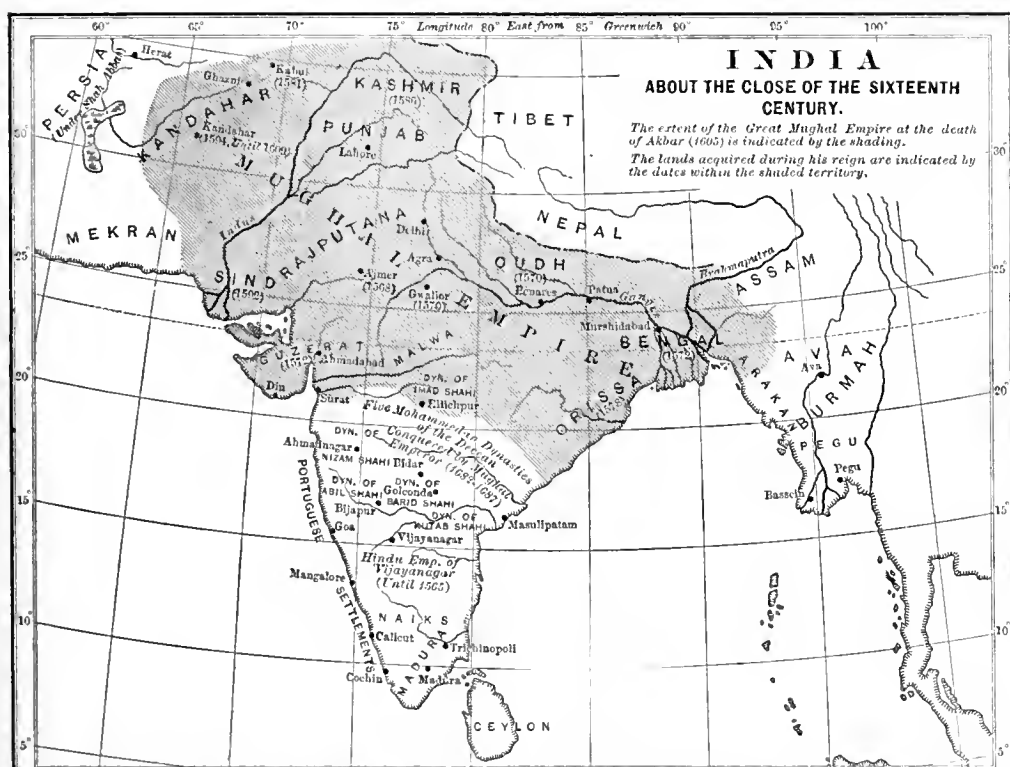

history as the Saiyid dynasty, ruled nominally in Northern India for about 33 years, but the rule had no coherence, and a powerful Afghan of the Lodi family took the opportunity to endeavour to concentrate power in his own hands. The Muhammadan rule in India had indeed become by this time the rule of several disjointed chiefs over several disjointed provinces, subject in point of fact to no common head. Thus, in 1450, Delhi, with a small territory around it, was held by the representative of the Saiyid family. Within fourteen miles of the capital, Ahmad Khan ruled independently in Mewat. Sambhal, or the province now known as Rohilkhand, extending to the very walls of Delhi, was occupied by Darya Khan Lodi. . . . Lahore, Dipalpur, and Sirhind, as far south as Panipat, by Behlul Lodi. Multan, Jaunpur, Bengal, Malwa, and Gujarat, each had its separate king. Over most of these districts, and as far eastward as the country immediately to the north of Western Bihar, Behlul Lodi, known as Sultan Behlul, succeeded on the disappearance of the Saiyids in asserting his sole authority, 1450-88. His son and successor, Sultan Sikandar Lodi, subdued Behar, invaded Bengal, which, however, he subsequently agreed to yield to Allah-u-din, its sovereign, and not to invade it again; and overran a great portion of Central India. On his death, in 1518, he had concentrated under his own rule the territories now known as the Punjab; the North-western Provinces, including Jaunpur; a great part of Central India; and Western Bihar. But, in point of fact, the concentration was little more than nominal.” The death of Sikandar Lodi was followed by a civil war which resulted in calling in the Tartar or Mongol conqueror, Babar, a descendant of Timour, who, beginning in 1494 with a small dominion (which he presently lost) in Ferghana, or Khokand, Central Asia, had made himself master of a great part of Afghanistan (1504), establishing his capital at Kabul. Babar had crossed the Indian border in 1505, but his first serious invasion was in 1519, followed, according to some historians, by a second invasion the same year; the third was in 1520; the fourth occurred after an interval of two or three years. On his fifth expedition he made the conquest complete, winning a great battle at Panipat, 53 miles to the north-west of Delhi, on the 24th of April, 1526. Ibrahim Lodi, son and successor of Sikandar Lodi, was killed in the battle, and Delhi and Agra were immediately occupied. “Henceforth the title of King of Kabul was to be subjected to the higher title of Emperor of Hindustan.” Babar was in one sense the founder of the Mughal (synonymous with Mongol) dynasty—the dynasty of the Great Moguls, as his successors were formerly known. He died in 1530, sovereign of northern India, and of some provinces in the center of the peninsula. But “he bequeathed to his son, Humayun, . . . a congeries of territories uncemented by any bond of union or of common interest, except that which had been concentrated in his life. In a word, when he died, the Mughal dynasty, like the Muhammadan dynasties which had preceded it, had shot down no roots into the soil of Hindustan.”—G. B. Malleson, *Akbar*, ch. 4-5.—Humayun succeeded Babar in India, “but had to make over Kabul and the Western Punjab to his brother and rival, Kamran. Humayun was thus left to govern the new conquest of India, and at the

same time was deprived of the country from which his father had drawn his support. The descendants of the early Afghan invaders, long settled in India, hated the new Muhammadan hordes of Babar even more than they hated the Hindus. After ten years of fighting, Humayun was driven out of India by these Afghans under Sher Shah, the Governor of Bengal. While flying through the desert of Sind to Persia, his famous son Akbar was born in the petty fort of Umarkot (1542). Sher Shah set up as emperor, but was killed while storming the rock fortress of Kalinjar (1545). His son succeeded. But, under Sher Shah's grandson, the third of the Afghan house, the Provinces revolted, including Malwa, the Punjab, and Bengal. Humayun returned to India, and Akbar, then only in his thirteenth year, defeated the Afghan army after a desperate battle at Panipat (1556). India now passed finally from the Afghans to the Mughals. Sher Shah's line disappears; and Humayun, having recovered his Kabul dominions, reigned again for a few months at Delhi, but died in 1556. . . . Akbar the Great, the real founder of the Mughal Empire as it existed for two centuries, succeeded his father at the age of fourteen. . . . His reign lasted for almost fifty years, from 1556 to 1605, and was therefore contemporary with that of our own Queen Elizabeth (1558-1603). His father, Humayun, left but a small kingdom in India, scarcely extending beyond the Districts around Agra and Delhi. . . . The reign of Akbar was a reign of pacification. . . . He found India split into petty kingdoms, and seething with discordant elements; on his death, in 1605, he bequeathed it an empire. The earlier invasions by Turks, Afghans, and Mughals, had left a powerful Muhammadan population in India under their own Chiefs. Akbar reduced these Musalman States to Provinces of the Delhi Empire. Many of the Hindu kings and Rajput nations had also regained their independence: Akbar brought them into political dependence upon his authority. This double task he effected partly by force of arms, but in part also by alliances. He enlisted the Rajput princes by marriage and by a sympathetic policy in the support of his throne. He then employed them in high posts, and played off his Hindu generals and Hindu ministers against the Mughal party in Upper India, and against the Afghan faction in Bengal. . . . His efforts to establish the Mughal Empire in Southern India were less successful. . . . Akbar subjugated Khandesh, and with this somewhat precarious annexation his conquests in the Deccan ceased. . . . Akbar not only subdued all India to the north of the Vindhya mountains, he also organized it into an empire. He partitioned it into Provinces, over each of which he placed a governor, or viceroy, with full civil and military control."—W. W. Hunter, *Brief Hist. of the Indian People*, ch. 10. —"I wish briefly and fairly to state what the Emperor Akbar did for the improvement of the country and the people of Hindostan. He improved the system of land-assessment, or rather he improved upon the improvements instituted by Sher Shah. He adapted an uniform and improved system of land-measurement, and computed the average value of the land, by dividing it into three classes, according to the productiveness of each. This computation being made, one-third of the average produce was fixed as

the amount of tax to be paid to the state. But as this was ordinarily to be paid in money, it was necessary to ascertain the value of the produce, and this was done upon an average of the nineteen preceding years, according to local circumstances; and if the estimate was conceived to be too high, the tax-payer was privileged to pay the assessment in kind. . . . The regulations for the collection of the revenue enforced by Akbar were well calculated to prevent fraud and oppression, and, on the whole, they worked well for the benefit of the people; but it has been said of them, and with truth, that 'they contained no principle of progressive improvement, and held out no hopes to the rural population, by opening paths by which it might spread into other occupations, or rise by individual exertions within its own.' The judicial regulations of Akbar were liberal and humane. Justice, on the whole, was fairly administered. All unnecessary severity—all cruel personal punishments, as torture and mutilation, were prohibited, except in peculiar cases, and capital punishments were considerably restricted. The police appears to have been well organised. . . . He prohibited . . . trials by ordeal . . . ; he suppressed the barbarous custom of condemning to slavery prisoners taken in war; and he authoritatively forbade the burning of Hindoo widows, except with their own free and uninfluenced consent. . . . That something of the historical lustre which surrounds the name of the Emperor Akbar was derived rather from the personal character of the man than from the great things that he accomplished, is, I think, not to be denied. His actual performances, when they come to be computed, fall short of his reputation. But his merits are to be judged not so much by the standard of what he did, as of what he did with the opportunities allowed to him, and under the circumstances by which he was surrounded. Akbar built up the Mogul Empire, and had little leisure allowed him to perfect its internal economy."—J. W. Kaye, *The Administration of the East India Co.*, pt. 1, ch. 2.

A. D. 1498-1580.—Portuguese trade and settlements.—In May, 1498, Vasco da Gama, the Portuguese navigator, reached Calicut, on the southwest (Malabar) coast, being the first European to traverse the ocean route to India, around the Cape of Good Hope (see PORTUGAL: A. D. 1463-1498). He met with a hostile reception from the natives of Malabar; but the next voyager from Portugal, Alvarez Cabral, "who came out the following year, was very favourably received, being allowed to establish a factory on the mainland and to appoint a 'factor' (or consul, as we say now) to represent Portugal there. This factor seems to have had some difficulties with the natives, chiefly owing to his own high-handed actions, which resulted in the murder of himself and the destruction of the factory. Alvarez Cabral therefore sailed up to Cochin, and was received with great friendliness by the chiefs of that part of the country, who allowed him again to set up agencies at Cochin and at Cananore. But the vengeance of the ruler of Malabar pursued them; and the Portuguese, together with their native allies, had to

fight desperately for their safety. They were almost exhausted with the struggle when in 1504 large reinforcements were sent from Portugal, bombarded Calicut, the capital of Malabar, and established the name and fame of the Portuguese as an important power in India generally. A regular maritime trade with India was now firmly set on foot, but the Portuguese had to struggle hard to maintain it. The Mohammedans of India called in the aid of Egypt against them, and even the republic of Venice joined these enemies, in hopes of crushing this new rival to their ancient trade. In 1508 a powerful expedition was sent out from Egypt against the newcomers, a tremendous battle took place, and the Portuguese were defeated. But by a desperate effort Almeida, the Portuguese viceroy, collected all his forces for a final blow, and succeeded in winning a magnificent naval victory which once and for all firmly established the Portuguese power in India. Two years afterwards Almeida's rival and successor, Alfonso de Albuquerque, gained possession of Goa (1510), and this city became the centre of their Indian dominion, which now included Ceylon and the Maldiv Islands, together with the Malacca and Malabar coasts. In 1511 the city of Malacca was captured, and the city of Ormuz in 1515. The next few years were spent in consolidating their sovereignty in these regions, till in 1542 the Portuguese colonists practically regulated all the Asiatic coast trade with Europe, from the Persian Gulf . . . to Japan. . . . For nearly sixty years after this date the king of Portugal, or his viceroy, was virtually the supreme ruler—in commercial matters at any rate—of the southern coast of Asia. The Portuguese were at the climax of their power in the east. The way in which Portuguese trade was carried on is an interesting example of the spirit of monopoly which has, invariably at first and very often afterwards, inspired the policy of all European powers in their efforts of colonisation. The eastern trade was of course kept in the hands of Portuguese traders only, as far as direct commerce between Portugal and India was concerned; but even Portuguese traders were shut out from intermediate commerce between India and other eastern countries, i. e., China, Japan, Malacca, Mozambique, and Ormuz. This traffic was reserved as a monopoly to the crown; and it was only as a great favour, or in reward for some particular service, that the king allowed private individuals to engage in it. The merchant fleet of Portugal generally set sail from Lisbon, bound to Goa, once a year about February or March. . . . This voyage generally took about eighteen months, and, owing to the imperfect state of navigation at that time, and the lack of accurate charts of this new route, was frequently attended by the loss of several ships. Immense profits were, however, made by the traders. On arriving back at Lisbon the Portuguese merchants, as a rule, did not themselves engage in any trade with other European countries in the goods they had brought back, but left the distribution of them in the hands of Dutch, English, and Ilansa sailors who met them at Lisbon. . . . The colonial empire of Portugal, so rapidly and brilliantly acquired, came to a disastrous close. It lasted altogether hardly a century. The avarice and oppressions of its viceroys and merchants, the spirit of monopoly which pervaded their whole policy, and the neg-

lect both of the discipline and defences necessary to keep newly-acquired foreign possessions, hastened its ruin. By 1580 the Portuguese power in the east had seriously declined, and in that year the crown of Portugal was united to that of Spain in the person of Philip II. The Spaniards neglected their eastern possessions altogether, and engaged in wars with the Dutch which had the effect, not only of wasting a great portion of their own and the Portuguese fleet, but of positively driving the Dutch into those very eastern seas which the Portuguese had once so jealously kept to themselves. Only Goa and Diu and a few other small stations remained out of all their magnificent dominion."—H. de B. Gibbins, *Hist. of Commerce in Europe*, bk. 3, ch. 1 (sect. 94-97).

A. D. 1600-1702.—Beginnings of English trade.—The chartering of the English East India Company.—Its early footholds in Hindostan.—The founding of Madras, Bombay and Calcutta.—The three Presidencies.—"For some time it appears to have been thought by other European Powers, that the discovery of the passage round Africa by the Portuguese gave them some exclusive claim to its navigation. But after the year 1580 the conquest of Portugal by Spain, and the example of the Dutch who had already formed establishments not only in India but the Spice Islands, aroused the commercial enterprise of England. In 1599 an Association was formed for the Trade to the East Indies; a sum was raised by subscription, amounting to 68,000l.; and a petition was presented to the Crown for a Royal Charter. Queen Elizabeth wavered during some time, apprehending fresh entanglements with Spain. At length, in December 1600, the boon was granted; the 'Adventurers' (for so were they termed at that time) were constituted a body corporate, under the title of 'the Governor and Company of Merchants of London trading into the East Indies.' By their Charter they obtained the right of purchasing lands without limitation, and the monopoly of their trade during fifteen years, under the direction of a Governor, and twenty-four other persons in Committee, to be elected annually. . . . In 1609, the Charter of the new Company was not only renewed but rendered perpetual,—with a saving clause, however, that should any national detriment be at any time found to ensue, these exclusive privileges should, after three years' notice, cease and expire. It does not seem, however, that the trade of the new Company was extensive. Their first voyage consisted of four ships and one pinnace, having on board 28,742l. in bullion, and 6,860l. in goods, such as cloth, lead, tin, cutlery, and glass. Many other of their voyages were of smaller amount; thus, in 1612, when they united into a Joint Stock Company, they sent out only one ship, with 1,250l. in bullion and 650l. in goods. But their clear profits on their capital were immense; scarcely ever, it is stated, below 100 per cent. During the Civil Wars the Company shared in the decline of every other branch of trade and industry. But soon after the accession

of Charles II. they obtained a new Charter, which not only confirmed their ancient privileges but vested in them authority, through their agents in India, to make peace and war with any prince or people, not being Christians, and to seize within their limits, and send home as prisoners, any Englishmen found without a licence. It may well be supposed that in the hands of any exclusive Company this last privilege was not likely to lie dormant. . . . The period of the Revolution was not so favourable to the Company as that of the Restoration. A rival Company arose, professing for its object greater freedom of trade with the East Indies, and supported by a majority in the House of Commons. It is said that the competition of these two Companies with the private traders and with one another had well nigh ruined both. . . . An Union between these Companies, essential, as it seemed, to their expected profits, was delayed by their angry feelings till 1702. Even then, by the Indenture which passed the Great Seal, several points were left unsettled between them, and separate transactions were allowed to their agents in India for the stocks already sent out. Thus the ensuing years were fraught with continued jarings and contentions. . . . After the grant of the first Charter by Queen Elizabeth, and the growth of the Company's trade in India, their two main factories were fixed at Surat and Bantam. Surat was then the principal sea-port of the Mogul Empire, where the Mahometan pilgrims were wont to assemble for their voyages towards Mecca. Bantam, from its position in the island of Java, commanded the best part of the Spice trade. But at Surat the Company's servants were harassed by the hostility of the Portuguese, as at Bantam, by the hostility of the Dutch. To such heights did these differences rise that in 1622 the English assisted the Persians in the recovery of Ormuz from the Portuguese, and that in 1623 the Dutch committed the outrage termed the 'Massacre of Amboyna,'—putting to death, after a trial, and confession of guilt extorted by torture, Captain Towerson and nine other Englishmen, on a charge of conspiracy. In the final result, many years afterwards, the factories both at Bantam and Surat were relinquished by the Company. Other and newer settlements of theirs had, meanwhile, grown into importance.—In 1640 the English obtained permission from a Hindoo Prince in the Carnatic to purchase the ground adjoining the Portuguese settlement of St. Thomé, on which they proceeded to raise Fort St. George and the town of Madras. . . . In a very few years Madras had become a thriving town.—About twenty years afterwards, on the marriage of Charles II. to Catherine of Braganza [1661], the town and island of Bombay were ceded to the King of England as a part of the Infanta's dowry. For some time the Portuguese Governor continued to evade the grant, alleging that the patent of His Majesty was not in accordance with the customs of Portugal; he was compelled to yield; but the possession being found on trial to cost more than it produced, it was given up by King Charles to the East India Company, and became one of their principal stations. Nor was Bengal neglected. Considering the beauty and richness of that province, a proverb was already current among the Europeans, that there are a hundred gates for entering and not one for leaving it.

The Dutch, the Portuguese, and the English had established their factories at or near the town of Hooghly on one of the branches—also called Hooghly—of the Gauges. But during the reign of James II. the imprudence of some of the Company's servants, and the seizure of a Mogul junk, had highly incensed the native Powers. The English found it necessary to leave Hooghly, and drop twenty-five miles down the river, to the village of Chuttanuttee. Some petty hostilities ensued, not only in Bengal but along the coasts of India. . . . So much irritated was Aurungzebe at the reports of these hostilities, that he issued orders for the total expulsion of the Company's servants from his dominions, but he was appeased by the humble apologies of the English traders, and the earnest intercession of the Hindoo, to whom this commerce was a source of profit. The English might even have resumed their factory at Hooghly, but preferred their new station at Chuttanuttee, and in 1698 obtained from the Mogul, on payment of an annual rent, a grant of the land on which it stood. Then, without delay, they began to construct for its defence a citadel, named Fort William, under whose shelter there grew by degrees from a mean village the great town of Calcutta,—the capital of modern India. . . . At nearly the same period another station,—Tegnapatam, a town on the coast of Coromandel, to the south of Madras,—was obtained by purchase. It was surnamed Fort St. David, was strengthened with walls and bulwarks, and was made subordinate to Madras for its government. Thus then before the accession of the House of Hanover these three main stations,—Fort William, Fort St. George, and Bombay,—had been erected into Presidencies, or central posts of Government; not, however, as at present, subject to one supreme authority, but each independent of the rest. Each was governed by a President and a Council of nine or twelve members, appointed by the Court of Directors in England. Each was surrounded with fortifications, and guarded by a small force, partly European and partly native, in the service of the Company. The Europeans were either recruits enlisted in England or strollers and deserters from other services in India. Among these the descendants of the old settlers, especially the Portuguese, were called Topasses,—from the tope or hat which they wore instead of turban. The natives, as yet ill-armed and ill-trained, were known by the name of Sepoys,—a corruption from the Indian word 'sipahi,' a soldier. But the territory of the English scarcely extended out of sight of their towns.—Lord Mahon (Earl Stanhope), *Hist. of England*, 1713-1783, ch. 39 (v. 4).

A. D. 1605-1658.—Jahangir and Nur Mahal.—Shah Jahan and the Taj Mahal.—Seizure of the throne by Aurungzebe.—“Selim, the son and successor of Akbar, reigned from the year of his father's death until 1627, having assumed the title of Jahangir, or 'Conqueror

of the World'; that is to say, he reigned, but he did not govern. Before he came to the throne, he fell in love with a poor Persian girl," whom his father gave in marriage to one of his officers. "On his advent to the throne, Jahangir . . . managed to get the husband killed, and took the widow into his harem. He subsequently married her, and she ruled, not him alone, but the whole empire. . . . [She was first called Nur Mahal, 'Light of the Harem,' then Nur Jahan, 'Light of the World.'] It was during this reign, in 1615, that the first English ambassador, Sir Thomas Roe, arrived in Hindustan from James I.; and proceeding to Ajmere, where Jahangir was staying at the time with his court, he made him several presents, amongst which, we are told, a beautiful English coach gave the Emperor the most satisfaction. He received the ambassador with great distinction, showed him marked attention at all public receptions, and granted a firmān to the English to establish a factory at Surat. . . . The later years of Jahangir's reign were disturbed by family intrigues, in which the Empress Nur Jahan took a prominent part, endeavouring to secure the succession for her son-in-law; but after the death of the Emperor, his oldest living son, Shah Jahan, pensioned and forced the Empress into retirement. . . . and . . . 'dispatched all the males of the house of Timour, so that only himself and his children remained of the posterity of Baber, who conquered India.' In some respects the reign of Shah Jahan was unfortunate. He lost his Afghan dominions, and gained but little by his invasions of the Dekhan, which were carried on by his rebellious son and successor, Aurungzeb; but in another direction he did more to perpetuate the glory of the Mughal dynasty than any other emperor of his line. Amongst other handsome buildings, he erected the most beautiful the world has ever possessed. . . . This was the well-known Taj Mahal at Agra, a mausoleum for his favourite Empress Arjamund, known as Mumtaz-i-Mahal [of which name, according to Elphinstone, Taj Mahal is a corruption], 'the Exalted One of the Seraglio.' . . . When Shah Jahan had attained his 66th year (according to some writers, his 70th), he was seized with a sudden illness, the result of his debauched life, and as it was reported that he was dead, a civil war broke out amongst his sons for the possession of the throne. These were four in number, Dara (the oldest), Shuja, Aurungzeb, and Murad (the youngest); and in the conflict Aurungzeb, the third son, was ultimately successful. Two of the brothers, Dara and Murad, fell into the power of the last-named and were put to death by his orders. Shuja escaped to Arracan, and was murdered there; and as for the Emperor, who had recovered, Aurungzeb confined him in the fort at Agra, with all his female relatives, and then caused himself to be proclaimed in his stead [1658]. Towards the close of Shah Jahan's life [which came to an end in 1666], a partial reconciliation took place between him and his son, who, however, did not release him from his confinement."—J. Samuelson, *India, Past and Present*, pt. 1, ch. 7.

A. D. 1662-1748.—The struggle of Aurungzebe with the Mahrattas.—The Mahratta

empire.—Invasion of Nadir Shah.—Sack of Delhi and great Massacre.—"Aurangzebe had reigned five years before he succeeded in destroying all his kinsmen. . . . About that time, in the year 1662, a new and extraordinary power in Southern India began to attract attention. The Mahrattas appear to have been nothing more than the Hindoo peasantry, scattered throughout some of the mountainous districts of the Mahomedan kingdoms of Ahmednuggur, Beijapoor and Golconda, and united into a body only by the prejudices of caste, of which their rank was the lowest, that of Sudra. In the confusion incidental to the constant wars in which these states were engaged, some of the head men of their villages set up for themselves, and one of them, Shahji Borla, became powerful enough to play a conspicuous part at the time of the annexation of Ahmednuggur to the Mogul empire. His son Sevaji, setting out from this vantage ground, strengthened his hands by the silent capture of some hill forts in Beijapoor, and eventually raising the standard of revolt against that government, introduced a spirit of union amidst the scattered masses of his people, and may thus be considered the founder of the Mahratta empire. In 1662 he commenced his predatory expeditions into the Mogul territory, and in ten years he found himself at the head of a regular government with the title of Rajah, and strong enough to encounter and defeat the imperial forces in a field battle. This was the critical moment in the progress of the Mogul empire. Aurungzebe was called away for two years by the chronic disturbances beyond the Indus; his strength was wasted by the ceaseless wars of the Deccan; and being goaded to madness by the casual insurrection of some Hindoo devotees in the centre of his dominions, he replaced the capitation tax on infidels, and fulminated other decrees against that portion of his subjects of such extravagant intolerance that they at length looked upon the progress of their co-religionists, the Mahrattas, with more longing than alarm. In 1679, the western portion of Rajahstan was in arms against the empire, and continued in a state of hostility more or less active during the whole reign. Even the emperor's eventual successes in the Deccan, in overthrowing the kingdoms of Beijapoor and Golconda, contributed to his ruin; for it removed the check of regular government from that distracted portion of the country, and . . . threw into the arms of the Mahrattas the adventurous and the desperate of the population. Sevaji died, and successors of less talent filled the throne of the robber-king; but this seems to have had no effect upon the progress of the inundation, which now bursting over the natural barriers of the peninsula, and sweeping away its military defences, overflowed Malwa and a portion of Guzerat. Aurungzebe fought gallantly and finessed craftily by turns; . . . and thus he struggled with his destiny even to extreme old age, bravely and alone. He expired in his 89th year, the 50th of his reign, on the 21st of February, 1707. . . . During the next twelve years after the death of Aurungzebe, no fewer than five princes sat upon the throne, whose reigns, without being distinguished by any great events, exhibited evident indications of the gradual decline of the empire. During that period the Sikhs, originally a sect of Hindoo dissenters, whose

peculiarity consisted in their repudiation of all religious ceremonies, having first been changed into warriors by persecution, began to rise by the spirit of union into a nation; but so weak were they at this time that in 1706 the dying energies of the empire were sufficient almost for their extirpation. . . . Mahomed Shah succeeded to the throne in 1719. The Mahratta government was by this time completely consolidated, and the great families of the race, since so celebrated, had begun to rise into eminence: such as that of the Peshwa, the official title of a minister of the Rajah; of Holkar, the founder of which was a shepherd; and of Sindia, which sprang from a menial servant. . . . A still more remarkable personage of the time was Asaf Jah, whose descendants became the Nizams [regulators or governors—the title becoming hereditary in the family of Asaf, at Hyderabad] of the Deccan. . . . While the empire was . . . rent in pieces by internal disturbances, a more tremendous enemy even than the Mahrattas presented himself from without. A revolution had taken place in Persia, which seated a soldier of fortune upon the throne; and the famous Nadir Shah, after capturing Candahar, found it necessary, according to the fashion of conquerors, to seize upon the Mogul territories, Ghizni and Cabul, and when at the latter city to continue his march into Hindostan. In 1739, he arrived at Kurnaul, within 70 miles of Delhi, and defeated the emperor in a general engagement. . . . The two kings then proceeded to Delhi after the battle, where Nadir, in consequence, it is said, of an insurrection of the populace, set fire to the city and massacred the inhabitants to a number which has been variously estimated at from 30,000 to 150,000. He then proceeded to the main business of his invasion, robbing first the treasury and afterwards the inhabitants individually, torturing or murdering all who were suspected of concealing their riches, and at length returned to his own dominions, having obtained a formal cession of the country west of the Indus, and carrying with him in money and plate at least twelve millions sterling, besides jewels of great value, including those of the Peacock Throne [the throne of the Great Mogul, made solidly of gold and adorned with diamonds and pearls,—the enamelled back of the throne being spread in the form of a peacock's tail.—*Tavernier's Travels*, tr. and ed. by V. Ball, bk. 2, ch. 8 (v. 1)]. From this period to the death of the Emperor Mahomed Shah, in 1748, the interval was filled up with the disturbances which might be expected.”—Leitch Ritchie, *Hist. of the Indian Empire*, bk. 1, ch. 5 (v. 1).—The Asaf or Asaf Jah mentioned above had become, in 1721, the Prime Minister of the Emperor Muhammad Shah. “In a little more than three years he had thrown up in disgust an office which the levity of the young monarch hindered him from discharging to his satisfaction; and had repaired to the Deccan, where he founded the State which still subsists under the name of ‘The Nizam’s Dominions.’ Nominally, it was the Subah [province] erected on the ruins of the old Musalman kingdoms; but in the decline of the Empire it became a hereditary and quasi-independent province, though the ruler never took the royal title, but continued to retain the style of an Imperial Viceroy, as ‘Nizam-ul-mulk,’ which his descendant still bears.”—H. G. Keene, *Mudhava Rao Sindhia*, ch. 1.—

“The different provinces and viceroalties went their own natural way; they were parcelled out in a scuffle among revolted governors, rebellious chiefs, leaders of insurgent tribes or sects, religious revivalists, or captains of mercenary bands. The Indian people were becoming a masterless multitude swaying to and fro in the political storm, and clinging to any power, natural or supernatural, that seemed likely to protect them. They were prepared to acquiesce in the assumption of authority by any one who could show himself able to discharge the most elementary functions of government in the preservation of life and property. In short, the people were scattered without a leader or protector; while the political system under which they had long lived was disappearing in complete disorganization. It was during this period of tumultuary confusion that the French and English first appeared upon the political arena in India.”—Sir A. Lyall, *Rise of the British Dominion in India*, ch. 4, sect. 1-2.

A. D. 1665-1743.—Commercial undertakings of the French.—Their settlement at Pondicherry.—“Many expeditions to India had been made [by the French] earlier than the time of Colbert’s East India Company, chartered in the year 1665. The first French ships, of which there is any record, that succeeded in reaching India, were two despatched from one of the ports of Brittany in 1601. These ships were, however, wrecked on the Maldiv Islands, and their commander did not return to France for ten years. Voyages were undertaken in 1616, 1619, and again in 1633, of which the most that can be said is that they met with no great disaster. The attempt to found settlements in Java and Madagascar, which was the object of these voyages, completely failed. The first operations of the French East India Company were to establish factories in Hindostan. Surat, a large commercial city at the mouth of the Taptee, was fixed upon for the principal depot. The abuses and lavish waste of the officers entrusted to carry out Colbert’s plans, brought the company to an end in five years. An attempt in 1672 to form a colony at Trincomalee, on the north-east coast of Ceylon, was frustrated by the hostility of the Dutch. Afterwards the French made an attempt on Meliapore or Thomé, belonging to the Portuguese. They were soon expelled, and the survivors sought refuge at Pondicherry [1674], a small town which they had purchased on the same coast of the Carnatic. In 1693, Pondicherry was taken by the Dutch, who improved the fortifications and general condition of the town. At the peace of Ryswick, in 1697, the settlement was restored to the French. For half a century Pondicherry shared the neglect common to French colonies, and owed more to the probity and discretion of its governors than to the home government. M. Martin, and subsequently Dumas, saved the settlement from ruin. They added to the defences; and Dumas, being in want of money for public purposes, obtained permission from the King of Delhi to coin money for the French settlers. He also procured the cession of Karikal, a district

of Tanjore. On the other hand, several stations and forts had to be given up."—J. Yeats, *Growth and Vicissitudes of Commerce*, pt. 3, ch. 7.

A. D. 1743-1752.—Struggle of the French and English for supremacy in the Deccan.—Clive against Dupleix.—The founding of British empire.—"England owes the idea of an Indian empire to the French, as also the chief means by which she has hitherto sought to realize it. The war of the Austrian succession had just broken out [1743] between France and England [see AUSTRIA: A. D. 1743]. Dupleix, the governor of the settlements of the French East India Company, proposed to the English company a neutrality in the eastern seas; it was rejected. The English probably repented of their presumption when they saw Captain Peyton, the commander of a squadron of three liners and a frigate, after an indecisive engagement with the French admiral, Labourdonnais, take flight to the Bay of Bengal, leaving Madras, then the most flourishing of the English settlements, defenceless. Dupleix and Labourdonnais were the first of that series of remarkable Frenchmen who, amidst every discouragement from home, and in spite of their frequent mutual dissensions, kept the French name so prominent in India for more than the next half century, only to meet on their return with obloquy, punishment, even death. Labourdonnais, who was Admiral of the French fleet, was also Governor of Mauritius, then called the Isle of France. He had disciplined a force of African negroes. With French troops and these, he entered the narrow strip of coast, five miles long, one mile broad, which was then the territory of Madras, bombarded the city, compelled the fort (which had lost five men) to surrender. But his terms were honourable; the English were placed on parole; the town was to be given up on payment of a moderate ransom (1746). Dupleix, however, was jealous; he denied Labourdonnais' powers; broke the capitulation; paraded the Governor and other English gentlemen in triumph through Pondicherry. In vain did Admiral Boscawen besiege the latter place; time was wasted, the trenches were too far, the rains came on; Boscawen raised the siege, crippled in men and stores; was recalled by the news of the peace of Aix-la-Chapelle, and, to close his career of misfortune, lost several ships and 1,200 men on the Coromandel coast (1748-9). News of the treaty of Aix-la-Chapelle, however, produced a very temporary cessation of hostilities, Madras being restored, with fortifications much improved. The English fortunes seemed at their lowest in India; the French rising to their full height. Dupleix conceived the bold plan of interfering in the internal politics of the country. Labourdonnais had disciplined the negro; Dupleix disciplined the native Indian. . . . Labourdonnais had beaten off the so-called Nawab of the Carnatic, when he attempted to take Madras; the event produced an immense sensation; it was the first victory obtained for a century by Europeans over the natives of India. Dupleix was strong enough to be reckoned a valuable ally. But on the English side a young man had appeared who was to change the whole course of events in the East. Robert Clive, an attorney's son from

Market Drayton, born in 1725, sent off at eighteen as a writer to Madras—a naughty boy who had grown into an insubordinate clerk, who had been several times in danger of losing his situation, and had twice attempted to destroy himself—ran away from Madras, disguised as a Mussulman, after Dupleix's violation of the capitulation, obtained an ensign's commission at twenty-one, and began distinguishing himself as a soldier under Major Lawrence, then the best British officer in India."—J. M. Ludlow, *British India*, lect. 7.—"Clive and others who escaped [from Madras] betook themselves to Fort St. David's—a small English settlement a few miles south of Pondicherry. There Clive prepared himself for the military vocation for which nature had clearly destined him. . . . At Fort St. David's the English intrigued with the native chiefs, much as the French had done, and not more creditably. They took sides, and changed sides, in the disputes of rival claimants to the province of Tanjore, under the inducement of the possession of Devi-cottah, a coast station at the mouth of the Coleroon. There was no great honour in the results, any more than in the conception, of this first little war. We obtained Devi-cottah; but we did not improve our reputation for good faith, nor lessen the distance between the French and ourselves in military prestige. But Dupleix was meantime providing the opportunity for Clive to determine whether the Deccan should be under French or English influence. . . . The greatest of the southern princes, the Nizam al Mulk, Viceroy of the Deccan, died in 1748; and rivals rose up, as usual, to claim both his throne and the richest province under his rule—the Carnatic. The pretenders on one side applied to the French for assistance, and obtained reinforcements to the extent of 400 French soldiers and 2,000 trained sepoys. This aid secured victory; the opposing prince was slain; and his son, the well-known Mohammed Ali, 'the Nabob of Arcot' of the last century, took refuge, with a few remaining troops, at Trichiupoly. In a little while, the French seemed to be supreme throughout the country. Dupleix was deferred to as the arbiter of the destinies of the native princes, while he was actually declared Governor of India, from the Kistna to Cape Comorin—a region as large as France, inhabited by 30,000,000 of people, and defended by a force so large that the cavalry alone amounted to 7,000 under the command of Dupleix. In the midst of this dominion, the English looked like a handful of dispirited and helpless settlers, awaiting the disposal of the haughty Frenchman. Their native ally had lost everything but Trichinopoly; and Trichinopoly itself was now besieged by the Nabob of the Carnatic and his French supporters. Dupleix was greater than even the Mogul sovereign; he had erected a column in his own honour, displaying on its four sides inscriptions in four languages, proclaiming his glory as the first man of the East; and a town had sprung up round this column, called his City of Victory. To the fatalistic mind of the native races it seemed a settled matter that the French rule was supreme, and that the English must perish out of the land. Major Lawrence had gone home; and the small force of the English had no commander. Clive was as yet only a commissary, with the rank of captain, and regarded more as

a civilian than a soldier. He was only five-and-twenty. His superiors were in extreme alarm, foreseeing that when Trichinopoly was taken, the next step would be the destruction of Madras. Nothing could make their position worse; and they caught at every chance of making it better. Clive offered to attack Arcot, the capital of the Carnatic, in the hope that this would draw away the besiegers from Trichinopoly; and the offer was accepted. The force consisted of 200 British and 300 native soldiers, commanded, under Clive, by four factors and four military men, only two of whom had ever been in action. Everything was against them, from numbers and repute to the weather; but Clive took Arcot [Sept. 11, 1751], and (what was much more difficult) kept it. The garrison had fled in a panic; but it was invested by 10,000 men before the British had repaired half its dilapidations and deficiencies, or recruited their numbers, now reduced to 320 men in all, commanded by four officers. For fifty days, amidst fatigue, hunger, and a hundred pressing dangers, the little band sustained the siege. . . . A series of victories followed, and men and opinion came round to the side of the victors. There was no energy at headquarters to sustain Clive in his career. . . . In his absence, the enemy appeared again before Fort George, and did much damage; but Clive came up, and 100 of the French soldiers were killed or taken. He uprooted Dupleix's boasting monument, and levelled the city to the ground, thereby reversing the native impression of the respective destinies of the French and English. Major Lawrence returned. Dupleix's military incapacity was proved, and his personal courage found wanting as soon as fortune deserted him. Trichinopoly was relieved, and the besiegers were beaten, and their candidate prince put to death. Dupleix struggled in desperation for some time longer before he gave up the contest; and Clive had his difficulties in completing the dislodgment of the French. . . . He did it; but nearly at the sacrifice of his life. When the British supremacy in the Deccan was completely established, he returned [1752] in bad health to England. . . . He left behind him Dupleix, for whom a summons home in disgrace was on the way."—H. Martineau, *Hist. of British Rule in India*, ch. 6.

A. D. 1747-1761.—The Duranee power in Afghanistan.—Conflict of the Afghans and the Mahrattas.—Great defeat of the latter at Panniput.—Fall of the shattered Moghul empire.—The state of things which invited British conquest.—On the death of Nadir Shah, who was murdered in 1747, his Afghan kingdom was acquired by a native chief, Ahmed Abdalee, who, first a prisoner and a slave to Nadir Shah, had become one of the trusted officers of his court and army. "Ahmed Abdalee had acquired so great an ascendancy among the troops that upon this event [the death of Nadir Shah] several commanders and their followers joined his standard; and he drew off toward his own country. He fell in with and seized a convoy of treasure, which was proceeding to the camp. This enabled him to engage in his pay a still larger body of his countrymen.

He proclaimed himself king of the Afghans; and took the title of Doordowran, or pearl of the age, which being corrupted into Dooranee [or Duranee], gave one of their names to himself and his Abdallees. He marched towards Candahar, which submitted to his arms; and next proceeded to Cabul . . . and this province also fell into the hands of the Afghans." Lahore was next added to his dominions, and he then, in 1747, invaded India, intent upon the capture of Delhi; but met with sufficient resistance to discourage his undertaking, and fell back to Cabul. In 1748, and again in 1749, he passed the Indus, and made himself master of the Punjab. In 1755-6 he marched to Delhi, which opened its gates to him and received him, pretendedly as a guest, but really as a master. A plague breaking out in his army caused him to return to his own country. He "left his son Governor of Lahore and Multan; disordered by revolutions, wasted and turbulent. A chief . . . incited the Seiks [Sikhs] to join him in molesting the Dooranees; and they gained several important advantages over their principal commanders. They invited the Mahratta generals, Ragonaut Raow, Shumsheer Bahadur, and Holkar, who had advanced into the neighbourhood of Delhi, to join them in driving the Abdalees from Lahore. No occupation could be more agreeable to the Mahrattas. After taking Sirhind, they advanced to Lahore, where the Abdalee Prince made but a feeble resistance and fled. This event put them in possession of both Multan and Lahore. . . . The whole Indian continent appeared now about to be swallowed up by the Mahrattas. . . . Ahmed Shah [the Abdalee, or Dooranee] was not only roused by the loss of his two provinces, and the disgrace imprinted on his arms, but he was invited by the chiefs and people of Hindustan, groaning under the depredations of the Mahrattas, to march to their succour and become their King. . . . For some days the Dooranees hovered round the Mahratta camp; when the Mahrattas, who were distressed for provisions, came out and offered battle. Their army, consisting of 80,000 veteran cavalry, was almost wholly destroyed; and Duttah Sindia, their General, was among the slain. A detachment of horse sent against another body of Mahrattas, who were marauding under Holkar in the neighbourhood of Secundra, surprised them so completely that Holkar fled naked, with a handful of followers, and the rest, with the exception of a few prisoners and fugitives, were all put to the sword. During the rainy season, while the Dooranee Shah was quartered at Secundra, the news of this disaster and disgrace excited the Mahrattas to the greatest exertions. A vast army was collected, and . . . the Mahrattas marched to gratify the resentments, and fulfil the unbounded hopes of the nation. . . . They arrived at the Jumna before it was sufficiently fallen to permit either the Mahrattas on the other side, or the Dooranees, to cross. In the meantime they marched to Delhi, of which after some resistance they took possession; plundered it with their usual rapacity, tearing away even the gold and silver ornaments of the palace; proclaimed Sultan Jewan Bukht, the son of Alee Gohur [or Shah Alum, absent son of the late nominal Emperor at Delhi, Alumgeer II., who had recently been put to death by his own vizir], Emperor; and named Sujah ad Dowlah, Nabob of Oude,

his Vizir. Impatient at intelligence of these and some other transactions, Ahmed Shah swam the Jumna, still deemed impassable, with his whole army. This daring adventure, and the remembrance of the late disaster, shook the courage of the Mahrattas; and they entrenched their camp on a plain near Panniput. The Dooranee, having surrounded their position with parties of troops, to prevent the passage of supplies, contented himself for some days with skirmishing. At last he tried an assault; when the Rohilla infantry . . . forced their way into the Mahratta works, and Bulwant Raow with other chiefs was killed; but night put an end to the conflict. Meanwhile scarcity prevailed and filth accumulated in the Mahratta camp. The vigilance of Ahmed intercepted their convoys. In a little time famine and pestilence raged. A battle became the only resource [January 7, 1761]. The Abdalee restrained his troops till the Mahrattas had advanced a considerable way from their works; when he rushed upon them with so much rapidity as left them hardly any time for using their cannon. The Bhaow was killed early in the action; confusion soon pervaded the army, and a dreadful carnage ensued. The field was floated with blood. Twenty-two thousand men and women were taken prisoners. Of those who escaped from the field of battle, the greater part were butchered by the people of the country, who had suffered from their depredations. Of an army of 140,000 horse, commanded by the most celebrated generals of the nation, only three chiefs of any rank, and a mere residue of the troops, found their way to Deccan. The Dooranee Shah made but little use of this mighty victory. After remaining a few months at Delhi, he recognized Alee Gohur as Emperor, by the title of Shah Aulum II.; and entrusting Nujeeb ad Dowlah with the superintendence of affairs, till his master should return from Bengal, he marched back to his capital of Cabul in the end of the year 1760 [1761]. With Aulumgeer II. the empire of the Moguls may be justly considered as having arrived at its close. The unhappy Prince who now received the name of Emperor, and who, after a life of misery and disaster, ended his days a pensioner of English merchants, never possessed a sufficient degree of power to consider himself for one moment as master of the throne."—J. Mill, *Hist. of British India*, bk. 3, ch. 4 (c. 2).—"The words 'wonderful,' 'strange,' are often applied to great historical events, and there is no event to which they have been applied more freely than to our [the English] conquest of India. . . . But the event was not wonderful in a sense that it is difficult to discover adequate causes by which it could have been produced. If we begin by remarking that authority in India had fallen on the ground through the decay of the Mogul Empire, that it lay there waiting to be picked up by somebody, and that all over India in that period adventurers of one kind or another were founding Empires, it is really not surprising that a mercantile corporation which had money to pay a mercenary force should be able to compete with other adventurers, nor yet that it should outstrip all its competitors by bringing into the field English military science and generalship, especially when it was backed over and over again by the whole power and credit of England and directed by English statesmen. . . . Eng-

land did not in the strict sense conquer India, but . . . certain Englishmen, who happened to reside in India at the time when the Mogul Empire fell, had a fortune like that of Hyder Ali or Runjeet Singh and rose to supreme power there."—J. R. Seeley, *The Expansion of England*, course 2, lect. 3.

ALSO IN: J. G. Duff, *Hist. of the Mahrattas*, v. 2, ch. 2-5.—G. B. Malletson, *Hist. of Afghanistan*, ch. 8.—H. G. Keene, *Madhava Rao Sindhia*, ch. 2.

A. D. 1755-1757.—Capture of Calcutta by Surajah Dowlah.—The tragedy of the Black Hole.—Clive's recovery of the Fort and settlement.—Clive remained three years in England, where he sought an election to Parliament, as a supporter of Fox, but was unseated by the Tories. On suffering this disappointment, he re-entered the service of the East India Company, as governor of Fort St. David, with the commission of a lieutenant-colonel in the British army, received from the king, and returned to India in 1755. Soon after his arrival at Fort St. David, "he received intelligence which called forth all the energy of his bold and active mind. Of the provinces which had been subject to the house of Tamerlane, the wealthiest was Bengal. No part of India possessed such natural advantages both for agriculture and for commerce. . . . The great commercial companies of Europe had long possessed factories in Bengal. The French were settled, as they still are, at Chandernagore on the Hoogley. Higher up the stream the Dutch traders held Chinsurah. Nearer to the sea, the English had built Fort William. A church and ample warehouses rose in the vicinity. A row of spacious houses, belonging to the chief factors of the East India Company, lined the banks of the river; and in the neighbourhood had sprung up a large and busy native town, where some Hindoo merchants of great opulence had fixed their abode. But the tract now covered by the palaces of Chowringhee contained only a few miserable huts thatched with straw. A jungle, abandoned to water-fowl and alligators, covered the site of the present Citadel, and the Course, which is now daily crowded at sunset with the gayest equipages of Calcutta. For the ground on which the settlement stood, the English, like other great landholders, paid rent to the government; and they were, like other great landholders, permitted to exercise a certain jurisdiction within their domain. The great province of Bengal, together with Orissa and Bahar, had long been governed by a viceroy, whom the English called Aliverdy Khan, and who, like the other viceroys of the Mogul, had become virtually independent. He died in 1756, and the sovereignty descended to his grandson, a youth under twenty years of age, who bore the name of Surajah Dowlah. . . . From a child Surajah Dowlah had hated the English. It was his whim to do so; and his whims were never opposed. He had also formed a very exaggerated notion of the wealth which might be obtained by plundering them; and his feeble and uncultivated mind was incapable of perceiving that the riches of Calcutta, had they been even greater than he imagined, would not compensate him for what he must lose, if the European trade, of which Bengal was a chief seat, should be driven by his violence to some other quarter. Pretexts for a quarrel were

readily found. The English, in expectation of a war with France, had begun to fortify their settlement without special permission from the Nabob. A rich native, whom he longed to plunder, had taken refuge at Calcutta, and had not been delivered up. On such grounds as these Surajah Dowlah marched with a great army against Fort William. The servants of the Company at Madras had been forced by Dupleix to become statesmen and soldiers. Those in Bengal were still mere traders, and were terrified and bewildered by the approaching danger. . . . The fort was taken [June 20, 1756] after a feeble resistance; and great numbers of the English fell into the hands of the conquerors. The Nabob seated himself with regal pomp in the principal hall of the factory, and ordered Mr. Holwell, the first in rank among the prisoners, to be brought before him. His Highness talked about the insolence of the English, and grumbled at the smallness of the treasure which he had found; but promised to spare their lives, and retired to rest. Then was committed that great crime, memorable for its singular atrocity, memorable for the tremendous retribution by which it was followed. The English captives were left at the mercy of the guards, and the guards determined to secure them for the night in the prison of the garrison, a chamber known by the fearful name of the Black Hole. Even for a single European malefactor, that dungeon would, in such a climate, have been too close and narrow. The space was only twenty feet square. The air-holes were small and obstructed. It was the summer solstice, the season when the fierce heat of Bengal can scarcely be rendered tolerable to natives of England by lofty halls and by the constant waving of fans. The number of the prisoners was 146. When they were ordered to enter the cell, they imagined that the soldiers were joking; and, being in high spirits on account of the promise of the Nabob to spare their lives, they laughed and jested at the absurdity of the notion. They soon discovered their mistake. They expostulated; they entreated; but in vain. The guards threatened to cut down all who hesitated. The captives were driven into the cell at the point of the sword, and the door was instantly shut and locked upon them. Nothing in history or fiction, not even the story which Ugolino told in the sea of everlasting ice, after he had wiped his bloody lips on the scalp of his murderer, approaches the horrors which were recounted by the few survivors of that night. They cried for mercy. They strove to burst the door. Holwell who, even in that extremity, retained some presence of mind, offered large bribes to the gaolers. But the answer was that nothing could be done without the Nabob's orders, that the Nabob was asleep, and that he would be angry if anybody woke him. Then the prisoners went mad with despair. They trampled each other down, fought for the places at the windows, fought for the pittance of water with which the cruel mercy of the murderers mocked their agonies, raved, prayed, blasphemed, implored the guards to fire among them. The gaolers in the mean time held lights to the bars, and shouted with laughter at the frantic struggles of their victims. At length the tumult died away in low gaspings and moanings. The day broke. The Nabob had slept off his debauch, and permitted the door to be opened. But it was

some time before the soldiers could make a lane for the survivors, by piling up on each side the heaps of corpses on which the burning climate had already begun to do its loathsome work. When at length a passage was made, twenty-three ghastly figures, such as their own mothers would not have known, staggered one by one out of the charnel-house. A pit was instantly dug. The dead bodies, 123 in number, were flung into it promiscuously and covered up. . . . One Englishwoman had survived that night. She was placed in the harem of the Prince at Moorshedabad. Surajah Dowlah, in the mean time, sent letters to his nominal sovereign at Delhi, describing the late conquest in the most pompous language. He placed a garrison in Fort William, forbade Englishmen to dwell in the neighbourhood, and directed that, in memory of his great actions, Calcutta should thenceforward be called Alinagore, that is to say, the Port of God. In August the news of the fall of Calcutta reached Madras, and excited the fiercest and bitterest resentment. The cry of the whole settlement was for vengeance. Within forty-eight hours after the arrival of the intelligence it was determined that an expedition should be sent to the Hoogley, and that Clive should be at the head of the land forces. The naval armament was under the command of Admiral Watson. Nine hundred English infantry, fine troops and full of spirit, and 1,500 sepoy, composed the army which sailed to punish a Prince who had more subjects than Lewis XV. or the Empress Maria Theresa. In October the expedition sailed; but it had to make its way against adverse winds, and did not reach Bengal till December. The Nabob was revelling in fancied security at Moorshedabad. He was so profoundly ignorant of the state of foreign countries that he often used to say that there were not ten thousand men in all Europe; and it had never occurred to him as possible, that the English would dare to invade his dominions. But, though undisturbed by any fear of their military power, he began to miss them greatly. His revenues fell off. . . . He was already disposed to permit the company to resume its mercantile operations in his country, when he received the news that an English armament was in the Hoogley. He instantly ordered all his troops to assemble at Moorshedabad, and marched towards Calcutta. Clive had commenced operations with his usual vigour. He took Budgebudge, routed the garrison of Fort William, recovered Calcutta, stormed and sacked Hoogley. The Nabob, already disposed to make some concessions to the English, was confirmed in his pacific disposition by these proofs of their power and spirit. He accordingly made overtures to the chiefs of the invading armament, and offered to restore the factory, and to give compensation to those whom he had despoiled. Clive's profession was war; and he felt that there was something discreditable in an accommodation with Surajah Dowlah. But his power was limited. . . . The promises of the Nabob were large, the chances of a contest doubtful; and Clive consented to treat, though he expressed his regret that things should not be concluded in so glorious a manner as he could have wished. With this negotiation commences a new chapter in the life of Clive. Hitherto he had been merely a soldier carrying into effect, with eminent ability and valour, the

plans of others. Henceforth he is to be chiefly regarded as a statesman; and his military movements are to be considered as subordinate to his political designs."—Lord Macaulay, *Lord Clive (Essays)*.

A. D. 1757.—A Treacherous conspiracy against Surajah Dowlah.—His overthrow at the battle of Plassey.—The counterfeit Treaty with Omichund.—Elevation of Meer Jaffier to the Subahdar's throne.—The unsatisfactory treaty entered into with Surajah Dowlah had been pressed upon Clive by the Calcutta merchants, who "thought the alliance would enable them to get rid of the rival French station at Chandernagore. The Subahdar gave a doubtful answer to their proposal to attack this settlement, which Clive interpreted as an assent. The French were overpowered, and surrendered their fort. Surajah Dowlah was now indignant against his recent allies; and sought the friendship of the French officers. Clive, called by the natives 'the daring in war,' was also the most adroit, and,—for the truth cannot be disguised,—the most unscrupulous in policy. The English resident at the Court of Moorshedabad, under Clive's instructions, encouraged a conspiracy to depose the Subahdar, and to raise his general, Meer Jaffier, to the supreme power. A Hindoo of great wealth and influence, Omichund, engaged in this conspiracy. After it had proceeded so far as to become the subject of a treaty between a Select Committee at Calcutta and Meer Jaffier, Omichund demanded that a condition should be inserted in that treaty, to pay him thirty lacs of rupees as a reward for his service. The merchants at Calcutta desired the largest share of any donation from Meer Jaffier, as a consideration for themselves, and were by no means willing that £300,000 should go to a crafty Hindoo. Clive suggested an expedient to secure Omichund's fidelity, and yet not to comply with his demands—to have two treaties drawn; a real one on red paper, a fictitious one on white. The white treaty was to be shown to Omichund, and he was to see with his own eyes that he had been properly cared for. Clive and the Committee signed this; as well as the red treaty which was to go to Meer Jaffier. Admiral Watson refused to sign the treacherous document. On the 19th of May, 1773, Clive stood up in his place in the House of Commons, to defend himself upon this charge against him, amongst other accusations. He boldly acknowledged that the stratagem of the two treaties was his invention;—that admiral Watson did not sign it; but that he should have thought himself authorised to sign for him in consequence of a conversation; that the person who did sign thought he had sufficient authority for so doing. 'He (Clive) forged admiral Watson's name,' says Lord Macaulay. . . . The courage, the perseverance, the unconquerable energy of Clive have furnished examples to many in India who have emulated his true glory. Thank God, the innate integrity of the British character has, for the most part, preserved us from such exhibitions of 'true policy and justice.' The English resident, Mr. Watts, left Moorshedabad. Clive wrote a letter of defiance to Surajah Dowlah, and marched towards his capital.

The Subahdar had come forth from his city, as populous as the London of a century ago, to annihilate the paltry army of 1,000 English, and their 2,000 Sepoys disciplined by English officers, who dared to encounter his 60,000. He reached the village of Plassey with all the panoply of oriental warfare. His artillery alone appeared sufficient to sweep away those who brought only eight field pieces and two howitzers to meet his fifty heavy guns. Each gun was drawn by forty yoke of oxen; and a trained elephant was behind each gun to urge it over rough ground or up steep ascents. Meer Jaffier had not performed his promise to join the English with a division of the Subahdar's army. It was a time of terrible anxiety with the English commander. Should he venture to give battle without the aid of a native force? He submitted his doubt to a Council of War. Twelve officers, himself amongst the number, voted for delay. Seven voted for instant action. Clive reviewed the arguments on each side, and finally cast away his doubts. He determined to fight, without which departure from the opinion of the majority, he afterwards said, the English would never have been masters of Bengal. On the 22nd of June [1757], his little army marched fifteen miles, passed the Hooghly, and at one o'clock of the morning of the 23rd rested under the mangoe-trees of Plassey. As the day broke, the vast legions of the Subahdar,—15,000 cavalry, 45,000 infantry,—some armed with muskets, some with bows and arrows, began to surround the mangoe-grove and the hunting-lodge where Clive had watched through the night. There was a cannonade for several hours. The great guns of Surajah Dowlah did little execution. The small field-pieces of Clive were well served. One of the chief Mohammedan leaders having fallen, disorder ensued, and the Subahdar was advised to retreat. He himself fled upon a swift camel to Moorshedabad. When the British forces began to pursue, the victory became complete. Meer Jaffier joined the conquerors the next day. Surajah Dowlah did not consider himself safe in his capital; and he preferred to seek the protection of a French detachment at Patna. He escaped from his palace disguised; ascended the Ganges in a small boat; and fancied himself secure. A peasant whose ears he had cut off recognised his oppressor, and with some soldiers brought him back to Moorshedabad. In his presence-chamber now sat Meer Jaffier, to whose knees the wretched youth crawled for mercy. That night Surajah Dowlah was murdered in his prison, by the orders of Meer Jaffier's son, a boy as blood-thirsty as himself."—C. Knight, *Pop. Hist. of Eng.*, v. 6, ch. 14.

A. D. 1757-1772.—Clive's Administration in Bengal.—Decisive war with the Moghul Emperor and the Nawab of Oudh.—English Supremacy established.—"The battle of Plassey was fought on June 23, 1757, an anniversary afterwards remembered when the Mutiny of 1857 was at its height. History has agreed to adopt this date as the beginning of the British Empire in the East. But the immediate results of the victory were comparatively small, and several

years passed in hard fighting before even the Bengalis would admit the superiority of the British arms. For the moment, however, all opposition was at an end. Clive, again following in the steps of Duplex, placed Mir Jafar upon the Viceregal throne at Murshidabad, being careful to obtain a patent of investiture from the Mughal court. Enormous sums were exacted from Mir Jafar as the price of his elevation. . . . At the same time, the Nawab made a grant to the Company of the zamindari or landholder's rights over an extensive tract of country round Calcutta, now known as the District of the Twenty-four Parganas. The area of this tract was 882 square miles. In 1757 the Company obtained only the zamindari rights—i. e., the rights to collect the cultivator's rents, with the revenue jurisdiction attached [see below: A. D. 1785-1793]. The superior lordship, or right to receive the land tax, remained with the Nawab. But in 1759, this also was granted by the Delhi Emperor, the nominal Suzerain of the Nawab, in favour of Clive, who thus became the landlord of his own masters, the Company. . . . Lord Clive's claims to the property as feudal Suzerain over the Company were contested in 1764; and on the 23d June, 1765, when he returned to Bengal, a new deed was issued, confirming the unconditional jagir to Lord Clive for ten years, with reversion afterwards to the Company in perpetuity. . . . In 1758, Clive was appointed by the Court of Directors the first Governor of all the Company's settlements in Bengal. Two powers threatened hostilities. On the west, the Shahzada or Imperial prince, known afterwards as the Emperor Shah Alam, with a mixed army of Afghans and Marhattas, and supported by the Nawab Wazir of Oudh, was advancing his own claims to the Province of Bengal. In the south, the influence of the French under Lally and Bussy was overshadowing the British at Madras. The name of Clive exercised a decisive effect in both directions. Mir Jafar was anxious to buy off the Shahzada, who had already invested Patna. But Clive marched in person to the rescue, with an army of only 450 Europeans and 2,500 sepoys, and the Mughal army dispersed without striking a blow. In the same year, Clive despatched a force southwards under Colonel Forde, which recaptured Masulipatnam from the French, and permanently established British influence throughout the Northern Circars, and at the court of Haidarabad. He next attacked the Dutch, the only other European nation who might yet prove a rival to the English. He defeated them both by land and water; and their settlement at Chinsurah existed thenceforth only on sufferance. From 1760 to 1765, Clive was in England. He had left no system of government in Bengal, but merely the tradition that unlimited sums of money might be extracted from the natives by the terror of the English name. In 1761, it was found expedient and profitable to dethrone Mir Jafar, the English Nawab of Murshidabad, and to substitute his son-in-law, Mir Kasim, in his place. On this occasion, besides private donations, the English received a grant of the three Districts of Bardwan, Midnapur, and Chittagong, estimated to yield a net revenue of half a million sterling. But Mir Kasim soon began to show a will of his own, and to cherish dreams of independence. . . . The Nawab alleged that his civil authority was everywhere set at naught. The

majority of the Council at Calcutta would not listen to his complaints. The Governor, Mr. Vansittart, and Warren Hastings, then a junior member of Council, attempted to effect some compromise. But the controversy had become too hot. The Nawab's officers fired upon an English boat, and forthwith all Bengal rose in arms [1763]. Two thousand of our sepoys were cut to pieces at Patna; about 200 Englishmen, who there and in other various parts of the Province fell into the hands of the Muhammadans, were massacred. But as soon as regular warfare commenced, Mir Kasim met with no more successes. His trained regiments were defeated in two pitched battles by Major Adams, at Gheriah and at Udhana; and he himself took refuge with the Nawab Wazir of Oudh, who refused to deliver him up. This led to a prolongation of the war. Shah Alam, who had now succeeded his father as Emperor, and Shuja-ud-Daula, the Nawab Wazir of Oudh, united their forces, and threatened Patna, which the English had recovered. A more formidable danger appeared in the English camp, in the form of the first sepoy mutiny. This was quelled by Major (afterwards Sir Hector) Munro, who ordered 24 of the ringleaders to be blown from guns, an old Mughal punishment. In 1764, Major Munro won the decisive battle of Baxar [or Buxar], which laid Oudh at the feet of the conquerors, and brought the Mughal Emperor as a suppliant to the English camp. Meanwhile, the Council at Calcutta had twice found the opportunity they loved of selling the government of Bengal to a new Nawab. But in 1765, Clive (now Baron Clive of Plassey in the peerage of Ireland) arrived at Calcutta, as Governor of Bengal for the second time. Two landmarks stand out in his policy. First, he sought the substance, although not the name, of territorial power, under the fiction of a grant from the Mughal Emperor. Second, he desired to purify the Company's service, by prohibiting illicit gains, and guaranteeing a reasonable pay from honest sources. In neither respect were his plans carried out by his immediate successors. But the beginning of our Indian rule dates from this second governorship of Clive, as our military supremacy had dated from his victory at Plassey. Clive landed, advanced rapidly up from Calcutta to Allahabad, and there settled in person the fate of nearly half of India. Oudh was given back to the Nawab Wazir, on condition of his paying half a million sterling towards the expenses of the war. The Provinces of Allahabad and Kora, forming the greater part of the Doab, were handed over to Shah Alam himself, who in his turn granted to the Company the diwani or fiscal administration of Bengal, Behar, and Orissa, and also the territorial jurisdiction of the Northern Circars. A puppet Nawab was still maintained at Murshidabad, who received an annual allowance from us of £600,000. Half that amount, or about £300,000, we paid to the Emperor as tribute from Bengal. Thus was constituted the dual system of government, by which the English received all the revenues and undertook to maintain the army; while the criminal jurisdiction, or nizamat, was vested in the Nawab. In Indian phraseology, the Company was diwan and the Nawab was nizamat. The actual collection of the revenues still remained for some years in the hands of native officials. . . . Lord Clive quitted India for the third and last time in 1767.

Between that date and the governorship of Warren Hastings, in 1772, little of importance occurred in Bengal beyond the terrible famine of 1770, which is officially reported to have swept away one-third of the inhabitants. The dual system of government, established in 1765 by Clive, had proved a failure. Warren Hastings, a tried servant of the Company, distinguished alike for intelligence, for probity, and for knowledge of oriental manners, was nominated Governor by the Court of Directors, with express instructions to carry out a predetermined series of reforms. In their own words, the Court had resolved to 'stand forth as diwan, and to take upon themselves, by the agency of their own servants, the entire care and administration of the revenues.' In the execution of this plan, Hastings removed the exchequer from Murshidabad to Calcutta, and appointed European officers, under the now familiar title of Collectors, to superintend the revenue collections and preside in the courts. Clive had laid the territorial foundations of the British Empire in Bengal. Hastings may be said to have created a British administration for that Empire."—Sir W. W. Hunter, *India (article in Imperial Gazetteer of India, v. 4), pp. 389-394.*

A. D. 1758-1761.—Overthrow of French domination in the Carnatic.—The decisive Battle of Wandiwash.—"In 1758 the fortunes of the French in India underwent an entire change. In April a French fleet arrived at Pondicherry. It brought a large force under the command of Count de Lally, who had been appointed Governor-General of the French possessions in India. . . . No sooner had he landed at Pondicherry than he organised an expedition against Fort St. David; but he found that no preparations had been made by the French authorities. There was a want alike of coolies, draught cattle, provisions, and ready money. But the energy of Lally overcame all obstacles. . . . In June, 1758, Lally captured Fort St. David. He then prepared to capture Madras as a preliminary to an advance on Bengal. He recalled Bussy from the Dekhan to help him with his Indian experiences; and he sent the Marquis de Conflans to succeed Bussy in the command of the Northern Circars. [A strip of territory on the Coromandel coast, which had been ceded to the French in 1752 by Salabut Jung, Nizam of the Dekhan, was so called; it stretched along 600 miles of seaboard, from the Carnatic frontier northwards.] . . . The departure of Bussy from the Northern Circars was disastrous to the French. The Raja of Vizianagram revolted against the French and sent to Calcutta for help. Clive despatched an English force to the Northern Circars, under the command of Colonel Forde; and in December, 1758, Colonel Forde defeated the French under Conflans [at Condore, or Kondur, December 9], and prepared to recover all the English factories on the coast which had been captured by Bussy. Meanwhile Count de Lally was actively engaged at Pondicherry in preparations for the siege of Madras. He hoped to capture Madras, and complete the destruction of the English in the Carnatic; and then to march northward, capture Calcutta, and expel the English

from Bengal. . . . Lally reached Madras on the 12th of December, 1758, and at once took possession of Black Town. He then began the siege of Fort St. George with a vigour and activity which commanded the respect of his enemies. His difficulties were enormous. . . . Even the gunpowder was nearly exhausted. At last, on the 16th of February, 1759, an English fleet arrived at Madras under Admiral Pocock, and Lally was compelled to raise the siege. Such was the state of party feeling amongst the French in India, that the retreat of Lally from Madras was received at Pondicherry with every demonstration of joy. The career of Lally in India lasted for two years longer, namely from February, 1759, to February, 1761; it is a series of hopeless struggles and wearying misfortunes. In the Dekhan, Salabut Jung had been thrown into the utmost alarm by the departure of Bussy and defeat of Conflans. He was exposed to the intrigues and plots of his younger brother, Nizam Ali, and he despaired of obtaining further help from the French. Accordingly he opened up negotiations with Colonel Forde and the English. Forde on his part recovered all the captured factories [taking Masulipatam by storm, April 7, 1759, after a fortnight's siege], and drove the French out of the Northern Circars. He could not however interfere in the domestic affairs of the Dekhan, by helping Salabut Jung against Nizam Ali. In 1761 Salabut Jung was dethroned and placed in confinement; and Nizam Ali ascended the throne at Hyderabad as ruler of the Dekhan. In the Carnatic the French were in despair. In January, 1760, Lally was defeated by Colonel Coote at Wandiwash, between Madras and Pondicherry. Lally opened up negotiations with Hyder Ali, who was rising to power in Mysore; but Hyder Ali as yet could do little or nothing. At the end of 1760 Colonel Coote began the siege of Pondicherry. Lally . . . was ill in health and worn out with vexation and fatigue. The settlement was torn by dissensions. In January, 1761, the garrison was starved into a capitulation, and the town and fortifications were levelled with the ground. A few weeks afterwards the French were compelled to surrender the strong hill-fortress of Jingi, and their military power in the Carnatic was brought to a close." On the return of Count Lally to France "he was sacrificed to save the reputation of the French ministers. . . . He was tried by the parliament of Paris. . . . In May, 1766, he was condemned not only to death, but to immediate execution."—J. T. Wheeler, *Short Hist. of India, pt. 3, ch. 2.*—"The battle of Wandewash. . . . though the numbers on each side were comparatively small, must yet be classed amongst the decisive battles of the world, for it dealt a fatal and decisive blow to French domination in India."—G. B. Malleon, *Hist. of the French in India, ch. 12.*

ALSO IN: The same, *Decisive Battles of India, ch. 4.*

A. D. 1767-1769.—The first war with Hyder Ali.—"At this period, the main point of interest changes from the Presidency of Bengal to the Presidency of Madras. There, the English were becoming involved in another war. There, they had now, for the first time, to encounter the most skilful and daring of all the enemies against whom they ever fought in India—Hyder Ali. He was of humble origin, the grandchild of a

wandering 'fakir' or Mahomedan monk. Most versatile in his talents, Hyder was no less adventurous in his career; by turns a private man devoted to sports of the chase, a captain of free-booters, a partisan-chief, a rebel against the Rajah of Mysore, and commander-in-chief of the Mysorean army. Of this last position he availed himself to dethrone and supplant his master. . . . Pursuing his ambitious schemes, Hyder Ali became, not merely the successor of the Rajah, but the founder of the kingdom of Mysore. From his palace at Seringapatam, as from a centre, a new energy was infused through the whole of Southern India. By various wars and by the dispossession of several smaller princes, he extended his frontiers to the northward, nearly to the river Kistna. His posts on the coast of Malabar, Mangalore especially, gave him the means of founding a marine; and he applied himself with assiduous skill to train and discipline his troops according to the European models. The English at Madras were roused by his ambition, without as yet fully appreciating his genius. We find them at the beginning of 1767 engaged, with little care or forethought, in a confederacy against him with the Nizam and the Mahrattas. Formidable as that confederacy might seem, it was speedily dissipated by the arts of Hyder. At the very outset, a well-timed subsidy bought off the Mahrattas. The Nizam showed no better faith; he was only more tardy in his treason. He took the field in concert with a body of English commanded by Colonel Joseph Smith, but soon began to show symptoms of defection, and at last drew off his troops to join the army of Hyder. A battle ensued near Trincomelee, in September, 1767. Colonel Smith had under him no more than 1,500 Europeans and 9,000 Sepoys; while the forces combined on the other side were estimated, probably with much exaggeration, at 70,000 men. Nevertheless, Victory, as usual, declared for the English cause. . . . Our victory at Trincomelee produced as its speedy consequence a treaty of peace with the Nizam. Hyder was left alone; but even thus proved fully a match for the English both of Madras and of Bombay. . . . He could not be prevented from laying waste the southern plains of the Carnatic, as the territory of one of the staunchest allies of England, Mahomed Ali, the Nabob of Arcot. Through such ravages, the British troops often underwent severe privations. . . . At length, in the spring of 1769, Hyder Ali became desirous of peace, and resolved to extort it on favourable terms. First, by a dexterous feint he drew off the British forces 140 miles to the southward of Madras. Then suddenly, at the head of 5,000 horsemen, Hyder himself appeared at St. Thomas's Mount, within ten miles of that city. The terrified Members of the Council already, in their mind's eye, saw their country-houses given up to plunder and to flame, and were little inclined to dispute whatever might be asked by an enemy so near at hand. Happily his terms were not high. A treaty was signed, providing that a mutual restoration of conquests should take place, and that the contracting parties should agree to assist each other in all defensive wars. In the career of Hyder Ali, this was by no means the first, nor yet the last occasion, on which he showed himself sincerely desirous of alliance with the English. He did not conceal the fact, that, in order to maintain his power

and secure himself, he must lean either on them or on the Mahrattas. . . . In this war with Hyder, the English had lost no great amount of reputation, and of territory they had lost none at all. But as regards their wealth and their resources, they had suffered severely. Supplies, both of men and of money, had been required from Bengal, to assist the government at Madras; and both had been freely given. In consequence of such a drain, there could not be made the usual investments in goods, nor yet the usual remittances to England. Thus at the very time when the proprietors of the East India Company had begun to wish each other joy on the great reforms effected by Lord Clive, and looked forward to a further increase of their half-yearly Dividend, they were told to prepare for its reduction. A panic ensued. Within a few days, in the spring of 1769, India Stock fell above sixty per cent."—Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713-1783, ch. 67.

A. D. 1770-1773.—Climax of English misrule.—Break-down of the East India Company's government.—The Indian Act of Lord North.—"In 1770 Bengal was desolated by perhaps the most terrible of the many terrible famines that have darkened its history, and it was estimated that more than a third part of its inhabitants perished. Yet in spite of all these calamities, in spite of the rapidly accumulating evidence of the inadequacy of the Indian revenues, the rapacity of the proprietors at home prevailed, and dividends of 12 and 12½ per cent., as permitted by the last Act, were declared. The result of all this could hardly be doubtful. In July, 1772, the Directors were obliged to confess that the sum required for the necessary payments of the next three months was deficient to the extent of no less than 1,293,000l., and in August the Chairman and Deputy Chairman waited on the Minister to inform him that nothing short of a loan of at least one million from the public could save the Company from ruin. The whole system of Indian government had thus for a time broken down. The division between the Directors and a large part of the proprietors, and between the authorities of the Company in England and those in India, the private and selfish interests of its servants in India, and of its proprietors at home, the continual oscillation between a policy of conquest and a policy of trade, and the great want in the whole organisation of any adequate power of command and of restraint, had fatally weakened the great corporation. In England the conviction was rapidly growing that the whole system of governing a great country by a commercial company was radically and incurably false. . . . The subject was discussed in Parliament, in 1772, at great length, and with much acrimony. Several propositions were put forward by the Directors, but rejected by the Parliament; and Parliament, under the influence of Lord North, and in spite of the strenuous and passionate opposition of Burke, asserted in unequivocal terms its right to the territorial revenues of the Company. A Select Committee, consisting of thirty-one members, was appointed by Parliament to make a full inquiry into the affairs of the Company. It was not, however, till 1773 that decisive measures

were taken. The Company was at this time absolutely helpless. Lord North commanded an overwhelming majority in both Houses, and on Indian questions he was supported by a portion of the Opposition. The Company was on the brink of ruin, unable to pay its tribute to the Government, unable to meet the bills which were becoming due in Bengal. The publication, in 1773, of the report of the Select Committee, revealed a scene of maladministration, oppression, and fraud which aroused a wide-spread indignation through England; and the Government was able without difficulty, in spite of the provisions of the charter, to exercise a complete controlling and regulating power over the affairs of the Company. . . . By enormous majorities two measures were passed through Parliament in 1773, which mark the commencement of a new epoch in the history of the East India Company. By one Act, the ministers met its financial embarrassments by a loan of 1,400,000*l.* at an interest of 4 per cent., and agreed to forego the claim of 400,000*l.* till this loan had been discharged. The Company was restricted from declaring any dividend above 6 per cent. till the new loan had been discharged, and above 7 per cent. till its bond-debt was reduced to 1,500,000*l.* It was obliged to submit its accounts every half-year to the Lords of the Treasury; it was restricted from accepting bills drawn by its servants in India for above 300,000*l.* a year, and it was obliged to export to the British settlements within its limits British goods of a specified value. By another Act, the whole constitution of the Company was changed, and the great centre of authority and power was transferred to the Crown. . . . All the more important matters of jurisdiction in India were to be submitted to a new court, consisting of a Chief Justice and three puisne judges appointed by the Crown. A Governor-General of Bengal, Behar, and Orissa, was to be appointed at a salary of 25,000*l.* a year, with four Councillors, at salaries of 8,000*l.* a year, and the other presidencies were made subordinate to Bengal. The first Governor-General and Councillors were to be nominated, not by the East India Company, but by Parliament: they were to be named in the Act, and to hold their offices for five years; after that period the appointments reverted to the Directors, but were subject to the approbation of the Crown. Everything in the Company's correspondence with India relating to civil and military affairs was to be laid before the Government. No person in the service of the King or of the Company might receive presents, and the Governor-General, the Councillors, and the judges were excluded from all commercial profits and pursuits. By this memorable Act the charter of the East India Company was completely subverted, and the government of India passed mainly into the hands of the ministers of the Crown. The chief management of affairs was vested in persons in whose appointment or removal the Company had no voice or share, who might govern without its approbation or sanction, but who nevertheless drew, by authority of an Act of Parliament, large salaries from its exchequer. Such a measure could be justified only by extreme necessity and by brilliant success, and it was obviously open to the gravest objections from many sides. . . . Warren Hastings was the first Governor-General: Barwell, Clavering, Monson, and

Philip Francis were the four Councillors."—W. E. H. Lecky, *Hist. of Eng. in the 18th Century*, ch. 13 (v. 3).

A. D. 1773-1785.—The First English Governor-General.—Administration of Warren Hastings.—Execution of Nuncomar.—The Rohilla War.—Annexation of Benares.—Treatment of the Begums of Oudh.—"The Governor-General was not at once the potential personage he has since become. The necessity of ruling by a Dictator (a dictator on the spot, though responsible to superiors at home) had not yet become obvious; and the Governor-General had no superiority in council, except the casting vote in case of an equal division. Whether he could govern or not depended chiefly on whether he had a party of two in the council. Two out of the four, with his own casting vote, were enough; and without it, he was not really governor. This is not the place in which to follow the history of the first general council and its factions, apart from the consequences to British interests. It must suffice to say that at the outset, three out of four of the council (and those the new officials from England) were opposed to Hastings. It has been related that the internal administration of Bengal under Clive's 'double system' was managed by the Nabob's prime-minister. This functionary had a salary of 100,000*l.* a year, and enjoyed a high dignity and immense power. One man who aspired to hold the office in Clive's time was the great Hindoo, Nuncomar, . . . eminent in English eyes for his wealth, and his abilities, and much more in native estimation for his sanctity as a Brahmin, and his almost unbounded social power. . . . The Maharajah Nuncomar was a great scoundrel—there is no doubt of that; and his intrigues, supported by forgeries, were so flagrant as to prevent his appointment to the premiership under the Nabob. Such vices were less odious in Bengal than almost anywhere else; but they were inconvenient, as well as disgusting, to the British; and this was the reason why Clive set aside Nuncomar, and appointed his rival competitor, Mohammed Reza Khan, though he was highly reluctant to place the highest office in Bengal in the hands of a Mussulman. This Mussulman administered affairs for seven years before Hastings became Governor-General; and he also had the charge of the infant Nabob, after Surajah Dowla died. We have seen how dissatisfied the Directors were with the proceeds of their Bengal dominions. Nuncomar planted his agents everywhere; and in London especially; and these agents persuaded the Directors that Mohammed Reza Khan was to blame for their difficulties and their scanty revenues. Confident in this information, they sent secret orders to Hastings to arrest the great Mussulman, and everybody who belonged to him, and to hear what Nuncomar had to say against him." The Governor-General obeyed the order and made the arrests, "but the Mussulman minister was not punished, and Nuncomar hated Hastings accordingly. He bided his time, storing up materials of accusation with which to overwhelm the Governor at the first turn of his fortunes. That turn was when the majority of the Council were opposed to the Governor-General, and rendered him helpless in his office; and

Nuncomar then presented himself, with offers of evidence to prove all manner of treasons and corruptions against Hastings. Hastings was haughty; the councils were tempestuous. Hastings prepared to resign, though he was aware that the opinion of the English in Bengal was with him; and Nuncomar was the greatest native in the country, visited by the Council, and resorted to by all his countrymen who ventured to approach him. Foiled in the Council, Hastings had recourse to the Supreme Court [of which Sir Elijah Impey was the Chief Justice]. He caused Nuncomar to be arrested on a charge brought ostensibly by a native of having forged a bond six years before. After a long trial for an offence which appeared very slight to Bengalee natives in those days, the culprit was found guilty by a jury of Englishmen, and condemned to death by the judges.—II. Martineau, *British Rule in India*, ch. 9.—“It may perhaps be said that no trial has been so often tried over again by such diverse authorities, or in so many different ways, as this celebrated proceeding. During the course of a century it has been made the theme of historical, political, and biographical discussions; all the points have been argued and debated by great orators and great lawyers; it has formed the avowed basis of a motion in Parliament to impeach the Chief-Justice, and it must have weighed heavily, though indirectly, with those who decided to impeach the Governor-General. It gave rise to rumours of a dark and nefarious conspiracy which, whether authentic or not, exactly suited the humour and the rhetoric of some contemporary English politicians. . . . Very recently Sir James Stephen, after subjecting the whole case to exact scrutiny and the most skilful analysis, after examining every document and every fact bearing upon this matter with anxious attention, has pronounced judgment declaring that Nuncomar's trial was perfectly fair, that Hastings had nothing to do with the prosecution, and that at the time there was no sort of conspiracy or understanding between Hastings and Impey in relation to it. Nothing can be more masterly or more effective than the method employed by Sir James Stephen to explode and demolish, by the force of a carefully-laid train of proofs, the loose fabric of assertions, invectives, and ill-woven demonstrations upon which the enemies of Hastings and Impey based and pushed forward their attacks, and which have never before been so vigorously battered in reply. . . . It may be accepted, upon Sir James Stephen's authority, that no evidence can be produced to justify conclusions adverse to the innocence of Hastings upon a charge that has from its nature affected the popular tradition regarding him far more deeply than the accusations of high-handed oppressive political transactions, which are little understood and leniently condemned by the English at large. There is really nothing to prove that he had anything to do with the prosecution, or that he influenced the sentence. . . . Nevertheless when Sir James Stephen undertakes to establish, by argument drawn from the general motives of human action, the moral certainty that Hastings was totally unconnected with the business, and that the popular impression against him is utterly wrong, his demonstration is necessarily less conclusive. . . . On the whole there is no reason whatever to dissent from

Pitt's view, who treated the accusation of a conspiracy between Impey and Hastings for the purpose of destroying Nuncomar, as destitute of any shadow of solid proof. Whether Hastings, when Nuncomar openly tried to ruin him by false and malignant accusations, became aware and made use in self-defence of the fact that his accuser had rendered himself liable to a prosecution for forgery, is a different question, upon which also no evidence exists or is likely to be forthcoming.”—Sir A. Lyall, *Warren Hastings*, ch. 3.—“James Mill says, ‘No transaction perhaps of his whole administration more deeply tainted the reputation of Hastings than the tragedy of Nuncomar.’ A similar remark was made by William Wilberforce. The most prominent part too in Nuncomar's story is played by Sir Elijah Impey. . . . Impey, in the present day, is known to English people in general only by the terrible attack made upon him by Lord Macaulay, in his essay on Warren Hastings. It stigmatises him as one of the vilest of mankind. ‘No other such judge has dishonoured the English crime since Jefferies drank himself to death in the Tower.’ ‘Impey, sitting as a judge, put a man unjustly to death, in order to serve a political purpose.’ ‘The time had come when he was to be stripped of that robe which he had so foully dishonoured.’ These dreadful accusations I, upon the fullest consideration of the whole subject, and, in particular, of much evidence which Macaulay seems to me never to have seen, believe to be wholly unjust. For Macaulay himself I have an affectionate admiration. He was my own friend, and my father's, and my grandfather's friend also, and there are few injunctions which I am more disposed to observe than the one which bids us not to forget such persons. I was, moreover, his successor in office, and am better able than most persons to appreciate the splendour of the services which he rendered to India. These considerations make me anxious if I can to repair a wrong done by him, not intentionally, for there never was a kinder-hearted man, but because he adopted on insufficient grounds the traditional hatred which the Whigs bore to Impey, and also because his marvellous power of style blinded him to the effect which his language produced. He did not know his own strength, and was probably not aware that a few sentences which came from him with little effort were enough to brand a man's name with almost indelible infamy. . . . My own opinion is that no man ever had, or could have, a fairer trial than Nuncomar, and that Impey in particular behaved with absolute fairness and as much indulgence as was compatible with his duty. In his defence at the bar of the House of Commons, he said, ‘Conscious as I am how much it was my intention to favour the prisoner in everything that was consistent with justice; wishing as I did that the facts might turn out favourable for an acquittal; it has appeared most wonderful to me that the execution of my purpose has so far differed from my intentions that any ingenuity could form an objection to my personal conduct as bearing hard on the prisoner.’ My own earnest study of the trial has led me to the conviction that every word of this is absolutely true and just. Indeed, the first matter which directed my attention to the subject was the glaring contrast between Impey's conduct as described in the State Trials and his character as described

by Lord Macaulay. There is not a word in his summing-up of which I should have been ashamed had I said it myself, and all my study of the case has not suggested to me a single observation in Nuneomar's favour which is not noticed by Impey. As to the verdict, I think that there was ample evidence to support it. Whether it was in fact correct is a point on which it is impossible for me to give an unqualified opinion, as it is of course impossible now to judge decidedly of the credit due to the witnesses, and as I do not understand some part of the exhibits."—J. F. Stephen, *The Story of Nuneomar*, pp. 2-3, 186-187.—"Sir John Strachey, in his work on Hastings and the Rohilla War, examines in detail one of the chief charges made against the conduct of Warren Hastings while Governor-General. The Rohilla charge was dropped by Burke and the managers, and was therefore not one of the issues tried at the impeachment; but it was, in spite of this fact, one of the main accusations urged against the Governor-General in Macaulay's famous essay. Macaulay, following James Mill, accuses Warren Hastings of having hired out an English army to exterminate what Burke called 'the bravest, the most honourable and generous nation on earth.' According to Macaulay, the Vizier of Oudh coveted the Rohilla country, but was not strong enough to take it for himself. Accordingly, he paid down forty lakhs of rupees to Hastings, on condition that the latter should help to strike down and seize his prey. . . . Sir John Strachey . . . shows beyond a shadow of doubt that the whole story is a delusion. . . . 'The English army was not hired out by Hastings for the destruction of the Rohillas; the Rohillas, described by Burke as belonging to the bravest, the most honourable and generous nation on earth, were no nation at all, but a comparatively small body of cruel and rapacious Afghan adventurers, who had imposed their foreign rule on an unwilling Hindoo population; and the story of their destruction is fictitious.' . . . The north-west angle of the great strip of plain which follows the course of the Ganges was possessed by a clan which fifty years before had been a mere band of Afghan mercenaries, but which was now beginning to settle down as a dominant governing class, living among a vastly more numerous subject-population of Hindoos. This country was Rohilkhand, the warrior-horde the Rohillas. It must never be forgotten that the Rohillas were no more the inhabitants of Rohilkhand than were the Normans fifty years after the Conquest the inhabitants of England. . . . But the fact that the corner of what geographically was our barrier-State was held by the Rohillas, made it necessary for us to keep Rohilkhand as well as Oudh free from the Mahrattas. Hence it became the key-note of Warren Hastings' policy to help both the Rohillas and the Vizier [of Oudh] to maintain their independence against the Mahrattas. In the year 1772, however, the Mahrattas succeeded in crossing the Ganges, in getting into Rohilkhand, and in threatening the Province of Oudh. . . . Hastings encouraged the Vizier and the Rohilla chiefs to make an alliance, under which the Rohillas were to be reinstated in their country by aid of the Vizier, the Vizier obtaining for such assistance forty lakhs,—that is, he coupled the Rohillas and the Vizier, for defence purposes,

into one barrier-State. . . . If the Rohillas had observed this treaty, all might have been well. Unhappily for them, they could not resist the temptation to break faith." They joined the Mahrattas against Oudh, and it was after this had occurred twice that Hastings lent assistance to the Vizier in expelling them from Rohilkhand. "Instead of exterminating the Rohillas, he helped make a warrior-clan, but one generation removed from a 'free company,' recross the Ganges and release from their grip the land they had conquered."—*The Spectator*, April 2, 1892.—Sir John Strachey, *Hastings and the Rohillas*.—"The year 1781 opened for Hastings on a troubled sea of dangers, difficulties, and distress. Haider Ali was raging in the Carnatic, Goddard and Camae were still fighting the Marathas, and French fleets were cruising in the Bay of Bengal. . . . It was no time for standing upon trifles. Money must be raised somehow, if British India was to be saved. Among other sources of supply, he turned to the Rajah of Banaras [or Benares]. Chait Singh was the grandson of an adventurer, who had ousted his own patron and protector from the lordship of the district so named. In 1775, his fief had been transferred by treaty from the Nawab of Oudh to the Company. As a vassal of the Company he was bound to aid them with men and money in times of special need. Five lakhs of rupees—£50,000—and two thousand horse was the quota which Hastings had demanded of him in 1780. In spite of the revenue of half-a-million, of the great wealth stored up in his private coffers, and of the splendid show which he always made in public, the Rajah pleaded poverty, and put off compliance with the demands of his liege lord. . . . Chait Singh had repeatedly delayed the payment of his ordinary tribute; his body-guard alone was larger than the force which Hastings required of him; he was enrolling troops for some warlike purpose, and Hastings' agents accused him of secret plottings with the Oudh Begams at Faizabad. . . . The Rajah, in fact, like a shrewd, self-seeking Hindu, was waiting upon circumstances, which at that time boded ill for his English neighbours. The Marathas, the French, or some other power might yet relieve him from the yoke of a ruler who restrained his ambition, and lectured him on the duty of preserving law and order among his own subjects. . . . It has often been argued that, in his stern dealings with the Rajah of Banaras, Hastings was impelled by malice and a desire for revenge. But the subsequent verdict of the House of Lords on this point, justifies itself to all who have carefully followed the facts of his life. . . . As a matter of policy, he determined to make an example of a contumacious vassal, whose conduct in that hour of need added a new danger to those which surrounded the English in India. A heavy fine would teach the Rajah to obey orders, and help betimes to fill his own treasury with the sinews of war. . . . Chait Singh had already tried upon the Governor-General those arts which in Eastern countries people of all classes employ against each other without a blush. He had sent Hastings a peace-offering of two lakhs—£20,000. Hastings took the money, but reserved it for the Company's use. Presently he received an offer of twenty lakhs for the public service. But Hastings was in no mood for further compromise in evasion of his former

demands. He would be satisfied with nothing less than half a million in quittance of all dues. In July, 1781, he set out, with Wheeler's concurrence, for the Rajah's capital. . . . Traveling, as he preferred to do, with a small escort and as little parade as possible, he arrived on the 16th August at the populous and stately city. . . . On his way thither, at Baxar, the recusant Rajah had come to meet him, with a large retinue, in the hope of softening the heart of the great Lord Sahib. He even laid his turban on Hastings' lap. . . . With the haughtiness of an ancient Roman, Hastings declined his prayer for a private interview. On the day after his arrival at Banaras, the Governor-General forwarded to Chait Singh a paper stating the grounds of complaint against him, and demanding an explanation on each point. The Rajah's answer seemed to Hastings 'so offensive in style and unsatisfactory in substance;' it was full, in fact, of such transparent, or, as Lord Thurlow afterwards called them, 'impudent' falsehoods, that the Governor-General issued orders for placing the Rajah under arrest. Early the next morning, Chait Singh was quietly arrested in his own palace. . . . Meanwhile his armed retainers were flocking into the city from his strong castle of Ramnagar, on the opposite bank. Mixing with the populace, they provoked a tumult, in which the two companies of Sepoys guarding the prisoner were cut to pieces. With unloaded muskets and empty pouches—for the ammunition had been forgotten—the poor men fell like sheep before their butchers. Two more companies, in marching to their aid through the narrow streets, were nearly annihilated. During the tumult Chait Singh quietly slipped out of the palace, dropped by a rope of turbans into a boat beneath, and crossed in safety to Ramnagar. . . . If Chait Singh's followers had not shared betimes their master's flight across the river, Hastings, with his band of thirty Englishmen and fifty Sepoys, might have paid very dearly for the sudden miscarriage of his plans. But the rabble of Banaras had no leader, and troops from the nearest garrisons were already marching to the rescue. . . . Among the first who reached him was the gallant Popham, bringing with him several hundred of his own Sepoys. . . . The beginning of September found Popham strong enough to open a campaign, which speedily avenged the slaughters at Banaras and Ramnagar, and carried Hastings back into the full stream of richly-earned success. . . . The capture of Bijigarh on the 10th November, closed the brief but brilliant campaign. The booty, amounting to £400,000, was at once divided among the captors; and Hastings lost his only chance of replenishing his treasury at the expense of Chait Singh. He consoled himself and improved the Company's finances, by bestowing the rebel's forfeit lordship on his nephew, and doubling the tribute hitherto exacted. He was more successful in accomplishing another object of his journey up the country."—L. J. Trotter, *Warren Hastings*, ch. 6.—"It is certain . . . that Chait Singh's rebellion was largely aided by the Begums or Princesses of Faizabad. On this point the evidence contained in Mr. Forrest's volumes ['Selections from Letters, Despatches and other State Papers in the Foreign Department of the Government of India,' ed. by G. W. Forrest] leaves no shadow of reasonable doubt.

In plain truth, the Begums, through their Ministers, the eunuchs, had levied war both against the Company and their own kinsmen and master, the new Wazir of Oudh. Some years before, when the Francis faction ruled in Calcutta, these ladies, the widow and the mother of Shuja, had joined with the British Agent in robbing the new Wazir, Asaf-ud-daula, of nearly all the rich treasure which his father had stored up in Faizabad. Hastings solemnly protested against a transaction which he was powerless to prevent. The Begums kept their hold upon the treasure, and their Jaghirs, or military fiefs, which ought by rights to have lapsed to the new Wazir. Meanwhile Asaf-ud-daula had to govern as he best could, with an empty treasury, and an army mutinous for arrears of pay. At last, with the suppression of the Benares revolt, it seemed to Hastings and the Wazir that the time had come for resuming the Jaghirs, and making the Begums disgorge their ill-gotten wealth. In accordance with the Treaty of Chunar, both these objects were carried out by the Wazir's orders, with just enough of compulsion to give Hastings' enemies a handle for the slanders and misrepresentations which lent so cruel a point to Sheridan's dazzling oratory, and to one of the most scathing passages in Macaulay's most popular essay. There are some points, no doubt, in Hastings' character and career about which honest men may still hold different opinions. But on all the weightier issues here mentioned there ought to be no room for further controversy. It is no longer possible to contend, for instance, that Hastings agreed, for a handsome bribe, to help in exterminating the innocent people of Rohilkhand; that he prompted Impey to murder Nand-Kumar; that any desire for plunder led him to fasten a quarrel upon Chait Singh; or that he engaged with the Oudh Wazir in a plot to rob the Wazir's own mother of vast property secured to her under a solemn compact, 'formally guaranteed by the Government of Bengal.'—L. J. Trotter, *Warren Hastings and his Libellers* (*Westminster Rev.*, March, 1891).

A. D. 1780-1783.—The second war with Hyder Ali (Second Mysore War).—"The brilliant successes obtained by the English over the French in Hindostan at the beginning of the war had made all direct competition between the two nations in that country impossible, but it was still in the power of the French to stimulate the hostility of the native princes, and the ablest of all these, Hyder Ali, the great ruler of Mysore, was once more in the field. Since his triumph over the English, in 1769, he had acquired much additional territory from the Mahrattas. He had immensely strengthened his military forces, both in numbers and discipline. . . . For some years he showed no wish to quarrel with the English, but when a Mahratta chief invaded his territory they refused to give him the assistance they were bound by the express terms of the treaty of 1769 to afford, they rejected or evaded more than one subsequent proposal of alliance, and they pursued a native policy in some instances hostile to his interest. As a great native sovereign,

too, he had no wish to see the balance of power established by the rivalry between the British and French destroyed. . . . Mysore was swarming with French adventurers. The condition of Europe made it scarcely possible that England could send any fresh forces, and Hyder Ali had acquired a strength which appeared irresistible. Ominous rumours passed over the land towards the close of 1779, but they were little heeded, and no serious preparations had been made, when in July, 1780, the storm suddenly burst. At the head of an army of at least 90,000 men, including 30,000 horsemen, 100 cannon, many European officers and soldiers, and crowds of desperate adventurers from all parts of India, Hyder Ali descended upon the Carnatic and devastated a vast tract of country round Madras. Many forts and towns were invested, captured, or surrendered. The Nabob and some of his principal officers acted with gross treachery or cowardice, and in spite of the devastations native sympathies were strongly with the invaders. . . . Madras was for a time in imminent danger. A few forts commanded by British officers held out valiantly, but the English had only two considerable bodies of men, commanded respectively by Colonel Baillie and by Sir Hector Munro, in the field. They endeavoured to effect a junction, but Hyder succeeded in attacking separately the small army of Colonel Baillie, consisting of rather more than 3,700 men, and it was totally defeated [September 10], 2,000 men being left on the field. Munro only saved himself from a similar fate by a rapid retreat, abandoning his baggage, and much of his ammunition. Arcot, which was the capital of the Nabob, and which contained vast military stores, was besieged for six weeks, and surrendered in the beginning of November. Velore, Wandewash, Permacoil, and Chingliput, four of the chief strongholds in the Carnatic, were invested. A French fleet with French troops was daily expected, and it appeared almost certain that the British power would be extinguished in Madras, if not in the whole of Hindostan. It was saved by the energy of the Governor-General, Warren Hastings, who, by extraordinary efforts, collected a large body of Sepoys and a few Europeans in Bengal, and sent them with great rapidity to Madras, under the command of Sir Eyre Coote, who had proved himself twenty years before scarcely second in military genius to Clive himself. I do not propose to relate in detail the long and tangled story of the war that followed. . . . It is sufficient to say that Coote soon found himself at the head of about 7,200 men, of whom 1,400 were Europeans; that he succeeded in relieving Wandewash, and obliging Hyder Ali to abandon for the present the siege of Velore; that the French fleet, which arrived off the coast in January, 1781, was found to contain no troops, and that on July 1, 1781, Coote, with an army of about 8,000 men, totally defeated forces at least eight times as numerous, commanded by Hyder himself, in the great battle of Porto Novo. . . . The war raged over the Carnatic, over Tanjore, in the Dutch settlements to the south of Tanjore, on the opposite Malabar coast, and on the coast of Ceylon, while at the same time another and independent struggle was proceeding with the Mahrattas. . . . The coffers at Calcutta were nearly empty, and it was in order to replenish them that Hastings committed some of the acts which were afterwards the subjects

of his impeachment. . . . By the skill and daring of a few able men, of whom Hastings, Coote, Munro, and Lord Macartney were the most prominent, the storm was weathered. Hyder Ali died in December, 1782, about four months before Sir Eyre Coote. The peace of 1782 withdrew France and Holland from the contest, and towards the close of 1783, Tippoo, the son of Hyder Ali, consented to negotiate a peace, which was signed in the following March. Its terms were a mutual restoration of all conquests, and in this, as in so many other great wars, neither of the contending parties gained a single advantage by all the bloodshed, the expenditure, the desolation, and the misery of a struggle of nearly four years."—W. E. H. Lecky, *Hist. of Eng. in the 18th Century*, ch. 14 (c. 5).—"The centre and heart of the English power lay in Bengal, which the war never reached at all, and which was governed by a man of rare talent and organizing capacity. No Anglo-Indian government of that time could carry on a campaign by war loans, as in Europe; the cost had to be provided out of revenue, or by requiring subsidies from allied native rulers; and it was Bengal that furnished not only the money and the men, but also the chief political direction and military leadership which surmounted the difficulties and repaired the calamities of the English in the western and southern Presidencies. And when at last the Marathas made peace, when Hyder Ali died, and Suffren, with all his courage and genius, could not master the English fleet in the Bay of Bengal, there could be no doubt that the war had proved the strength of the English position in India, had tested the firmness of its foundation. . . . With the termination of this war ended the only period in the long contest between England and the native powers, during which our position in India was for a time seriously jeopardized. That the English dominion emerged from this prolonged struggle uninjured, though not unshaken, is a result due to the political intrepidity of Warren Hastings. . . . Hastings had no aristocratic connexions or parliamentary influence at a time when the great families and the House of Commons held immense power; he was surrounded by enemies in his own Council; and his immediate masters, the East India Company, gave him very fluctuating support. Fiercely opposed by his own colleagues, and very ill obeyed by the subordinate Presidencies, he had to maintain the Company's commercial establishments, and at the same time to find money for carrying on distant and impolitic wars in which he had been involved by blunders at Madras or Bombay. These funds he had been expected to provide out of current revenues, after buying and despatching the merchandise on which the company's home dividends depended; for the resource of raising public loans, so freely used in England, was not available to him. He was thus inevitably driven to the financial transactions, at Benares and Lucknow, that were now so bitterly stigmatized as crimes by men who made no allowance for a perilous situation in a distant land, or for the weight of enormous national interests committed to the charge of the one man capable of sustaining them. When the storm had blown over in India, and he had piloted his vessel into calm water, he was sacrificed with little or no hesitation to party exigencies

in England; the Ministry would have recalled him; they consented to his impeachment; they left him to be baited by the Opposition and to be ruined by the law's delay, by the incredible procrastination and the obsolete formalities of a seven years' trial before the House of Lords."—Sir A. Lyall, *Rise of the British Dominion in India*, ch. 11, sect. 2.

A. D. 1785-1793.—State of India.—Extent of English rule.—Administration of Lord Cornwallis.—War with Tippoo Saib (Third Mysore War).—The "Permanent Settlement" of Land Revenue in Bengal, and its fruit.—"When Warren Hastings left India, the Mogul Empire was simply the phantom of a name. The warlike tribes of the north-west, Sikhs, Rajpoots, Jats, were henceforth independent; but the Rohillas of the north-east had been subdued and almost exterminated. Of the three greatest Soobahs or vice-royalties of the Mogul empire, at one time practically independent, that of Bengal had wholly disappeared, those of Oude and the Deckan had sunk into dependence on a foreign power, were maintained by the aid of foreign mercenaries. The only two native powers that remained were, the Mahrattas, and the newly-risen Mussulman dynasty of Mysore. The former were still divided between the great chieftaincies of the Peshwa, Scindia, Holkar, the Guicowar, and the Boslas of Berar. But the supremacy of the Peshwa was on the wane; that of Scindia, on the contrary, in the ascendant. Scindia ruled in the north; he had possession of the emperor's person, of Delhi, the old Mussulman capital. In the south, Hyder Ali and Tippoo [son of Hyder Ali, whom he had succeeded in 1782], Sultan of Mysore, had attained to remarkable power. They were dangerous to the Mahrattas, dangerous to the Nizam, dangerous, lastly, to the English. But the rise of the last-named power was the great event of the period. . . . They had won for themselves the three great provinces of Bengal, Behar, and Orissa, besides Benares,—forming a large compact mass of territory to the north-east. They had, farther down the east coast, the province of the Northern Circars, and farther still, the jagheer [land grant], of Madras; on the west, again, a large stretch of territory at the southern extremity of the peninsula. The two Mussulman sovereigns of Oude and Hyderabad were their dependent allies; they administered the country of the Nawab of the Carnatic, besides having hosts of smaller potentates under their protection. . . . The appointed successor to Hastings was Lord Macartney. . . . He lost his office, however, by hesitating to accept it, and going to England to urge conditions. . . . The great military event of Lord Cornwallis's government was the third Mysore war. It began with some disputes about the petty Raja of Cherika, from whom the English had farmed the customs of Tellicherry, and taken, in security for advances, a district called Randattera, and by Tippoo's attack upon the lines of the Raja of Travancore, an ally of the English, consisting of a ditch, wall, and other defences, on an extent of about thirty miles. Tippoo was, however, repelled with great slaughter in an attack on the town (1789). Hear-

ing this, Lord Cornwallis at once entered into treaties with the Nizam and the Peshwa for a joint war upon Mysore; all new conquests to be equally divided, all Tippoo's own conquests from the contracting powers to be restored. After a first inconclusive campaign, in which, notwithstanding the skill of General Meadows, the advantage rather remained to Tippoo, who, amongst other things, gave a decided check to Colonel Floyd (1790), Lord Cornwallis took the command in person, and carried Bangalore by assault, with great loss to both parties, but a tremendous carnage of the besieged. However, so wretched had been the English preparations, that, the cattle being 'reduced to skeletons, and scarcely able to move their own weight,' Lord Cornwallis, after advancing to besiege Seringapatam, was forced to retreat and to destroy the whole of his battering-train and other equipments; whilst General Abercrombie, who was advancing in the same direction from the Malabar coast, had to do the same (1791). A force of Mahrattas came in, well appointed and well provided, but too late to avert these disasters. The next campaign was more successful. It began by the taking of several of the hill-forts forming the western barrier of Mysore. . . . On the 5th Feb., 1792, however, Lord Cornwallis appeared before Seringapatam, situated in an island formed by the Cauvery: the fort and outworks were provided with 300 pieces of cannon; the fortified camp, outside the river, by six redoubts, with more than 100 pieces of heavy artillery. Tippoo's army consisted of 6,000 cavalry and 50,000 infantry, himself commanding. This first siege, which is celebrated in Indian warfare, continued with complete success on the English side till the 24th. 10,000 subjects of Coorg, whom Tippoo had enlisted by force, deserted. At last, when the whole island was carried and all preparations made for the siege, Tippoo made peace. The English allies had such confidence in Lord Cornwallis, that they left him entire discretion as to the terms. They were,—that Tippoo should give up half of his territory, pay a large sum for war expenses, and give up two of his sons as hostages. The ceded territory was divided between the allies, the Company obtaining a large strip of the Malabar coast, extending eastward to the Carnatic. . . . Meanwhile, on the breaking out of war between England and the French Republic, the French settlements in India were all again annexed (1792). Lord Cornwallis now applied himself to questions of internal government. Properly speaking, there was no English Government as yet. Mr. Kaye, the brilliant apologist of the East India Company, says, of Lord Cornwallis, that 'he gathered up the scattered fragments of government which he found, and reduced them to one comprehensive system.' He organized the administration of criminal justice, reorganized the police. He separated the collection of the revenues from the administration of justice, organizing civil justice in turn. . . . He next proceeded to organize the financial system of the Company's government. . . . Hence the famous 'Permanent Settlement' of Lord Cornwallis (22nd March, 1793).—J. M. Ludlow, *British India*, lect. 9 (v. 1).—"In 1793 the so-called Permanent Settlement of the Land Revenue was introduced. We found in Bengal, when we succeeded to the Government, a class of middle-men, called

Zemindars [or Zamindars—see, also, TALUKDARS], who collected the land revenue and the taxes, and we continued to employ them. As a matter of convenience and expediency, but not of right, the office of zemindar was often hereditary. The zemindars had never been in any sense the owners of the land, but it was supposed by Lord Cornwallis and the English rulers of the time that it would be an excellent thing for Bengal to have a class of landlords something like those of England; the zemindars were the only people that seemed available for the purpose, and they were declared to be the proprietors of the land. It was by no means intended that injustice should thus be done to others. Excepting the State, there was only one great class, that of the ryots or actual cultivators, which, according to immemorial custom, could be held to possess permanent rights in the land. The existence of those rights was recognised, and, as it was supposed, guarded by the law. . . . There has been much dispute as to the exact nature of the rights given to the zemindars, but every one agrees that it was not the intention of the authors of the Permanent Settlement to confiscate anything which, according to the customs of the country, had belonged to the cultivators. The right of property given to the zemindars was a portion of those rights which had always been exercised by the State, and of which the State was at liberty to dispose; it was not intended that they should receive anything else. The land revenue, representing the share of the produce or rental to which the State was entitled, was fixed in perpetuity. The ryots were to continue to hold their lands permanently at the 'rates established in the purgunnah;' when the amount of these rates was disputed it was to be settled by the courts; so long as rents at those rates were paid, the ryot could not be evicted. The intention was to secure to the ryot fixity of tenure and fixity of rent. Unfortunately, these rights were only secured upon paper. . . . The consequences at the present time are these:—Even if it be assumed that the share of the rent which the State can wisely take is smaller than the share which any Government, Native or English, has ever taken or proposed to take in India, the amount now received by the State from the land in Bengal must be held to fall short of what it might be by a sum that can hardly be less than 5,000,000*l.* a year; this is a moderate computation; probably the loss is much more. This is given away in return for no service to the State or to the public; the zemindars are merely the receivers of rent; with exceptions so rare as to deserve no consideration, they take no part in the improvement of the land, and, until a very few years ago, they bore virtually no share of the public burdens. The result of these proceedings of the last century, to the maintenance of which for ever the faith of the British Government is said to have been pledged, is that the poorer classes in poorer provinces have to make good to the State the millions which have been thrown away in Bengal. If this were all, it would be bad enough, but worse remains to be told. . . . 'The original intention of the framers of the Permanent Settlement (I am quoting from Sir George Campbell) was to record all rights. The Canongoes (District Registrars) and Putwarees (Village Accountants) were to register all holdings, all

transfers, all rent-rolls, and all receipts and payments; and every five years there was to be filed in the public offices a complete register of all land tenures. But the task was a difficult one; there was delay in carrying it out. . . . The putwarees fell into disuse or became the mere servants of the zemindars; the canongoes were abolished. No record of the rights of the ryots and inferior holders was ever made, and even the quinquennial register of superior rights, which was maintained for a time, fell into disuse. . . . The consequences of the Permanent Settlement did not become immediately prominent. . . . But, as time went on, and population and wealth increased, as cultivators were more readily found, and custom began to give way to competition, the position of the ryots became worse and that of the zemindars became stronger. Other circumstances helped the process of confiscation of the rights of the peasantry. . . . The confiscation of the rights of the ryots has reached vast proportions. In 1793 the rental left to the zemindars under the Permanent Settlement, after payment of the land revenue, is supposed not to have exceeded 400,000*l.*; according to some estimates it was less. If the intentions of the Government had been carried out, it was to the ryots that the greater portion of any future increase in the annual value of the land would have belonged, in those parts at least of the province which were at that time well cultivated. It is not possible to state with confidence the present gross annual rental of the landlords of Bengal. An imperfect valuation made some years ago showed it to be 13,000,000*l.* It is now called 17,000,000*l.*, but there can be little doubt that it is much more. Thus, after deducting the land revenue, which is about 3,800,000*l.*, the net rental has risen from 400,000*l.* in the last century to more than 13,000,000*l.* at the present time. No portion of this increase has been due to the action of the zemindars. It has been due to the industry of the ryots, to whom the greater part of it rightfully belonged, to the peaceful progress of the country, and to the expenditure of the State, an expenditure mainly defrayed from the taxation of poorer provinces. If ever there was an 'unearned increment,' it is this."—Sir J. Strachey, *India*, *lect.* 12.

A. D. 1785-1795.—**The Impeachment and Trial of Warren Hastings.**—Warren Hastings returned to England in the summer of 1785, and met with a distinguished reception. "I find myself," he wrote to a friend, "every where and universally treated with evidences, apparent even to my own observation, that I possess the good opinion of my country." But underneath this superficial "good opinion" there existed a moral feeling which had been outraged by the unscrupulous measures of the Governor-General of India, and which began soon to speak aloud through the eloquent lips of Edmund Burke. Joined in the movement by Fox and Sheridan, Burke laid charges before Parliament which forced the House of Commons, in the session of 1787 to order the impeachment of Hastings before the Lords. "On the 13th of February, 1788,

the sittings of the Court commenced. There have been spectacles more dazzling to the eye, more gorgeous with jewellery and cloth of gold, more attractive to grown-up children, than that which was then exhibited at Westminster; but, perhaps, there never was a spectacle so well calculated to strike a highly cultivated, a reflecting, an imaginative mind. All the various kinds of interest which belong to the near and to the distant, to the present and to the past, were collected on one spot and in one hour. All the talents and all the accomplishments which are developed by liberty and civilisation were now displayed, with every advantage that could be derived both from co-operation and from contrast. Every step in the proceedings carried the mind either backward, through many troubled centuries, to the days when the foundations of our constitution were laid; or far away, over boundless seas and deserts, to dusky nations living under strange stars, worshipping strange gods, and writing strange characters from right to left. The High Court of Parliament was to sit, according to forms handed down from the days of the Plantagenets, on an Englishman accused of exercising tyranny over the lord of the holy city of Benares, and over the ladies of the princely house of Oude. The place was worthy of such a trial. It was the great hall of William Rufus, the hall which had resounded with acclamations at the inauguration of thirty kings, the hall which had witnessed the just sentence of Bacon and the just absolution of Somers, the hall where the eloquence of Strafford had for a moment awed and melted a victorious party inflamed with just resentment, the hall where Charles had confronted the High Court of Justice with the placid courage which has half redeemed his fame. Neither military nor civil pomp was wanting. The avenues were lined with grenadiers. The streets were kept clear by cavalry. The peers, robed in gold and ermine, were marshalled by the heralds under Garter King-at-arms. The judges in their vestments of state attended to give advice on points of law. Near a hundred and seventy lords, three fourths of the Upper House as the Upper House then was, walked in solemn order from their usual place of assembling to the tribunal. . . . The grey old walls were hung with scarlet. The long galleries were crowded by an audience such as has rarely excited the fears or the emulations of an orator. There were gathered together, from all parts of a great, free, enlightened, and prosperous empire, grace and female loveliness, wit and learning, the representatives of every science and of every art. . . . The Serjeants made proclamation. Hastings advanced to the bar, and bent his knee. The culprit was indeed not unworthy of that great presence. He had ruled an extensive and populous country, had made laws and treaties, had sent forth armies, had set up and pulled down princes. And in his high place he had so borne himself, that all had feared him, that most had loved him, and that hatred itself could deny him no title to glory, except virtue. He looked like a great man, and not like a bad man. . . . His counsel accompanied him, men all of whom were afterwards raised by their talents and learning to the highest posts in their profession, the bold and strong-minded Law, afterwards Chief Justice of the King's Bench; the more humane and eloquent Dallas, afterwards Chief Justice of the

Common Pleas; and Plomer who, near twenty years later, successfully conducted in the same high court the defence of Lord Melville, and subsequently became Vice-chancellor and Master of the Rolls. But neither the culprit nor his advocates attracted so much notice as the accusers. In the midst of the blaze of red drapery, a space had been fitted up with green benches and tables for the Commons. The managers, with Burke at their head, appeared in full dress. The collectors of gossip did not fail to remark that even Fox, generally so regardless of his appearance, had paid to the illustrious tribunal the compliment of wearing a bag and sword. Pitt had refused to be one of the conductors of the impeachment; and his commanding, copious, and sonorous eloquence was wanting to that great muster of various talents. . . . The charges and the answers of Hastings were first read. The ceremony occupied two whole days, and was rendered less tedious than it would otherwise have been by the silver voice and just emphasis of Cowper, the clerk of the court, a near relation of the amiable poet. On the third day Burke rose. Four sittings were occupied by his opening speech, which was intended to be a general introduction to all the charges. With an exuberance of thought and a splendour of diction, which more than satisfied the highly raised expectation of the audience, he described the character and institutions of the natives of India, recounted the circumstances in which the Asiatic empire of Britain had originated, and set forth the constitution of the Company and of the English presidencies. . . . When the Court sat again, Mr. Fox, assisted by Mr. Grey, opened the charge respecting Cheyte Sing, and several days were spent in reading papers and hearing witnesses. The next article was that relating to the Princesses of Oude. The conduct of this part of the case was intrusted to Sheridan. The curiosity of the public to hear him was unbounded. His sparkling and highly finished declamation lasted two days; but the Hall was crowded to suffocation during the whole time. It was said that fifty guineas had been paid for a single ticket. Sheridan, when he concluded, contrived, with a knowledge of stage effect which his father might have envied, to sink back, as if exhausted, into the arms of Burke, who hugged him with the energy of generous admiration. June was now far advanced. The session could not last much longer; and the progress which had been made in the impeachment was not very satisfactory. There were twenty charges. On two only of these had even the case for the prosecution been heard; and it was now a year since Hastings had been admitted to bail. The interest taken by the public in the trial was great when the Court began to sit, and rose to the height when Sheridan spoke on the charge relating to the Begums. From that time the excitement went down fast. The spectacle had lost the attraction of novelty. The great displays of rhetoric were over. . . . The trial in the Hall went on languidly. In the session of 1788, when the proceedings had the interest of novelty, and when the Peers had little other business before them, only thirty-five days were given to the impeachment. In 1789 . . . during the whole year only seventeen days were given to the case of Hastings. . . . At length, in the spring of 1795, the decision was pronounced, near eight years after Hastings had been brought

by the Serjeant-at-arms of the Commons to the bar of the Lords. . . . Only twenty-nine Peers voted. Of these only six found Hastings guilty on the charges relating to Cheyte Sing and to the Begums. On other charges, the majority in his favour was still greater. On some he was unanimously absolved. He was then called to the bar, was informed from the woolsack that the Lords had acquitted him, and was solemnly discharged. He bowed respectfully and retired. We have said that the decision had been fully expected. It was also generally approved. . . . It was thought, and not without reason, that, even if he was guilty, he was still an ill-used man, and that an impeachment of eight years was more than a sufficient punishment. It was also felt that, though, in the ordinary course of criminal law, a defendant is not allowed to set off his good actions against his crimes, a great political cause should be tried on different principles, and that a man who had governed an empire during thirteen years might have done some very reprehensible things, and yet might be on the whole deserving of rewards and honours rather than of fine and imprisonment."—Lord Macaulay, *Warren Hastings (Essays)*.—"The trial had several beneficial results. It cleared off a cloud of misconceptions, calumnies, exaggerations, and false notions generally on both sides; it fixed and promulgated the standard which the English people would in future insist upon maintaining in their Indian administration; it bound down the East India Company to better behaviour; it served as an example and a salutary warning, and it relieved the national conscience. But the attempt to make Hastings a sacrifice and a burnt-offering for the sins of the people; the process of loading him with curses and driving him away into the wilderness; of stoning him with every epithet and metaphor that the English language could supply for heaping ignominy on his head; of keeping him seven years under an impeachment that menaced him with ruin and infamy—these were blots upon the prosecution and wide aberrations from the true course of justice which disfigured the aspect of the trial, distorted its aim, and had much to do with bringing it to the lame and impotent conclusion that Burke so bitterly denounced."—Sir A. Lyall, *Warren Hastings*, ch. 9.

A. D. 1798-1805.—The administration and imperial policy of the Marquis Wellesley.—**Treaty with the Nizam.**—**Overthrow and death of Tippoo, Sultan of Mysore.**—**War with the Marhattas.**—**Assaye and Laswari.**—**Territorial acquisitions.**—"The period of Sir John Shore's rule as Governor-General, from 1793 to 1798 [after which he became Lord Teignmouth], was uneventful. In 1798, Lord Mornington, better known as the Marquis of Wellesley, arrived in India, already inspired with imperial projects which were destined to change the map of the country. Mornington was the friend and favourite of Pitt, from whom he is thought to have derived his far-reaching political vision, and his antipathy to the French name. From the first he laid down as his guiding principle, that the English must be the one paramount power in the peninsula, and that Native princes could only retain the insignia of sovereignty by

surrendering their political independence. The history of India since his time has been but the gradual development of this policy, which received its finishing touch when Queen Victoria was proclaimed Empress of India on the 1st of January, 1877. To frustrate the possibility of a French invasion of India, led by Napoleon in person, was the governing idea of Wellesley's foreign policy. France at this time, and for many years later, filled the place afterwards occupied by Russia in the minds of Indian statesmen. Nor was the danger so remote as might now be thought. French regiments guarded and overawed the Nizam of Haidarabad. The soldiers of Sindhia, the military head of the Marhatta Confederacy, were disciplined and led by French adventurers. Tipu Sultan of Mysore carried on a secret correspondence with the French Directorate, allowed a tree of liberty to be planted in his dominions, and enrolled himself in a republican club as 'Citizen Tipu.' The islands of Mauritius and Bourbon afforded a convenient half-way rendezvous for French intrigue and for the assembling of a hostile expedition. Above all, Napoleon Buonaparte was then in Egypt, dreaming of the conquests of Alexander, and no man knew in what direction he might turn his hitherto unconquered legions. Wellesley conceived the scheme of crushing for ever the French hopes in Asia, by placing himself at the head of a great Indian confederacy. In Lower Bengal, the sword of Clive and the policy of Warren Hastings had made the English paramount. Before the end of the century, our power was consolidated from the seaboard to Benares, high up the Gangetic valley. . . . In 1801, the treaty of Lucknow made over to the British the Doab, or fertile tract between the Ganges and the Jumna, together with Rohilkhand. In Southern India, our possessions were chiefly confined, before Lord Wellesley, to the coast Districts of Madras and Bombay. Wellesley resolved to make the British supreme as far as Delhi in Northern India, and to compel the great powers of the south to enter into subordinate relations to the Company's government. The intrigues of the Native princes gave him his opportunity for carrying out this plan without breach of faith. The time had arrived when the English must either become supreme in India, or be driven out of it. The Mughal Empire was completely broken up; and the sway had to pass either to the local Muhammadan governors of that empire, or to the Hindu Confederacy represented by the Marhattas, or to the British. Lord Wellesley determined that it should pass to the British. His work in Northern India was at first easy. The treaty of Lucknow in 1801 made us territorial rulers as far as the heart of the present North-Western Provinces, and established our political influence in Oudh. Beyond those limits, the northern branches of the Marhattas practically held sway, with the puppet emperor in their hands. Lord Wellesley left them untouched for a few years, until the second Marhatta war (1802-1804) gave him an opportunity for dealing effectively with their nation as a whole. In Southern India, he saw that the Nizam at Haidarabad stood in need of his protection, and he converted him into a useful follower throughout the succeeding struggle. The other Muhammadan power of the south, Tipu Sultan of Mysore, could not be so easily handled. Lord

Wellesley resolved to crush him, and had ample provocation for so doing. The third power of Southern India—namely, the Marhatta Confederacy—was so loosely organized, that Lord Wellesley seems at first to have hoped to live on terms with it. When several years of fitful alliance had convinced him that he had to choose between the supremacy of the Marhattas or of the British in Southern India, he did not hesitate to decide. Lord Wellesley first addressed himself to the weakest of the three southern powers, the Nizam of Haidarabad. Here he won a diplomatic success, which turned a possible rival into a subservient ally. The French battalions at Haidarabad were disbanded, and the Nizam bound himself by treaty not to take any European into his service without the consent of the English Government,—a clause since inserted in every engagement entered into with Native powers. Wellesley next turned the whole weight of his resources against Tipu, whom Cornwallis had defeated, but not subdued. Tipu's intrigues with the French were laid bare, and he was given an opportunity of adhering to the new subsidiary system. On his refusal, war was declared, and Wellesley came down in viceregal state to Madras to organize the expedition in person, and to watch over the course of events. One English army marched into Mysore from Madras, accompanied by a contingent from the Nizam. Another advanced from the western coast. Tipu, after a feeble resistance in the field, retired into Seringapatam, and, when his capital was stormed, died fighting bravely in the breach (1799). Since the battle of Plassey, no event so greatly impressed the Native imagination as the capture of Seringapatam, which won for General Harris a peerage, and for Wellesley an Irish marquissate. In dealing with the territories of Tipu, Wellesley acted with moderation. The central portion, forming the old state of Mysore, was restored to an infant representative of the Hindu Rajas, whom Haidar Ali had de-throned; the rest of Tipu's dominion was partitioned between the Nizam, the Marhattas, and the English. At about the same time, the Karnatic, or the part of South-Eastern India ruled by the Nawab of Arcot, and also the principality of Tanjore, were placed under direct British administration, thus constituting the Madras Presidency almost as it has existed to the present day. . . . The Marhattas had been the nominal allies of the English in both their wars with Tipu. But they had not rendered active assistance, nor were they secured to the English side as the Nizam now was. The Marhatta powers at this time were five in number. The recognised head of the confederacy was the Peshwa of Poona, who ruled the hill country of the Western Ghats, the cradle of the Marhatta race. The fertile Province of Guzerat was annually harried by the horsemen of the Gaekwar of Baroda. In Central India, two military leaders, Sindhia of Gwalior and Holkar of Indore, alternately held the pre-eminence. Towards the east, the Bhonsla Raja of Nagpur reigned from Berar to the coast of Orissa. Wellesley laboured to bring these several Marhatta powers within the net of his subsidiary system. In 1802, the necessities of the Peshwa, who had been defeated by Holkar, and driven as a fugitive into British territory, induced him to sign the treaty of Bassein. By this he pledged himself to the British to hold communications

with no other power, European or Native, and granted to us Districts for the maintenance of a subsidiary force. This greatly extended the English territorial influence in the Bombay Presidency. But it led to the second Marhatta war, as neither Sindhia nor the Raja of Nagpur would tolerate the Peshwa's betrayal of the Marhatta independence. The campaigns which followed are perhaps the most glorious in the history of the British arms in India. The general plan, and the adequate provision of resources, were due to the Marquis of Wellesley, as also the indomitable spirit which refused to admit of defeat. The armies were led by Sir Arthur Wellesley (afterwards Duke of Wellington) and General (afterwards Lord) Lake. Wellesley operated in the Deccan, where in a few short months, he won the decisive victories of Assaye [September 23, 1803] and Argaum [November 28], and captured Ahmednagar. Lake's campaign in Hindustan was equally brilliant, although it has received less notice from historians. He won pitched battles at Aligarh [August 29] and Laswari [November 1, 1803], and took the cities of Delhi and Agra. He scattered the French troops of Sindhia, and at the same time stood forward as the champion of the Mughal Emperor in his hereditary capital. Before the end of 1803, both Sindhia and the Bhonsla Raja of Nagpur sued for peace. Sindhia ceded all claims to the territory north of the Jumna, and left the blind old Emperor Shah Alam once more under British protection. The Bhonsla forfeited Orissa to the English, who had already occupied it with a flying column in 1803, and Berar to the Nizam, who gained fresh territory by every act of complaisance to the British Government. . . . The concluding years of Wellesley's rule were occupied with a series of operations against Holkar, which brought little credit on the British name. The disastrous retreat of Colonel Monson through Central India (1804) recalled memories of the convention of War-gaum, and of the destruction of Colonel Baillie's force by Haidar Ali. The repulse of Lake in person at the siege of Bhartpur (Bhurlpore) is memorable as an instance of a British army in India having to turn back with its object unaccomplished (1805). Bhartpur was not finally taken till 1827. Lord Wellesley during his six years of office carried out almost every part of his territorial scheme. In Northern India, Lord Lake's campaigns brought the North-Western provinces (the ancient Madhyadesa) under British rule, together with the custody of the puppet emperor. The new Districts were amalgamated with those previously acquired from the Nawab Wazir of Oudh into the 'Ceded and Conquered Provinces.' This partition of Northern India remained till the Sikh wars of 1844 and 1847 gave us the Punjab.—W. W. Hunter, *Brief Hist. of the Indian People*, ch. 13.

Also in: W. H. Maxwell, *Life of the Duke of Wellington*, v. 1, ch. 2-12.—J. M. Wilson, *Memoir of Wellington*, v. 1, ch. 2-9.—G. B. Mallison, *Decisive Battles of India*, ch. 9-10.—W. H. Hutton, *The Marquess Wellesley*.—J. S. Cotton, *Mountstuart Elphinstone*, ch. 4.

A. D. 1805-1816.—Reversal of Lord Wellesley's policy.—Sepoy revolt at Vellore.—Influence established with Runjeet Singh and the Sikhs.—Conquest of the Mauritius.—The Ghorka War.—"The retreat of Monson was not

only a disastrous blow to British prestige, but ruined for a while the reputation of Lord Wellesley. Because a Mahratta freebooter had broken loose in Hindustan, the Home authorities imagined that all the Mahratta powers had risen against the imperial policy of the Governor-General. Lord Wellesley was recalled from his post, and Lord Cornwallis was sent out to take his place, to reverse the policy of his illustrious predecessor, to scuttle out of Western Hindustan, to restore all the ceded territories, to surrender all the captured fortresses, and to abandon large tracts of country to be plundered and devastated by the Mahrattas, as they had been from the days of Sivaji to those of Wellesley and Lake. Before Lord Cornwallis reached Bengal the political outlook had brightened. . . . But Lord Cornwallis was sixty-seven years of age, and had lost the nerve which he had displayed in his wars against Tippu; and he would have ignored the turn of the tide, and persisted in falling back on the old policy of conciliation and non-intervention, had not death cut short his career before he had been ten weeks in the country. Sir George Barlow, a Bengal civilian, succeeded for a while to the post of Governor-General, as a provisional arrangement. He had been a member of Council under both Wellesley and Cornwallis, and he halted between the two. He refused to restore the conquered territories to Sindia and the Bhonsla, but he gave back the Indore principality to Holkar, together with the captured fortresses. Worst of all, he annulled most of the protective treaties with the Rajput princes on the ground that they had deserted the British government during Monson's retreat from Jaswant Rao Holkar. For some years the policy of the British government was a half-hearted system of non-intervention. . . . The Mahratta princes were left to plunder and collect chout [a blackmail extortion, levied by the Mahrattas for a century] in Rajputana, and practically to make war on each other, so long as they respected the territories of the British government and its allies. . . . All this while an under-current of intrigue was at work between Indian courts, which served in the end to revive wild hopes of getting rid of British supremacy, and rekindling the old aspirations for war and rapine. In 1806 the peace of India was broken by an alarm from a very different quarter. In those days India was so remote from the British Isles that the existence of the British government mainly depended on the loyalty of its sepoy armies. Suddenly it was discovered that the Madras army was on the brink of mutiny. The British authorities at Madras had introduced an obnoxious head-dress resembling a European hat, in the place of the old time-honoured turban, and had, moreover, forbidden the sepoys to appear on parade with earrings and caste marks. India was astounded by a revolt of the Madras sepoys at the fortress of Vellore, about eight miles to the westward of Arcot. . . . The garrison at Vellore consisted of about 400 Europeans and 1,500 sepoys. At midnight, without warning, the sepoys rose in mutiny. One body fired on the European barracks until half the soldiers were killed or wounded. Another body fired on the houses of the British officers, and shot them down as they rushed out to know the cause of the uproar. All this while provisions were distributed amongst the sepoys by the Mysore

princes, and the flag of Mysore was hoisted over the fortress. Fortunately the news was carried to Arcot, where Colonel Gillespie commanded a British garrison. Gillespie at once galloped to Vellore with a troop of British dragoons and two field guns. The gates of Vellore were blown open; the soldiers rushed in; 400 mutincers were cut down, and the outbreak was over. . . . In 1807 Lord Minto succeeded Barlow as Governor-General. He broke the spell of non-intervention. . . . Lord Minto's main work was to keep Napoleon and the French out of India. The north-west frontier was still vulnerable, but the Afghans had retired from the Punjab, and the once famous Runjeet Singh had founded a Sikh kingdom between the Indus and the Sutlej. As far as the British were concerned, the Sikhs formed a barrier against the Afghans; and Runjeet Singh was apparently friendly, for he had refused to shelter Jaswant Rao Holkar in his flight from Lord Lake. But there was no knowing what Runjeet Singh might do if the French found their way to Lahore. To crown the perplexity, the Sikh princes on the British side of the river Sutlej, who had done homage to the British government during the campaigns of Lord Lake, were being conquered by Runjeet Singh, and were appealing to the British government for protection. In 1808-9 a young Bengal civilian, named Charles Metcalfe, was sent on a mission to Lahore. The work before him was difficult and complicated, and somewhat trying to the nerves. The object was to secure Runjeet Singh as a useful ally against the French and Afghans, whilst protecting the Sikh states on the British side of the Sutlej, namely, Jhind, Nabha, and Patiala. Runjeet Singh was naturally disgusted at being checked by British interference. It was unfair, he said, for the British to wait until he had conquered the three states, and then to demand possession. Metcalfe cleverly dropped the question of justice, and appealed to Runjeet Singh's self-interest. By giving up the three states, Runjeet Singh would secure an alliance with the British, a strong frontier on the Sutlej, and freedom to push his conquests on the north and west. Runjeet Singh took the hint. He withdrew his pretensions from the British side of the Sutlej, and professed a friendship which remained unbroken until his death in 1839; but he knew what he was about. He conquered Cashmere on the north, and he wrested Peshawar from the Afghans; but he refused to open his dominions to British trade, and he was jealous to the last of any attempt to enter his territories. . . . Meanwhile the war against France and Napoleon had extended to eastern waters. The island of the Mauritius had become a French depot for frigates and privateers, which swept the seas from Madagascar to Java, until the East India Company reckoned its losses by millions, and private traders were brought to the brink of ruin. Lord Minto sent one expedition [1810], which wrested the Mauritius from the French; and he conducted another expedition in person, which wrested the island of Java from the Dutch, who at that time were the allies of France. The Mauritius has remained a British possession until this day, but Java was restored to Holland at the conclusion of the war. . . . Meanwhile war clouds were gathering on the southern slopes of the Himalayas. Down to the middle of the 18th century, the territory of

Nipal had been peopled by a peaceful and industrious race of Buddhists known as Newars, but about the year 1767, when the British had taken over the Bengal provinces, the Newars were conquered by a Rajput tribe from Cashmere, known as Ghorkas. The Ghorka conquest of Nipal was as complete as the Norman conquest of England. The Ghorkas established a military despotism with Brahmanical institutions, and parcelled out the country amongst feudal nobles known as Bharadars. . . . During the early years of the 19th century the Ghorkas began to encroach on British territory, annexing villages and revenues from Darjeeling to Simla without right or reason. They were obviously bent on extending their dominion southward to the Ganges, and for a long time aggressions were overlooked for the sake of peace. At last two districts were appropriated to which the Ghorkas had not a shadow of a claim, and it was absolutely necessary to make a stand against their pretensions. Accordingly, Lord Minto sent an ultimatum to Khatmandu, declaring that unless the districts were restored they would be recovered by force of arms. Before the answer arrived, Lord Minto was succeeded in the post of Governor-General by Lord Moira, better known by his later title of Marquis of Hastings. Lord Moira landed at Calcutta in 1813. Shortly after his arrival an answer was received from the Ghorka government, that the disputed districts belonged to Nipal, and would not be surrendered. Lord Moira at once fixed a day on which the districts were to be restored; and when the day had passed without any action being taken by the Ghorkas, a British detachment entered the districts and set up police stations. . . . The council of Bharadars resolved on war, but they did not declare it in European fashion. A Ghorka army suddenly entered the disputed districts, surrounded the police stations, and murdered many of the constables, and then returned to Khatmandu to await the action of the British government in the way of reprisals. The war against the Ghorkas was more remote and more serious than the wars against the Mahrattas. . . . Those who have ascended the Himalayas to Darjeeling or Simla may realise something of the difficulties of an invasion of Nipal. The British army advanced in four divisions by four different routes. . . . General David Ochterlony, who advanced his division along the valley of the Sutlej, gained the most brilliant successes. He was one of the half-forgotten heroes of the East India Company. . . . For five months in the worst season of the year he carried one fortress after another, until the enemy made a final stand at Maloun on a shelf of the Himalayas. The Ghorkas made a desperate attack on the British works, but the attempt failed; and when the British batteries were about to open fire, the Ghorka garrison came to terms, and were permitted to march out with the honours of war. The fall of Maloun shook the faith of the Ghorka government in their heaven-built fortresses. Commissioners were sent to conclude a peace. Nipal agreed to cede Kumaon in the west, and the southern belt of forest and jungle known as the Terai. It also agreed to receive a British Resident at Khatmandu. Lord Moira had actually signed the treaty, when the Ghorkas raised the question of whether the Terai included the forest or only the swamp. War was renewed.

Ochterlony advanced an army within fifty miles of Khatmandu, and then the Ghorkas concluded the treaty [1816], and the British army withdrew from Nipal. The Terai, however, was a bone of contention for many years afterwards. Nothing was said about a subsidiary army, and to this day Nipal is outside the pale of subsidiary alliances; but Nipal is bound over not to take any European into her service without the consent of the British government."—J. T. Wheeler, *India under British Rule*, ch. 3.

A. D. 1816-1819.—Suppression of the Pindaris.—Overthrow of the Mahratta power.—The last of the Peshwas.—"For some time past the Pindaris, a vast brotherhood of mounted freebooters, who were ready to fight under any standard for the chance of unbounded plunder, had been playing a more and more prominent part in the wars of native princes. As Free Lances, they had fought for the Peshwa at Panipat, had shared in the frequent struggles of the Sindhas and Holkars in Hindustan and Southern India, and made war on their own account with every native prince whose weakness at any moment seemed to invite attack. . . . From the hills and glens of Central India thousands of armed ruffians sallied forth year after year in quest of plunder, sparing no cruelty to gain their ends, and widening the circle of their ravages with each new raid, until in 1811 the smoke of their camp-fires could be seen from Gaya and Mirzapur. . . . To thwart Maratha intrigues and punish Pindari aggressions was the Governor-General's next aim. In spite of hindrances offered by his own council and the Court of Directors, he set himself to revive and extend Lord Wellesley's policy of securing peace and order throughout India by means of treaties, which placed one native prince after another in a kind of vassalage to the paramount power that ruled from Fort William. . . . By means of a little timely compulsion, the able and accomplished Elphinstone baffled for a while the plots which the Peshwa, Baji Rao, and his villainous accomplice, Trimbakji Dhangla, had woven against their English allies. The treaty of June, 1817, left Lord Hastings master of Sagar and Bundalkhand, while it bound the Peshwa to renounce his friend Trimbakji, his own claims to the headship of the Maratha League, to make no treaties with any other native prince, and to accept in all things the counsel and control of the Company's Government. Hard as these terms may seem, there was no choice, averred Lord Hastings, between thus crippling a secret foe and depriving him of the crown he had fairly forfeited. Meanwhile Lord Hastings' fearless energy had already saved the Rajputs of Jaipur from further suffering at the hands of their Pathan oppressor, Amir Khan, and forced from Sindia himself a reluctant promise to aid in suppressing the Pindari hordes, whose fearful ravages had at length been felt by the peaceful villagers in the Northern Sarkars. In the autumn of 1817 Hastings took the field at the head of an army which, counting native contingents, mustered nearly 120,000 strong, with some 300 guns. From east, west, north, and south, a dozen columns set forth to hunt down the merciless ruffians who had so long been allowed to harry the

fairest provinces of India. In spite of the havoc wrought among our troops by the great cholera outbreak of that year, and of a sudden rising among the Maratha princes for one last struggle with their former conquerors, our arms were everywhere successful against Marathas and Pindaris alike. The latter, hunted into the hills and jungles of Central India, found no safety anywhere except in small bodies and constant flight . . . and the famous robber-league passed into a tale of yore. Not less swift and sure was the punishment dealt upon the Maratha leaders who joined the Peshwa in his sudden uprising against the British power. His late submission had been nothing but a mask for renewed plottings. Elphinstone, however, saw through the mask which had taken in the confiding Malcolm. Before the end of October an English regiment, summoned in hot haste from Bombay, pitched its camp at Kirki, about two miles from Puna, beside the small Sepoy brigade already quartered there. In the first days of November Baji Rao began to assume a bolder tone as his plans grew ripe for instant execution. On the 5th, a body of Marathas attacked and destroyed the Residency, which Elphinstone had quitted in the nick of time. A great Maratha army then marched forth to overwhelm the little garrison at Kirki, before fresh troops could come up to its aid from Sirur. Elphinstone, however, who knew his foe, had no idea of awaiting the attack. Colonel Burr at once led out his men, not 3,000 all told. A brilliant charge of Maratha horse was heavily repulsed by a Sepoy regiment, and the English steadily advancing drove the enemy from the field. A few days later General Smith, at the head of a larger force, advanced on Puna, occupied the city, and pursued the frightened Peshwa from place to place. The heroic defence of Karigaum, a small village on the Bhima, by Captain Staunton and 800 Sepoys, with only two light guns, against 25,000 Marathas during a whole day, proved once more how nobly native troops could fight under English leading. Happily for Staunton's weary and diminished band, Smith came up the next morning, and the despairing Peshwa continued his retreat. Turn where he would, there was no rest for his jaded soldiers. Munro with a weak force, partly of his own raising, headed him on his way to the Carnatic, took several of his strong places, and drove him northwards within reach of General Smith. On the 19th February, 1818, that officer overtook and routed the flying foe at the village of Ashti. Bapu Gokla, the Peshwa's staunchest and ablest follower, perished in the field, while covering the retreat of his cowardly master. For some weeks longer Baji Rao fled hither and thither before his resolute pursuers. But at length all hope forsook him as the circle of escape grew daily narrower; and in the middle of May the great-grandson of Balaji Vishwanath yielded himself to Sir John Malcolm at Indor, on terms far more liberal than he had any reason to expect. Even for the faithful few who still shared his fortunes due provision was made at his request. He himself spent the rest of his days a princely pensioner at Bithur, near Cawnpore; but the sceptre which he and his sires had wielded for a hundred years passed into English hands, while the Rajah of Satara, the long-neglected heir of the house of Sivaji, was restored to the nominal headship of the Maratha power.

Meanwhile Appa Sahib, the usurping Rajah of Berar, had no sooner heard of the outbreak at Puna, than he, too, like the Peshwa, threw off his mask. On the evening of the 24th November, 1817, his troops, to the number of 18,000, suddenly attacked the weak English and Sepoy force of 1,400 men with four guns, posted on the Sitabaldi Hills, outside Nagpur. A terrible fight for eighteen hours ended in the repulse of the assailants, with a loss to the victors of more than 300 men and twelve officers. A few weeks later Nagpur itself was occupied after another fight. Even then the Rajah might have kept his throne, for his conquerors were merciful and hoped the best. But they hoped in vain. It was not long before Appa Sahib, caught out in fresh intrigues, was sent off a prisoner towards Allahabad. Escaping from his captors, he wandered about the country for several years, and died at Lahor a pensioner on the bounty of Ranjit Singh. The house of Holkar had also paid the penalty of its rash resistance to our arms. . . . On the 6th January, 1818, the young Holkar was glad to sign a treaty which placed him and his heirs under English protection at the cost of his independence and of some part of his realm. Luckily for himself, Sindia had remained quiet, if not quite loyal, throughout this last struggle between the English and his Maratha kinsfolk. Thus in one short and decisive campaign, the great Maratha power, which had survived the slaughter of Panipat, fell shattered to pieces by the same blow which crushed the Pindaris, and raised an English merchant-company to the paramount lordship of all India. The last of the Peshwas had ceased to reign, the Rajah of Berar was a disrowned fugitive, the Rajah of Satara a king only in name, while Sindia, Holkar, and the Nizam were dependent princes who reigned only by sufferance of an English Governor-General at Calcutta. The Moghul Empire lingered only in the Palace of Delhi; its former viceroy, the Nawab of Audh, was our obedient vassal; the haughty princes of Rajputana bowed their necks, more or less cheerfully, to the yoke of masters merciful as Akbar and mightier than Aurangzib. Ranjit Singh himself cultivated the goodwill of those powerful neighbours who had sheltered the Sikhs of Sirhind from his ambitious inroads. With the final overthrow of the Marathas a new reign of peace, order, and general progress began for peoples who, during a hundred and fifty years, had lived in a ceaseless whirl of anarchy and armed strife. With the capture of Asirgarh in April, 1819, the fighting in Southern India came to an end."—L. J. Trotter, *Hist. of India*, bk. 5, ch. 2-3.

A. D. 1823-1833.—The first Burmese War.—English acquisition of Assam and Aracan.—Suppression of Suttee and Thuggee.—Re-chartering of the East India Company.—It is deprived of its last trading monopoly.—"On Hastings' retirement, in 1823, the choice of the ministry fell upon Canning. . . . Canning ultimately resigning the Governor-Generalship, the choice of the authorities fell upon Lord Amherst. The new Governor-General reached India at a time when the authorities in London had a right to expect a long period of peace. In fact, both

in Hindostan and in the Deccan, the victories of Hastings had left the Company no more enemies to conquer. Unfortunately, however, for the prospects of peace, nature, which had given India an impenetrable boundary on the north, had left her with an undefined and open frontier on the east. On the shores of the Bay of Bengal, opposite Calcutta, a struggle had raged during the eighteenth century between the inhabitants of Ava and Pegu. The former, known as Burmans or Burmese, had the good fortune to find a capable leader, who rapidly ensured their own victory and founded a Burmese Empire. The successful competitors were not satisfied with their own predominance in Pegu—they conquered Aracan, they overran Assam, and they wrested from Siam a considerable territory on the Tenasserim coast. The conquest of Aracan brought the Burmese to the confines of the Company's dominions in Chittagong. The conquered people, disliking the severe rule of the conquerors, crossed the frontier and settled in British territory. Many of them used their new home as a secure basis for hostile raids on the Burmese. . . . The river Naf ran for a portion of its course between the possessions of the British in Chittagong and those of the Burmese in Aracan. With the object of preventing the repetition of outrages, which had occurred on the river, a small British guard was stationed on a little island, called Shaporee, near its mouth. The Burmese, claiming the island as their own, attacked the guard and drove it from the post. It was impossible to ignore such a challenge. The island was reoccupied; but the Governor-General, still anxious for peace, offered to treat its occupation by the Burmese as an action unauthorised by the Burmese Government. The Burmese Court, however, instead of accepting this offer, sent an army to reoccupy the island; collisions almost simultaneously occurred between the British and the Burmese on other parts of the frontier, and in February 1824 the first Burmese war began. . . . If the war of 1824 may be excused as inevitable, its conduct must be condemned as careless. No pains were taken to ascertain the nature of the country which it was requisite to invade, or the strength of the enemy whom it was decided to encounter. . . . Burma is watered by two great rivers, the Irawaddy and the Salween. . . . In its upper waters the Irawaddy is a rapid stream; in its lower waters it flows through alluvial plains, and finds its way through a delta with nine mouths into the Bay of Bengal. On one of its western mouths is the town of Bassein, on one of its eastern mouths the great commercial port of Rangoon. The banks of the river are clothed with jungle and with forest; and malaria, the curse of all low-lying tropical lands, always lingers in the marshes. The authorities decided on invading Burma through the Rangoon branch of the river. They gave Sir Archibald Campbell, an officer who had won distinction in the Peninsula, the command of the expedition, and, as a preliminary measure, they determined to seize Rangoon. Its capture was accomplished with ease, and the Burmese retired from the town. But the victory was the precursor of difficulty. The troops dared not advance in an unhealthy season; the supplies which they had brought with them proved insufficient for their support; and the men perished by scores during their period of forced inaction.

. . . When more favourable weather returned with the autumn, Campbell was again able to advance. Burma was then attacked from three separate bases. A force under Colonel Richards, moving along the valley of the Bramaputra, conquered Assam; an expedition under General Morrison, marching from Chittagong, occupied Aracan; while Campbell himself, dividing his army into two divisions, one moving by water, the other by land, passed up the Irawaddy and captured Donabue and Prome. The climate improved as the troops ascended the river, and the hot weather of 1825 proved less injurious than the summer of 1824. . . . The operations in 1825-6 drove home the lesson which the campaign of 1824-5 had already taught. The Burmese realised their impotence to resist, and consented to accept the terms which the British were still ready to offer them. Assam, Aracan, and the Tenasserim Coast were ceded to the Company; the King of Burma consented to receive a Resident at his capital, and to pay a very large sum of money—1,000,000l.—towards the expenses of the war. . . . The increasing credit which the Company thus acquired did not add to the reputation of the Governor-General. . . . The Company complained of the vast additions which his rule had made to expenditure, and they doubted the expediency of acquiring new and unnecessary territory beyond the confines of India itself. The ministry thought that these acquisitions were opposed to the policy which Parliament had laid down, and to the true interests of the empire. It decided on his recall. . . . William Bentinck, whom Canning selected as Amherst's successor, was no stranger to Indian soil. More than twenty years before he had served as Governor of Madras. . . . Bentinck arrived in Calcutta in difficult times. Amherst's war had saddled the Government with a debt, and his successor with a deficit. . . . Retrenchment, in the opinion of every one qualified to judge, was absolutely indispensable, and Bentinck, as a matter of fact, brought out specific instructions to retrench. . . . In two other matters . . . Bentinck effected a change which deserves to be recollected with gratitude. He had the courage to abolish flogging in the native Indian army; he had the still higher courage to abolish suttee. . . . In Bengal the suttee, or 'the pure and virtuous woman,' who became a widow, was required to show her devotion to her husband by sacrificing herself on his funeral pile. . . . Successive Governors-General, whose attention had been directed to this barbarous practice, had feared to incur the unpopularity of abolishing it. . . . Cornwallis and Wellesley, Hastings and Amherst, were all afraid to prohibit murder which was identified with religion, and it was accordingly reserved to Bentinck to remove the reproach of its existence. With the consent of his Council, suttee was declared illegal. The danger which others had apprehended from its prohibition proved a mere phantom. The Hindoos complied with the order without attempting to resist it, and the horrible rite which had disgraced the soil of India for centuries became entirely unknown. For these humane regulations Bentinck deserves to be remembered with gratitude. Yet it should not be forgotten that these reforms were as much the work of his age as of himself. . . . One other great abuse was terminated under Bentinck. In

Central India life was made unsafe and travelling dangerous by the establishment of a secret band of robbers known as Thugs. The Thugs mingled with any travellers whom they met, disarmed them by their conversation and courtesy, and availed themselves of the first convenient spot in their journey to strangle them with a rope and to rob them of their money. The burial of the victim usually concealed all traces of the crime; the secrecy of the confederates made its revelation unlikely; and, to make treachery more improbable, the Thugs usually consecrated their murders with religious rites, and claimed their god as the patron of their misdoings. Bentinck selected an active officer, Major Sleeman, whom he charged to put down Thuggee. Sleeman's exertions were rewarded by a gratifying success. The Thugs, like all secret societies, were assailable in one way. The first discovery of crime always produces an approver. The timid conspirator, conscious of his guilt, is glad to purchase his own safety by sacrificing his associates, and when one man turns traitor every member of the band is anxious to secure the rewards and immunity of treachery. Hence the first clue towards the practices of the Thugs led to the unveiling of the whole organisation; and the same statesman, who had the merit of forbidding suttee, succeeded in extirpating Thuggee from the dominions over which he ruled. Social reforms of this character occupy the greater portion of the history of Bentinck's government. In politics he almost always pursued a policy of non-intervention. The British during his rule made few additions to their possessions; they rarely interfered in the affairs of Native states. . . . The privileges which the East India Company enjoyed had from time to time been renewed by the British Parliament. The charter of the Company had been extended for a period of twenty years in 1773, in 1793, and in 1813. But the conditions on which it was continued in 1813 were very different from those on which it had been originally granted. Instead of maintaining its exclusive right of trade, Parliament decided on throwing open the trade with India to all British subjects. It left the Company a monopoly of the China trade alone. The Act of 1813 of course excited the strenuous opposition of the Company. The highest authorities were brought forward to prove that the trade with India would not be increased by a termination of the monopoly. Their views, however, were proved false by the result, and the stern logic of facts consequently pointed in 1833 to the further extension of the policy of 1813 [see CHINA: A. D. 1839-1842]. . . . The inclination towards free trade was, in fact, so prevalent, that it is doubtful whether, even if the Tories had remained in office, they would have consented to preserve the monopoly. . . . The fall of the Wellington administration made its termination a certainty [see ENGLAND: A. D. 1832-1833]. . . . The Government consented to compensate the Company for the loss of its monopoly by an annuity of 630,000*l.* charged on the territorial revenues of India. It is a remarkable circumstance that the change of ministry which deprived the Company of its trade possibly preserved its political power for nearly a quarter of a century. . . . The Whig ministry shrank from proposing an alteration for which the country was not prepared, and which might have aroused the opposition by

which the Coalition of 1783 had been destroyed. Though, however, it left the rule with Leadenhall Street, it altered the machinery of government. The Governor-General of Bengal was made Governor-General of India. A fourth member—an English jurist—was added to his Council, and the Governor-General in Council was authorised to legislate for the whole of India. At the same time the disabilities which still clung to the natives were in theory swept away, and Europeans were for the first time allowed to hold land in India. These important proposals were carried at the close of the first session of the first reformed Parliament."—S. Walpole, *Hist. of England from 1815*, ch. 25 (v. 5).

A. D. 1836-1845.—The first Afghan war and its catastrophe.—Conquest and annexation of Scinde.—Threatened trouble with the Sikhs.—“With the accession of Lord Auckland, Bentinck's successor, began a new era in Anglo-Indian history, in which the long-sown seeds of fresh political complications, which even now seem as far from solution as ever, began to put forth fruit. All danger from French ambition had passed away; but Russian intrigue was busy against us. We had brought the danger on ourselves. False to an alliance with Persia, which dated from the beginning of the century, we had turned a deaf ear to her entreaties for help against Russian aggression, and had allowed her to fall under the power of her tyrant, who thenceforth used her as an instrument of his ambition. The result of our selfish indifference appeared in 1837, when Persia, acting under Russian influence, laid siege to Herat, which was then under Afghan rule. While Herat was still holding out, the Shah was at last threatened with war, and raised the siege. Then was the time for Auckland to destroy the Russian danger once for all, by making a friend of the power which seemed to be the natural barrier against invasion from the north-west. After a long series of revolutions, Dost Mahomed, the representative of the now famous tribe of Baruckzyes, had established himself upon the throne, with the warm approval of the majority of the people; while Shah Sooja, the leader of the rival Suddozyes, was an exile. The ruling prince did not wait for Auckland to seek his friendship. He treated the Russian advances with contempt, and desired nothing better than to be an ally of the English. Auckland was urged to seize the opportunity. It was in his power to deal Russia a crushing blow, and to avert those troubles which are even now harassing British statesmen. He did not let slip the opportunity. He flung it from him, and clutched at a policy that was to bring misery to thousands of families in England, in India, and in Afghanistan, and to prove disastrous to the political interests of all three countries. . . . Those who are least interested in Indian history are not likely to forget how the Afghan mob murdered the British Envoy and his associates; how the British commander, putting faith in the chiefs of a people whom no treaties can bind, began that retreat from which but one man escaped to tell how 16,000 had

perished; how poor Auckland, unmanned by the disaster, lacked the energy to retrieve it; how the heroic Sale held out at Jellalabad till Pollock relieved him; how Auckland's successor, Lord Ellenborough, dreading fresh disasters, hesitated to allow his generals to act till, yielding to their indignant zeal, he threw upon them the responsibility of that advance to Cabul which retrieved the lost prestige of our arms [see AFGHANISTAN: A. D. 1838-1842, and 1842-1869]. Thus closed the first act of a still unfinished drama. After celebrating the triumph of the victorious army, Ellenborough sent Charles Napier to punish the Ameers of Scinde [see SCINDE], who, emboldened by the retreat from Cabul, had violated a treaty which they had concluded with the British Government. The result of the war was the annexation of the country: but the whole series of transactions is only remembered now as having given rise to the dispute on the question of the guilt of the Ameers between Napier and James Outram. Less talked of at the time, but historically more important, was Ellenborough's reconstitution of the British relations with the Sindia of the day. Political disturbances had for some time agitated that prince's court, while his army had swollen to a dangerous size, and, like the Sikh army since Runjeet Singh's death, which had taken place a few years before, had passed beyond the control of the civil power. In these two armies Ellenborough saw a danger which might disturb the peace of Hindostan. He foresaw that the Sikh soldiers, released from the stern discipline of Runjeet Singh, would soon force a government which they despised to let them cross the Sutlej in quest of plunder. Two years later his character as a prophet was vindicated; and, if he had not now, in anticipation of the invasion which then took place, disbanded the greater part of Sindia's army, and over-awed the remainder by a native contingent under the command of British officers, the Sikhs would probably have joined their forces with the Mahrattas. . . . But the Directors took a different view of their Governor-General's conduct of affairs. In June, 1844, all India was astonished by the news that Ellenborough had been recalled. He had helped to bring about his own downfall, for in the controversies with his masters in which he, like some of the ablest of his predecessors, had found himself involved, he had shown an unfortunate want of discretion; but, though by bombastic proclamations and a theatrical love of display he had sometimes exposed himself to ridicule, many of his subordinates felt that in him they had lost a vigorous and able ruler. Sir Henry Hardinge, who was raised to the peerage before the close of his administration, succeeded to the office of Governor-General, and waited anxiously for the breaking of the storm which his predecessor had seen gathering. The Sikhs, the Puritans of India [see SIKHS], who were not strictly speaking a nation, but a religious brotherhood of warriors called the Khalsa, were animated by two passions equally dangerous to the peace of those around them, a fierce enthusiasm, half military, half religious, for the glory of their order, and an insatiable desire for plunder. By giving them full scope for the indulgence of these passions, and by punishing all disobedience with merciless severity, Runjeet Singh had governed his turbulent subjects for forty years: but, when he died,

they broke loose from all control; and the weak Government of Lahore found that they could only save their own capital from being plundered by the Khalsa army by sending it to seek plunder in British territory. Thus began the first Sikh war.—T. R. E. Holmes, *Hist. of the Indian Mutiny*, ch. 1.

A. D. 1843.—Conquest of Scinde. See SCINDE.

A. D. 1845-1849.—The Sikh Wars.—Conquest and annexation of the Punjab.—“There had always been an expectation that whenever Runjeet Singh died, there would be trouble with his soldiery; and it soon appeared that some incursion was in contemplation, for which the Sikh troops were prepared by an able European training under French officers. While the strife about the succession was going on in the Punjab, the military element of society there became supreme; and the government at Calcutta considered it necessary to move troops to the frontier to preserve peace, and reassure the inhabitants of whole districts which dreaded the incursions of a haughty and lawless soldiery. The Sikhs were alarmed at the approach of English troops, and adopted the same course towards us that we had tried with their western neighbours—they crossed the frontier to forestal our doing it. Whether this move was a device of the Sikh chiefs, as some say it was, to get rid of the army, and perhaps to cause its destruction by the British, and thus to clear the field for their own factions; or whether war with the British was considered so inevitable that the invasion of our territory was intended as a measure of prudence; we need not here decide. The fact was that the Sikh soldiery gathered round the tomb of Runjeet Singh, preparing themselves for a great battle soon to happen; and that war was virtually declared at Lahore in November, 1845, and fairly begun by the troops crossing the Sutlej on the 11th of December, and taking up a position near Ferozepore. The old error prevailed in the British councils, the mistake denounced by Charles Metcalfe as fatal—that of undervaluing the enemy. The Sikhs had been considered unworthy to be opposed to the Afghans in Runjeet's time; and now we expected to drive them into the Sutlej at once; but we had never yet, in India, so nearly met with our match. The battle of Moodkee was fought under Sir Hugh Gough, on the 18th of December, and ‘the rabble’ from the Punjab astonished both Europeans and Sepoys by standing firm, manœuvring well, and rendering it no easy matter to close the day with honour to the English arms. This ill-timed contempt was truly calamitous, as it had caused miscalculations about ammunition, carriage, hospital stores, and everything necessary for a campaign. All these things were left behind at Delhi or Agra; and the desperate necessity of winning a battle was only enough barely to save the day. The advantage was with the British in the battle of Moodkee, but not so decisively as all parties had expected. After a junction with reinforcements, the British fought the invaders again on the 21st and 22nd, at Ferozeshur. On the first night our troops were hardly masters of the ground they stood on, and had no reserve, while their gallant enemy had large reinforcements within reach. The

next day might easily have been made fatal to the English army, at times when their ammunition fell short; but the Sikhs were badly commanded at a critical moment, then deserted by a traitorous leader, and finally driven back. For a month after this nothing was done by the British, and the Sikhs crossed the Sutlej at their ease. The valour of Gough and of Hardinge, who, while Governor-General, had put himself under the orders of the Commander-in-Chief, had saved the honour of the English; but their prestige was weakened among their own Sepoys, and even the European regiments; much more among the Sikhs; and most of all in the eyes of the vigilant surrounding states. It was a matter of life and death now to bring up guns, ammunition and treasure. A considerable portion fell into the enemy's hands on the 21st of January, on its way to the relief of Loodeana; but the battle of Aliwal on the 28th was again a true British fight. The Sikhs were driven into the Sutlej; and as soon as they had collected in their stronghold of Sobraon on the other side, they were driven thence by a closing struggle on the 10th of February. The Sikhs were beaten, with a slaughter of 5,000 (some say 8,000) men, against 320 killed and 2,000 wounded on our side. The Maharajah submitted, the road to Lahore lay open, and the Governor-General could make his own terms. He flattered himself that he had arranged a protectorate of the Punjab which would render annexation unnecessary; and all who could believe in it rejoiced that means had been found to escape the necessity of adding new conquests to a territory already much too large. As the Punjab could not pay its amount of tribute to the Company, Cashmere and some other territory was accepted instead, and given, as a kingdom, to Gholab Singh . . . on his paying a portion of the debt, thus reimbursing the Company, and lessening the overgrown power of the Punjab rulers. When, at the close of 1846, the English troops should be withdrawing from Lahore, the Sikh chiefs begged that they might remain, and take care of the Punjab till the young Maharajah should grow up to manhood."—H. Martineau, *British Rule in India*, ch. 20.—"Lord Hardinge entrusted the government of the Punjab to a Council of Regency, consisting of Sikh nobles under the guidance of Sir Henry Lawrence as British Resident. He refused to create a subsidiary army, but he left a British force to protect the government until the boy Dhuleep Singh reached his majority. Two-thirds of the Sikh army of the Khalsa were disbanded. The Jullunder Doab between the Sutlej and the Beas was added to the British empire. . . . Lord Dalhousie succeeded Lord Hardinge in 1848. Shortly afterwards the Punjab was again in commotion. Sikh government under British protection had failed to keep the peace. The army of the Khalsa had disappeared, but the old love of license and plunder was burning in the hearts of the disbanded soldiery. The Sikh governor of Multan revolted; two Englishmen were murdered. A British force besieged the rebels in Multan. It was joined by a Sikh force in the service of the Council of Regency commanded by Shere Singh. So far the revolt at Multan was regarded as a single outbreak which would be soon suppressed by the capture of the fortress. In reality it was the beginning of a general insurrection. Shere Singh, who com-

manded the Sikh force in the besieging army, suddenly deserted the British force and joined his father Chutter Singh, who was already in open rebellion. The revolt was secretly promoted by the queen mother, and spread over the Punjab like wildfire. The old soldiers of the Khalsa rallied round Shere Singh and his father. The half-and-half government set up by Lord Hardinge was unable to cope with a revolution which was restoring the old anarchy. In November, 1848, Lord Gough advanced against the rebel army. Then followed the famous campaign between the Chenab and Jhelum rivers about 100 miles to the north of Lahore. In January, 1849, Lord Gough fought the dubious battle of Chillianwallah, near the spot where Alexander the Great crossed the Jhelum and defeated the army of Porus. Meanwhile Multan surrendered, and the besieging force joined Lord Gough. In February the Sikh army was utterly defeated at Gujrat."—J. T. Wheeler, *Indian History*, ch. 11.—"Gujrat was essentially a forenoon battle, with the whole day before the combatants to finish their work. It commenced with a magnificent duel of artillery; the British infantry occupying post after post as they were abandoned by the enemy; and the British cavalry breaking up the Sikh masses and scattering them by pursuit. Of the sixty Sikh guns engaged, fifty-three were taken. Lord Dalhousie resolved to make the victory a final one. 'The war,' he declared, 'must be prosecuted now to the entire defeat and dispersion of all who are in arms against us, whether Sikhs or Afghans.' General Gilbert hurried out with a pursuing force of 12,000, horse, foot and artillery, the day after the battle. In the breathless chase which followed across the plains of the Punjab to the frontier mountain-wall, the Sikh military power was destroyed for ever. On the 12th of March, 1849, General Gilbert received the submission of the entire Sikh army at Rawal Pindi, together with the last forty-one of the 160 Sikh cannon captured by the British during the war. While the Sikh army heaped up their swords and shields and matchlocks in submissive piles, and salamed one by one as they passed disarmed along the British line, their Afghan allies were chased relentlessly westwards, and reached the safety of the Khaibar Pass panting, and barely twenty miles in front of the English hunters. The horsemen of Afghanistan, it was said, 'had ridden down through the hills like lions and ran back into them like dogs.' The question remained what to do with the Punjab. The victory of Sobraon in 1846 gave to Lord Hardinge the right of conquest: the victory at Gujrat in 1849 compelled Lord Dalhousie to assert that right. Lord Hardinge at the end of the first Punjab war in 1846, tried, as we have seen, an intermediate method of ruling the province by British officers for the benefit of the infant prince. This method had failed. . . . In determining the future arrangements for the Punjab, Lord Dalhousie had as his advisers the two Lawrences. Sir Henry Lawrence, the former Resident at Lahore, hurried back from his sick-leave in England on the breaking out of the war. He was of opinion that the annexation of the Punjab might perhaps be just, but that it would be inexpedient. His brother John, afterwards Lord Lawrence, who had also acted as Resident, although as much averse in general principle to

annexation as Henry, was convinced that, in this case, annexation was not only just, but that its expediency was 'both undeniable and pressing.' Lord Dalhousie, after a full review of the efforts which had been made to convert the Sikh nation into a friendly power without annexation, decided that no course now remained to the British Government but to annex. . . . The annexation of the Punjab was deliberately approved of by the Court of Directors, by Parliament, and by the English nation."—W. W. Hunter, *The Marquess of Dalhousie*, ch. 3.

Temple, *Men and Events of My Time in India*, ch. 3-4.

A. D. 1848-1856.—Lord Dalhousie's minor annexations.—The lapse of dependent Native States.—The case of Nana Sahib.—"In applying the doctrine of lapse to the Hindu chiefdoms, on default of natural successors or of an heir legally adopted with the sanction of the Ruling Power, Lord Dalhousie merely carried out the declared law of the case, and the deliberately formulated policy of the Government of India, years before he arrived in the country. In so doing, however, Lord Dalhousie became the unconscious but effective instrument by which the old India of Lord Wellesley at the beginning of the century was prepared for its conversion, in 1858, into the new India of the Queen. . . . The fundamental question was whether we should allow the government of a dependent State, in absence of natural heirs, to pass like mere private property to an adopted son. The Court of Directors had at one time permitted the adoption of a successor in special cases to a principality on failure of natural heirs. It declared, however, in 1834, that such an 'indulgence should be the exception, not the rule.' . . . As the evils of the old system of government by sham royalties further developed themselves, the Government of India determined in 1841 to enforce a more uniform policy. . . . What Lord Dalhousie did, therefore, was not to invent a new principle of Indian law, but to steadily apply an old principle. . . . The first case in which this principle came to be applied, shortly after Lord Dalhousie's arrival, was the Native State of Satara. That Maratha principality had been constituted by the British Government on the general break up of the Maratha power in 1818, and confirmed to the 'sons and heirs, and successors' of the recipient in 1819. In 1839 the reigning prince was deposed for misconduct by the British Government in the exercise of its Suzerain rights. By the same rights the British Government then set up the brother of the deposed prince on the throne. . . . The Raja, whom in 1839 we had placed on the throne, applied for permission to adopt a son. The British Government deliberately withheld the permission; and in the last hours of his life the Raja, in 1848, hastily adopted a son without the consent of the Government." Lord Dalhousie, with the advice of the Court of Directors, declared in this case that the territory of Satara had lapsed, on the death of the Raja, by failure of heirs, to the Power which deposed, and it was annexed, accordingly, to the British domin-

ions. Under kindred circumstances the Native States of Sambalpur, on the south-western frontier of Lower Bengal, and Jhansi, a fragment of the Maratha dominions in Northern India, were absorbed. "The same principle of lapse on failure of heirs was applied by Lord Dalhousie to several other dependent States. Jaitpur in Bundelkhand, Baghat a petty hill Chiefdom of 36 square miles in the Punjab, Udaipur on the Western frontier of Lower Bengal, and Budawal in Khandesh, passed under direct British rule from this cause. The fort and military fief of Tanjore were annexed after Lord Dalhousie's departure from India, but practically on the grounds set forth by his government. . . . By far the largest accession of territory made during Lord Dalhousie's rule, to the British dominions on the failure of heirs, was the great central tract of India known as Nagpur. This Maratha principality as now constituted into the Central Provinces, and after various rectifications of frontier, has an area of 113,279 square miles, with a population of 12,000,000 souls. The territories annexed by Lord Dalhousie in 1854 make nearly four-fifths of the present Central Provinces. . . . It is difficult to find any ground for the charge which Mr. Kaye brought in 1865 against Lord Dalhousie, for 'harshness' towards the man afterwards known as the infamous Nana Sahib [see below: A. D. 1857 (MAY—AUGUST)]. As this charge, however, is still occasionally repeated, and as it has even been suggested that Lord Dalhousie was to some extent responsible for the Mutiny of 1857, in consequence of his action towards Nana Sahib in 1851, I must briefly state the facts. In 1818, the Peshwa of the Marathas, completely beaten in the field, threw himself on the generosity of the British. Sir John Malcolm, then the Governor-General's Agent in the Deccan, assured him of his protection, and engaged that he should receive an allowance of £80,000 a year for his support. . . . There could not be the slightest pretension that it was ever anything more than a personal annuity; and from first to last all mention of heirs is carefully excluded. The records show that the ex-Peshwa, Baji Rao, was well aware of this. Baji Rao lived until 1851, leaving to his adopted son, Nana Sahib, an immense fortune admitted to amount to £280,000, and believed by the Government of the North-western Provinces to greatly exceed that sum. The Government of India at once acknowledged the adopted son's title to this splendid heritage, and out of its own beneficence added to it the Jaghir, or grant of land, on which his father had resided in the North-western Provinces. But the pension, paid out of the tax-payers' pockets, lapsed upon the death of the annuitant."—Sir W. W. Hunter, *The Marquess of Dalhousie*, ch. 6-7.—Duke of Argyll, *India under Dalhousie and Canning*.

A. D. 1849-1893.—The life in exile of Dhuleep Singh, heir to the Sikh throne.—"Few careers have ever been more instructive to those who can see than that of the Maharajah Dhuleep Singh, who died in Paris on Sunday [October 22, 1893] of apoplexy. He finished life a despised exile, but no man of modern days ever had such chances, or had seen them snatched, partly by fate, partly by fault, so completely from his lips. But for an accident, if there is such a thing as accident, he would have been the Hindoo Emperor of India. His father,

Runjeet Singh, that strange combination of Louis XI. and Charles the Bold, had formed and knew how to control an army which would have struck down all the native powers of India much more easily than did any of the Tartar conquerors. Without its master at its head, that army defeated the British, and but for a magnificent bribe paid to its General (vide Cunningham's 'History of the Sikhs') would have driven the English from India, and placed the child, Dhuleep Singh, upon the throne of the Peninsula, to be supported there by Sikh and Rajpoot, Mah-ratta, and Beharee. Apart from the English, there was nothing to resist them; and they were guided by a woman, the Ranee Chunda Kour; who of all modern women was most like Mary of Scots as her enemies have painted her, and of whom, after her fall, Lord Dalhousie said that her capture would be worth the sacrifice of a brigade. How Dhuleep Singh would have reigned had Runjeet Singh's destiny completed itself is another matter—probably like a Hindoo Humayoon—for even if not the son of Runjeet Singh, who, be it remembered, acknowledged him, he inherited ability from his mother; he was a bold man, and he was, as his career showed, capable of wild and daring adventure. He fell, however, from his throne under the shock of the second Sikh War, and began a new and, to all appearance, most promising career. Lord Dalhousie had a pity for the boy, and the English Court—we never quite understood why—an unusually kindly feeling. A fortune of £40,000 a year was settled on him, he was sent to England, and he was granted rank hardly less than that of a Prince of the Blood. He turned Christian—apparently from conviction, though subsequent events throw doubt on that—a tutor, who was quite competent, devoted himself to his education, and from the time he became of age he was regarded as in all respects a great English noble. He knew, too, how to sustain that character,—made no social blunders, became a great sportsman, and succeeded in maintaining for years the sustained stateliness of life which in England is held to confer social dignity. Confidence was first shaken by his marriage, which, though it did not turn out unsuccessfully, and though the lady was in after-life greatly liked and respected, was a whim, his bride being a half Coptic, half English girl whom he saw in an Egyptian school-room, and who, by all English as well as Indian ideas of rank, was an unfitting bride. Then he began over-spending, without the slightest necessity, for his great income was unburdened by a vast estate; and at last reduced his finances to such a condition that the India Office, which had made him advance after advance, closed its treasury and left him, as he thought, face to face with ruin. Then the fierce Asiatic blood in him came out. He declared himself wronged, perhaps believed himself oppressed, dropped the whole varnish of civilisation from him, and resolved to make an effort for the vengeance over which he had probably brooded for years. He publicly repudiated Christianity, and went through a ceremony intended to readmit him within the pale of the Sikh variety of the Hindoo faith. Whether it did readmit him, greater doctors than we must decide. That an ordinary Hindoo who has eaten beef cannot be readmitted to his own caste, even if the eating is involuntary, is certain, as witness

the tradition of the Tagore family; but the rights of the Royal are, even in Hindooism, extraordinarily wide, and we fancy that, had Dhuleep Singh succeeded in his enterprise, Sikh doctors of theology would have declared his re-admission legal. He did not, however, succeed. He set out for the Punjab intending, it can hardly be doubted, if the Sikhs acknowledged him, to make a stroke for the throne, if not of India, at least of Runjeet Singh; but he was arrested at Aden, and after months of fierce dispute, let go, on condition that he should not return to India. He sought protection in Russia, which he did not obtain, and at last gave up the struggle, made his peace with the India Office, took his pension again, and lived, chiefly in Paris, the life of a disappointed but wealthy idler. There was some spirit in his adventure, though it was unwisely carried out. The English generally thought it a bit of foolhardiness, or a dodge to extract a loan from the India Office; but those who were responsible held a different opinion, and would have gone nearly any length to prevent his reaching the Punjab. They were probably wise. The heir of Runjeet might have been ridiculed by the Sikhs as a Christian, but he might also have been accepted as a reconverted man; and one successful skirmish in a district might have called to arms all the 'children of the sugar and the sword,' and set all India on fire. The Sikhs are our very good friends, and stood by us against any revival of the Empire of Delhi, their sworn hereditary foe; but they have not forgotten Runjeet Singh, and a chance of the Empire for themselves might have turned many of their heads."—*The Spectator*, October 28, 1893.

A. D. 1852.—The second Burmese War.—Annexation of Pegu.—"While Lord Dalhousie was laying out the Punjab like a Scotch estate, on the most approved principles of planting, road-making, culture, and general management, the chance of another conquest at the opposite extremity of his vice-kingdom summoned him to Calcutta. The master of a trading barque from Chittagong, who was charged unjustly with cruelty to a pilot, had been fined £100 by the authorities of Rangoon, and the captain of a brig had in like manner been amerced for alleged ill-treatment of his crew. To support a claim for restitution, two English ships of war had been sent to the mouth of the Irrawadi. . . . Misunderstandings arose on some inexplicable point of etiquette;" the British commodore seized a royal yacht which lay in the river; the angry Burmese opened fire on his ships from their forts; and, "with an unprecedented economy of time and trouble in the discovery or making of plausible pretexts, a second war with Burmah was thus begun. A long catalogue of affronts, wrongs, and injuries, now for the first time poured in. . . . The subjects of the 'Golden Foot' . . . must make an official apology for their misbehaviour, pay ten lacs compensation, and receive a permanent Resident at Rangoon. If these demands were not met within five weeks, further reparation would be exacted otherwise, and as there was no fear that they would, preparations were made for an expedition. . . . The Governor-General threw himself with enthusiasm into an undertaking which promised him another chance of gratifying, as his biographer says, his 'passion for imperial symmetry.' He resolved

'to take in kingdoms wherever they made a gap in the red line running round his dominions or broke its internal continuity.' There was a gap in the ring-fence between Arracan and Moulmein, which Pegu would fill. The logical inference was clear, the duty of appropriation obvious. Let us have Pegu. Ten millions of silver happening just then to lie in the coffers of Fort William, how could they be better invested than in a jungle on the sea coast, inhabited by quadrupeds and bipeds after their various kinds, alike unworthy of being consulted as to their future destiny? . . . In April, Martaban and Rangoon were taken with trifling loss. Operations being suspended during the rainy season, the city of Prome was not attacked till October, and after a few hours' struggle it fell, with the loss of a single sepoy on the side of the victors. There was in fact no serious danger to encounter, save from the climate; but that unfailing ally fought with terrible effect upon the side of Ava. . . . On the 20th December, 1852, a proclamation was issued, which, after reciting undisguisedly the ineffably inadequate pretext for the war, informed the inhabitants that the Governor in Council had resolved that the maritime province of Pegu should henceforth form a portion of the British territories in the East, and warning the King of Ava, 'should he fail to renew his former relations of friendship with the British Government, and seek to dispute its quiet possession of the province, the Governor-General would again put forth the power he held, which would lead to the total subversion of the Burman State, and to the ruin and exile of the King and his race.' But no depth of humiliation could bring the Sovereign or his Ministers to acknowledge the hopelessness of defeat or the permanency of dismemberment. . . . Twenty years have passed, and no treaty recognising the alienation of Pegu has yet [in 1872] been signed."—W. M. Torrens, *Empire in Asia: How we came by it*, ch. 24.

A. D. 1856.—The annexation of Oudh. See OUDH.

A. D. 1857.—Causes of the Sepoy Mutiny.—"The various motives assigned for the Mutiny appear inadequate to the European mind. The truth seems to be that Native opinion throughout India was in a ferment, predisposing men to believe the wildest stories, and to rush into action in a paroxysm of terror. Panic acts on an Oriental population like drink upon a European mob. The annexation policy of Lord Dalhousie, although dictated by the most enlightened considerations, was distasteful to the Native mind. The spread of education, the appearance at the same moment of the steam-engine and the telegraph wire, seemed to reveal a deep plan for substituting an English for an Indian civilisation. The Bengal sepoys especially thought that they could see further than the rest of their countrymen. Most of them were Hindus of high caste; many of them were recruited from Oudh. They regarded our reforms on Western lines as attacks on their own nationality, and they knew at first hand what annexation meant. They believed it was by their prowess that the Punjab had been conquered, and that all India was held. The numerous dethroned princes, or their heirs and widows, were the first to learn and to take advantage of this spirit of disaffection and panic.

They had heard of the Crimean war, and were told that Russia was the perpetual enemy of England. Our munificent pensions had supplied the funds with which they could buy the aid of skilful intriguers. They had much to gain, and little to lose, by a revolution. In this critical state of affairs, of which the Government had no official knowledge, a rumour ran through the cantonments that the cartridges of the Bengal army had been greased with the fat of pigs,—animals unclean alike to Hindu and Muhammadan. No assurances could quiet the minds of the sepoys. Fires occurred nightly in the Native lines; officers were insulted by their men; confidence was gone, and only the form of discipline remained. In addition, the outbreak of the storm found the Native regiments denuded of many of their best officers. The administration of the great empire to which Dalhousie put the corner-stone, required a larger staff than the civil service could supply. The practice of selecting able military men for civil posts, which had long existed, received a sudden and vast development. Oudh, the Punjab, the Central Provinces, British Burma, were administered to a large extent by picked officers from the Company's regiments. Good and skilful commanders remained; but the Native army had nevertheless been drained of many of its brightest intellects and firmest wills at the very crisis of its fate."—W. W. Hunter, *Brief Hist. of the Indian People*, ch. 15.—"The annexation of Oudh had nothing to do with the Mutiny in the first place, though that measure certainly did add to the number of our enemies after the Mutiny commenced. The old government of Oudh was extremely obnoxious to the mass of our native soldiers of the regular army, who came from Oudh and the adjacent province of Behar, and with whom the Mutiny originated. These men were the sons and kinsmen of the Hindu yeomen of the country, all of whom benefited more or less by annexation; while Oudh was ruled by a Muhammadan family which had never identified itself with the people, and whose government was extremely oppressive to all classes except its immediate creatures and followers. But when the introduction of the greased cartridges had excited the Native Army to revolt, when the mutineers saw nothing before them short of escape on the one hand or destruction on the other, they, and all who sympathised with them, were driven to the most desperate measures. All who could be influenced by love or fear rallied round them. All who had little or nothing to lose joined their ranks. All that dangerous class of religious fanatics and devotees who abound in India, all the political intriguers, who in peaceful times can do no mischief, swelled the numbers of the enemy, and gave spirit and direction to their measures. India is full of races of men, who, from time immemorial, have lived by service or by plunder, and who are ready to join in any disturbance which may promise them employment. Oudh was full of disbanded soldiers who had not had time to settle down. Our gaoles furnished thousands of desperate men let loose on society. The cry throughout the country, as cantonment after cantonment became the scene of triumphant mutiny was, 'The English rule is at an end. Let us plunder and enjoy ourselves.' The industrious classes throughout India were on our side, but for a long time feared to act.

On the one side they saw the few English in the country shot down or flying for their lives, or at the best standing on the defensive, sorely pressed; on the other side they saw summary punishment, in the shape of the plunder and destruction of their houses, dealt out to those who aided us. But when we evinced signs of vigour, when we began to assume the offensive and vindicate our authority, many of these people came forward and identified themselves with our cause."—Lord Lawrence, *Speech at Glasgow, 1860* (quoted by Sir O. T. Burne, in "*Clyde and Strathairn*," ch. 1).

A. D. 1857 (May).—The outbreak at Meerut.—Seizure of Delhi by the Mutineers.—Massacre of Europeans.—Explosion of the magazine.—"The station of Meerut, some 40 miles north-east of Delhi, was one of the very few in India where adequate means existed for quelling an outbreak of native troops. There was a regiment of English Dragoons, a battalion of the 60th Rifles, and a strong force of Horse and Foot Artillery, far more than sufficient to deal with the three native regiments who were also quartered in the cantonment. The court-martial on . . . eighty-five men of the 3rd N. C., who had refused to take their cartridges, had by this time completed its inquiry. The men were sentenced to long terms of imprisonment. The sentence was carried out with impressive solemnity. On a morning [May 9] presently to become historical—the heavens sombre with rolling clouds—the brigade assembled to hear their comrades' doom—to see them stripped of their uniform and secured with felons' manacles. The scene produced intense emotion. Resistance was impossible. There were entreaties, tears, imprecations, as the prisoners were marched away to jail. Discipline had been vindicated by a terrible example. The next day was Sunday. In the evening, as the European Riflemen were gathering for Church, a sudden movement took place in the native quarters. The Cavalry dashed off to the jail to rescue their imprisoned companions. The two Infantry regiments, after a moment's wavering, threw in their lot with the mutineers. Then ensued a scene such as, unhappily, became too familiar in Upper India within the next few weeks. Officers were shot, houses fired, Europeans—men, women, and children, wherever found, were put to the sword. A crowd of miscreants from the jail, suddenly set free, made a long night of pillage. Meanwhile, paralysed by the sudden catastrophe, the English General of the Division and the Brigadier of the Station forebore to act, refused to let their subordinates act, and the Sepoys who had fled, a disorganised mob, in different directions, soon found themselves gathering on the march for Delhi. In the early morning at Delhi, where courts and offices had already begun the day's work, a line of horsemen were descried galloping on the Meerut road. They found their way into the city, into the presence of the King; cut down the European officials, and, as they were gradually reinforced by the arrival of fresh companions, commenced a general massacre of the Christian population. A brave telegraph clerk, as the mutineers burst in upon him, had just time to flash the dreadful tidings to Lahore. Before

evening, the native regiments fired upon their officers and joined the mutineers. After weary hours of hope for the help from Meerut which never came, the British officers in command were compelled to recognise that the only chance of safety lay in flight. Ere the day closed, every European who had risen that morning in Delhi, was dead, or awaiting death, or wandering about the country in the desperate endeavor to reach a place of safety. A day dark with disaster was, however, illumined by the first of those heroic acts which will make the siege of Delhi immortal. The insurgents had their first taste of the quality of the race whose ascendancy they had elected to assail. Lieutenant Willoughby, the officer in charge of the Magazine, and eight gallant companions, resolved, early in the day, that, if they could not defend their invaluable supply of ammunition, they would destroy it, though its destruction would almost certainly involve their own. For hours they defended their stronghold against an overpowering crowd of assailants. The train was laid: the sergeant who was to fire it stood ready: Willoughby took a last look out upon the Meerut road: the assailants were swarming on the walls. The word was spoken: a vast column of flame and smoke shot upward. Two thousand of the assailants were blown into the air [and five of the defenders perished, while Willoughby and three of his companions escaped]. The thunder of that explosion announced to the mutineers that one great object in the seizure of Delhi had escaped their grasp."—H. S. Cunningham, *Earl Canning*, ch. 5.

A. D. 1857 (May–August).—The situation at Delhi.—Siege of the English at Cawnpur.—Their surrender and massacre.—The siege of Lucknow.—"A few days of inactivity allowed the flame to blaze up beyond possibility of immediate extinction. The unchallenged occupation of the Mughal capital by rebel sepoys and badmashes was followed by risings and massacres in almost every station within range of the example; and from Firozpur, Bareilly, Moradabad, Shahjahanpur, Cawnpur, and numerous other places came harrowing tales of massacre, suffering, and heroism. When this terrible news reached army head-quarters, it was received with a perhaps natural incredulity. Nevertheless, a force was hastily assembled at Ambala; and with the troops thus mobilised, General Anson, then Commander-in-Chief, made preparations to march against the renowned city of the Mughal. The little force had hardly started, however, when its leader died of cholera (May 27th). It was not until the 1st of June that General Barnard, who had succeeded temporarily to the chief command, advanced in earnest against the now jubilant rebels. Meanwhile, a small body of troops under Brigadier Archdale Wilson marched out from Meerut, after a disastrous delay; and the combined force, amounting to about 3,000 Europeans and one battalion of Gurkhas, fought its way onwards till it reached the outskirts of the city on the 8th of June, 1857. We may now refer to the three great points—Delhi, Cawnpur, and Lucknow, round which the Mutiny was, so to speak, centred during the earlier period of the revolt; namely, from May, 1857, till the arrival in India of Sir Colin Campbell

in August of that year. The modern city of Delhi was founded by the Emperor Jahangir in 1631. Situated on the right bank of a branch of the Jumna river it was, as it still is, surrounded by a high wall some seven miles in extent, strengthened by bastions and by a capacious dry ditch. The British force held the elevated ground known as the Ridge, which extends two miles along the northern and western faces of the city—a position taken up some centuries before by Timur Shah and his Tartar hordes when advancing to attack old Delhi. At intervals along the Ridge stood the Flagstaff Tower, the Observatory, a large mansion called Hindu Rao's house, and other defensible buildings. The space between the city and the Ridge was thickly planted, for the most part with trees and shrubs; in the midst of which might be seen numerous mosques and large houses, and the ruins of older buildings. It soon became evident that the position held by the British force on the Ridge was a false one; and the question arose whether the city might not be taken by a coup de main, seeing that it was impossible either to invest it or to attempt a regular siege with any chance of success. A plan of assault, to be carried out on the 12th of June, was drawn up by a young Engineer officer and sanctioned. Had this assault been delivered the city would in all likelihood have been taken and held. . . . But owing to a series of accidents, the plan fell through—a miscarriage the more to be regretted because the early recapture of the city would in all human probability have put a stop to further outbreaks. As matters stood, however, the gallant little force before Delhi could barely hold its own. It was an army of observation perpetually harassed by an active enemy. As time went on, therefore, the question of raising the siege in favour of a movement towards Agra was more than once seriously discussed, but was fortunately abandoned. On July 5th, 1857, General Barnard died, worn out with fatigue and anxiety. He was succeeded in command by General Archdale Wilson, an officer who, possessing no special force of character, did little more than secure the safe defence of the position until the arrival of Brigadier Nicholson from the Punjab, August 14th, 1857, with a moveable column of 2,500 men, Europeans and Sikhs. And here we may leave Delhi, for the moment, deferring till later any further details of the siege. The city of Cawnpur, situated on the south bank of the river Ganges, 42 miles south-west of Lucknow and 270 miles from Delhi, lies about a mile from the river in a large sandy plain. On the strip of land between the river and the town, a space broken by ravines, stretched the Civil Station and cantonments. A more difficult position to hold in an extremity cannot well be conceived, occupied as it was by four disaffected Sepoy regiments with but sixty European artillerymen to overawe them. There was, moreover, an incompetent commander. Realising after the disasters at Meerut and Delhi that his native garrison was not to be trusted, Sir Hugh Wheeler threw up a make-shift entrenchment close to the Sepoy lines. Commanded on all sides, it was totally unfitted to stand a siege. But a worse mistake was to follow. Alarmed as time went on at his growing difficulties, Sir Hugh Wheeler at length asked the notorious Nana Sahib [see above: A. D. 1848-1856], who lived a

few miles off at Bithur, to assist him with troops to guard the Treasury. For some months previously this archtraitor's emissaries had been spreading discontent throughout India, but he himself had taken care to remain on good terms with his European neighbours. He now saw his opportunity. Cawnpur, delivered into his hands by the misplaced confidence of its defenders, was virtually in his keeping. Of European succour there was no immediate hope. The place was doomed. The crash came three days before General Barnard's force reached Delhi. With the exception of a few devoted natives who remained faithful to their salt, the whole Sepoy force on the 5th of June rose in revolt, opened the doors of the jail, robbed the treasury, and made themselves masters of the magazine. The Nana cast aside all further pretence of friendship and, joined by the mutinous troops, laid siege to the entrenchment already mentioned, which with culpable military ignorance had been thrown up in one of the worst positions that could have been chosen. The besieging army numbered some 3,000 men. The besieged could only muster about 400 English soldiers, more than 70 of which number were invalids. For twenty-one days the little garrison suffered untold horrors from starvation, heat, and the onslaughts of the rebels; until the General in command listened to overtures for surrender, and the garrison marched out on the 27th of June, to the number of about 450 souls, provided with a promise of safeguard from the Nana, who would allow them, as they thought, to embark in country boats for Allahabad. Tantia Topi, who afterwards became notorious in Central India, superintended the embarkation. No sooner, however, were the Europeans placed in the boats, in apparent safety, than a battery of guns concealed on the river banks opened fire, while at the same time a deadly fusillade of musketry was poured on the luckless refugees. The Nana at length ordered the massacre to cease. He celebrated what he called his glorious victory by proclaiming himself Peshwa or Maratha Sovereign, and by rewarding his troops for their 'splendid achievements,' while the wretched survivors of his treachery, numbering about 5 men and 206 women and children, were taken back to Cawnpur and confined in a small building for further vengeance and insult. On the 15th of July came the last act of this tragedy. The Nana, having suffered a crushing defeat at the hands of Brigadier Havelock's force within a day's march of Cawnpur, as will presently be recorded, put the whole of his prisoners to death. The men were brought out and killed in his presence, while the women and children were hacked to pieces by Muhammadan butchers and others in their prison. Their bodies were thrown into what is now known as the 'Cawnpur Well.' Lucknow, at the time of the Mutiny, was in population, in extent, and in the number and importance of its principal buildings, one of the foremost cities of India. . . . The Residency stood on a hill gently sloping towards the river, and was an imposing edifice of three stories. Near it were the iron and stone bridges over the river. . . . At the outbreak of the Mutiny the Sepoy regiments were stationed in various localities within the city; while the 32nd Foot, the only European regiment on the spot, was quartered in a barrack about a mile or so from the

Residency. As was the case elsewhere, so it happened at Lucknow. While the population and native garrison were seething with sedition, the British authorities were hampered by ignorance of popular feeling, by the want of European troops, and by divided counsels. So, by the end of May, 1857, the rebellion in Oudh became an accomplished fact, although matters went on with comparative smoothness in Lucknow itself. At length, after a serious disaster at Chinhat, the British garrison was forced to withdraw to the Residency and its adjacent buildings; and on the 1st of July commenced the famous investment of this position by the rebel forces. The position was ill adapted for defence; for the lofty windows of the Residency itself not only allowed free access to the enemy's missiles, but its roof was wholly exposed. On the opposite side of the street, leading from the Bailey Guard Gate, was the house of the Residency Surgeon, Dr. (now Sir Joseph) Fayer. It was a large but not lofty building with a flat roof which, protected by sand bags, afforded a good cover for our riflemen, and with a tyekhana, or underground store, that afforded good shelter for the women and children. But as a whole, the defences of the Residency were more formidable in name than in reality, and were greatly weakened by the proximity of high buildings from which the rebels without danger to themselves poured an unceasing fire. The siege had an ominous commencement. On July 4th the much-beloved Sir Henry Lawrence, the Resident, died of a wound received two days before from an enemy's shell that had fallen into his room. Brigadier Inglis succeeded him in command; and for three months the heroic garrison of about 1,700 souls held their weak position, amid inconceivable hardships and dangers, against thousands of the rebels who were constantly reinforced by fresh levies. It was well said in a general order by Lord Canning that there could not be found in the annals of war an achievement more heroic than this defence.—Gen. Sir O. T. Burne, *Clyde and Strathairn*, ch. 2.

A. D. 1857 (June—September).—The siege, the storming and the capture of Delhi. — Murder of the Moghul princes.—“During the four months that followed the revolt at Delhi on the 11th of May, all political interest was centred at the ancient capital of the sovereigns of Hindustan. The public mind was occasionally distracted by the current of events at Cawnpore and Lucknow, as well as at other stations which need not be particularised; but so long as Delhi remained in the hands of the rebels, the native princes were bewildered and alarmed; and its prompt recapture was deemed of vital importance to the prestige of the British government, and the re-establishment of British sovereignty in Hindustan. The Great Moghul had been little better than a mummy for more than half a century, and Bahadur Shah was a mere tool and puppet in the hands of rebel sepoys; but nevertheless the British government had to deal with the astounding fact that the rebels were fighting under his name and standard, just as Afghans and Mahattas had done in the days of Ahmad Shah Durani and Mahadaji Sindia. To make

matters worse, the roads to Delhi were open from the south and east; and nearly every outbreak in Hindustan was followed by a stampede of mutineers to the old capital of the Moghuls. Meanwhile, in the absence of railways, there were unfortunate delays in bringing up troops and guns to stamp out the fires of rebellion at the head centre. The highway from Calcutta to Delhi was blocked up by mutiny and insurrection; and every European soldier sent up from Calcutta was stopped for the relief of Benares, Allahabad, Cawnpore, or Lucknow. But the possession of the Punjab at this crisis proved to be the salvation of the empire. Sir John Lawrence, the Chief Commissioner, was called upon to perform almost superhuman work:—to maintain order in a newly conquered province; to suppress mutiny and disaffection amongst the very sepoy regiments from Bengal who were supposed to garrison the country; and to send reinforcements of troops and guns, and supplies of all descriptions, to the siege of Delhi. Fortunately the Sikhs had been only a few short years under British administration; they had not forgotten the miseries that prevailed under the native government, and could appreciate the many blessings they enjoyed under British rule. They were staunch to the British government, and eager to be led against the rebels. In some cases terrible punishment was meted out to mutinous Bengal sepoys within the Punjab; but the imperial interests at stake were sufficient to justify every severity, although all must regret the painful necessity that called for such extreme measures. . . . The defences of Delhi covered an area of three square miles. The walls consisted of a series of bastions, about sixteen feet high, connected by long curtains, with occasional martello towers to aid the flanking fire. . . . There were seven gates to the city, namely, Lahore gate, Ajmir gate, Turkoman gate, Delhi gate, Mori gate, Kabul gate, and Kashmir gate. The principal street was the Chandni Chouk, which ran in a direct line from the Delhi gate to the palace of the Moghuls. . . . For many weeks the British army on the Ridge was unable to attempt siege operations. It was, in fact, the besieged, rather than the besiegers; for, although the bridges in the rear were blown up, the camp was exposed to continual assaults from all the other sides. On the 23rd of June, the hundredth anniversary of the battle of Plassy, the enemy made a greater effort than ever to carry the British position. The attack began on the right from the Subzi Mundi, its object being to capture the Mound battery. Finding it impossible to carry the battery, the rebels confined themselves to a hand to hand conflict in the Subzi Mundi. The deadly struggle continued for many hours; and as the rebels came up in overwhelming numbers, it was fortunate that the two bridges in the rear had been blown up the night before, or the assault might have had a different termination. It was not until after sunset that the enemy was compelled to retire with the loss of a thousand men. Similar actions were frequent during the month of August; but meanwhile reinforcements were coming up, and the end was drawing nigh. In the middle of August, Brigadier John Nicholson, one of the most distinguished officers of the time, came up from the Punjab with a brigade and siege train. On the 4th of September a heavy train of artillery

was brought in from Ferozepore. The British force on the Ridge now exceeded 8,000 men. Hitherto the artillery had been too weak to attempt to breach the city walls; but now fifty-four heavy guns were brought into position and the siege began in earnest. From the 8th to the 12th of September four batteries poured in a constant storm of shot and shell; number one was directed against the Kashmir bastion, number two against the right flank of the Kashmir bastion, number three against the Water bastion, and number four against the Kashmir and Water gates and bastions. On the 13th of September the breaches were declared to be practicable, and the following morning was fixed for the final assault upon the doomed city. At three o'clock in the morning of the 14th September, three assaulting columns were formed in the trenches, whilst a fourth was kept in reserve. The first column was led by Brigadier Nicholson; the second by Brigadier Jones; the third by Colonel Campbell; and the fourth, or reserve, by Brigadier Longfield. The powder bags were laid at the Kashmir gate by Lieutenants Home and Salkeld. The explosion followed, and the third column rushed in, and pushed towards the Juma Masjid. Meanwhile the first column under Nicholson escalated the breaches near the Kashmir gate, and pushed along the ramparts towards the Kabul gate, carrying the several bastions in the way. Here it was met by the second column under Brigadier Jones, who had escalated the breach at the Water bastion. The advancing columns were met by a ceaseless fire from terraced houses, mosques, and other buildings; and John Nicholson, the hero of the day, whilst attempting to storm a narrow street near the Kabul gate, was struck down by a shot and mortally wounded."—J. T. Wheeler, *Short Hist. of India*, pt. 3, ch. 25.—"The long autumn day was over, and we were in Delhi. But Delhi was, by no means, ours. Sixty-six officers and 1,100 men—nearly a third, that is, of the whole attacking force—had fallen; while, as yet, not a sixth part of the town was in our power. How many men, it might well be asked, would be left to us by the time that we had conquered the remainder? We held the line of ramparts which we had attacked and the portions of the city immediately adjoining, but nothing more. The Lahore Gate and the Magazine, the Juma Masjid and the Palace, were still untouched, and were keeping up a heavy fire on our position. Worse than this, a large number of our troops had fallen victims to the temptation which, more formidable than themselves, our foes had left behind them, and were wallowing in a state of bestial intoxication. The enemy, meanwhile, had been able to maintain their position outside the town; and if only, at this supreme hour, a heaven-sent General had appeared amongst them, they might have attacked our camp, defended as it was mainly by the sick, and the maimed, and the halt. . . . Never, perhaps, in the history of the Mutiny were we in quite so perilous a position as on the night which followed our greatest military success. General Wilson, indeed, proposed, as might have been expected from a man in his enfeebled condition of mind and body, to withdraw the guns, to fall back on the camp and wait for reinforcements there; a step which, it is needless to point out, would have given us all the deadly work to do over again, even if our

force should prove able to maintain itself on the Ridge till reinforcements came. But the urgent remonstrances of Baird Smith and others, by word of mouth; of Chamberlain, by letter; and, perhaps, also, the echoes which may have reached him from the tempest-tossed hero who lay chafing against his cruel destiny on his death-bed, and exclaimed in a wild paroxysm of passion, when he heard of the move which was in contemplation, 'Thank God, I have strength enough left to shoot that man,' turned the General once more from his purpose. On the following day, the 15th, vast quantities of the intoxicating drinks, which had wrought such havoc amongst our men, were destroyed by General Wilson's order, and the streets literally ran with rivers of beer, and wine, and brandy. Meanwhile, the troops were sleeping off their drunken debauch; and on the 16th active operations were resumed. On that day the Magazine was taken, and its vast stores of shot and shell, and of all the 'material' of war, fell once more into the hands of their proper owners. By sapping gradually from house to house we managed, for three days more, to avoid the street-fighting which, once and again, has proved so demoralising to Englishmen; and, slowly but surely, we pressed back the defenders into that ever-narrowing part of the city of which, fortunately for themselves, they still held the bolt-holes. Many of them had already begun, like rats, to quit the sinking vessel. And now the unarmed population of the city flocked in one continuous stream out of the open gates, hoping to save their lives, if nothing else, from our avenging swords. On the 19th, the palace of the Moguls, which had witnessed the last expiring flicker of life in an effete dynasty, and the cruel murder of English men, and women, and children, fell into our hands; and by Sunday, the 20th, the whole of the city—in large part already a city of the dead—was at our mercy. But what of the King himself and the Princes of the royal house? They had slunk off to the tomb of Humayoun, a huge building, almost a city in itself, some miles from the modern Delhi, and there, swayed this way and that, now by the bolder spirits of his army who pressed him to put himself at their head and fight it out to the death, as became the descendant of Tamerlane and Baber, now by the entreaties of his young wife, who was anxious chiefly for her own safety and that of her son, the heir of the Moguls; and now, again, by the plausible suggestions of a double-dyed traitor of his own house who was in Hodson's pay, and who, approaching the head of his family with a kiss of peace, was endeavoring to detain him where he was till he could hand him over to his employer and receive the price of blood, the poor old monarch dozed or fooled away the few hours of his sovereignty which remained, the hours which might still make or mar him, in paroxysms of inebriate vacillation and despair. The traitor gained the day, and Hodson, who could play the game of force as well as of fraud, and was an equal adept at either, learning from his craven-hearted tool that the King was prepared to surrender on the promise of his life, went to Wilson and obtained leave, on that condition, to bring him into Delhi. The errand, with such a promise tacked on to it, was only half to Hodson's taste. 'If I get into the Palace,' he had written in cool blood some days before, 'the

house of Timour will not be worth five minutes' purchase, I ween.' . . . After two hours of bargaining for his own life and that of his queen and favourite son, the poor old Priam tottered forth and was taken back, in a bullock-cart, a prisoner, to his own city and Palace, and was there handed over to the civil authorities. But there were other members of the royal family, as Hodson knew well from his informants, also lurking in Humayoun's tomb. . . . With a hundred of his famous horse Hodson started for Humayoun's tomb, and, after three hours of negotiation, the three princes, two of them the sons, the other the grandson of the King, surrendered unconditionally into his hands. . . . Their arms were taken from them, and, escorted by some of his horsemen, they too were despatched in bullock-carts towards Delhi. With the rest of his horse, Hodson stayed behind to disarm the large and nerveless crowd, who, as sheep having no shepherd, and unable, in their paralysed condition, to see what the brute weight even of a flock of sheep might do by a sudden rush, were overawed by his resolute bearing. This done, he galloped after his prey and caught them up just before the cavalcade reached the walls of Delhi. He ordered the princes roughly to get out of the cart and strip,—for, even in his thirst for their blood, he had, as it would seem, an eye to the value of their outer clothes,—he ordered them into the cart again, he seized a carbine from one of his troopers, and then and there, with his own hand, shot them down deliberately one after the other. It was a stupid, cold-blooded, three-fold murder. . . . Had they been put upon their trial, disclosures of great importance as to the origin of the Mutiny could hardly fail to have been elicited. Their punishment would have been proportioned to their offence, and would have been meted out to them with all the patient majesty of offended law."—R. B. Smith, *Life of Lord Lawrence*, v. 2, ch. 5.

A. D. 1857-1858 (July—June).—General Havelock's campaign.—Sir Colin Campbell's.—The Relief of Lucknow.—Substantial suppression of the Mutiny.—"Meanwhile the greatest anxiety prevailed with regard to our countrymen and countrywomen at Lucknow and Cawnpore. The Indian government made every effort to relieve them; but the reinforcements which had been despatched from England and China came in slowly, and the demands made for assistance far exceeded the means at the disposal of the government. . . . The task of relieving the city was entrusted to the heroic General Havelock, who marched out with a mere handful of men, of whom only 1,400 were British soldiers, to encounter a large army and a whole country in rebellion. At Futtehpore, on the 12th of July, he defeated a vastly superior force, posted in a very strong position. After giving his men a day's rest, he advanced again on the 14th, and routed the enemy in two pitched battles. Next morning he renewed his advance, and with a force of less than 900 men attacked 5,000 strongly entrenched, and commanded by

Nana Sahib. They were outmanœuvred, out-flanked, beaten and dispersed. But for this signal defeat they wreaked their vengeance on the unfortunate women and children who still remained at Cawnpore. On the very day on which the battle occurred, they were massacred under circumstances of cruelty over which we must throw a veil. The well of Cawnpore, in which their hacked and mutilated bodies were flung, presented a spectacle from which soldiers who had regarded unmoved the carnage of numerous battle-fields shrank with horror. Of all the atrocities perpetrated during this war, so fruitful in horrors, this was the most awful; and it was followed by a terrible retribution. It steeled the hearts, and lent a furious and fearless energy to the arms, of the British soldiery. Wherever they came, they gave no quarter to the mutineers; a few men often frantically attacked hundreds, frantically but vainly defending themselves; and never ceased till all had been bayoneted, or shot, or hewn in pieces. All those who could be shown to have been accomplices in the perpetration of the murders that had been committed were hung, or blown from the cannon's mouth. Though the intrepid Havelock was unable to save the women and children who had been imprisoned in Cawnpore, he pressed forward to Lucknow. But the force under his command was too small to enable him to drive off the enemy. Meanwhile Sir J. Outram, who was now returning from the Persian war, which had been brought to a successful conclusion, was sent to Oude as chief commissioner, with full civil and military power. This appointment was fully deserved; but it had the effect, probably not thought of by those who made it, of superseding Havelock just as he was about to achieve the crowning success of his rapid and glorious career. Outram, however, with a generosity which did him more real honour than a thousand victories would have conferred, wrote to Havelock to inform him that he intended to join him with adequate reinforcements; adding: 'To you shall be left the glory of relieving Lucknow, for which you have already struggled so much. I shall accompany you only in my civil capacity as commissioner, placing my military service at your disposal, should you please, and serving under you as a volunteer.' Thus Havelock, after gaining no fewer than twelve battles against forces far superior in numbers to the little band he originally led, was enabled at length, on the 25th of August, to preserve the civilians, the women, and children of Lucknow from the impending horrors of another massacre, which would no doubt have been as fearful as that of Cawnpore. The Highlanders were the first to enter, and were welcomed with grateful enthusiasm by those whom they had saved from a fate worse than death. However, the enemy, recovering from the panic which the arrival of Havelock and his troops had caused, renewed the siege. Sir Colin Campbell, who had assumed the command of the Indian army, had determined to march to the relief of Lucknow. He set out from Cawnpore on the 9th of November, but was obliged to wait till the 14th for reinforcements, which were on the way to join him, and which raised the force under his command to 5,000—a force numerically far inferior to that which it was to attack. On the 17th of November the relief of

Lucknow was effected. The music of the Highland regiments, playing 'The Campbells are coming,' announced to their delighted countrymen inside the city that the commander-in-chief himself was with the relieving force. Little time, however, was allowed for congratulations and rejoicings. The ladies, the civilians, and the garrison were quietly withdrawn; the guns, which it was thought not desirable to remove, were burst; and a retreat effected, without affording the enemy the slightest suspicion of what was going on until some hours after the town had been evacuated by its defenders. The retreating force reached Dilhasha on the 24th, without having sustained any serious molestation. There the gallant Havelock sank under the trials and hardships to which he had been exposed, and yielded up the life which was instrumental in preserving so many others from the most terrible of deaths. While Sir Colin Campbell was engaged in effecting the relief of Lucknow, intelligence reached Cawnpore that a large hostile army was making towards it. General Windham, who commanded there, unacquainted with the number or the position of the approaching force, marched forth to meet it, in the hope that he should be able to rout and cut up the advanced guard before the main body of the enemy could come to its assistance. But in this expectation he was disappointed. Instead of having to deal with the van, he engaged with the whole rebel army, and his little force, assailed on all sides, was obliged to retire. He at once despatched a letter to the commander-in-chief, requesting him to hasten to his assistance; but it was intercepted by the enemy. Fortunately Sir Colin Campbell, though ignorant of the critical position of his subordinate, came up just at the moment when the danger was at its height. This was on the 28th of November. He was, however, in no haste to attack the foe, and was content for the present merely to hold them in check. His first care was for the safety of the civilians, the women, and the children, which was not secured till the 30th; and he continued to protect them till the 5th of December, when they were all safely lodged at Allahabad. The enemy, unaware of the motive of his seeming inaction, imputed it to fear, and became every day more confident and audacious. On the 6th he at length turned fiercely on them, completely defeated them, and seized their baggage; he then dispersed and drove away another large force, under the command of Nana Sahib, which was watching the engagement at a little distance. The army entered the residence of Nana Sahib at Bithoor, and took possession of much treasure, which had been concealed in a well. Nearly the whole of the enemy's artillery was captured; and the army, being overtaken as they were in the act of crossing into Oude, great numbers of them were destroyed. Of course, for the moment Lucknow, being no longer garrisoned, had fallen into the hands of the insurgents; but they were not long permitted to retain it. Strong reinforcements arrived, and the Indian government was enabled to send a force against Lucknow sufficient to overwhelm all resistance; and on the 15th of December this important city was in the undisputed possession of the British troops. This final recovery of the capital of Oude decided the reconquest of that country. A struggle was, indeed, maintained for some time

longer; innumerable battles were fought; and the final subjugation of the country was effected in the month of June, 1858."—W. N. Molesworth, *Hist. of Eng.*, 1830-1874, v. 3, ch. 2.

A. D. 1858.—The Governor-General's Proclamation.—Termination of the rule of the East India Company.—The government transferred to the Crown.—"By a singular circumstance, when the mutiny was suppressed in 1858, the Governor-General, who in the previous year had been condemned for leniency which was thought ill-timed, was destined to receive censure for harshness which was declared unnecessary. On the eve of the fall of Lucknow, he drew up a proclamation confiscating the lands of all the great landowners in Oudh. Exceptions were, indeed, made to this sweeping decree. Landowners who could prove their loyalty were promised exemption from it, just as rebels who unconditionally surrendered, and whose hands were not stained with British blood, were offered pardon. There is no doubt that Canning, in drawing up this proclamation, relied on the exceptions which it contained, while there is equally no doubt that the critics who objected to it overlooked its parentheses. But its issue was made the basis of an attack which well-nigh proved fatal to the Governor-General's administration. The chances of party warfare had replaced Palmerston with Derby; and the Conservative minister had entrusted the Board of Control to the brilliant but erratic statesman who, fifteen years before, had astounded India with pageant and proclamation. . . . Ellenborough thought proper to condemn Canning's proclamation in a severe despatch, and to allow his censure to be made public. For a short time it seemed impossible that the Governor-General who had received such a despatch could continue his government. But the lapse of a few days showed that the minister who had framed the despatch, and not the Viceroy who had received it, was to suffer from the transaction. The public, recollecting the justice of Canning's rule, the mercy of his administration, almost unanimously considered that he should not have been hastily condemned for a document which, it was gradually evident, had only been imperfectly understood; and Ellenborough, to save his colleagues, volunteered to play the part of Jonah, and retired from the ministry. His retirement closes, in one sense, the history of the Indian Mutiny. But the transactions of the Mutiny had, almost for the first time, taught the public to consider the anomalies of Indian government. In the course of a hundred years a Company had been suffered to acquire an empire nearly ten times as large and as populous as Great Britain. It was true that the rule of the Company was in many respects nominal. The President of the Board of Control was the true head of the Indian Government, and spoke and acted through the Secret Committee of the Court of Directors. But this very circumstance only accentuated the anomaly. If the President of the Board of Control was in fact Indian minister, it was far simpler to make him Indian minister by name, and to do away with the clumsy expedient which alone enabled him to exercise his

authority. Hence it was generally decided that the rule of the Company should cease, and that India should thenceforward become one of the possessions of the crown. . . . A great danger thus led to the removal of a great anomaly, and the vast Indian empire which Englishmen had won was thenceforward taken into a nation's keeping."—S. Walpole, *Hist. of Eng. from 1815*, ch. 27 (v. 5).—The act "for the better government of India," which was passed in the autumn of 1858, "provided that all the territories previously under the government of the East India Company were to be vested in her Majesty, and all the Company's powers to be exercised in her name. One of her Majesty's principal Secretaries of State was to have all the power previously exercised by the Company, or by the Board of Control. The Secretary was to be assisted by a Council of India, to consist of fifteen members, of whom seven were to be elected by the Court of Directors from their own body, and eight nominated by the Crown. The vacancies among the nominated were to be filled up by the Crown; those among the elected by the remaining members of the Council for a certain time, but afterward by the Secretary of State for India. The competitive principle for the Civil Service was extended in its application, and made thoroughly practical. The military and naval forces of the Company were to be deemed the forces of her Majesty. A clause was introduced declaring that, except for the purpose of preventing or repelling actual invasion of India, the Indian revenues should not, without the consent of both Houses of Parliament, be applicable to defray the expenses of any military operation carried on beyond the external frontiers of her Majesty's Indian possessions. Another clause enacted that whenever an order was sent to India directing the commencement of hostilities by her Majesty's forces there, the fact should be communicated to Parliament within three months, if Parliament were then sitting, or, if not, within one month after its next meeting. These clauses were heard of more than once in later days. The Viceroy and Governor-General was to be supreme in India, but was to be assisted by a Council. India now has nine provinces, each under its own civil government, and independent of the others, but all subordinate to the authority of the Viceroy. In accordance with this Act the government of the Company, the famed 'John Company,' formally ceased on September 1st, 1858; and the Queen was proclaimed throughout India in the following November, with Lord Canning for her first Viceroy."—J. McCarthy, *Hist. of Our Own Times*, ch. 36 (v. 3).

A. D. 1862-1876.—Vice-regal administrations of Lords Lawrence, Mayo and Northbrook.—Lord Canning was succeeded as Viceroy by Lord Elgin, in 1862; but Elgin only lived until November, 1863, and his successor was Sir John Lawrence, the savior of the Punjab. "Sir John Lawrence's Viceroyalty was an uneventful time. Great natural calamities by famine and cyclone fell upon the country, which called forth the philanthropic energies of Government and people. Commerce passed through an unex-

ampled crisis, taxing skill and foresight. But the political atmosphere was calm. With the exception of little frontier wars, wasteful of resources that were sorely needed, there was nothing to divert the Government from the prosecution of schemes for the improvement of the physical and moral condition of the people." Sir John Lawrence held the Viceroyalty until January, 1869, when he was succeeded by Lord Mayo and returned to England. He was raised, in that year, to the peerage, under the title of Baron Lawrence of Punjab and Grately. He died ten years later.—Sir C. Aitchison, *Lord Lawrence*, ch. 7-12.—Lord Lawrence's immediate successor, Lord Mayo, was assassinated, while Viceroy, in 1872, by a convict—a Highlander—at the convict settlement on the Andaman Islands, for no reason of personal hatred, but only because he represented the governing authority which had condemned the man. Lord Mayo was succeeded by Lord Northbrook, who held the office from 1872 to 1876.—Sir W. W. Hunter, *The Earl of Mayo*.

A. D. 1876.—Lord Lytton, Viceroy.—The successor of Lord Northbrook in the Vice-regal office was Lord Lytton, appointed in 1876.

A. D. 1877.—The Native States and their quasi feudatory relation to the British Crown.

—Queen Victoria's assumption of the title of Empress of India.—"In some sense the Indians were accustomed to consider the Company, as they now consider the Queen, to be the heir of the Great Moghal, and therefore universal suzerain by right of succession. But it is easy to exaggerate the force of this claim, which is itself a mere restatement of the fact of conquest. Politically, India is divided into two parts, commonly known as British territory and the native states. The first portion alone is ruled directly by English officials, and its inhabitants alone are subjects of the Queen. The native states are sometimes called feudatory—a convenient term to express their vague relation to the British crown. To define that relation precisely would be impossible. It has arisen at different times and by different methods; it varies from semi-independence to complete subjection. Some chiefs are the representatives of those whom we found on our first arrival in the country; others owe their existence to our creation. Some are parties to treaties entered into as between equal powers; others have consented to receive patents from their suzerain recording their limited rights; with others, again, there are no written engagements at all. Some have fought with us and come out of the struggle without dishonour. Some pay tribute; others pay none. Their extent and power vary as greatly as their political status. The Nizam of Hyderabad governs a kingdom of 80,000 square miles and 10,000,000 inhabitants. Some of the petty chieftains of Kathiawar exercise authority over only a few acres. It is, however, necessary to draw a line sharply circumscribing the native states, as a class, from British territory. Every native chief possesses a certain measure of local authority, which is not derivative but inherent. English control, when and as exercised, is not so much of an administrative as of a diplomatic nature. In Anglo-Indian terminology this shade of meaning is expressed by the word 'political.' . . . As a general proposition, and excepting the quite insignificant states, it may be stated that the

government is carried on not only in the name but also by the initiative of the native chief. At all the large capitals, and at certain centres round which minor states are grouped, a British officer is stationed under the style of Resident or Agent. Through him all diplomatic affairs are conducted. He is at once an ambassador and a controller. His duty is to represent the majesty of the suzerain power, to keep a watchful eye upon abuses, and to encourage reforms."—J. S. Cotton, *Colonies and Dependencies*, pt. 1, ch. 3.—"The supremacy of the British Government over all the Native States in India was declared in 1877, in a more emphatic form than it had received before, by the assumption by the Queen of the title of Kaisar-i-Hind, Empress of India. No such gathering of chiefs and princes has taken place in historical times as that seen at Delhi in January, 1877, when the rulers of all the principal States of India formally acknowledged their dependence on the British Crown. The political effect of the assertion of the supremacy of the paramount power, thus formally made for the first time in India, has been marked and extremely important."—Sir J. Strachey, *India*, lect. 11.

A. D. 1880-1893.—Recent Viceroys.—On the defeat of the Conservative Beaconsfield Ministry in England, in 1880, Lord Lytton resigned the Viceroyalty and was succeeded by the Marquis of Ripon, who gave place in turn to the Marquis of Dufferin in 1884. In 1888, the Marquis of Lansdowne succeeded Lord Dufferin, and was himself succeeded in 1893 by Sir Henry Norman.

A. D. 1893.—Suspension of the free coinage of silver.—In June, 1893, the Indian Government, with the approval of the British Cabinet, stopped the free coinage of silver, with a view to the introduction of a gold standard. The Government, it was announced, while stopping

the coinage of the declining metal for private persons, would continue on its own account to coin rupees in exchange for gold at a ratio then fixed at sixteen pence sterling per rupee. "The closing of the mints of British India to the coinage of silver coins of full-debt-paying power is the most momentous event in the monetary history of the present century. It is the final and disastrous blow to the use of silver as a measure of value and as money of full-debt-paying power, and the relegation of it to the position of a subsidiary, or token metal. It is the culmination of the evolution from a silver to a gold standard which has been progressing with startling rapidity in recent years. . . . The remarkable series of events which have characterized, or made manifest, this evolution from a silver to a gold standard are nearly all condensed in the brief period of twenty years, and are probably without a parallel in ancient or modern monetary history. . . . With the single exception of England, all Europe forty years ago had the silver standard, not only legally but actually—silver coins constituting the great bulk of the money of actual transactions. To-day, not a mint in Europe is open to the coinage of full-debt-paying silver coins, and the gateways of the Orient have been closed against it. Twenty years ago one ounce of gold exchanged in the markets of the world for fifteen and one-half ounces of silver; to-day, one ounce of gold will buy nearly thirty ounces of silver. . . . There is a general impression that silver has been the money of India from remote generations. This is a fallacy. It has not been a great many years since India adopted the silver standard. The ancient money of the Hindoos was gold, which in 1818 was supplemented by silver, but gold coins remained legal tender until 1835, when silver was made the sole standard of value and legal tender money in British India, and gold was demonetized. . . . During the last fifty odd years, India has absorbed vast quantities of silver."—E. O. Leech, *The Doom of Silver* (*The Forum*, Aug., 1893).

A. D. 1800-1818.—Successive partitions of the Territory.—Michigan and Illinois detached.—The remaining Indiana admitted as a State.—"Indiana Territory as originally organized [in 1800] . . . included the county of Knox, upon the Wabash, from which has sprung

the State of Indiana; the county of St. Clair, on the Upper Mississippi, or Illinois River, from which has sprung the State of Illinois; and the county of Wayne, upon the Detroit River, from which has sprung the State of Michigan. . . . At this time, the inhabitants contained in all of them did not amount to more than 5,640 souls, while the aggregate number of the Indian tribes within the extreme limits of the territory was more than 100,000. . . . By successive treaties, the Indian title was extinguished gradually to all the country lying upon the waters of the White River, and upon all the lower tributaries of the Wabash, upon the Little Wabash, the Kaskaskia, and east of the Mississippi, below the mouth of the Illinois. Thus, before the close of the year 1805, nearly all the southern half of the present State of Indiana, and one third of the State of Illinois, was open to the advance of the enterprising pioneer. . . . In 1807, the Federal government, in like manner, purchased from the Indians extensive regions west of Detroit River, and within the present State of Michigan, far beyond the limits of the white settlements in that quarter. Meantime, the settlements formerly comprised in Wayne county, having increased in inhabitants and importance, had been erected into a separate territorial government, known and designated as the 'Territory of Michigan.' On the 1st of July, 1805, the territory entered upon the first grade of territorial government, under the provisions of the ordinance of 1787; and William Hull, formerly a lieutenant in the Revolutionary army, was made the first governor. . . . Detroit . . . was made the seat of the territorial government. . . . By the close of the year 1808, the Indiana Territory east of the Wabash had received such an increase in numbers that it was desirable to assume the second grade of territorial government. Having a population of 5,000 free white males, Congress, with a view to a future state government, by an act approved February 3d, 1809, restricted its limits, and authorized a territorial Legislature. . . . The Indiana Territory, from this time, was bounded on the west by a line extending up the middle of the Wabash, from its mouth to Vincennes, and thence by a meridian due north to the southern extremity of Lake Michigan. On the north, it was bounded by the southern line of the Michigan Territory. That portion west of the Wabash was erected into a separate territorial government of the first grade, known and designated as the 'Illinois Territory.' The inhabitants of the Indiana Territory soon began to augment more rapidly. . . . In 1810 the people had increased in numbers to 24,500, and in the newly-erected Territory of Illinois there was an aggregate of 12,300 persons." In 1816 "it was ascertained that the Indiana Territory possessed a population which entitled it to an independent state government. Congress authorized the election of a convention to form a state Constitution," and "the new 'State of Indiana' was formally admitted into the Union on the 19th of April, 1816." Two years later, on the 3d of December, 1818, the Territory of Illinois was similarly transformed and became one of the states of the Union.—J. W. Monette, *The Discovery and Settlement of the Mississippi Valley*, bk. 5, ch. 16 (v. 2).

INDIANS, American: The Name.—"As Columbus supposed himself to have landed on an island at the extremity of India, he called the natives by the general appellation of Indians, which was universally adopted before the true nature of his discovery was known, and has since been extended to all the aboriginals of the New World."—W. Irving, *Life and Voyages of Columbus*, bk. 4, ch. 1 (v. 1).—"The Spanish writers from the outset, beginning with Columbus in his letters, call the natives of America, Indians, and their English translators do the same. So, too, Richard Eden, the earliest English writer on American travel, applies the name to the natives of Peru and Mexico. It is used in the same way, both in translations and original accounts, during the rest of the century, but it is always limited to those races with whom the Spaniards were in contact. In its wider and later application the word does not seem to have established itself in English till the next century. The earliest instance I can find, where it is applied to the natives of North America generally in any original work, is by Hakluyt. In 1587 he translated Laudonnière's 'History of the French Colony in Florida,' and dedicated his translation to Sir Walter Raleigh. In this dedication he once uses the term Indian for the natives of North America. Heriot and the other writers who describe the various attempts at settlement in Virginia during the sixteenth century, invariably call the natives 'savages.' Perhaps the earliest instance where an English writer uses the name Indian specially to describe the occupants of the land afterwards colonized by the English is in the account of Archer's voyage to Virginia in 1602. This account, written by James Rosier, is published in Purchas (vol. iv. b. viii.). From that time onward the use of the term in the wider sense becomes more common. We may reasonably infer that the use of it was an indication of the growing knowledge of the fact that the lands conquered by the Spaniards and those explored by the English formed one continent."—J. A. Doyle, *The English in America: Virginia, &c., appendix A.*

The tribes and families. See AMERICAN ABORIGINES.

INDICTIONS, The.—The indiction "was a cycle of 15 years, used only by the Romans, for appointing the times of certain public taxes; as appears from the title in the Code, 'De tributo indicto.' It was established by Constantine, A. D. 312, in the room of the heathen Olympiads; and was used in the acts of the General Councils, Emperors, and Popes."—W. Hales, *New Analysis of Chronology*, v. 1, bk. 1.—"The indictions consisted of a revolution of 15 years, which are separately reckoned as indiction 1, indiction 2, &c., up to 15; when they recommence with indiction 1. . . . Doubt exists as to the commencement of the indictions; some writers assigning the first indiction to the year 312; the greater number to the year 313; others to 314; whilst some place it

in the year 315. In 'L'Art de vérifier les Dates,' the year 313 is fixed upon as that of the first indiction. There are four descriptions of indictions. The first is that of Constantinople, which was instituted by Constantine in A. D. 312, and began on the 1st of September. The second, and more common in England and France, was the Imperial or Caesarean indiction, which began on the 24th of September. The third kind of indiction is called the Roman or Pontifical, from its being generally used in papal bulls, at least from the ninth to the fourteenth century; it commences on the 25th of December or 1st of January, accordingly as either of these days was considered the first of the year. The fourth kind of indiction, which is to be found in the register of the parliaments of Paris, began in the month of October. . . . After the 12th century, the indiction was rarely mentioned in public instruments. . . . But in France, in private charters, and in ecclesiastical documents, the usage continued until the end of the 15th century."—Sir H. Nicolas, *Chronology of History*, pp. 6-7.

INQUISITION, The: A. D. 1203-1525.—Origin of the Holy Office.—St. Dominic and the Dominicans.—The Episcopal Inquisition.—The Apostolical or Papal Inquisition.—The Spanish Inquisition and its terrible rule.—Estimate of victims.—Expulsion of Jews and Moors.—"In the earlier ages of the Church, the definition of heresy had been committed to episcopal authority. But the cognizance of heretics and the determination of their punishment remained in the hands of secular magistrates. At the end of the 12th century the wide diffusion of the Albigensian heterodoxy through Languedoc and Northern Italy alarmed the chiefs of Christendom, and furnished the Papacy with a good pretext for extending its prerogatives. Innocent III. in 1203 empowered two French Cistercians, Pierre de Castelnau and Raoul, to preach against the heretics of Provence. In the following year he ratified this commission by a Bull, which censured the negligence and coldness of the bishops, appointed the Abbot of Citeaux Papal delegate in matters of heresy, and gave him authority to judge and punish misbelievers. This was the first germ of the Holy Office as a separate Tribunal. . . . Being a distinct encroachment of the Papacy upon the episcopal jurisdiction and prerogatives, the Inquisition met at first with some opposition from the bishops. The people for whose persecution it was designed, and at whose expense it carried on its work, broke into rebellion; the first years of its annals were rendered illustrious by the murder of one of its founders, Pierre de Castelnau. He was canonised, and became the first Saint of the Inquisition. . . . In spite of opposition, the Papal institution took root and flourished. Philip Augustus responded to the appeals of Innocent; and a crusade began against the Albigenses, in which Simon de Montfort won his sinister celebrity. During those bloody wars the Inquisition developed itself as a force of formidable expansive energy. Material assistance to the cause was rendered by a Spanish monk of the Augustine order, who settled in Provence on his way back from Rome in 1206. Domingo de Guzman, known to universal history as S. Dominic, organised a new militia for the service of the orthodox Church between the years 1215 and 1219. His order, called the Order of the Preachers, was originally designed to repress heresy and confirm the faith by diffusing Catholic doctrine and maintaining the creed in its purity. It consisted of three sections: the Preaching Friars; monks living in conventual retreat; and laymen, entitled the Third Order of Penitence or the Militia of Christ, who in after years were merged with the Congregation of S. Peter Martyr, and corresponded to the familiars of the Inquisition. Since the Dominicans were established in the heat and passion of a crusade against heresy, by a rigid Spaniard who employed his energies in persecuting misbelievers, they assumed at the outset a belligerent and inquisitorial attitude. Yet it is not strictly accurate to represent S. Dominic himself as the first Grand Inquisitor. The Papacy proceeded with caution in its

design of forming a tribunal dependant on the Holy See and independent of the bishops. Papal Legates with plenipotentiary authority were sent to Languedoc, and decrees were issued against the heretics, in which the Inquisition was rather implied than directly named; nor can I find that S. Dominic, though he continued to be the soul of the new institution until his death, in 1221, obtained the title of Inquisitor. Notwithstanding this vagueness, the Holy Office may be said to have been founded by S. Dominic; and it soon became apparent that the order he had formed was destined to monopolise its functions. . . . This Apostolical Inquisition was at once introduced into Lombardy, Romagna and the Marches of Treviso. The extreme rigour of its proceedings, the extortions of monks, and the violent resistance offered by the communes, led to some relaxation of its original constitution. More authority had to be conceded to the bishops; and the right of the Inquisitors to levy taxes on the people was modified. Yet it retained its true form of a Papal organ, superseding the episcopal prerogatives, and overriding the secular magistrates, who were bound to execute its biddings. As such it was admitted into Tuscany, and established in Aragon. Venice received it in 1289, with certain reservations that placed its proceedings under the control of Doge and Council. In Languedoc, the country of its birth, it remained rooted at Toulouse and Carcassonne; but the Inquisition did not extend its authority over central and northern France. In Paris its functions were performed by the Sorbonne. Nor did it obtain a footing in England, although the statute 'De Hæretico Comburendo,' passed in 1401 at the instance of the higher clergy, sanctioned the principles on which it existed. . . . The revival of the Holy Office on a new and far more murderous basis, took place in 1484. We have seen that hitherto there had been two types of inquisition into heresy. The first, which remained in force up to the year 1203, may be called the episcopal. The second was the Apostolical or Dominican: it transferred this jurisdiction from the bishops to the Papacy, who employed the order of S. Dominic for the special service of the tribunal instituted by the Imperial Decrees of Frederick II. The third deserves no other name than Spanish, though, after it had taken shape in Spain, it was transferred to Portugal, applied in all the Spanish and Portuguese colonies, and communicated with some modifications to Italy and the Netherlands. Both the second and the third types of inquisition into heresy were Spanish inventions, patented by the Roman Pontiffs and monopolised by the Dominican order. But the third and final form of the Holy Office in Spain distinguished itself by emancipation from Papal and Royal control, and by a specific organisation which rendered it the most formidable of irresponsible engines in the annals of religious institutions. . . . Castile had hitherto been free from the pest. But the conditions of that kingdom offered a good occasion for its introduction at the date which I have named. During the Middle Ages the Jews of Castile acquired vast wealth and influence. Few families but felt the burden of their bonds and mortgages. Religious fanaticism, social jealousy, and pecuniary distress exasperated the Christian population; and as early as the year 1391, more than

5,000 Jews were massacred in one popular uprising. The Jews, in fear, adopted Christianity. It is said that in the 15th century the population counted some million of converts—called New Christians, or, in contempt, Marranos: a word which may probably be derived from the Hebrew Maranatha. These converted Jews, by their ability and wealth, crept into high offices of state, obtained titles of aristocracy, and founded noble houses. . . . It was a Sicilian Inquisitor, Philip Barberis, who suggested to Ferdinand the Catholic the advantage he might secure by extending the Holy Office to Castile. Ferdinand avowed his willingness; and Sixtus IV. gave the project his approval in 1478. But it met with opposition from the gentler-natured Isabella. . . . Then Isabella yielded; and in 1481 the Holy Office was founded at Seville. It began its work by publishing a comprehensive edict against all New Christians suspected of Judaizing, which offence was so constructed as to cover the most innocent observance of national customs. Resting from labour on Saturday; performing ablutions at stated times; refusing to eat pork or puddings made of blood; and abstaining from wine, sufficed to colour accusations of heresy. . . . Upon the publication of this edict, there was an exodus of Jews by thousands into the fiefs of independent vassals of the crown—the Duke of Medina Sidonia, the Marquis of Cadiz, and the Count of Arcos. All emigrants were 'ipso facto' declared heretics by the Holy Office. During the first year after its foundation, Seville beheld 298 persons burned alive, and 79 condemned to perpetual imprisonment. A large square stage of stone, called the Quemadero, was erected for the execution of those multitudes who were destined to suffer death by hanging or by flame. In the same year, 2,000 were burned and 17,000 condemned to public penitence, while even a larger number were burned in effigy, in other parts of the kingdom. . . . In 1483 Thomas of Torquemada was nominated Inquisitor General for Castile and Aragon. Under his rule a Supreme Council was established, over which he presided for life. . . . In 1484 a General Council was held, and the constitution of the Inquisition was established by articles. . . . The two most formidable features of the Inquisition as thus constituted were the exclusion of the bishops from its tribunal and the secrecy of its procedure. . . . In the autumn of 1484 the Inquisition was introduced into Aragon; and Saragossa became its headquarters in that State. . . . The Spanish Inquisition was now firmly grounded. Directed by Torquemada, it began to encroach upon the crown, to insult the episcopacy, to defy the Papacy, to grind the Commons, and to outrage by its insolence the aristocracy. . . . The Holy Office grew every year in pride, pretensions and exactions. It arrogated to its tribunal crimes of usury, bigamy, blasphemous swearing, and unnatural vice, which appertained by right to the secular courts. It depopulated Spain by the extermination and banishment of at least three million industrious subjects during the first 139 years of its existence. . . . Torquemada was the genius of evil who created and presided over this foul instrument of human crime and folly. During his eighteen years of administration, reckoning from 1480 to 1498, he sacrificed, according to Llorente's calculation, above 114,000 victims, of whom

10,220 were burned alive, 6,860 burned in effigy, and 97,000 condemned to perpetual imprisonment or public penitence. He, too, it was who in 1492 compelled Ferdinand to drive the Jews from his dominions. . . . The edict of expulsion was issued on the last of March. Before the last of July all Jews were sentenced to depart, carrying no gold or silver with them. They disposed of their lands, houses, and goods for next to nothing, and went forth to die by thousands on the shores of Africa and Italy. . . . The exodus of the Jews was followed in 1502 by a similar exodus of Moors from Castile, and in 1524 by an exodus of Mauresques from Aragon. To compute the loss of wealth and population inflicted upon Spain by these mad edicts would be impossible. . . . After Torquemada, Diego Deza reigned as second Inquisitor General from 1498 to 1507. In these years, according to the same calculation, 2,592 were burned alive, 896 burned in effigy, 34,952 condemned to prison or public penitence. Cardinal Ximenes de Cisneros followed between 1507 and 1517. The victims of this decade were 3,564 burned alive. . . . Adrian, Bishop of Tortosa, tutor to Charles V., and afterwards Pope, was Inquisitor General between 1516 and 1525. Castile, Aragon, and Catalonia, at this epoch, simultaneously demanded a reform of the Holy Office from their youthful sovereign. But Charles refused, and the tale of Adrian's administration was 1,620 burned alive, 560 burned in effigy, 21,845 condemned to prison or public penitence. The total, during 43 years, between 1481 and 1525, amounted to 234,526, including all descriptions of condemned heretics. These figures are of necessity vague, for the Holy Office left but meagre records of its proceedings."—J. A. Symonds, *Renaissance in Italy: The Catholic Reaction*, ch. 3 (pt. 1).

INTERIM OF CHARLES V., The. See GERMANY: A. D. 1546-1552.

"INTERNATIONAL," The.—"The year of the London Exhibition, and under the auspices of the Emperor Napoleon III., a number of Paris working-men visited the English capital. They were welcomed by a London Committee of artisans, and on this occasion the wish for a closer union between the labourers of different countries was expressed on both sides. Then the Polish insurrection broke out, and masses of London and Paris working-men took steps simultaneously to manifest sympathy with the insurgents. A deputation was again sent over from Paris, and the result of this measure was a resolution to delay preparations for co-operation no longer. For some time the international idea was carefully given prominence in labour circles in various countries, and on September 28th, 1864, a congress of many nations was held in St. Martin's Hall, London, under the presidency of Professor Beesly. A committee was appointed, representing England, France, Germany, Italy, Poland, and Switzerland, for the drawing up of statutes for an International Working Men's Association, whose seat should be London. . . . It was not long before the International Association became a power which caused alarm to not a few European Governments."—W. H. Dawson, *German Socialism and Ferdinand Lassalle*, ch. 13.

IONIAN ISLANDS: To 1814.—Under Greek, Roman, Byzantine, Venetian and French rule.—"Acarnania, as a glance at the map will show, is the most western part of continental Greece. But in close proximity to the mainland there stretch along the west coast a number of islands, some of them of considerable area, the history and traditions of which are inseparably intertwined with those of Hellas. They have long been known as the Ionian Islands, deriving the name, in all likelihood, from the sea in which they are situated; for their ancient inhabitants were not, so far as is known, of Ionic

descent. They are very numerous, but only six of them are of any historic importance. The most northerly is Coreyra (Corfu), a long, narrow island, which extends like a lofty breakwater in front of the coast of Epirus." The other five are Paxos (Paxo), Leucadia (Santa Maura), Cephalonia (Cephalonia), Ithaca (Thiaki), Zacynthus (Zante), and Cythera (Cerigo). "Though not the largest, Coreyra is the most populous and important of the islands. It has a place in the mythic tradition, and a still greater one in the ascertained history, of ancient Hellas [see KORKYRA; also, GREECE: B. C. 435-432, and 432]. . . . With the other islands in the Ionian Sea, Coreyra passed under the dominion of Rome, and subsequently became part of the Eastern Empire. In 540 A. D. the fleet of the Gothic leader Totila ravaged the coasts of the island, but did not capture the city, the fortifications of which had been greatly strengthened by the Romans. Five centuries later the island and its capital fell into the hands of a more formidable invader — the Norman Robert Guiscard, who captured them on his way from Italy to prosecute that invasion of the Byzantine Empire which was at one time so nearly attended with success. The first Norman supremacy did not last long; but in 1144 A. D., Roger, the Norman king of Sicily, took occasion of a rising of the Coreyreans (or, as they now began to be called, the Corfiotes) against the Byzantine Emperor Manuel to introduce a garrison into the city. Four years later Manuel, who was an energetic and warlike prince, laid siege to Corfu, and was assisted by the Venetians. The Norman garrison offered a most determined resistance, but were ultimately obliged to surrender on honourable terms. After the overthrow of the Byzantine emperors, in the early part of the 13th century, Corfu, with the other Ionian Islands, became part of the dominions of the Venetian republic, and so continued, with brief intervals, for nearly 500 years. The Venetian rule was on the whole favourable to the material prosperity of the island: it was admirably cultivated, and became the centre of a large commerce. Unlike most of the other possessions of Venice in the eastern Mediterranean, Corfu never fell into the hands of the Turks. They overran and ravaged the island in 1537, carrying off, according to their custom, many of the young women and children as slaves; and they besieged the capital, but its fortifications had been much strengthened by the Venetians, and the garrison was able to offer a successful resistance. In 1716 another memorable siege [see TURKS: A. D. 1714-1718] took place, during the war in which Sultan Achmet III. engaged with Austria and the Venetian republic. A large Ottoman army under Kara Mustapha beleaguered Corfu; but the garrison was commanded by a distinguished soldier, Count Schulemburg, who baffled all the efforts of the Turks, and at last compelled them to withdraw to their ships after they had lost 15,000 men. By the Treaty of Campo Formio, dictated in 1797 to Austria by Napoleon after his marvellous Italian campaign, the Ionian Islands were transferred to France [see FRANCE: A. D. 1797 (MAY-OCTOBER)], the rest of the Venetian territories falling to the share of Austria. The French garrisons were, however, expelled in 1799 by a Russo-Turkish expedition, and the islands constituted a republic [called the Re-

public of the Seven Islands]. But in 1807, when the course of events had changed Russia into an ally of the French emperor, the latter again obtained possession of the islands under the Treaty of Tilsit. The English, being masters of the Mediterranean, soon drove the French out of all the islands except Corfu. This was under French rule till 1814; and it is only fair to say that they did much for the improvement of the island, constructing some substantial roads in the interior. In 1814, during the general cataclysm of the gigantic empire of Napoleon, the French garrison was driven out of the island after a gallant resistance, and in the following year the Ionian Islands were reconstituted a republic under British protection and supremacy." —C. H. Hanson, *The Land of Greece*, ch. 4.

A. D. 1815-1862.—The British protectorate.—Its relinquishment.—Annexation to the kingdom of Greece.—"These seven islands [the Ionian] were constituted a sort of republic or commonwealth by the Treaty of Vienna [1815]. But they were consigned to the protectorate of Great Britain, which had the right of maintaining garrisons in them. Great Britain used to appoint a Lord High Commissioner, who was generally a military man, and whose office combined the duties of Commander-in-Chief with those of Civil Governor. The little republic had a Senate of six members and a Legislative Assembly of forty members. It seems almost a waste of words to say that the islanders were not content with British government. For good or ill, the Hellenes, wherever they are found, are sure to be filled with an impassioned longing for Hellenic independence. The people of the Ionian Islands were eager to be allowed to enter into one system with the kingdom of Greece. It was idle to try to amuse them by telling them they constituted an independent republic, and were actually governing themselves, . . . while they saw themselves presided over by an English Lord High Commissioner who was also the Commander-in-Chief of a goodly British army garrisoned in their midst. . . . It is certain that they got a great deal of material benefit from the presence of the energetic road-making British power. But they wanted to be, above all things, Greek. . . . Sir Edward Bulwer Lytton [who was then — 1858 — Secretary for the Colonies in the British Government] . . . thought the causes of the complaints and the dissatisfaction were well worth looking into, and he resolved on sending a statesman of distinction out to the islands to make the enquiry. Mr. Gladstone had been for some years out of office. He had been acting as an independent supporter of Lord Palmerston's Government. It occurred to Sir Edward Bulwer Lytton that Mr. Gladstone was the man best fitted to conduct the enquiry. . . . He offered, therefore, to Mr. Gladstone the office of Lord High Commissioner Extraordinary to the Ionian Islands, and Mr. Gladstone accepted the offer and its duties." Arriving in Corfu in November, 1858, "he called together the Senate, and endeavoured to satisfy them as to the real nature of his mission. He explained that he had not come there to discuss the propriety of maintaining the English protectorate, but only to enquire into the manner in which the just claims of the Ionian Islands might be secured by means of that protectorate." But "the population of the islands persisted in regarding him, not as the

IONIAN ISLANDS.

commissioner of a Conservative English Government, but as 'Gladstone the Philhellene.' He was received wherever he went with the honours due to a liberator. . . . The visit of Mr. Gladstone, whatever purpose it may have been intended to fulfil, had the effect of making them [the Ionians] agitate more strenuously than ever for annexation to the kingdom of Greece. Their wish, however, was not to be granted yet. A new Lord High Commissioner was sent out after Mr. Gladstone's return. . . . Still . . . the idea held ground that sooner or later Great Britain would give up the charge of the islands. A few years after, an opportunity occurred for making the cession. The Greeks got rid quietly of their heavy German king Otho [see GREECE: A. D. 1830-1862], and on the advice chiefly of England they elected as sovereign a brother of the Princess of Wales. . . . The second son of the King of Denmark was made King of Greece; and Lord John Russell, on behalf of the English Government, then [1862] handed over to the kingdom of Greece the islands of which Great Britain had had so long to bear the unwilling charge."—J. McCarthy, *Hist. of our Own Times*, ch. 39 (v. 3).

IONIANS, The. See DORIANS AND IONIANS.
IONIC (PAN-IONIC) AMPHIKTYONY.—"There existed at the commencement of historical Greece, in 776 B. C., besides the Ionians in Attica and the Cyclades, twelve Ionian cities of note on or near the coast of Asia Minor, besides a few others less important. Enumerated from south to north, they stand—Miletus, Myŷis, Priênê, Samos, Ephesus, Kolophôn, Lebedus, Teôs, Erythræ, Chios, Klazomenæ, Phôkæa. . . . Miletus, Myŷis and Priênê were situated on or near the productive plain of the river Mæander; while Ephesus was in like manner planted near the mouth of the Kæster . . . : Kolophon is only a very few miles north of the same river. Possessing the best means of communication with the interior, these towns seem to have thriven with greater rapidity than the rest; and they, together with the neighbouring island of Samos, constituted in early times the strength of the Pan-Ionic Amphiktyony. The situation of the sacred precinct of Poseidôn (where this festival was celebrated) on the north side of the promontory of Mykalê, near Priênê, and between Ephesus and Miletus, seems to show that these towns formed the primitive centre to which the other Ionian settlements became gradually aggregated. For it was by no means a central site with reference to all the twelve. . . . Moreover, it seems that the Pan-Ionic festival [the celebration of which constituted the Amphiktyony], though still formally continued, had lost its importance before the time of Thucydides, and had become practically superseded by the more splendid festival of the Ephesia, near Ephesus,

IRELAND.

where the cities of Ionia found a more attractive place of meeting."—G. Grote, *Hist. of Greece*, pt. 2, ch. 13 (v. 3).

IRAK.—At the time of the Mahometan conquest, "Chaldea and Babylonia occupied the rich region south of the river Tigris, watered by the Euphrates, and were known as Irak of the Arabs, as distinguished from Irak of the Persians, which corresponded somewhat nearly to the modern kingdom of Persia. . . . Irak of Arabia was at this time under the jurisdiction of Persia, and the wandering Arabs who roamed over the broad desert were tributary to Persia when they pitched their tents on the eastern side, and to Rome when sojourning on the side towards Syria; though they were at no time trusty allies or subjects. The region of Irak contains many relics of a former civilization; there are the mounds that mark the site of old Babylon."—A. Gilman, *Story of the Saracens*, pp. 226-227.

IRAN, Table-Land of.—"Between the valley of the Indus and the land of the Euphrates and Tigris, bounded on the south by the ocean and the Persian Gulf, on the north by the broad steppes which the Oxus and Jaxartes vainly attempt to fertilise, by the Caspian Sea and the valley of the Aras [embracing modern Persia, Baluchistan, Afghanistan and Russian Turkestan], lies the table-land of Iran. Rising to an average height of 4,000 feet above the level of the sea, it forms an oblong, the length of which from east to west is something more than 1,500 miles. . . . As far back as our information extends, we find the table-land of Iran occupied by a group of nations closely related to each other, and speaking dialects of the same language."—M. Duncker, *Hist. of Antiquity*, bk. 7, ch. 1.—See, also, ARYANS.

IRDJAR, Russian defeat at. See RUSSIA: A. D. 1859-1876.

IRELAND.

The name.—"Ireland was known by many names from very early ages. Thus, in the Celtic it was called Inis-Fail, the isle of destiny; Inis-Ealga, the noble island; Fiodh-Inis, the woody island; and Eire, Fodhla, and Banba. By the

Greeks it was called Ierne, probably from the vernacular name of Eire, by inflection Erin; whence, also, no doubt, its Latin name of Juverna; Plutarch calls it Ogygia, or the ancient land; the early Roman writers generally called it

A Logical Outline of Irish History

IN WHICH THE DOMINANT CONDITIONS AND

INFLUENCES ARE DISTINGUISHED BY COLORS.

Physical or material.

Ethnological.

Social and political.
Intellectual, moral and

religious.

Foreign.

In the history of the two islands which form the United Kingdom of Great Britain and Ireland there is a contrast of fortune which nothing will account for save unexplainable qualities of race. The Celtic warmth prevailing on one side of St. George's Channel has worked ill in politics as against the Teutonic coolness on the other; and it is probable that no change of circumstances or conditions would have altered greatly the relations of the two peoples. In their situation as close neighbors, it was inevitable that one should dominate the other. It seems to have been no less inevitable that the mastery should settle where it did; and simply by the force of more masterful qualities in the English race.

If those who dwelt nearer to the mainland of Europe held advantages over those of the farther island, they took nothing from them in the earlier generations, but were overleaped and passed by when the first movements of Christianity and Christian culture into the West began; and it was Ireland, not England, for three centuries, which nourished the purest faith and the highest civilization of the age. If other advantages belonged to the island which was richer in iron and coal, the English were not helped by them to an ascendancy which they had won before the mining of their riches began.

In the early years of the eleventh century, when most of the island had submitted to the rule of Brian Boru, and when he had shaken the grasp of the intruding Danes on the seaports of the eastern and southern coasts, the state and prospects of Ireland would have seemed to be well-nigh as good as those of England at the same time. But that appearance vanished soon, and it never returned. Among the English, the tendency toward national union grew stronger with every generation; among the Irish it got no growth. The political genius of the race, remarkable to the present day in municipal politics, but rarely successful in the greater political arenas, has always been tribal or provincial in its range, and wanting in a national comprehensiveness.

11th century.
Brian Boru.

The Norman conquest of England was helpful to the consolidation of an English kingdom. The Anglo-Norman conquest A. D. 1169-1172.

order from any native root of influence or authority, but not complete enough to carry order with itself. In the full sense of the term it was never a conquest. It was rather a persisting invasion, continued and repeated through more than five centuries. In every generation it inflamed anew the fierce animosity which an incomplete conquest will not suffer to die out, until the very descendants of the older intruders were infected with the native hatred of their later-coming kindred. After four hundred years of inconclusive conflict, the English were hardly nearer to mastery, the Irish hardly nearer to submission, than at first.

Then arose between them a new difference to embitter their antagonism. The Reformation of religion was accepted by one race as naturally as it was rejected by the other. But Protestantism under English patronage assumed a more hateful aspect in Irish eyes, and Irishmen as Papists became doubly odious to the English mind. So political hostilities and religious enmities fomented one another, from that time, while the primitive antagonism of race gave energy to both.

Under Cromwell and under William of Orange the subjugation was completed at last in the spirit of a Protestant crusade, and used as crusading victories have been wont to be used. The triumphant Church, planting its strong settlements in the land, assumed to itself all civil and political rights. Every office and every honorable profession were closed against the adherents of the defeated faith; its ministrations were forbidden; its priests were expelled.

But this was not all. As British commerce grew and British industries were built up, they contributed yet another to the malign confederacy of passions which oppressed the Irish people. The merchant, the manufacturer, the landowner and the farmer, on the English side, were banded by common jealousies to suppress competition in Ireland. They hindered the improvement of its resources and paralyzed its energies by atrocious legislation. They reduced its population to dependence on the most restricted production, leaving little except husbandry for a vocation, and that under grinding terms. They created by such measures a nation of peasants, as poor and as helpless as serfs, living wretchedly on precarious holdings of soil, at the mercy of landlords who regarded them with dislike and contempt.

It was under such crushing conditions as these that Ireland remained until near the end of the eighteenth century, always hating the oppressors, often resisting the oppression, but weakly or rashly, without judgment or enduring resolution. Then began a great change in the tenor of her history. Two influences of the age came into play, one acting on the conscience of the English people, the other on the mind and temper of the Irish. One has worked to the yielding of justice, the other to the firmer pressing of demands for it.

At this day it may be said that oppression in Ireland, whether religious or political, is wholly and forever extinct; that whatever remains in dispute between Celt and Saxon is from questions such as rise in every nation, and that the bitterness which stays in Anglo-Irish politics is the lingering rancor of a hateful past, not quickly to be extinguished.

Hibernia, probably from its Iberian inhabitants, and the later Romans and mediæval writers Scotia, and sometimes Hibernia; and finally its name of Ireland was formed by the Anglo-Normans from its native name of Éire."—M. Haverty, *Hist. of Ireland*, p. 76, note.—See, also, SCOTLAND: THE NAME; and IRELAND: TRIBES OF EARLY CELTIC INHABITANTS.

The primitive inhabitants.—"The first people . . . of whose existence in Ireland we can be said to know anything are commonly asserted to have been of Turanian origin, and are known as 'Formorians.' As far as we can gather, they were a dark, low-browed, stunted race, although, oddly enough, the word Formorian in early Irish legend is always used as synonymous with the word giant. They were, at any rate, a race of utterly savage hunters and fishermen, ignorant of metal, of pottery, possibly even of the use of fire; using the stone hammers or hatchets of which vast numbers remain in Ireland to this day, and specimens of which may be seen in every museum. How long they held possession no one can tell, although Irish philologists believe several local Irish names to date from this almost inconceivably remote epoch. Perhaps if we think of the Lapps of the present day, and picture them wandering about the country, . . . it will give us a fairly good notion of what these very earliest inhabitants of Ireland were probably like [see FOMORIANS]. Next followed a Belgic colony, known as the Firbolgs, who overran the country, and appear to have been of a somewhat higher ethnological grade, although, like the Formorians, short, dark, and swarthy. Doubtless the latter were not entirely exterminated to make way for the Firbolgs, any more than the Firbolgs to make way for the Danaans, Milesians, and other successive races; such wholesale extirpations being, in fact, very rare, especially in a country which like Ireland seems specially laid out by kindly nature for the protection of a weaker race struggling in the grip of a stronger one. After the Firbolgs, though I should be sorry to say how long after, fresh and more important tribes of invaders began to appear. The first of these were the Tuatha-da-Danaans, who arrived under the leadership of their king Nuad, and took possession of the east of the country. These Tuatha-da-Danaans are believed to have been large, blue-eyed people of Scandinavian origin, kinsmen and possibly ancestors of those Norsemen or 'Danes' who in years to come were destined to work such woe and havoc upon the island. . . . What their end was no man can tell you, save that they, too, were, in their turn, conquered by the Milesians or 'Scoti,' who next overran the country, giving to it their own name of Scotia, by which name it was known down to the end of the twelfth century, and driving the earlier settlers before them, who thereupon fled to the hills, and took refuge in the forests, whence they emerged, doubtless, with unpleasant effect upon their conquerors, as another defeated race did upon their conquerors in later days."—E. Lawless, *The Story of Ireland*, ch. 1.

ALSO IN: T. Moore, *Hist. of Ireland*, v. 1, ch. 5.

Tribes of early Celtic inhabitants.—"On the northern coast dwelt the Veniconii, in the modern county of Donegal, and the Robogdii, in Londonderry and Antrim. Adjoining to the Veniconii, westward, were the Erdini or Erped-

itani, and next to them the Magnatæ, all in Donegal. Farther south were the Auteri, in Sligo; the Gangani, in Mayo; and the Velibori, or Ellebri, in the district between Galway and the Shannon. The south-west part of the island, with a great portion of the interior, was inhabited by the Iverni, who gave name not only to the great river but to the whole island, and who may, perhaps, be considered as the aboriginal inhabitants. . . . In the modern counties of Waterford and Tipperary, Ptolemy places a tribe called the Usdiæ or Vodæ, according to the variations of the manuscripts. In the modern county of Wexford dwelt the Brigantes; and northward from them were the Coriondi, in Wicklow; the Menapii, in Dublin; the Cauçi, on the banks of the Boyne; the Blanii, or Eblani, on the bay of Dundalk; the Voluntii, in Down; and the Dariui, bordering on the Robogdii, in Antrim. Three, at least, of the tribes who held the eastern coast of Ireland, the Brigantes, the Menapii, and the Voluntii, were, no doubt, colonies from the opposite shores of Britain."—T. Wright, *Celt, Roman and Saxon*, ch. 2.

5th-8th Centuries.—The coming of St. Patrick and the Christianizing of the Island.

—**Its Schools and its Missionaries.**—"Lying on the extreme verge of Europe, the last land then known to the adventurous Scandinavian, and beyond which fable had scarcely projected its dreams, it was in the fifth century since the Redemption that Christianity reached them. Patricius, a Celt of Gaul it is said, carried into Erin as a slave by one of the Pagan kings, some of whom made military expeditions to North and South Britain, and even to the Alps and the Loire, became the Apostle of Ireland. Patrick escaped from slavery, was educated at Rome, but in mature manhood insisted on returning to the place of his bondage, to preach Christianity to a people who seem to have exercised over the imagination of the Apostle the same spell of sympathy which in later times subdued strangers of many nations. He was received with extraordinary favour, and before his death nearly the whole island had embraced Christianity. The coming of Patrick took place in the year of our Lord 432, and he laboured for sixty years after; planting churches and schools, rooting out the practices and monuments of Paganism, and disciplining the people in religion and humanity. It was a noble service, and it impressed itself for ever on the memory of the race whom he served. . . . In the succeeding century the Church which he planted became possessed by a passion which it has never entirely lost, the passion for missionary enterprise. Its fathers projected the conversion of the fierce natives of the Continent to the new creed of humility and self-denial, and by the same humane agents which Patrick had employed in Ireland—persuasion and prayer; a task as generous as any of which history has preserved the record. In this epoch Ireland may, without exaggeration, be said to have been a Christian Greece, the nurse of science and civilisation. The Pagan annals of the country are overlaid by fable and extravagance, but the foundation of Oxford or the mission of St. Augustine does not lie more visibly within the boundaries of legitimate history than the Irish schools, which attracted students from Britain and Gaul, and sent out missionaries through the countries now known as Western Europe.

Among the forests of Germany, on the desert shores of the Hebrides, in the camp of Alfred, at the court of Charlemagne, in the capital of the Christian world, where Michelet describes their eloquence as charming the counsellors of the Emperor, there might be found the fervid preachers and subtle doctors of the Western Isle. It was then that the island won the title still fondly cherished, 'insula sanctorum'. The venerable Bede describes nobles and students at this epoch as quitting the island of Britain to seek education in Ireland, and he tells us that the hospitable Celts found them teachers, books, food and shelter at the cost of the nation. The school at Armagh, where St. Patrick had established the primacy of the Church, is reputed to have attracted 7,000 students, and there were schools at Lismore, Bangor, Clonmacnoise, and Mayo, which rivalled it in importance. Monasteries multiplied in a still greater number, and with results as beneficial. . . . Writers who are little disposed to make any other concession to Ireland admit that this was a period of extraordinary intellectual activity, and of memorable services to civilization. The arts, as far as they were the handmaidens of religion, attained a surprising development. The illuminated copies of the Scripture, the croziers and chalices which have come down to us from those days, the Celtic crosses and Celtic harps, the bells and tabernacles, are witnesses of a distinct and remarkable national culture. The people were still partly shepherds and husbandmen, partly soldiers, ruled by the Chief, the Brehon, and the Priest. . . . After this generous work had obtained a remarkable success, it was disturbed by contests with the Sea Kings. . . . The Cathedral and city of St. Patrick, the schools of Bangor, the cloisters of Clonmacnoise, and many more seats of piety and learning, fell into their hands. The sacred vessels of the altar were turned into drinking cups, and the missals, blazing with precious stones, were torn from their costly bindings to furnish ornaments for their sword hilts, and gifts to the Scalds who sang their achievements. These pagans burned monasteries, sacked churches, and murdered women and priests, for plunder or sport. . . . Before the dangers and troubles of a long internecine war, the School of the West gradually dwindled away, and it had fallen into complete decay before Brian Borhoime, at the beginning of the 11th century, finally subdued the invaders."—Sir C. G. Duffy, *A Bird's Eye View of Irish Hist.*, rev. ed., pp. 7-12 (or ch. 4, in "Young Ireland").—"Ireland, that virgin island on which proconsul never set foot, which never knew either the orgies or the exactions of Rome, was also the only place in the world of which the Gospel took possession without bloodshed. . . . From the moment that this Green Erin, situated at the extremity of the known world, had seen the sun of faith rise upon her, she had vowed herself to it with an ardent and tender devotion which became her very life. The course of ages has not interrupted this; the most bloody and implacable of persecutions has not shaken it; the defection of all northern Europe has not led her astray; and she maintains still, amid the splendours and miseries of modern civilisation and Anglo-Saxon supremacy, an inextinguishable centre of faith, where survives, along with the completest orthodoxy, that admirable purity of manners which no conqueror

and no adversary has ever been able to dispute, to equal, or to diminish. . . . The Irish communities, joined by the monks from Gaul and Rome, whom the example of Patrick had drawn upon his steps, entered into rivalry with the great monastic schools of Gaul. They explained Ovid there; they copied Virgil; they devoted themselves especially to Greek literature; they drew back from no inquiry, from no discussion. . . . A characteristic still more distinctive of the Irish monks, as of all their nation, was the imperious necessity of spreading themselves without, of seeking or carrying knowledge and faith afar, and of penetrating into the most distant regions to watch or combat paganism. This monastic nation, therefore, became the missionary nation 'par excellence'."—Count de Montalembert, *The Monks of the West*, bk. 7 (v. 2).

9th-10th Centuries.—The Danish conquests and settlements.—"The people popularly known in our history as Danes comprised swarms from various countries in the north of Europe, from Norway, Sweden, Zealand, Jutland, and, in general, from all the shores and islands of the Baltic. . . . In the Irish annals they are variously called Galls, or foreigners; Geinti, or Gentiles; and Lochlanni, or inhabitants of Lochlann, or Lake-land, that is, Norway; and they are distinguished as the Finn Galls, or White Foreigners, who are supposed to have been the inhabitants of Norway; and the Dubh Galls, or Black Foreigners, who were probably the people of Jutland, and of the southern shores of the Baltic Sea. A large tract of country north of Dublin still retains the name of the former. . . . The Danes never obtained the dominion of Ireland as they did that of England."—M. Haverty, *Hist. of Ireland*, ch. 13-14.—"Ireland was as yet [in the 9th century] a more tempting prey for the pirates than even Gaul. It was at the monasteries that these earlier raids were mainly aimed; and nowhere were the monastic houses so many and so rich. It was in these retreats indeed, sheltered as men deemed by their holiness from the greed of the spoiler, that the whole wealth of the country was stored; and the goldwork and jewelry of their shrines, their precious chalices, the silver-bound horn which king or noble dedicated at their altars, the curiously-wrought covering of their mass-books, the hoard of their treasure-chests, fired the imagination of the northern marauders as the treasures of the Incas fired that of the soldiers of Spain. News spread fast up dale and fiord how wealth such as men never dreamed of was heaped up in houses guarded only by priests and shavelings who dared not draw sword. The Vikings had long been drawing closer to this tempting prey. From the coast of Norway a sail of twenty-four hours with a fair wind brings the sailor in sight of the Shetlands; Shetlands and Orkneys furnished a base for the advance of the pirates along the western shores of Britain, where they found a land like their own in the dales and lochs of Ross and Argyll, and where the names of Caithness and Sutherland tell of their conquest and settlement on the mainland; while the physical appearance of the people still records their colonization of the Hebrides. Names such as that of

the Orm's Head mark their entrance at last into the Irish Channel."—J. R. Green, *The Conquest of England*, ch. 2.—"The 9th century was the period of Danish plunder, and of settlement along the coasts and in convenient places for purposes of plunder. Towards the latter end of this century the Irish in Ireland, like the English in England, succeeded in driving out the enemy, and there was peace for forty years. Then came the Danes again, but bent more definitely than before on permanent settlement; and their most notable work was the establishment of the Danish kingdom of Dublin, with its centre at one of their old haunts, Ath Cliath on the Liffey, where the city of Dublin was built by them. The establishment of this kingdom dates from the year 919, and its extent may be traced to-day as continuous with the diocese of Dublin, extending from Holmpatrick and Skerries on the north, to Arklow and Wicklow on the south, and inland no farther than seven or eight miles to Leixlip. Until quite recently this was also the district over which extended the jurisdiction of the Lord Mayor of Dublin as Admiral of the Port of Dublin. On College Green used to be held the assembly of the freemen of the kingdom of Dublin, while the chiefs took their seats on the steep hill that once stood where St. Andrew's Church now stands, opposite to 'the old house on College Green,' which is so dear to the national aspirations of the modern Irishmen. There the Danes held their parliaments, agreeing on laws, consenting to judgments and contracts, feasting and making merry, just as the old Irish held their parliaments at Tara, Carman, Armagh, and elsewhere. Nor was Dublin the only Danish city. Limerick, Cork, Waterford, Wexford, all became the centres of petty Danish kingdoms, active in commerce, skilful for those times, in domestic architecture, and with political and legislative ideas identical in their essence with those of the people among whom they settled. In the course of the 10th century the Danes nominally became, for the most part, converts to Christianity. But it appears that they derived their Christianity mainly from English sources; and when they began to organize their Church, they did so after the Roman manner, and in connection with the see of Canterbury. It was not, however, till after the wars of Brian Boru that Danish Christianity became either very real or at all organized."—S. Bryant, *Celtic Ireland*, ch. 5.

A. D. 1014.—The Battle of Clontarf and the great defeat of the Danes.—By a revolution which occurred in the year 1000, Malachy II. of the dynasty which had reigned long at Tara, was deposed from the chief sovereignty, and Brian Boromh or Boru, of the royal family of Munster, who had fought his way up to masterful power, became the Ardrioh or over-king of Ireland. In 1014 Brian was called upon to face a great combination which the Danes of Dublin had effected with their fellow Northmen, including those of Denmark, Norway, Scotland and all the isles. It was the Danish intention now to accomplish completely the conquest of Ireland and bring their long struggle with its Celtic inhabitants to an effectual close. King Brian and his

countrymen made equal exertions on their side to meet the attack, and the great battle of Clontarf, fought on Good Friday of the year 1014, gave them a decisive victory. "Clontarf, the lawn or meadow of bulls, stretches along the crescent-shaped north strand of Dublin harbor, from the ancient salmon weir at Ballyboght bridge, towards the promontory of Howth. Both horns of the crescent were held by the enemy, and communicated with his ships; the inland point terminating in the roofs of Dublin, and the seaward marked by the lion-like head of Howth. The meadow land between sloped gently upward and inward from the beach, and for the myriad duels which formed the ancient battle, no field could present less positive vantage ground to combatants on either side. The invading force had possession of both wings, so that Brian's army, which had first encamped at Kilmainham, must have crossed the Liffey higher up, and marched round by the present Drumcondra in order to reach the appointed field. The day seems to have been decided on by formal challenge. . . . The forces on both sides could not have fallen short of 20,000 men. . . . The utmost fury was displayed on all sides. . . . Hardly a nobly born man escaped, or sought to escape. The ten hundred in armor, and 3,000 others of the enemy, with about an equal number of the men of Ireland, lay dead upon the field. One division of the enemy were, towards sunset, retreating to their ships, when Brodar the Viking, perceiving the tent of Brian, standing apart, without a guard, and the aged king on his knees before the Crucifix, rushed in, cut him down with a single blow, and then continued his flight. . . . The deceased hero took his place at once in history, national and foreign. . . . The fame of the event went out through all nations. The chronicles of Wales, of Scotland, and of Man; the annals of Ademar and Marianus; the Sagas of Denmark and the Isles, all record the event. . . . 'Brian's battle,' as it is called in the Sagas, was, in short, such a defeat as prevented any general northern combination for the subsequent invasion of Ireland. Not that the country was entirely free from their attacks till the end of the 11th century; but, from the day of Clontarf forward, the long cherished Northern idea of a conquest of Ireland seems to have been gloomily abandoned by that indomitable people."—T. D'Arcy McGee, *Popular Hist. of Ireland*, bk. 2, ch. 6 (v. 1).

ALSO IN: T. Moore, *Hist. of Ireland*, ch. 21 (v. 2).—See, also, NORMANS.—NORTHMEN: 10TH-13TH CENTURIES.

12th Century.—The great tribes and kingdoms and the ruling families.—"Ireland was now [immediately before Strongbow's conquest] divided into four confederations of tribes. The O'Neils held Ulidia, which is now called Ulster; the O'Connors Conacia, or Connaught; the O'Briens and the McCarthys Mononia, or Munster; and the Macmurroughs Lagenia, or Leinster—all under the paramount but often-disputed rule of a branch of the Ulster O'Neils. The royal demesne of Meath, the appanage of the Ulster family, which included Westmeath, Longford, and a part of King's County, was sometimes counted a fifth kingdom. In the wild north, O'Neil, O'Donnel, O'Kane, O'Hara, O'Sheel, O'Carrol, were mighty names. On the northernmost peninsula, where the Atlantic runs into

Lough Foyle and Lough Swilly. O'Dogherty reigned supreme. In Connaught, O'Rourke, O'Reilly, O'Kelly, O'Flaherty, O'Malley, O'Dowd, were lords. In Meath and Leinster, MacGeoghegan, O'Farrell, O'Connor, O'Moore, O'Brennan, Macmurrough, ruled. In Munster, by the western shore, MacCarthy More held sway. MacCarthy Reagh swayed the south, by the pleasant waters of Cork Bay. O'Sullivan Beare was lord of the fair promontory between Bantry Bay and Kenmare River. O'Mahony reigned by roaring Water Bay. O'Donoghue was chieftain by the haunted Killarney Lakes. MacMahon ruled north of the Shannon. O'Loglin looked on Galway Bay. All Ireland, with the exception of a few seaport towns where the Danes had settled, was in the hands of Irish chiefs of old descent and famous lineage. They quarrelled amongst themselves as readily and as fiercely as if they had been the heads of so many Greek states. The Danes had been their Persians; their Romans were now to come."—J. H. McCarthy, *Outline of Irish History*, ch. 3.

A. D. 1169-1175.—The Anglo-Norman conquest.—"The conquest of Ireland is among the most important episodes in the reign of Henry II. . . . There were reasons, besides the mere lust of conquest, why an English king should desire to reduce Ireland. It had given harbours and recruits to the Northmen on their expeditions; Irish soldiers had fought at Brunanbeorh [or Brunnanburgh] against Athelstane; English exiles, like the sons of Harold, repeatedly fled to the island, and awaited the opportunity of reprisals upon their own government. Irish pirates infested the English coasts, and carried off prisoners, whom they sold as slaves. Accordingly, William the Conqueror had meditated subjugating Ireland, if he lived two years longer; William Rufus once declared, as he stood on the coast of Wales, that he would bridge St. George's Channel with a fleet of ships. But it was reserved for John of Salisbury to obtain from his intimate friend, the English pope, Adrian IV., a grant of Ireland to the English crown [by the Bull 'Laudabiliter'] as a hereditary fief (A. D. 1154). . . . Nevertheless, the difficulty of invading Ireland seemed greater than any profit likely to result from it. The king's council opposed the enterprise; and for some years the project was suffered to sleep. But the wretched disorders of Irish politics invited the invader." Diarmaid MacMurchad, king of Leinster, having been driven from his dominions, "repaired to the court of Henry II. in Aquitaine. The offer to hold Leinster, if Henry would reinstate him, as an English fief, procured Diarmaid free quarters in Bristol, to which he speedily returned, and letters patent authorizing any English subject to assist him. Diarmaid published these, and promised large rewards in land to those who would help him to win back his kingdom. The most powerful ally whom Diarmaid's offers attracted was Richard de Clare, surnamed Strongbow, earl of Pembroke, and distant cousin to the king. . . . Three other adventurers were enlisted. Two of them, Robert Fitz-Stephen and Maurice Fitz-Gerald, were sons, by different fathers, of Nest, a Welsh princess; the third was Maurice de Prendergast." In May, 1169, Fitz-Stephen, with a small following, crossed the channel and captured Wexford. Some other successes soon enabled Diarmaid to

make peace with his enemies and recover his kingdom, even before Strongbow's expedition had left Wales. "Diarmaid was reinstated, and English subjects had no authority to carry on war on their own account in Ireland. Strongbow accordingly went to Normandy, and asked permission to push the advantages gained. Obtaining only an ambiguous answer from the king, he determined to consider it in his favour, and went back into Wales to prepare an expedition. In May, A. D. 1170, he sent over Raymond le Gros, Fitz-Stephen's half nephew, as his precursor." Raymond defeated the Irish with great slaughter, in a battle near Waterford, and savagely murdered seventy prisoners. "In August, A. D. 1170, as Strongbow was preparing to embark, he received an explicit order from the king not to proceed. Quietly disregarding it, he crossed with a little army of 1,200 men, out of whom 200 were knights. The storm of Waterford was his first exploit; and it illustrates the Irish architecture of the times, that the city walls were trenched by cutting away the wooden props of a house that was built into them. The frightful carnage of the storm was succeeded by the earl's marriage with Eva [daughter of King Diarmaid], who brought a kingdom as her dower. Then the united forces marched upon Dublin." The Danish city was treacherously stormed in the midst of a negotiation, and "the inhabitants experienced the worst miseries of the conquered. Hasculf [the Danish or Norse governor], and Asgall, king of the Northmen, escaped on board some small vessels to their countrymen in the Orkneys." The next year Hasculf reappeared with 60 ships from the Orkneys and Norway and laid siege to Dublin. He was defeated, taken prisoner and killed; but another fleet soon arrived and Dublin was again under siege. Reduced to a desperate strait, the small garrison sallied and routed the besiegers; but meantime Strongbow had lost ground elsewhere and Dublin and Waterford were the only possessions he retained. The anger of King Henry at his disobedience caused many of his followers to desert him, and he soon found it necessary to make peace with his offended sovereign. Crossing over to England, he succeeded in winning the royal pardon, and Henry returned to Ireland with him, to assist in the completing of the conquest. They were accompanied by a fleet of 400 ships and some 4,000 men. The appearance of the king was followed by a general submission of the Irish princes, and he made a royal progress to Cashel, where, in 1172, a synod was held to effect the Church reforms which were, ostensibly, the chief object of the conquest. "The court held at Lismore to establish order among the English settlers is better evidence than any synod of the real objects of the conquest. The country was partially distributed among Norman nobles; but as the English conquest of Ireland, more rapid than the Norman of England, had been effected by fewer men, and was more insecure, the changes in the property and laws of the nation were proportionately smaller. Meath, as the appanage of royalty, of course accrued to the English crown, and Henry assigned the whole of it to Hugh de Lacy, whom he made justiciary of the realm and governor of Dublin. The object of this enormous grant, no doubt, was to balance Strongbow's power. The families of Desmond,

Ormond, and Vernon received other estates. But the number of those invested was small. . . . The slightness of the change, no doubt, mainly contributed to the readiness with which the supremacy of the English crown was accepted. In April, A. D. 1172, Henry was able to return to England, leaving only Ulster behind him nominally unsubdued. A series of petty wars between Irish chiefs and Norman nobles soon broke out. The precarious nature of the English dominion became manifest; and Henry was forced to publish the papal grant of Ireland, which he had hitherto suppressed. At last, in A. D. 1175, Roderic O'Connor [king of Connaught, and previously recognized over-king of Ireland] made a treaty with the English crown, and agreed to render homage and submission, and a tribute of every tenth hide, in return for royal rights in his own kingdom of Connaught. At the same time, the limits of the English pale, as it was afterwards called, were defined. This district, which was immediately subject to the king of England and his barons, comprised Dublin with its appurtenances, Meath, Leinster, and the country from Waterford to Dungarvon. . . . From the English point of view, the kings of England were henceforth lords-paramount of Ireland, with the fee of the soil vested in them, and all Irish princes in future were no more than tenants-in-chief. From the Irish point of view, the English kings were nothing more than military suzerains in the districts outside the pale." —C. H. Pearson, *Hist. of Eng. during the Early and Middle Ages*, v. 1, ch. 30.

13th-14th Centuries.—Under the Anglo-Norman conquerors.—"The feudal system as established in Ireland differed in important respects from that existing in England. It is usual for Irish writers to attribute much of the sufferings of Ireland to the misgovernment of England and the introduction of feudalism, whereas most of these evils may be referred rather to English non-government and to the peculiar anomalies of the Irish feudal system. The feudal system as introduced into Ireland, like most other institutions imported from England, was altered in such a manner as to retain all its evils, and lose all its advantages. The Crown in Ireland possessed no power of controlling its vassals. . . . In Ireland there were no manor or valuable estates that the Crown could appropriate—the entire country had to be conquered; and as the Crown did not assist in the conquest, it received no part of the spoils. Thus we find the Crown had absolutely no demesnes of its own, and, being deprived of any military force of its own, it had to rely upon such of the great feudal vassals as might remain loyal for the purpose of crushing those who might be in rebellion. The inevitable result of this policy was to kindle a civil war and excite personal feuds in the attempt to maintain order. . . . We have thus a feudal system, in which the Crown is powerless to fulfil its duties, yet active in preventing the greater nobles from exercising that influence which might have secured a reasonable degree of order. The whole energy of the nobles was

turned away from government to war; and lest they should become local potentates, they were allowed to degenerate into local tyrants. But what, meanwhile, had become of the Irish nation? As the feudal system ignored their existence, we have permitted them to fall out of our view; but they still existed, and still were politically independent. The invaders had occupied the flat country, suitable for the operation of their forces, and the original inhabitants had retired into either the mountainous districts, impassable to cavalry, or into districts protected by the bogs, and difficult of access; nay, even in some parts of the island, where the Normans were not in force, they had re-occupied large portions of the open country. They did not retire as disorganised fugitives, but the tribes retreated, keeping their social organisation unbroken; and, although removed from their original habitations, still preserved their social identity. The remarkable point in the conquest was, that the Celtic population was not driven back upon any one portion of the kingdom, but remained as it was, interpolated among the new arrivals. . . . The Celtic population possessed no definite legal position, filled no place in the feudal hierarchy, and was in the eyes of the English Government hostile and alien; the only exception to this was the case of the O'Briens, who, though not actually feudal vassals, had their estates secured by a charter, and five Irish families, through some unknown reason, were considered as the king's men and entitled to his protection; these were known as the five bloods, who enjoyed the law of England to the extent of the privilege to sue in the king's courts, viz., O'Neill, O'Molaghlín, O'Connor, O'Brien, and M'Murrough. . . . The Irish in Ireland were treated by the king's courts in Ireland as an alien and hostile nation; an Irishman out of the king's peace could not bring an action against an Englishman. . . . But, though legally ignored, the Irish tribes could not be politically disregarded. The English Government used their assistance to repress the rebellions of insurgent vassals. . . . They were called on to furnish assistance to the English armies, and on many occasions we find their chiefs summoned by writ of Parliament, as if feudal vassals; but the mode in which they were treated depended upon the immediate objects and want of the English Government, and the general course of conduct pursued towards them was such as has been previously stated. . . . We thus find the English and Irish races hopelessly at variance, and it would seem that one or other must have been crushed out in the contest; but such was not the result; they both survived, and, contrary to reasonable expectations, the Irish exhibited the greater vitality. The expulsion of the English colony was an effort beyond the power of the disunited Irish tribes; for in the darkest hours of the English settlement the power of England was ready, by some sudden effort, to reassert the English supremacy. But why did the Anglo-Normans wholly fail to subdue the Irish? . . . 1. The large extent comprised in the grants made to the first colonists led to a dispersion of the Norman nobles over the more fertile portions of the country. The English colony never formed one compact body capable of combined action. . . . 2. The military equipment of the Normans, and their mode of carrying on war, rendered their

forces wholly inefficient, when, leaving the flat country, they attempted to penetrate the fastnesses of the native tribes. . . . 3. From the absence of any central government, civil wars continually arose between the several Norman lords; thus the military power of the colonists was frittered away in dissensions. . . . 4. The English Government continually called upon the Irish barons for aids and military service, to be employed in wars elsewhere than in Ireland. . . . 5. Many of the estates of the Norman nobles descended to heiresses who married Englishmen already possessing estates in England; hence arose absenteeism. . . . 6. Even the lords who resided constantly upon their Irish estates gradually lost their Norman habits, and tended to assimilate themselves to the manners, and to adopt the language, of the Irish."—A. G. Riehey, *Short Hist. of the Irish People*, ch. 8.

ALSO IN: P. W. Joyce, *Short Hist. of Ireland*, pt. 3.—See, also, PALATINE, THE IRISH COUNTIES; and GERALDINES.

The Celticizing of the Anglo-Norman conquerors.—"Prior to experience, it would have been equally reasonable to expect that the modern Englishman would adopt the habits of the Hindoo or the Mohican, as that the fiery knights of Normandy would have stooped to imitate a race whom they despised as slaves; that they would have flung away their very knightly names to assume a barbarous equivalent [the De Burghs became Bourkes or Burkes, the M'Sweenies had been Veres in England, and the Munster Geraldines merged their family name in that of Desmond.—Foot-note]; and would so utterly have cast aside the commanding features of their Northern extraction, that their children's children could be distinguished neither in soul nor body, neither in look, in dress, in language, nor in disposition, from the Celts whom they had subdued. Such, however, was the extraordinary fact. The Irish who had been conquered in the field revenged their defeat on the minds and hearts of their conquerors; and in yielding, yielded only to fling over their new masters the subtle spell of the Celtic disposition. In vain the government attempted to stem the evil. Statute was passed after statute forbidding the 'Englishry' of Ireland to use the Irish language, or intermarry with Irish families, or copy Irish habits. Penalties were multiplied on penalties; fines, forfeitures, and at last death itself, were threatened for such offences. But all in vain. The stealthy evil crept on irresistibly. Fresh colonists were sent over to restore the system, but only for themselves or their children to be swept into the stream; and from the century which succeeded the Conquest till the reign of the eighth Henry, the strange phenomenon repeated itself, generation after generation, baffling the wisdom of statesmen, and paralysing every effort at a remedy."—J. A. Froude, *History of England*, ch. 8 (v. 2).

A. D. 1314-1318.—Edward Bruce's invasion.—The crushing defeat of the English by the Scotch at Bannockburn (1314) rekindled a spirit of rebellion in Ireland, and the discontented chiefs made haste to solicit aid from Scotland, offering the sovereignty of their island to Edward Bruce, brother of king Robert, if he would come to their help and conquer it. "By consent of king Robert, who was pleased to make a diversion against England upon a vulnerable point,

and not, perhaps, sorry to be rid of a restless spirit, which became impatient in the lack of employment, Edward invaded Ireland at the head of a force of 6,000 Scots. He fought many battles, and gained them all. He became master of the province of Ulster, and was solemnly crowned king of Ireland; but found himself amid his successes obliged to intreat the assistance of king Robert with fresh supplies; for the impetuous Edward, who never spared his own person, was equally reckless of exposing his followers; and his successes were misfortunes, in so far as they wasted the brave men with whose lives they were purchased. Robert Bruce led supplies to his brother's assistance, with an army which enabled him to overrun Ireland, but without gaining any permanent advantage. He threatened Dublin, and penetrated as far as Limerick in the west, but was compelled, by scarcity of provisions, to retire again into Ulster, in the spring of 1317. He shortly after returned to Scotland, leaving a part of his troops with Edward, though probably convinced that his brother was engaged in a desperate and fruitless enterprise. . . . After his brother's departure, Edward's career of ambition was closed at the battle of Dumdalk, where, October 5th, 1318, fortune at length failed a warrior who had tried her patience by so many hazards. On that fatal day he encountered, against the advice of his officers, an Anglo-Irish army ten times more numerous than his own. A strong champion among the English, named John Maupas, singling out the person of Edward, slew him, and received death at his hands. . . . A general officer of the Scots, called John Thomson, led back the remnant of the Scottish force to their own country. And thus ended the Scottish invasion of Ireland, with the loss of many brave soldiers."—Sir W. Scott, *Hist. of Scotland*, ch. 11 (v. 1).

ALSO IN: T. Moore, *Hist. of Ireland*, v. 3, ch. 36.

A. D. 1327-1367.—Oppressions of the reign of Edward III.—"Of all the legislative measures of this period the most notable was the Statute of Kilkenny, passed at a Parliament held in that town, in the last year of the decade, in the Lent session of 1367. This 'famous, or infamous,' enactment gathered up into one, and recapitulated with additional aggravations and insults, all the former oppressive, exasperating, and iniquitous ordinances by which English legislation for Ireland had hitherto been disgraced. . . . Among the earliest measures passed in the reign of Edward III. was a statute directed against absenteeism, obliging all Englishmen who were Irish proprietors either to reside on their estates or to provide soldiers to defend them. But this enactment was unproductive of good results. The O'Neills drove the colonists out of the 'liberty of Ulster,' and the English De Burghs, so far from helping to uphold English ascendancy, appropriated to themselves the entire lordship of Connaught, made common cause with the native tribes, and adopting their dress, language, and customs, became 'Hibernis ipsis Hiberniores,' threw off their allegiance to King Edward, and bade defiance to the King's authority. Thus it came to pass that before many years of this reign had elapsed more than a third part of the territories of the Pale was again in the hands of its original possessors. . . . Edward III. inherited the barbarous and iniquitous

traditions of English rule in Ireland, but he improved upon them. He ordered all his officers in that country who had Irish estates to be removed and give place to Englishmen with no Irish ties. He next declared void every grant of land in Ireland since the time of Edward II., and made new grants of the lands thus recovered to the Crown. The tendency of this monstrous measure was to create two more antagonistic parties in Ireland, destined by their bitter dissensions to bring about the result that ere long 'all the King's land in Ireland was on the point of passing away from the Crown of England,'—viz., the 'English by blood,' as the established settlers were called, and the 'English by birth,' or new grantees. Some of the chief of the former, in despair of a career, or even of a quiet life, at home, were about to bid good-bye to Ireland and seek their fortunes elsewhere, when they were arrested by a proclamation making it penal for any English subject capable of bearing arms to leave the country. . . . The 'English by blood' became more and more intimately connected and identified with the native Irish, and the 'English by birth' became more and more powerless to maintain the English ascendancy; till at last, in 1361, the King determined on sending over a viceroy of the blood royal, and appointed to the post his son Lionel, created shortly afterwards Duke of Clarence, whom he had married to Elizabeth de Burgh, daughter and representative of the last Earl of Ulster. But though Prince Lionel, on his arrival, took the precaution of forbidding any man born in Ireland to approach his camp, his position soon became so critical that the King issued writs commanding all the absentee Irish lords to hasten to Ireland to the assistance of the Prince, 'for that his very dear son and his companions in Ireland were in imminent peril.' The next step was the passing of the Statute of Kilkenny. It re-enacted the prohibition of marriage and foster-nursing, rendered obligatory the adoption of the English language and customs, forbade the national games of 'hurlings and quoitings,' and the use of the ancient Gaelic code called the *Senchus Mor*; a code by which the native brehons, or judges, of the Irish septs had decided causes among them since the time of the conversion of the race to Christianity in the fifth century."—W. Warburton, *Edward III., 4th decade, ch. 3.*

A. D. 1494.—Poynings' Laws.—During the Wars of the Roses, "if Ireland had any preference for either of the great contending parties in England, it was . . . for the House of York; and from this cause chiefly sprang the change of Henry VII.'s mode of governing the dependency which on ascending the throne he had found all but severed from his dominions. At first he had thought it best to employ the native nobility for this purpose, and had chosen for Deputy the Earl of Kildare—setting him, as the story ran, to rule all Ireland, because all Ireland could not rule him. When, however, he had time to reflect on the dangers springing from the Irish support of Simnel and Warbeck, from which he and his dynasty had escaped so narrowly, he perceived the necessity of bringing the country under a more regular government. Accordingly he sent over in 1494 (at the time when Warbeck was pre-

paring for his descent on England) Sir Edward Poynings as Lord Deputy, a statesman and commander well experienced in the most important affairs of the time."—C. E. Moberly, *The Early Tudors, ch. 6.*—After some military operations, which he found to be beset with treacheries and difficulties, the new Lord Deputy held a Parliament at Drogheda—"perhaps the most memorable that was ever held in Ireland, as certainly no other Parliament in that country made laws which endured so long as two which were then enacted, and were known for centuries afterwards as the 'Poynings Acts.' By the first of these it was ordained that no Parliament should be held in Ireland in future until the king's Council in England had approved not only of its being summoned, but also of the Acts which the Lieutenant and Council of Ireland proposed to pass in it. By the second the laws enacted before that time in England were extended to Ireland also. Thus the Irish legislature was made entirely dependent upon England. The Irish Parliament had no power to originate anything, but was only free to accept or (if they were very bold) to reject measures drawn up by the Irish Council and approved already by the king and his Council in England before they were submitted to discussion. Little as this looks like parliamentary government, such was the state of subjection in which the Irish Parliament remained by virtue of this law for nearly three centuries later. Almost the whole time, that is to say, that Ireland had a separate Parliament at all it remained in this manner restricted in its action by the legislation of Sir Edward Poynings. . . . It should be remembered, however, that Henry VII. merely sought to do in Ireland what there is every reason to suppose he practically did in England. Legislation was not at this time considered to be the chief business of a Parliament."—J. Gairdner, *Henry the Seventh, ch. 8.*

A. D. 1515.—The English Pale and the Clans and Chiefs beyond it.—"The events on which we are about to enter require for their understanding a sketch of the position of the various chiefs, as they were at this time scattered over the island. The English pale, originally comprising 'the four shires,' as they were called, of Dublin, Kildare, Meath, and Uriel or Louth, had been shorn down to half its old dimensions. The line extended from Dundalk to Ardee; from Ardee by Castletown to Kells; thence through Athboy and Trim to the Castle of Maynooth; from Maynooth it crossed to Claine upon the Liffey, and then followed up the line of the river to Ballimore Eustace, from which place it skirted back at the rear of the Wicklow and Dublin mountains to the forts at Dalkey, seven miles south of Dublin. This narrow strip alone, some fifty miles long and twenty broad, was in any sense English. Beyond the borders the common law of England was of no authority; the king's writ was but a strip of parchment; and the country was parcelled among a multitude of independent chiefs, who acknowledged no sovereignty but that of strength, who levied tribute on the inhabitants of the pale as a reward for a nominal protection of their rights, and as a

compensation for abstaining from the plunder of their farms. . . . These chiefs, with their dependent clans, were distributed over the four provinces in the following order. The Geraldines, the most powerful of the remaining Normans, were divided into two branches. The Geraldines of the south, under the Earls of Desmond, held Limerick, Cork, and Kerry; the Geraldines of Leinster lay along the frontiers of the English pale; and the heads of the house, the Earls of Kildare, were the feudal superiors of the greater portion of the English counties. To the Butlers, Earls of Ormond and Ossory, belonged Kilkenny, Carlow, and Tipperary. The De Burghs, or Bourkes, as they called themselves, were scattered over Galway, Roscommon, and the south of Sligo, occupying the broad plains which lie between the Shannon and the mountains of Connemara and Mayo. This was the relative position into which these clans had settled at the Conquest, and it had been maintained with little variation. The north, which had fallen to the Lacies and the De Courcies, had been wholly recovered by the Irish. The Lacies had become extinct. The De Courcies, once Earls of Ulster, had migrated to the south, and were reduced to the petty fief of Kinsale, which they held under the Desmonds. The Celtic chieftains had returned from the mountains to which they had been driven, bringing back with them, more intensely than ever, the Irish habits and traditions. . . . The O'Neils and O'Donnells had spread down over Ulster to the frontiers of the pale. The O'Connors and O'Carrolls had recrossed the Shannon and pushed forwards into Kildare; the O'Connor Don was established in a castle near Portarlinton, said to be one of the strongest in Ireland; and the O'Carrolls had seized Leap, an ancient Danish fortress, surrounded by bog and forest, a few miles from Parsonstown. O'Brien of Inchiquin, Prince—as he styled himself—of Thomond, no longer contented with his principality of Clare, had thrown a bridge across the Shannon five miles above Limerick, and was thus enabled to enter Munster at his pleasure and spread his authority towards the south; while the McCarties and O'Sullivans, in Cork and Kerry, were only not dangerous to the Earls of Desmond, because the Desmonds were more Irish than themselves, and were accepted as their natural chiefs. In Tipperary and Kilkenny only the Celtic reaction was held in check. The Earls of Ormond, although they were obliged themselves to live as Irish chieftains, and to govern by the Irish law, yet . . . remained true to their allegiance, and maintained the English authority as far as their power extended. . . . Wexford, Wicklow, and the mountains of Dublin, were occupied by the Highland tribes of O'Bryne and O'Toole, who, in their wild glens and dangerous gorges, defied attempts to conquer them, and who were able, at all times, issuing down out of the passes of the hills, to cut off communication with the pale. Thus the Butlers had no means of reaching Dublin except through the county of Kildare, the home of their hereditary rivals and foes. This is a general account of the situation of the various parties in Ireland at the beginning of the 16th century. I have spoken only of the leading families. . . . 'There be sixty counties, called regions, in Ireland,' says the report of 1515, 'inhabited with the king's Irish enemies.'—J. A.

Froude, *Hist. of Eng.*, ch. 8 (p. 2).—See, also, PALE, THE ENGLISH.

A. D. 1535-1553.—The reconquest under Henry VIII. and the fall of the Geraldines.—The political pacification and the religious alienation.—“To Henry VIII. the policy which had been pursued by his father was utterly hateful. His purpose was to rule in Ireland as thoroughly and effectively as he ruled in England. . . . The Geraldines, who had been suffered under the preceding reign to govern Ireland in the name of the Crown, were quick to discover that the Crown would no longer stoop to be their tool. They resolved to frighten England again into a conviction of its helplessness; and the rising of Lord Thomas Fitzgerald followed the usual fashion of Irish revolts. A murder of the Archbishop of Dublin, a capture of the city, a repulse before its castle, a harrying of the Pale, ended in a sudden disappearance of the rebels among the bogs and forests of the border on the advance of the English forces. . . . Unluckily for the Geraldines, Henry had resolved to take Ireland seriously in hand, and he had Cromwell [Sir Thomas] to execute his will. Skeffington, the new Lord Deputy, brought with him a train of artillery, which worked a startling change in the political aspect of the island. The castles which had hitherto sheltered rebellion were battered into ruins. . . . Not only was the power of the great Norman house which had towered over Ireland utterly broken, but only a single boy was left to preserve its name. With the fall of the Geraldines Ireland felt itself in a master's grasp. . . . In seven years, partly through the vigour of Skeffington's successor, Lord Leonard Grey, and still more through the resolute will of Henry and Cromwell, the power of the Crown, which had been limited to the walls of Dublin, was acknowledged over the length and breadth of Ireland. . . . Chieftain after chieftain was won over to the acceptance of the indenture which guaranteed him in the possession of his lands, and left his authority over his tribesmen untouched, on conditions of a pledge of loyalty, of abstinence from illegal wars and exactions on his fellow-subjects, and of rendering a fixed tribute and service in war-time to the Crown. . . . [This] firm and conciliatory policy must in the end have won, but for the fatal blunder which plunged Ireland into religious strife at the moment when her civil strife seemed about to come to an end. . . . In Ireland the spirit of the Reformation never existed among the people at all. They accepted the legislative measures passed in the English Parliament without any dream of theological consequences, or of any change in the doctrine or ceremonies of the Church. . . . The mission of Archbishop Browne ‘for the plucking-down of idols and extinguishing of idolatry’ was the first step in the long effort of the English Government to force a new faith on a people who to a man clung passionately to their old religion. Browne's attempts at ‘tuning the pulpits’ were met by a sullen and significant opposition. . . . Protestantism had failed to wrest a single Irishman from his older convictions, but it succeeded in uniting all Ireland against the Crown. . . . The population within the Pale and without it became one, ‘not as the Irish nation,’ it has been acutely said, ‘but as Catholics.’ A new sense of national identity was found in the identity of religion.”

A. D. 1559-1603.—The wars of Shane O'Neil and Hugh O'Neil, Earls of Tyrone.—The League of the Geraldines and the Ulster Confederacy.—“The Reformation begun under Henry VIII. was carried out with pitiless determination under Edward VI., and was met by the Catholics with unflinching opposition. Under Mary there was a period of respite, but the strife was renewed with greater fierceness in the succeeding reign. As authentic Irish history begins with St. Patrick, so with Elizabeth modern Irish history may be said to begin. . . . At her accession, Elizabeth was too much occupied with foreign complications to pay much heed to Ireland. Trouble first began in a conflict between the feudal laws and the old Irish law of Tanistry. Con O'Neil, Earl of Tyrone, had taken his title from Henry VIII., subject to the English law of succession; but when Con died, the clan O'Neil, disregarding the English principle of hereditary succession, chose Shane O'Neil, an illegitimate son of Con, and the hero of his Sept, to be The O'Neil. Shane O'Neil at once put himself forward as the champion of Irish liberty, the supporter of the Irish right to rule themselves in their own way and pay no heed to England. Under the pretence of governing the country, Elizabeth overran it with a soldiery who, as even Mr. Froude acknowledges, lived almost universally on plunder, and were little better than bandits. The time was an appropriate one for a champion of Irish rights. Shane O'Neil boldly stood out as sovereign of Ulster, and pitted himself against Elizabeth. . . . Shane fought bravely against his fate, but he was defeated [A. D. 1567], put to flight, and murdered by his enemies, the Scots of Antrim, in whose strongholds he madly sought refuge. His head was struck off, and sent to adorn the walls of Dublin Castle. His lands were declared forfeit, and his vassals vassals of the Crown. English soldiers of fortune were given grants from Shane's escheated territory, but when they attempted to settle they were killed by the O'Neils. Others came in their place, under Walter Devereux, Earl of Essex, and did their best to simplify the process of colonization by exterminating the O'Neils, men, women, and children, wherever they could be got at. After two years of struggle Essex was compelled to abandon his settlement. But other colonizers were not disheartened. Some West of England gentlemen, under Peter Carew, seized on Cork, Limerick and Kerry, and sought to hold them by extirpating the obnoxious natives. Against these English inroads the great Geraldine League was formed. In the reign of Mary, that boy of twelve whom Henry VIII. had not been able to include in the general doom of his house had been allowed to return to Ireland, and to resume his ancestral honours. Once more the Geraldines were a great and powerful family in Ireland.” Defeated in their first rising, “the Geraldines and their companion chiefs got encouragement in Rome and pledges from Spain, and they rose again under the Earl of Desmond and Sir James Fitzmaurice Fitzgerald. At first they had some successes. They had many wrongs to avenge.

. . . Sir Francis Cosby, the Queen's representative in Leix and Offaly, had conceived and executed the idea of preventing any further possible rising of the chiefs in those districts by summoning them and their kinsmen to a great banquet in the fort of Mullaghmast, and there massacring them all. Out of 400 guests, only one man, a Lalor, escaped from that feast of blood. . . . With such memories in their minds, the tribes rose in all directions to the Desmond call. . . . Elizabeth sent over more troops to Ireland under the new Lord Deputy, Sir William Pelham, who had with him as ally Ormonde, the head of the house of Butler, hereditary foes of the Geraldines, and easily induced to act against them. Pelham and Ormonde cut their way over Munster, reducing the province by unexampled ferocity. Ormonde boasted that he had put to death nearly 6,000 disaffected persons. Just at this moment some of the chiefs of the Pale rose, and rose too late. They gained one victory over Lord Grey de Wilton in the pass of Glenmalur [August, 1580]. . . . Grey immediately abandoned the Pale to the insurgents, and turned to Smerwick [A. D. 1580], where some 800 Spanish and Italian soldiers had just landed, too late to be of any service to the rebellion, and had occupied the dismantled fort. It was at once blockaded by sea and by land. In Grey's army Sir Walter Raleigh and Edmund Spenser both held commands. Smerwick surrendered at discretion, and the prisoners were killed by Raleigh and his men in cold blood. Flushed by this success, Grey returned to the Pale and carried all before him. The Geraldines were disheartened, and were defeated wherever they made a stand. . . . Munster was so vigorously laid waste that Mr. Froude declares that ‘the lowing of a cow or the sound of a ploughboy's whistle was not to be heard from Valentia to the Rock of Cashel.’ Holinshed declares the traveller would not meet any man, woman, or child, saving in towns or cities, and would not see any beast; and Spenser gives a melancholy picture of the misery of the inhabitants, ‘as that any stony heart would rue the same.’ . . . The next step was to confiscate the estates of the rebellious chieftains. . . . The estates of Desmond and some 140 of his followers came to the Crown. The land was then distributed at the cheapest rate in large tracts to English nobles and gentlemen adventurers, who were pledged to colonize it with English labourers and tradesmen. But of these labourers and tradesmen not many came over, and those who did soon returned, tired of struggling for their foothold with the dispossessed Irish.” During all this Geraldine or Desmond rebellion Ulster had remained quiet; but in 1594 it began to show signs of disturbance. “Hugh O'Neil, the grandson of that Con O'Neil whom Henry VIII. had made Earl of Tyrone, had been brought up at the English court, and confirmed in the lordship of Tyrone by the English Government. In the brilliant court of Elizabeth the young Irish chief was distinguished for his gifts of mind and body. When he came of age he was allowed to return to Ireland to his earldom. Once within his own country, he assumed his ancestral title of The O'Neil, and revived all the customs of independent Irish chieftains. For long enough he took no part in any plots or movements against the Crown; but many things, the ties of friendship and of love, combined to drive him into rebellion.

. . . Tyrone in the end consented to give the powerful support of his name and his arms to a skilfully planned confederation of the tribes. On all sides the Irish chiefs entered into the insurrection. O'Neil was certainly the most formidable Irish leader the English had yet encountered. . . . Victory followed victory [that of the Yellow Ford, 1598, being the most important]. In a little while all Ireland, with the exception of Dublin and a few garrison towns, was in the hands of the rebels. Essex, and the largest army ever sent to Ireland, crossed the Channel to cope with him; but Essex made no serious move, and after an interview with Tyrone, in which he promised more than he could perform, he returned to England to his death. His place was taken by Lord Mountjoy, who, for all his love of angling and of Elizabethan 'play-books,' was a stronger man. Tyrone met him, was defeated [at Kinsale, 1601]. From that hour the rebellion was over. . . . At last Tyrone was compelled to come to terms. He surrendered his estates, renounced all claim to the title of The O'Neil, abjured alliance with all foreign powers, and promised to introduce English laws and customs into Tyrone. In return he received a free pardon and a re-grant of his title and lands by letters patent. Rory O'Donnell, Red Hugh's brother, also submitted, and was allowed to retain the title of Earl of Tyrconnel. Elizabeth was already dead, and the son of Mary Stuart [James I.] was King of England when these terms were made; but they were not destined to do much good."—J. H. McCarthy, *Outline of Irish Hist.*, ch. 4.

ALSO IN: T. D. McGee, *Popular Hist. of Ireland*, bk. 8, ch. 3-11 (v. 1-2).—M. Haverty, *Hist. of Ireland*, ch. 32-35.—R. Bagwell, *Ireland under the Tudors*, v. 2.—T. Leland, *Hist. of Ireland*, bk. 4, ch. 1-5 (v. 2).

A. D. 1607-1611.—The flight of the Earls and the Plantation of Ulster.—"With the submission of the Earl of Tyrone terminated the struggle between the Tudor princes and the native Celtic tribes. No chieftain henceforward claimed to rule his district in independence of the Crown of England. The Celtic land tenure, the Brehon laws, the language, customs, and traditions of the defeated race were doomed to gradual yet certain extinction. . . . Before Elizabeth was laid in the grave, the object for which during so many years she had striven was thus at length accomplished; . . . but between the wars of the Tudors and the civil government of the Stuarts, still remain (the intermediate link, as it were, between the two) the fall of the able man who had created and so long conducted an almost national resistance, and the colonisation by English settlers of his demesnes and the adjoining parts of Ulster."—A. G. Richey, *Short Hist. of the Irish People*, ch. 20.—"Lord Bacon, with whom ideas grew plentifully, had a suggestion at the service of the new king as profitable as the 'princelie policie' which he taught his predecessor. He was of opinion that a great settlement of English husbandmen in Ireland, able to guard as well as to till the land, would help to secure the interest of the Crown. Till this was done Ireland was not effectually reduced, as Sir Edward Coke afterwards declared, 'for there was ever a back-door in the north.' The only question was where to plant them. O'Neill and Tyrconnel had proved dangerous

adversaries; they possessed a fertile territory, and as their 'loose order of inheritance' had been duly changed into 'an orderly succession,' they were quite ripe for confiscation. But they had been ostentatiously received into favour at the close of the late war, and some decent pretence for destroying them so soon was indispensable. It was found in a letter conveniently dropped in the precincts of Dublin Castle, disclosing a new conspiracy. Of a conspiracy there was not then, and has not been since discovered, any evidence worth recording. The letter was probably forged, according to the practise of the times; but where so noble a booty was to be distributed by the Crown, one can conceive how ill-timed and disloyal any doubt of their treason would have appeared at the Court of James, or of the Lord Deputy. They were proclaimed traitors, and fled to the Continent to solicit aid from the Catholic Powers. Without delay James and his counsellors set to work. The King applied to the City of London to take up the lands of the wild Irish. They were well watered, he assured them, plentifully supplied with fuel, with good store of all the necessaries for man's sustenance; and moreover yielded timber, hides, tallow, canvas, and cordage for the purposes of commerce. The Companies of Skinners, Fishmongers, Haberdashers, Vintners and the like thereupon became Absentee Proprietors, and have guzzled Irish rents in city feasts and holiday excursions to Ireland from that day to this. Six counties in Ulster were confiscated, and not merely the chiefs, but the entire population dispossessed. The fruitful plains of Armagh, the deep pastoral glens that lie between the sheltering hills of Donegal, the undulating meadow lands stretching by the noble lakes and rivers of Fermanagh, passed from the race which had possessed them since before the redemption of mankind. . . . The alluvial lands were given to English courtiers whom the Scotch king found it necessary to placate, and to Scotch partisans whom he dared not reward in England. The peasants driven out of the tribal lands to burrow in the hills or bogs were not treated according to any law known among civilised men. Under Celtic tenure the treason of the chief, if he committed treason, affected them no more than the offences of a tenant for life affect a remainder man in our modern practice. Under the feudal system they were innocent feudatories who would pass with the forfeited land to the Crown, with all their personal rights undisturbed. The method of settlement is stated with commendable simplicity by the latest historian. The 'plantators' got all the land worth their having; what was not worth their having—the barren mountains and trackless morass, which after two centuries still in many cases yield no human food—were left to those who in the language of an Act of Parliament of the period were 'natives of the realm of Irish blood, being descended from those who did inherit and possess the land.' Lest the frugality of the Celts should enable them to peacefully regain some of their possessions, it was strictly conditioned that no plantator or servitor should alienate his portion, or any part thereof, to the mere Irish. The confiscated territory amounted to two millions of acres. 'Of these a million and a half' says Mr. Froude, 'bog, forest, and mountain were restored to the Irish. The half million acres of fertile land

were settled with families of Scottish and English Protestants.' It was in this manner that the famous Plantation of Ulster was founded."—Sir C. G. Duffy, *Bird's-Eye View of Irish Hist.*, rev. ed., pp. 74-78 (or bk. 1, ch. 4, of "Young Ireland").—"The City of London had taken in hand the settlement of Derry, which was now to be rebuilt under the name of Londonderry, and to give its name to the county in which it stood, and which had hitherto been known as the county of Coleraine."—S. R. Gardiner, *Hist. of Eng.*, 1603-1642, ch. 10 (v. 1).

ALSO IN: T. D'Arcy McGee, *Popular Hist. of Ireland*, bk. 9, ch. 1 (v. 2).—J. Harrison, *The Scot in Ulster*, ch. 3.—C. P. Meehan, *Fate and Fortunes of Hugh O'Neill, Earl of Tyrone, and Rory O'Donel, Earl of Tyrconnel*.

A. D. 1625.—The Graces of Charles I.—On the accession of Charles I., "one more effort was made by the Irish gentry to persuade, or rather to bribe, the Government to allow them to remain undisturbed in the possession of their property. They offered to raise by voluntary assessment the large sum of £120,000 in three annual instalments of £40,000, on condition of obtaining certain Graces from the King. These Graces, the Irish analogue of the Petition of Rights, were of the most moderate and equitable description. The most important were that undisturbed possession of sixty years should secure a landed proprietor from all older claims on the part of the Crown, that the inhabitants of Connaught should be secured from litigation by the enrolment of their patents, and that Popish recusants should be permitted, without taking the Oath of Supremacy, to sue for livery of their estates in the Court of Arches, and to practise in the courts of law. The terms were accepted. The promise of the King was given. The Graces were transmitted by way of instruction to the Lord Deputy and Council, and the Government also engaged, as a further security to all proprietors, that their estates should be formally confirmed to them and to their heirs by the next Parliament which should be held in Ireland. The sequel forms one of the most shameful passages in the history of English government of Ireland. In distinct violation of the King's solemn promise, after the subsidies that were made on the faith of that promise had been duly obtained, without provocation or pretext or excuse, Wentworth, who now presided with stern despotism over the government of Ireland, announced the withdrawal of the two principal articles of the Graces, the limitation of Crown claims by a possession of sixty years and the legalisation of the Connaught titles."—W. E. H. Lecky, *Hist. of Eng.*, 18th Century, ch. 6 (v. 2).

A. D. 1633-1639.—Wentworth's system of "Thorough."—In the summer of 1633, Thomas Wentworth, afterwards Earl of Strafford, was appointed Lord-Lieutenant of Ireland. "It was during his tenure of office as viceroy that he attempted to establish absolutism in Ireland, in order that, by the thereby enhanced power of the monarchy, he might be enabled to turn the scale in favour of a despotic government in England. And, never at a loss in the choice of his expedients, he contended for his scheme with an energy and a recklessness characteristic of the man. In the prosecution of his ends, he treated some of the most influential English noblemen resi-

dent in Ireland with the utmost indignity, simply with the object of intimidating them, at the outset, from any further opposition. One of them, Lord Mountnorris, was even condemned to death on a charge of sedition and mutiny, merely for having made use of a disrespectful expression with reference to the lord-lieutenant, the representative of the sovereign. . . . Every longing of the Irish Protestant Church for independence was suppressed by Wentworth. According to his views, supreme authority in Church matters belonged absolutely and unconditionally to the king. He, therefore, abolished, in 1634, the 'Irish Articles,' which granted some concessions to Puritanism, and which had been introduced by Archbishop Usher in the reign of James I., and, at the same time, he united the Irish Established Church indissolubly with that of England. But above all things he considered it to be his duty to increase the army, which had hitherto been in a disorganised condition, and to put it in a state of complete efficiency; in order to do this, however, it was of the first importance to augment the revenue of the Crown, and in pursuance of this object he disdained no means. He extorted large sums of money from the Catholics by reminding them that, in case their contributions were too niggardly, there still existed laws against the Papists which could easily be put into operation again. The City of London Company, which some years before had effected the colonization of Londonderry, was suddenly called to account for not having fulfilled the stipulations contained in its charter, and condemned to pay a fine of £70,000. In the same spirit he conceived the idea of obtaining additions to the royal exchequer by a fresh settlement of Connaught; and, accordingly, he induced the Government, regardless of the engagements made some years previously at the granting of the 'graces,' to re-assert the claims it had formerly advanced to the possession of this province. And now, as in the worst days of James I., there again prevailed the old system of investigation into the validity of the titles by which the landed gentry of Connaught held their estates. Such persons as were practised in disinterring these unregistered titles were looked upon with favour, and as a means of inciting to more vigorous efforts, a premium of 20 per cent. on the receipts realized during the first year by the confiscation of property thus imperfectly registered was guaranteed to the presidents of the commission. With a cynical frankness, Wentworth declared that no money was ever so judiciously expended as this, for now the people entered into the business with as much ardour and assiduity as if it were their own private concern. . . . The collective titles of the province of Connaught were at the unlimited disposal of the lord-lieutenant; and, although, notwithstanding this result, he, at the last moment, recoiled from the final act, and shrank from ejecting the present owners, and re-settling the province, it was not from any conscientious scruples that he refrained from taking this last decisive step: to the man whose motto was 'Thorough,' such scruples were unknown. . . . Practical considerations alone . . . induced Wentworth to pause in the path upon which he had entered. Just at that time the Crown was engaged in a contest with Puritanism in Scotland, while, in England, the attempts of

Charles to make his rule absolute had produced a state of public feeling which was in the highest degree critical. . . . In view of these considerations, therefore, Strafford postponed the colonization of the western province to a more favourable season. While we turn with just abhorrence from the contemplation of the reckless and despotic acts of this remarkable man, we must not, on the other hand, fail to acknowledge that his administration has features which present a brighter aspect. . . . In the exercise of a certain toleration, dictated, it is true, only by policy, he declined to meddle directly in the religious affairs of the Catholics. His greatest merit, however, consists in having advanced the material well-being of the country. He took a lively interest in agriculture and cattle-rearing, and by causing the rude and antiquated methods of husbandry which prevailed among the Irish agriculturalists to be superseded by more modern appliances, he contributed very materially to the advancement of this branch of industry. He also largely encouraged navigation, in consequence of which the number of Irish ships increased from year to year; and although it can not be denied that he endeavoured to suppress the trade in woollen cloth, from an apprehension that it might come into dangerous competition with English manufactures, he, nevertheless, sought to compensate the Irish in other ways, and the development of the Irish linen industry in the north was essentially his work. . . . The Irish revenue annually increased, and the customs returns alone were trebled during the administration of Lord Strafford. He was, accordingly, in a position to place at the disposal of his royal master a standing army of 9,000 men. . . . It was, therefore, no idle boast, but a statement in strict accordance with the truth, which he made when writing to Archbishop Laud on 16th December, 1634: 'I can now say that the king is here as truly absolute as any sovereign in the world can be.'—R. Hassencamp, *Hist. of Ireland*, ch. 3.—'Of all the suggesters of the infamous counsels of Charles, Laud and Wentworth were the most sincere:—Laud, from the intense faith with which he looked forward to the possible supremacy of the ecclesiastical power, and to which he was bent upon going, 'thorough', through every obstacle;—Wentworth, from that strong sense, with which birth and education had perverted his genius, of the superior excellence of despotic rule. . . . The letters which passed between them partook of a more intimate character, in respect of the avowal of ulterior designs, than either of them, probably, chose to avow elsewhere. . . . Laud had to regret his position in England, contrasted with that of the Irish deputy. 'My lord,' he writes to Wentworth, speaking of the general affairs of church and state, 'to speak freely, you may easily promise more in either kind than I can perform: for, as for the church, it is so bound up in the forms of the common law, that it is not possible for me, or for any man, to do that good which he would, or is bound to do. . . . And for the state, indeed, my lord, I am for Thorough; but I see that both thick and thin stays somebody, where I conceive it should not; and it is impossible for me to go thorough alone.' . . . Every new act of despotism which struck terror into Ireland shot comfort to the heart of Laud. 'As for my marginal note,' exclaims the

archbishop, 'I see you deciphered it well, and I see you make use of it too,—do so still; throw and throw. Oh that I were where I might go so too! but I am shackled between delays and uncertainties. You have a great deal of honour here for your proceedings. Go on a God's name!' And on Wentworth went, stopping at no gratuitous quarrel that had the slightest chance of pleasing the archbishop, even to the demolishing the family tomb of the earl of Cork,—since his grace, among his select ecclesiastical researches, had discovered that the spot occupied by my lord of Cork's family monuments, was precisely that spot upon which the communion-table, to answer the purposes of heaven, ought to stand!—R. Browning, *Thomas Wentworth (Eminent British Statesmen)*, v. 2,—published under the name of John Forster).

A. D. 1641.—The Catholic rising and alleged Massacres of Protestants.—'The government which Strafford had established in Ireland fell with him, the office of viceroy was entrusted to some of the judges, and shorn of the powers which gave it authority over the whole country. The Irish army, which had been formed with so much difficulty, and maintained in spite of so much opposition, was disbanded without any attention being vouchsafed to the King's wish that it should be allowed to enter the Spanish service. . . . Under the influence of events in England, government based on prerogative, and on its connexion with the English hierarchy, as it had existed in Ireland since Elizabeth's time, fell to the ground. This revolution however might entail important results. The Irish people was Catholic; while the Protestant settlers were split into two hostile factions, and thereby the highest authority in the land, which bore a really Protestant character, was systematically weakened and almost destroyed, the thought of ridding themselves of it altogether was sure to arise in the nation. The steed, never completely broken in, felt itself suddenly free from the tight rein which hitherto it had unwillingly obeyed. . . . It was the common object of all Catholics, alike of Anglo-Saxon and of Celtic origin, to restore to the Catholic Church the possession of the goods and houses that had been taken from her, and above all to put an end to the colonies established since James I. in which Puritan tendencies prevailed. The Catholics of the old settlements were as eager for this as the natives. The idea originated in a couple of chiefs of old Irish extraction, Roger O'More and Lord Maeguire, who had been involved in Tyrone's ruin, but were connected by marriage with several English families. The first man whom O'More won over was Lord Mayo, the most powerful magnate of old English descent in Connaught, of the house of De Burgh. . . . The best military leader in the confederacy, Col. Plunkett, was a Catholic of old English origin. . . . Among the natives the most notable personage was Phelim O'Neil, who, after having been long in England, and learning Protestantism there, on his return to Ireland went back to the old faith and the old customs: he was reckoned

the rightful heir of Tyrone, and possessed unbounded popular influence. The plan for which the Catholics of both Irish and English extraction now united was a very far-reaching one. It involved making the Catholic religion altogether dominant in Ireland: even of the old nobility none but the Catholics were to be tolerated: all the lands that had been seized for the new settlements were to be given back to the previous possessors or their heirs. In each district a distinguished family was to be answerable for order, and to maintain an armed force for the purpose. They would not revolt from the King, but still would leave him no real share in the government. Two lords justices, both Catholic, one of Irish, the other of old English family, were to be at the head of the government. . . . The preparations were made in profound silence: a man could travel across the country without perceiving any stir or uneasiness. But on the appointed day, Oct. 23, the day of St. Ignatius, the insurrection everywhere broke out." Dublin was saved, by a disclosure of the plot to the government, on the evening of the 22d, by a Protestant Irishman who had gained knowledge of it. "Several other places also held out, as Londonderry and Carrickfergus, and afforded places to which the Protestants might fly. But no one can paint the rage and cruelty which was vented, far and wide over the land, upon the unarmed and defenceless. Many thousands perished: their corpses filled the land and served as food for the kites. . . . Religious abhorrence entered into a dreadful league with the fury of national hatred. The motives of the Sicilian Vespers and of the night of St. Bartholomew were united. Sir Phelim, who at once was proclaimed Lord and Master in Ulster, with the title of the native princes, as Tyrone had been, and who in his proclamations assumed the tone of a sovereign, was not at all the man to check these cruelties. . . . With all this letting loose of ancient barbarism there was still some holding back. The Scottish settlements were spared, although they were the most hated of all, for fear of incurring the hostility of the Scottish as well as of the English nation. Immediately there was a rising in the five counties of the old English Pale: the gentry of Louth, under the leadership of the sheriff, took the side of the rebels. The younger men of Meath assembled on the Boyne, and commenced hostilities against the Protestants: so completely had their religious sympathies prevailed over their patriotism."—L. Von Ranke, *Hist. of Eng., 17th Century, bk. 8, ch. 7 (v. 2)*.—"Some reference to the notorious story of the massacre of 1641 is required, not because the account of it is true and is a part of history, nor because it is false and needs refutation, but because it is a State fiction, a falsehood with a purpose, and as such deserves mention as much as the levying of troops or the passing of laws. The record of the period is not the history of a massacre, but of the deliberate invention of a massacre. . . . No word of massacre had been heard of in the first State document that referred to the so-called rebellion. The Catholic lords of the Pale would never have united their names and fortunes with those of murderers. . . . The royalists again and again urged in their treaties with their opponents that an investigation of the cruelties committed on both sides should be made, and the proposal was always absolutely refused."—W. A. O'Connor,

Hist. of the Irish People, bk. 3, ch. 1, sect. 5 (v. 2).—"There were few places of strength in Ulster which had not fallen by the end of the first week into the hands of the insurgents. Sir Phelim O'Neill already found himself at the head of some 30,000 men, as yet of course undisciplined, and but few of them efficiently armed; and it is not to be expected that such an irregular multitude, with wild passions let loose, and so many wrongs and insults to be avenged, could have been engaged in scenes of war, even so long, without committing some deeds of blood which the laws of regular warfare would not sanction. . . . Life was taken in some few instances where the act deserved the name of murder; but the cases of this nature, on the Irish side, at the commencement of the rebellion, were isolated ones; and nothing can be more unjust and false than to describe the outbreak of this war as a 'massacre'."—M. Haverty, *Hist. of Ireland, ch. 37*.—"This [Sir Wm. Petty's] estimate of 37,000 Protestants supposed to have been murdered makes no allowance for those who escaped to England and Scotland, and never returned to Ireland. It seems to me more likely that about 27,000 Protestants were murdered by the sword, gun, rope, drowning, &c., in the first three or four years of the rebellion. The evidence of the depositions, after deducting all doubtful exaggerations, leaves little doubt that the number so destroyed could hardly have been less than 25,000 at all events. But the truth is that no accurate estimate is possible. After the Portnaw massacre the Protestants, especially the Scotch, took an awful vengeance on their enemies. Henceforward one side vied in cruelty with the other."—M. Hickson, *Ireland in the 17th Century, introd., p. 163*.

A. D. 1643.—The king makes Peace with the rebels. See ENGLAND: A. D. 1643 (JUNE—SEPTEMBER).

A. D. 1645.—King Charles' treaty with the Catholics. See ENGLAND: A. D. 1645 (JUNE—DECEMBER).

A. D. 1646-1649.—The Rebels become Royalists.—"The truce [offered by King Charles to the rebels in 1643] appears to have been well observed by each party, and resulted in a treaty of peace which was signed in July, 1646, by which the Roman Catholics obtained every demand which they put forward. This peace was nevertheless at once broken, and Ormond (who had been appointed Lord Lieutenant in January, 1643) was closely besieged in Dublin by a force, headed by Cardinal Rinuccini, the Papal Nuncio, who had assumed the command of the Irish Catholics. Finding himself in so dangerous a position, Ormond, by express direction from the king, offered his submission to the English Parliament, to whom he surrendered Dublin, Drogheda, Dundalk, and such other garrisons as remained in his hands. This transaction was completed on the 25th of July, 1647, when Colonel Jones took command of Dublin for the Parliament, and was made by them Commander-in-Chief in Ireland; his total force however amounted to but 5,000 men. The war now continued with varying success, the commanders for the Parliament being, in addition to Jones, Monk in Ulster and Lord Inchiquin in Munster.

The latter in 1648 joined Ormond, who in September, upon the invitation of the Catholics, returned to Ireland, the Papal Nuncio having been driven from the country by his own party, who were alienated from him by his folly and insolence. At the end of 1648 there were therefore two parties in Ireland; the Parliamentary, which had been the English, holding Dublin and a few garrisons, and the Catholics, who, formerly rebels, were now held as Royalists, and whose new leader Ormond, on the death of Charles I., proclaimed the Prince of Wales, on the 16th of February, 1649, at Carrick, as King of England, Scotland, France, and Ireland. The English Parliament now at last resolved to put an end to disorder in Ireland, and with this object, in March, 1649, appointed Cromwell to the supreme command." Before Cromwell arrived in Ireland, however, the Irish Royalists had reduced every garrisoned place except Dublin and Londonderry, defeating Monk, who held Dundalk, but being defeated (Aug. 2) by Jones when they laid siege to the capital. Though fought at the gates of Dublin, this was called the battle of Rathmines. Ormond retreated with a loss of 4,000 killed and 2,500 prisoners.—N. L. Walford, *Parliamentary Generals of the Great Civil War*, ch. 7.

ALSO IN: T. Carte, *Life of James Duke of Ormond*, bk. 4-5 (v. 3).—D. Murphy, *Cromwell in Ireland*, ch. 1-3.

A. D. 1649-1650.—Cromwell's campaign.—The slaughter at Drogheda and Wexford.—"When Cromwell arrived in Ireland at the head of 12,000 men, he found almost the whole country under the power of the Royalists (Aug. 15th). A Parliamentary garrison in Dublin itself had only escaped a siege by surprising the enemy on the banks of the Liffey (Aug. 2nd). The general first marched against Drogheda, then called Droghdagh or Tredah, and summoned the garrison to surrender. Sir Arthur Ashton, the governor, refused; he had 3,000 of the choicest troops of the confederates and enough provisions to enable him to hold out till winter should compel the enemy to raise the siege. But within twenty-four hours the English batteries had made a breach in the wall. Oliver, after twice seeing his soldiers beaten off, led them on in person and carried the breach. A terrible massacre followed. 'Being in the heat of action I forbade them,' Cromwell wrote in his despatch to the Parliament, 'to spare any that were in arms in the town; and I think that night they put to the sword about 2,000 men.' Of these, one-half probably fell in the streets; the other half Cromwell describes as having been slain at early dawn in St. Peter's Church. This he looks upon as a judgment for their previous proceedings there. 'It is remarkable,' he writes, 'that these people at first set up the mass in some places of the town that had been monasteries; but afterwards grew so insolent that, the last Lord's day before the storm, the Protestants were thrust out of the great church called St. Peter's, and they had public mass there; and in this very place near 1,000 of them were put to the sword, fleeing thither for safety. I believe all the friars were knocked on the head promiscuously but two.' . . . Royalist accounts assert that many hundreds of women and children were slain in St. Peter's Church. It is, of course, possible that some of the townspeople, fleeing thither for

safety, lost their lives in the general massacre of the garrison. There is, however, no trustworthy witness for any lives being taken except those of soldiers and friars. Cromwell did not sanction the killing of any but those with arms in their hands, though he seems to have approved of the fate of the friars. The fanatical zeal of his letter, and the fact that he takes the full credit, or discredit, for the slaughter of the garrison, makes it improbable that he concealed anything; and this substantiated by his subsequent declaration, in which he gives this challenge:—"Give us an instance of one man, since my coming into Ireland, not in arms, massacred, destroyed, or banished, concerning the massacre or the destruction of whom justice hath not been done, or endeavoured to be done." With the enemy's troops Cromwell carried out the determined mode of warfare which he began at Drogheda. They were mostly scattered over the country, occupied in garrison duty. Before whatever town he came he demanded immediate surrender, or threatened to refuse quarter. Town after town opened its gates to this grim summons. Wexford, which refused to surrender, was stormed, and the whole garrison, 2,000 in number, put to the sword (Oct. 11th). . . . In other respects, while Cromwell's rigour and determination saved bloodshed in the end by the rapidity and completeness of his conquests, his conduct in Ireland contrasted favourably on many points with that of the Royalists there. His own soldiers, for ill-using the people contrary to regulations, were sometimes cashiered the army, sometimes hanged. When a treaty was made, he kept faithfully to its terms. Garrisons that yielded on summons were allowed either to march away with arms and baggage, or else to go abroad and enter the service of any government at peace with England. Before the war was over he had rid the country, on these terms, of some 45,000 soldiers. Taking advantage of the divisions of his enemies, he persuaded several garrisons of English soldiers to desert the cause of Charles Stuart for the Commonwealth. His conduct of the war was so successful that, during the nine months of his stay in Ireland, the forces of the Royalists were shattered, and the provinces of Leinster and Munster recovered for the Parliament. Cromwell returned to England in May, 1650, leaving his son-in-law Ireton to complete the conquest of the country. The last garrisons in Ulster and Munster surrendered during the course of the ensuing summer and autumn. Ireton crossed the Shannon and drove the Irish back into the bogs and mountain fastnesses of Connaught, their last refuge, where fighting still continued for two years after all the rest of the country had been reduced (1651-2)."—B. M. Cordery and J. S. Phillpotts, *King and Commonwealth*, ch. 12.—"No admiration for Cromwell, for his genius, courage, and earnestness—no sympathy with the cause that he upheld in England—can blind us to the truth, that the lurid light of this great crime [the massacre at Drogheda] burns still after centuries across the history of England and of Ireland; that it is one of those damning charges which the Puritan theology has yet to answer at the bar of humanity."—F. Harrison, *Oliver Cromwell*, ch. 8.—"Oliver's proceedings here [at Drogheda] have been the theme of much loud criticism, and sibylline execration; into which it is not our plan to enter

at present. . . . To those who think that a land overrun with Sanguinary Quacks can be healed by sprinkling it with rose-water, these letters must be very horrible. Terrible Surgery this; but is it Surgery and Judgment, or atrocious Murder merely? That is a question which should be asked; and answered. Oliver Cromwell did believe in God's Judgments; and did not believe in the rose-water plan of Surgery;—which, in fact, is this Editor's case too. . . . Here is a man whose word represents a thing! Not bluster this, and false jargon scattering itself to the winds: what this man speaks out of him comes to pass as a fact; speech with this man is accurately prophetic of deed. This is the first King's face poor Ireland ever saw; the first Friend's face, little as it recognises him,—poor Ireland! . . . To our Irish friends we ought to say likewise that this Garrison of Tredah consisted, in good part, of Englishmen. Perfectly certain this:—and therefore let 'the bloody hoof of the Saxon,' &c., forbear to continue itself on that matter."—T. Carlyle, *Oliver Cromwell's Letters and Speeches*, pt. 5.—"Cromwell met with little resistance: wherever he came, he held out the promise of life and liberty of conscience; . . . liberty of conscience he explained to mean liberty of internal belief, not of external worship; . . . but the rejection of the offer, though it were afterwards accepted, was punished with the blood of the officers; and, if the place were taken by force, with indiscriminate slaughter."—J. Lingard, *Hist. of England*, v. 10, ch. 5, with foot-note.

A. D. 1652.—The Kilkenny Articles.—"On 12th May, 1652, the Leinster army of the Irish surrendered on terms signed at Kilkenny, which were adopted successively by the other principal armies between that time and the September following, when the Ulster forces surrendered. By these Kilkenny articles, all except those who were guilty of the first blood were received into protection, on laying down their arms; those who should not be satisfied with the conclusions the Parliament might come to concerning the Irish nation, and should desire to transport themselves with their men to serve any foreign state in amity with the Parliament, should have liberty to treat with their agents for that purpose."—J. P. Prendergast, *The Cromwellian Settlement of Ireland*, pt. 1, sect. 2.

A. D. 1653.—The Cromwellian Settlement.—"By the term Cromwellian Settlement is to be understood the history of the dealings of the Commonwealth of England with the lands and habitations of the people of Ireland after their conquest of the country in the year 1652. . . . The officers of the army were eager to take Irish lands in lieu of their arrears, though it does not appear that the common soldiers were, who had small debentures and no capital, and no chance of founding families and leaving estates to their posterity. But the adventurers [national creditors, who had loaned money to the government for the Irish War] must be first settled with, as they had a claim to about one million of acres, to satisfy the sums advanced for putting down the rebellion on the faith of the Act of 17 Charles I. (A. D. 1642), and subsequent Acts and Ordinances,

commonly called 'The Acts of Subscription.' By these, lands for the adventurers must be first ascertained, before the rest of the country could be free for disposal by the Parliament to the army. . . . Towards the close of the year 1653, the island seemed sufficiently desolated to allow the English to occupy it. On the 26th of September in that year, the Parliament passed an Act for the new planting of Ireland with English. The government reserved for themselves all the towns, all the church lands and tithes; for they abolished all archbishops, bishops, deans, and other officers, belonging to that hierarchy, and in those days the Church of Christ sat in Chichester House on College-green. They reserved also for themselves the four counties of Dublin, Kildare, Carlow, and Cork. Out of the lands and tithes thus reserved, the government were to satisfy public debts, private favourites, eminent friends of the republican cause in Parliament, regicides, and the most active of the English rebels, not being of the army. They next made ample provision for the adventurers. The amount due to the adventurers was £360,000. This they divided into three lots, of which £110,000 was to be satisfied in Munster, £205,000 in Leinster, and £45,000 in Ulster, and the moiety of ten counties was charged with their payment:—Waterford, Limerick, and Tipperary, in Munster; Meath, Westmeath, King's and Queen's Counties, in Leinster; and Antrim, Down, and Armagh, in Ulster. But, as all was required by the Adventurers Act to be done by lot, a lottery was appointed to be held in Grocers' Hall, London, for the 20th July, 1653. . . . A lot was then to be drawn by the adventurers, and by some officer appointed by the Lord General Cromwell on behalf of the soldiery, to ascertain which baronies in the ten counties should be for the adventurers, and which for the soldiers. The rest of Ireland, except Connaught, was to be set out amongst the officers and soldiers, for their arrears, amounting to £1,550,000, and to satisfy debts of money or provisions due for supplies advanced to the army of the Commonwealth, amounting to £1,750,000. Connaught was by the Parliament reserved and appointed for the habitation of the Irish nation; and all English and Protestants having lands there, who should desire to remove out of Connaught into the provinces inhabited by the English, were to receive estates in the English parts, of equal value, in exchange. . . . The Earl of Ormond, Primate Bramhall, and all the Catholic nobility, and many of the gentry, were declared incapable of pardon of life or estate, and were banished. . . . Connaught was selected for the habitation of all the Irish nation by reason of its being surrounded by the sea and the Shannon, all but ten miles, and the whole easily made into one line by a few forts. To further secure the imprisonment of the nation, and cut them off from relief by sea, a belt four miles wide, commencing one mile to the west of Sligo, and so winging along the coast and Shannon, was reserved by the Act of 27th September, 1653, from being set out to the Irish, and was given to the soldiery to plant. Thither all the Irish were to remove at latest by the first day of May, 1654, except Irish women married to English Protestants before the 2d December, 1650, provided they became Protestants; except, also, boys under fourteen and girls under twelve, in Protestant service and to be

brought up Protestants; and, lastly, those who had shown during the ten years' war in Ireland their constant good affection to the Parliament of England in preference to the king. There they were to dwell without entering a walled town, or coming within five miles of some, on pain of death. All were to remove thither by the 1st of May, 1654, at latest, under pain of being put to death by sentence of a court of military officers, if found after that date on the English side of the Shannon." In the actual enforcement of the law—found impracticable in all its rigor—there were many special dispensations granted, and extensions of time.—J. P. Prendergast, *The Cromwellian Settlement of Ireland*, pref., and pt. 1-2.

A. D. 1655.—Cromwell's deportation of Girls to Jamaica. See JAMAICA: A. D. 1655.

A. D. 1660-1665.—The restored Stuarts and their Act of Settlement.—"On the fall of Richard Cromwell, a council of officers was established in Dublin; these summoned a convention of deputies from the protestant proprietors; and the convention tendered to Charles the obedience of his ancient kingdom of Ireland. . . . To secure the royal protection, they made the king an offer of a considerable sum of money, assured him, though falsely, that the Irish catholics meditated a general insurrection, and prayed him to summon a protestant parliament in Ireland, which might confirm the existing proprietors in the undisturbed possession of their estates. The present was graciously accepted, and the penal laws against the Irish catholics were ordered to be strictly enforced; but Charles was unwilling to call a parliament, because it would necessarily consist of men whose principles, both civil and religious, he had been taught to distrust. The first measure recommended to him by his English advisers, with respect to Ireland, was the re-establishment of episcopacy. For this no legislative enactment was requisite. His return had given to the ancient laws their pristine authority. . . . In a short time the episcopal hierarchy was quietly restored to the enjoyment of its former rights, and the exercise of its former jurisdiction. To this, a work of easy accomplishment, succeeded a much more difficult attempt,—the settlement of landed property in Ireland. The military, whom it was dangerous to disoblige, and the adventurers, whose pretensions had been sanctioned by Charles I., demanded the royal confirmation of the titles by which they held their estates; and the demand was opposed by a multitude of petitioners claiming restitution or compensation [protestant royalists, loyal catholics, &c.]. . . . Humanity, gratitude, and justice, called on the king to listen to many of these claims. . . . From an estimate delivered to the king, it appeared that there still remained at his disposal forfeited lands of the yearly rental of from eighty to one hundred thousand pounds; a fund sufficiently ample, it was contended, to 'reprise' or compensate all the Irish really deserving of the royal favour. Under this impression, Charles published his celebrated declaration for the settlement of Ireland. It provided that no person deriving his title from the adventurers under the parliament, or the soldiers under the commonwealth, should be disturbed in the pos-

session of his lands, without receiving an equivalent from the fund for reprisals; that all innocents, whether protestants or catholics, that is, persons who had never adhered either to the parliament or the confederates, should be restored to their rightful estates." After much contention between deputations from both sides sent to the king, an act was passed through the Irish parliament substantially according to the royal declaration. "But to execute this act was found to be a task of considerable difficulty. By improvident grants of lands to the church, the dukes of York, Ormond, and Albemarle, the earls of Orrery, Monrath, Kingston, Massarene, and several others, the fund for reprisals had been almost exhausted." New controversies and agitations arose, which finally induced the soldiers, adventurers, and grantees of the crown to surrender one third of their acquisitions, for the augmenting of the fund for reprisals. "The king, by this measure, was placed in a situation [Aug., 1665], not indeed to do justice, but to silence the most importunate or most deserving among the petitioners. . . . But when compensation had thus been made to a few of the sufferers, what, it may be asked, became of the officers who had followed the royal fortune abroad, or of the 3,000 catholics who had entered their claims of innocence? To all these, the promises which had been made by the act of settlement were broken; the unfortunate claimants were deprived of their rights, and debarred from all hope of future relief. A measure of such sweeping and appalling oppression is perhaps without a parallel in the history of civilized nations. Its injustice could not be denied; and the only apology offered in its behalf was the stern necessity of quieting the fears and jealousies of the Cromwellian settlers, and of establishing on a permanent basis the protestant ascendancy in Ireland. . . . The following is the general result. The protestants were previously [i. e., before the Cromwellian Settlement] in possession of about one moiety of all the profitable lands in the island; of the second moiety, which had been forfeited under the commonwealth, something less than two-thirds was by the act confirmed to the protestants; and of the remainder a portion almost equal in quantity, but not in quality, to one-third, was appropriated to the catholics."—J. Lingard, *Hist. of Eng.*, v. 11, ch. 4.

ALSO IN: J. A. Froude, *The English in Ireland*, bk. 1, ch. 3 (v. 1).—T. Carte, *Life of James Duke of Ormond*, bk. 6 (v. 4).

A. D. 1685-1688.—The reign of James II.—Domination of Tyrconnel and the Catholics.—"At the accession of James II., in 1685, he found the native Irish, all of whom were Roman Catholics, opposed to the English rule, as to that of a conquering minority. . . . Of the settlers, the Scotch Presbyterians shared the feelings of their brethren in their native country, and hated Episcopals with the true religious fury. In the Irish Parliament the Presbyterians and Episcopals were nearly balanced, whilst the Protestant Nonconformists, in numbers almost equalling the other two parties, had but few seats in the Parliament. The Episcopals alone were hearty supporters of the house of Stuart; the Presbyterians and Nonconformists were Whigs. James was in a most favourable position for tranquilizing Ireland, for, as a Roman Catholic, he was much more acceptable to the

native Irish than his predecessors had been. Had he followed his true interests, he would have endeavoured, firstly, to unite together, as firmly as possible, the English settlers in Ireland, and secondly, by wise acts of mediation, to bridge over the differences between the English and Irish. Thus he might have welded them into one people. James, however, followed a directly opposite policy, and the results of this misgovernment of Ireland are visible at the present day. The Duke of Ormond was at the time of the death of Charles II. both lord lieutenant and commander of the forces. . . . Soon after his accession James recalled him, and the office of lord lieutenant was bestowed on his own brother-in-law, Lord Clarendon, whilst the post of general of the troops was given to Richard Talbot, Earl of Tyrconnel. Talbot . . . was a coarse, vulgar, truculent ruffian, greedy and unprincipled; but in the eyes of James he had great virtues, for he was devoted to the Romish Church and to his sovereign. 'Lying Dick Talbot,' as he was called, was raised by James to the peerage as Earl of Tyrconnel. Lord Clarendon was, from the time of his appointment, hampered by his associate," who, finally, in 1687, supplanted him, gathering the reins of government into his own hands, "not indeed as lord lieutenant, but with the power which Ormond had formerly held, although under a new title, that of lord deputy. The rule of Tyrconnel entirely subverted the old order of things. Protestants were disarmed and Protestant soldiers were disbanded. The militia was composed wholly of Roman Catholics. The dispensing power in the royal prerogative set aside the statutes of the kingdom, and the bench and privy council were occupied by Roman Catholics. Vacant bishoprics of the Established Church remained unfilled, and their revenues were devoted to Romish priests. Tithes were with impunity withheld from the clergy of the Establishment. . . . The hatred of the Irish Roman Catholics towards the Protestant settlers was excited to the utmost under Tyrconnel's rule. The former now hoped to mete out to the latter a full measure of retaliation. The breach was widened owing to the fear and distrust openly showed by the Protestants, and has never since been effectually repaired." Before the occurrence of the Revolution which drove James from his throne, in 1688, "Tyrconnel had disarmed all the Protestants, except those in the North. He had a large force of 20,000 men under arms, and of this force all the officers were trustworthy and Papists. He had filled the corporations of the towns with adherents of James. He had shown himself to be, as ever, tyrannical and unscrupulous. It was universally believed by the Protestants that a general massacre, a second St. Bartholomew, was intended. Even a day, December 9, was, they thought, fixed for the expected outbreak. The garrison of Londonderry had been temporarily withdrawn. On December 8, Lord Antrim arrived in command of 12,000 [1,200?] soldiers to form the new garrison. Without any warning, the Protestant apprentices ('the prentice boys of Derry') shut the gates of the city in his face. The inhabitants, in spite of the entreaties of the bishop and of the town council, refused to allow them to be opened. Antrim was compelled to withdraw. Thus one rallying-point was gained for the opponents of James. Another

was found in Enniskillen, sixty miles south of Londonderry. Into these two towns poured all the Protestants from the surrounding districts. With these two exceptions, the boast of Tyrconnel that Ireland was true, was well founded."—E. Hale, *The Fall of the Stuarts*, ch. 10 and 13. —"He [James II.] deliberately resolved, not merely to give to the aboriginal inhabitants of Ireland the entire dominion of their own country, but also to use them as his instruments for setting up arbitrary government in England. The event was such as might have been foreseen. The colonists turned to bay with the stubborn hardihood of their race. The mother country justly regarded their cause as her own. Then came a desperate struggle for a tremendous stake. . . . The contest was terrible but short. The weaker went down. His fate was cruel; and yet for the cruelty with which he was treated there was, not indeed a defence, but an excuse: for though he suffered all that tyranny could inflict, he suffered nothing that he would not himself have inflicted. The effect of the insane attempt to subjugate England by means of Ireland was that the Irish became hewers of wood and drawers of water to the English. . . . The momentary ascendancy of Popery produced such a series of barbarous laws against Popery as made the statute book of Ireland a proverb of infamy throughout Christendom. Such were the bitter fruits of the policy of James."—Lord Macaulay, *Hist. of Eng.*, ch. 6 (v. 2).

A. D. 1688-1689.—Enniskillen and the Battle of Newton Butler.—Enniskillen, then a village, surrounding an ancient castle, was, in 1688-89, one of the two rallying points of the Protestant colonists in Ireland, who supported the Revolution by which James II. was dethroned and William and Mary were crowned. The chief stronghold of their cause was Londonderry; but Enniskillen bore a scarcely less important part. "In December, 1688, Tyrconnel's troops, being two companies of Popish infantry, advanced upon Enniskillen. The inhabitants, reinforced by 200 foot and 150 horse, contributed by the neighbouring gentry, marched out to oppose them. Tyrconnel's men fled to Cavan. The Enniskilleners, then, arming themselves as well as they could, and converting all the country-houses round Lough Erne into garrisons, appointed Gustavus Hamilton their governor and resolved upon defence. . . . Early in May, 1689, the Enniskilleners routed Tyrconnel's troops, sent from Connaught into Donegal. They next drove 1,500 men out of the County Cavan—destroyed the Castle of Ballinacraig—and then entered the County Meath, whence they carried off oxen and sheep. Colonel Hugh Sutherland was sent with a regiment of dragoons and two regiments of foot against the Enniskilleners, who, however, defeated them, and took Belturbet, where they found muskets, gunpowder, and provisions; but unfortunately they were unable to relieve Derry, then beleaguered and sorely distressed. The Enniskilleners held out against all attacks, and refused all terms of surrender. They were now assailed from various points; by Macarthy (then by James created Viscount Mountcashel) from the east, by another body from the west, and by the Duke of Berwick from the north. The Enniskilleners sent to Colonel

Kirke [commanding the English forces first sent to Ireland by William of Orange] who had arrived in Lough Foyle, and received from him some arms and ammunition; and Colonel Wolseley and Lieutenant-Colonel Berry came from him to their assistance. Colonel Wolseley took the command." Under Wolseley, the men of Enniskillen, 3,000 strong, encountered 5,000 of the enemy, under Mountcashel, near the town of Newton Butler, on the 31st of July, three days after Derry had been relieved. Their victory was complete. "The whole Irish force was totally and hopelessly routed. Their slaughter was dreadful—1,500 killed, and 500 drowned in Lough Erne, whither they were driven. Mountcashel was wounded and taken prisoner. The Enniskilleners lost only twenty killed and fifty wounded. They took 400 prisoners, some cannons, fourteen barrels of gunpowder, and all the colours and drums. . . . The victory became known at Strabane to the Irish army retreating from Derry, which thereupon broke up in confusion and fled to Omagh, and thence to Charlemont."—W. II. Torriano, *William the Third*, ch. 21.

A. D. 1689-1691.—The War of the Revolution.—The Orange conquest.—Supported by a French fleet, supplied moderately with French gold, and accompanied by a picked body of French officers, for the organizing and disciplining of raw Irish troops, James II. landed in Ireland, at Kinsale, on the 12th of March, 1689, to take personal possession of the government still maintained there in his name. From Kinsale he hastened to Dublin, "and summoned a Parliament, which met on May 7, 1689, and sat until July 18. This Parliament of James has been described as a Parliament of Irish Celts, yet out of the 228 members of the House of Commons about one-fourth only belonged to the native race, and even including members of families Anglicized or of doubtful origin, not one-third of the House of Commons belonged to the so-called Celts. Of the thirty-two lay peers who attended, not more than two or three bore old Irish names. The four spiritual peers were Protestant bishops."—W. K. Sullivan, *pt. 1, of Two Centuries of Irish History*, ch. 1.—"The members of the House of Commons were almost all new men, completely inexperienced in public business and animated by the resentment of the bitterest wrongs. Many of them were sons of some of the 3,000 proprietors who without trial and without compensation had been deprived by the Act of Settlement of the estates of their ancestors. To all of them the confiscations of Ulster, the fraud of Strafford, the long train of calamities that followed were recent and vivid events. . . . It will hardly appear surprising to candid men that a Parliament so constituted and called together amid the excitement of a civil war, should have displayed much violence, much disregard for vested interests. Its measures, indeed, were not all criminal. By one Act which was far in advance of the age, it established perfect religious liberty in Ireland. . . . By another Act, repealing Poyning's law, and asserting its own legislative independence, it anticipated the doctrine of Molyneux, Swift, and Grattan. . . . A third measure abolished the payments to Protestant clergy in the corporate towns, while a fourth ordered that the Catholics

throughout Ireland should henceforth pay their tithes and other ecclesiastical dues to their own priests and not to the Protestant clergy. The Protestants were still to pay their tithes to their own clergy. . . . Several other measures—most of them now only known by their titles—were passed for developing the resources of the country or remedying some great abuse. . . . If these had been the only measures of the Irish Parliament it would have left an eminently honourable reputation. But, unfortunately, one of its main objects was to re-establish at all costs the descendants of the old proprietors in their land, and to annul by measures of sweeping violence the grievous wrongs and spoliations their fathers and their grandfathers had undergone. The first and most important measure with this object was the repeal of the Acts of Settlement and Explanation. . . . The preamble asserts that the outbreak of 1641 had been solely due to the intolerable oppression and to the disloyal conduct of the Lords Justices and Puritan party, that the Catholics of Ireland before the struggle had concluded had been fully reconciled to the sovereign, that they had received from the sovereign a full and formal pardon, and that the royal word had been in consequence pledged to the restitution of their properties. This pledge by the Act of Settlement had been to a great extent broken, and the Irish legislators maintained that the twenty-four years which had elapsed since that Act had not annulled the rights of the old proprietors or their descendants. They maintained that these claims were not only valid but were prior to all others, and they accordingly enacted that the heirs of all persons who had possessed landed property in Ireland on October 22, 1641, and who had been deprived of their inheritance by the Act of Settlement, should enter at once into possession of their old properties. . . . The long succession of confiscations of Irish land which had taken place from the days of Mary to the Act of Settlement had been mainly based upon real or pretended plots of the owners of the soil, which enabled the Government, on the plea of high treason, to appropriate the land which they desired. In 1689 the great bulk of the English proprietors of Irish soil were in actual correspondence with William, and were therefore legally guilty of high treason. The Irish legislators now proceeded to follow the example of the British Governments, and by a clause of extreme severity they pronounced the real estates of all Irish proprietors who dwelt in any part of the three kingdoms which did not acknowledge King James, or who aided, abetted or corresponded with the rebels, to be forfeited and vested in the Crown, and from this source they proposed to compensate the purchasers under the Act of Settlement. . . . The measure of repeal, however, was speedily followed by another Act of much more sweeping and violent injustice. The Act of Attainder, which was introduced in the latter part of June, aimed at nothing less than a complete overthrow of the existing land system in Ireland. A list divided into several groups, but containing in all more than 2,000 names, was drawn up of landowners who were to be attainted of high treason. . . . Few persons will question the tyranny of an Act which in this manner made a very large proportion of the Irish landlords liable to the penalties of high treason, unless they could prove their innocence, even though

the only crime that could be alleged against them was that of living out of Ireland in a time of civil war. . . . It is . . . a curious illustration of the carelessness or partiality with which Irish history is written, that no popular historian has noticed that five days before this Act, which has been described as 'without a parallel in the history of civilised countries,' was introduced into the Irish Parliament, a Bill which appears, in its essential characteristics, to have been precisely similar was introduced into the Parliament of England; that it passed the English House of Commons; that it passed, with slight amendments, the English House of Lords; and that it was only lost, in its last stage, by a prorogation. . . . These facts will show how far the Irish Act of Attainder was from having the unique character that has been ascribed to it. It is not possible to say how that Act would have been executed, for the days of Jacobite ascendancy were now few and evil. The Parliament was prorogued on the 20th of July, one of its last Acts being to vest in the King the property of those who were still absentees."—W. E. H. Lecky, *Hist. of England in the 18th Century*, ch. 6 (v. 2).—While James' Irish Parliament sat, "sufficient men had presented themselves to form fifty regiments of infantry and a proportionate number of cavalry. But . . . these levies were undisciplined, and their officers, with few exceptions, were without military training and experience. There were no arsenals, and in the government stores only about 1,000 serviceable firearms were found; there was no artillery and no supply of ammunition. . . . What coin was in circulation was small in quantity and debased in quality. James's Government issued a brass coinage, which had no currency outside the kingdom, and even within it practically circulated only among the partisans of James, and could not consequently help in purchasing arms, ammunition, and military stores, which had to be imported from without. Under such unfavourable circumstances the war began. The first campaign comprised the siege, or rather blockade, of Derry—for the Irish, having no artillery, could not undertake a regular siege—which was gallantly defended by the Scoto-English colonists; the check of Mountcashel by the Enniskilleners, who had followed the example of Derry; the landing of Schomberg with an army of Dutch, French Protestants, and English, who went into winter quarters near Dundalk, where he lost nearly half his troops from sickness; and, lastly, the military parade of James, who marched out from Dublin, and, failing to force Schomberg to fight, went into winter quarters himself. The result of the campaign was the successful defence of Derry, and the signal exhibition of James's incapacity as a general. At the opening of the second campaign, an exchange of troops was made between James and Louis XIV., with the view of giving prestige to the cause of the former. Six thousand French troops, under a drawing-room general, the well-known Comte de Lauzun, arrived in Ireland, and the same ships carried back an equal number of Irish troops—the brigade of Mountcashel, the best-trained and best-equipped body of troops in the Irish army. . . . The wasted army of Schomberg was strengthened by the arrival of William himself on June 14, 1690, with a considerable force. The united armies, composed of the most heterogeneous materials,

one-half being foreigners of various nationalities, amounted to between 36,000 and 48,000 men. . . . To meet William, James set out from Dublin with an army of about 23,000 men. The French troops and the Irish cavalry were good, but the infantry was not well trained, and the artillery consisted only of twelve field-pieces. The battle took place on July 1, 1690, at the passage of the River Boyne, a few miles above Drogheda [the rout of James's army being complete and its loss about 1,500 men. William lost but 500; but the number included Schomberg, one of the great soldiers of his age. James was among the first in the flight, and he scarcely paused until he had put himself on board of a French frigate and quitted Ireland forever]. The Irish fell back on Dublin and thence retired behind the line of the Shannon. About 20,000 half-armed infantry and about 3,500 horse concentrated at Limerick. The English having failed in taking Athlone, the key of the upper Shannon, William gathered together about 38,000 men in the neighbourhood of Limerick. Lauzun having declared that Limerick could not be defended, and might be taken with roasted apples, withdrew with the whole of the French troops to Galway, to await the first opportunity of returning to France. On August 9, 1690, William moved his whole army close to the town and summoned the garrison to surrender; but having failed, with a loss of 2,000 men, to carry the town by assault, he raised the siege and went to England. The third and last campaign began late in 1691. The Irish received many promises of assistance from Louis XIV., but his ministers fulfilled few or none of them. With scarcely any loss of men, and with a small expenditure of stores and money, the Irish war enabled Louis to keep William and a veteran army of 40,000 men out of his way. . . . The campaign opened in the beginning of June with the advance of Ginkel [William's general] on Athlone. The chief defence of the place was the River Shannon, the works being weak, and mounting only a few field-pieces; yet so obstinately was the place defended that, but for the discovery of a ford, and some neglect on the part of D'Usson, who commanded, it is probable that the siege would have been raised. As it was, Ginkel became master of the heap of ruins. . . . St. Ruth [the French officer commanding the Irish] moved his camp to Aughrim [or Aghrim], and there was fought the final battle of the war on Sunday, July 12, 1691. . . . St. Ruth was killed at a critical moment, and his army defeated, with a loss of about 4,000 men, the English loss being about half that number. Part of the defeated Irish infantry retreated to Galway; but the bulk of the troops, including the whole of the cavalry, fell back on Limerick, which surrendered, after a gallant resistance, in October, 1691."—W. K. Sullivan, *pt. 1 of Two Centuries of Irish Hist.*, ch. 1.

O'Connor, *Hist. of the Irish People*, bk. 3, ch. 3 (v. 2).—Sir J. Dalrymple, *Memoirs of Gt. Britain and Ireland*, pt. 2, bk. 2-5 (v. 2).

A. D. 1691.—The Treaty of Limerick and its violation.—The surrender of Limerick was under the terms of a treaty—or of two treaties,

one military, the other civil—formally negotiated for the terminating of the war. This Treaty of Limerick was signed, Oct. 3, 1691, by Baron De Ginkel, William's general, and by the lords justices of Ireland, on behalf of the English, and by Sarsfield and other chieftains on behalf of the Irish. "Its chief provisions were: 'The Roman Catholics of this kingdom shall enjoy such privileges in the exercise of their religion as are consistent with the laws of Ireland; or as they did enjoy in the reign of King Charles II.; and their Majesties, as soon as their affairs will permit them to summon a Parliament in this kingdom, will endeavour to procure the said Roman Catholics such further security in that particular as may preserve them from any disturbance upon the account of their said religion. All the inhabitants or residents of Limerick, or any other garrison now in the possession of the Irish, and all officers and soldiers now in arms under any commission of King James, or those authorized by him to grant the same in the several counties of Limerick, Clare, Kerry, Cork, and Mayo, or any of them, and all the commissioned officers in their Majesties' quarters that belong to the Irish regiments now in being that are treated with and who are not prisoners of war, or having taken protection, and who shall return and submit to their Majesties' obedience, and their and every of their heirs shall hold, possess, and enjoy all and every their estates of freehold and inheritance; and all the rights, titles, and interest, privileges and immunities, which they, or every or any of them, held, enjoyed, and were rightfully and lawfully entitled to in the reign of King Charles II.' . . . A general pardon was to be granted to all persons comprised within the treaty, and the Lords Justices and the generals commanding King William's army were to use their best endeavours to get the attainders of any of them attainted repealed. . . . In the copy of the rough draft engrossed for signature the following words, 'and all such as are under their protection in the said counties,' which immediately followed the enumeration of the several counties in the second article, were omitted. This omission, whether the result of design or accident, was, however, rectified by King William when confirming the treaty in February, 1692. The confirming instrument stated that the words had been casually omitted; that the omission was not discovered till the articles were signed, but was taken notice of before the town was surrendered; and that the Lords Justices or General Ginkel, or one of them, had promised that the clause should be made good, since it was within the intention of the capitulation, and had been inserted in the rough draft. William then for himself did 'ratify and confirm the said omitted words.' The colonists, or at all events the 'new interests'—that is, those who shared or expected to share in the confiscations—were indignant at the concessions made to the native race."—W. K. Sullivan, *pt. 1 of Two Centuries of Irish Hist.*, ch. 1.—"The advantages secured to Catholics by the Treaty of Limerick were moderate. But when the flower of the Irish army had withdrawn to France, and the remnant could be hanged without ceremony, they began to look inordinate. The parliament of Cromwellian settlers and Government officials in Dublin having excluded Catholic members, by requiring from them an oath of abjuration,

in direct infringement of one of the articles of surrender, were free to proceed at their discretion. They first passed a stringent statute depriving Catholics of arms, and another ordering all 'Popish archbishops, bishops, vicars-general, deans, jesuits, monks, friars, and regulars of whatever condition to depart from the kingdom on pain of transportation,' and then proceeded to consider the treaty. They . . . resolved by a decisive majority not to keep the conditions affecting the Catholics. William . . . struggled for a time to preserve his honour; but it is not convenient for a new king to be in conflict with his friends, and after a time he gave way. . . . In Ireland the Treaty of Limerick can never be forgotten; it is one of the title deeds of the Irish race to their inheritance in their native land. For more than a century its sordid and shameless violation was as common a reproach to England on the Continent as the partition of Poland has been a reproach to Russia in our own day."—Sir C. G. Duffy, *Bird's-Eye View of Irish Hist.*, revised ed., pp. 155-156 (or bk. 1, ch. 4, of "Young Ireland").—"The Protestant rancour of parliament was more powerful than the good will of the prince. The most vital articles of the capitulation were ignored, especially in all cases where the Catholic religion and the liberties granted to its professors were concerned; and 4,000 Irish were denounced as traitors and rebels,—by which declaration a fresh confiscation of 1,060,000 acres was immediately effected. . . . It has been calculated that in 1692 the Irish Catholics, who quadrupled the Protestants in number, owned only one-eleventh of the soil, and that the most wretched and unproductive portion."—A. Perraud, *Ireland under Eng. Rule*, introd., sect. 8.

A. D. 1691-1782.—The peace of despair.—A century of national death.—Oppression of the Penal Laws.—"By the military treaty [of Limerick], those of Sarsfield's soldiers who would were suffered to follow him to France; and 10,000 men, the whole of his force, chose exile rather than life in a land where all hope of national freedom was lost. When the wild cry of the women who stood watching their departure was hushed, the silence of death settled down upon Ireland. For a hundred years the country remained at peace, but the peace was a peace of despair. The most terrible legal tyranny under which a nation has ever groaned avenged the rising under Tyrconnell. The conquered people, in Swift's bitter words of contempt, became 'hewers of wood and drawers of water' to their conquerors; but till the very eve of the French Revolution Ireland ceased to be a source of terror and anxiety to England."—J. R. Green, *Short Hist. of Eng.*, ch. 9, sect. 8.—"In Ireland there was peace. The domination of the colonists was absolute. The native population was tranquil with the ghastly tranquillity of exhaustion and of despair. There were indeed outrages, robberies, fireraids, assassinations. But more than a century passed away without one general insurrection. During that century, two rebellions were raised in Great Britain by the adherents of the House of Stuart. But neither when the elder Pretender was crowned at Scone, nor when the younger held his court at Holyrood, was the standard of that House set up in Connaught or Munster. In 1745, indeed, when the Highlanders were marching towards

London, the Roman Catholics of Ireland were so quiet that the Lord Lieutenant could, without the smallest risk, send several regiments across Saint George's Channel to reinforce the army of the Duke of Cumberland. Nor was this submission the effect of content, but of mere stupefaction and brokenness of heart. The iron had entered into the soul. The memory of past defeats, the habit of daily enduring insult and oppression, had cowed the spirits of the unhappy nation. There were indeed Irish Roman Catholics of great ability, energy and ambition; but they were to be found everywhere except in Ireland,—at Versailles and at Saint Ildefonso, in the armies of Frederic and in the armies of Maria Theresa. One exile became a Marshal of France. Another became Prime Minister of Spain. If he had staid in his native land he would have been regarded as an inferior by all the ignorant and worthless squireens who had signed the Declaration against Transubstantiation. . . . Scattered over all Europe were to be found brave Irish generals, dexterous Irish diplomatists, Irish Counts, Irish Barons, Irish Knights . . . who, if they had remained in the house of bondage, could not have been ensigns of marching regiments or freemen of petty corporations. These men, the natural chiefs of their race, having been withdrawn, what remained was utterly helpless and passive. A rising of the Irishry against the Englishry was no more to be apprehended than a rising of the women and children against the men."—Lord Macaulay, *Hist. of Eng.*, ch. 17. — "An act of 1695 'deprived the Roman Catholics of the means of educating their children, either at home or abroad, and of the privilege of being guardians either of their own or of any other person's children.' Another Act of the same year deprived the Roman Catholics of the right of bearing arms, or of keeping any horse which was worth more than £5. An Act of 1697 ordered the expulsion of every Roman Catholic priest from Ireland. The Parliament, which had imposed these disabilities on Irish Roman Catholics, proceeded to confirm the Articles of Limerick, or 'so much of them as may consist with the safety and welfare of your Majesty's subjects of this kingdom,' and by a gross act of injustice omitted the whole of the first of these articles, and the important paragraph in the second article which had been accidentally omitted from the original copy of the Treaty, and subsequently restored to it by letters patent under the Great Seal. Reasonable men may differ on the propriety or impropriety of the conditions on which the surrender of Limerick was secured; but it is difficult to read the story of their repudiation without a deep sense of shame. Three other acts relating to the Roman Catholics were passed during the reign of William. An Act of 1697 forbade the intermarriage of Protestants and Papists. An Act of 1698 prevented Papists from being solicitors. Another Act of the same year stopped their employment as gamekeepers. William died; and the breach of faith which he had countenanced was forgotten amidst the pressure of the legislation which disgraced the reign of his successor. Two Acts passed in this reign, for preventing the further growth of Popery, were styled by Burke the 'ferocious Acts of Anne.' By the first of these Acts a Papist having a Protestant son was de-

barred from selling, mortgaging, or devising any portion of his estate: however young the son might be, he was to be taken from his father's hands and confided to the care of a Protestant relation. The estate of a Papist who had no Protestant heir was to be divided equally among his sons. The Papist was declared incapable of purchasing real estate or of taking land on lease for more than thirty-one years. A Papist was declared incapable of inheriting real estate from a Protestant. He was disqualified from holding any office, civil or military. With twenty exceptions, a Papist was forbidden to reside in Limerick or Galway. Advowsons the property of Papists were vested in the Crown. Religious intolerance had now apparently done its uttermost. . . . But the laws failed. Their severity insured their failure. . . . The first of the ferocious Acts of Anne was almost openly disregarded. . . . Its failure only induced the intolerant advisers of Anne to supplement it with harsher legislation. The Act of 1704 had deprived the Papist of the guardianship of his apostate child. An Act of 1709 empowered the Court of Chancery to oblige the Papist to discover his estate, and authorized the Court to make an order for the maintenance of the apostate child out of the proceeds of it. The Act of 1704 had made it illegal for a Papist to take lands on lease; the Act of 1709 disabled him from receiving a life annuity. An Act of 1704 had compelled the registry of priests. The Act of 1709 forbade their officiating in any parish except that in which they were registered. These, however, were the least reprehensible features in the Act of 1709. Its worst features were the encouragement which it gave to the meaner vices of human nature. The wife of a Papist, if she became a Protestant, was to receive a jointure out of her husband's estate. A Popish priest abandoning his religion was to receive an annuity of £30 a year. Rewards were to be paid for 'discovering' Popish prelates, priests, and schoolmasters. Two justices might compel any Papist to state on oath where and when he had heard mass, who had officiated at it, and who had been present at it. Encouragement was thus given to informers; bribes were thus held out to apostates; and Parliament trusted to the combined effects of bribery and intimidation to stamp out the last remnant of Popery. The penal code, however, was not yet complete. The armoury of intolerance was not yet exhausted. An Act of George I. disabled Papists from serving in the Irish militia, but compelled them to find Protestant substitutes; to pay double towards the support of the militia, and rendered their horses liable to seizure for militia purposes. By Acts of George II. the Papists were disfranchised; barristers or solicitors marrying Papists were deemed Papists; all marriages between Protestants and Papists were annulled; and Popish priests celebrating any illegal marriages were condemned to be hanged. By an Act of George III. Papists refusing to deliver up or declare their arms were liable to be placed in the pillory or to be whipped, as the Court should think proper. Such were the laws which the intolerance of a minority imposed on the majority of their fellow-subjects. Utterly unjust, they had not even the bare merit of success. . . . 'The great body of the people,' wrote Arthur Young [1780], 'stripped of their all,

were more enraged than converted: they adhered to the persuasion of their forefathers with the steadiest and the most determined zeal; while the priests, actuated by the spirit of a thousand inducements, made proselytes among the common Protestants in defiance of every danger. . . . Those laws have crushed all the industry and wrested most of the property from the Catholics; but the religion triumphs; it is thought to increase."—S. Walpole, *Hist. of Eng.* from 1815, ch. 8 (v. 2).

A. D. 1710.—Colonization of Palatines in Munster. See PALATINES.

A. D. 1722-1724.—Wood's halfpence.—The Drapier's Letters.—"A patent had been given [1722, by the Walpole administration] to a certain William Wood for supplying Ireland with a copper coinage. Many complaints had been made, and in September, 1723, addresses were voted by the Irish Houses of Parliament, declaring that the patent had been obtained by clandestine and false representations; that it was mischievous to the country; and that Wood had been guilty of frauds in his coinage. They were pacified by vague promises; but Walpole went on with the scheme on the strength of a favourable report of a committee of the Privy Council; and the excitement was already serious when (in 1724) Swift published the Drapier's Letters, which gave him his chief title to eminence as a patriotic agitator. Swift either shared or took advantage of the general belief that the mysteries of the currency are unfathomable to the human intelligence. . . . There is, however, no real mystery about the halfpence. The small coins which do not form part of the legal tender may be considered primarily as counters. A penny is a penny, so long as twelve are change for a shilling. It is not in the least necessary for this purpose that the copper contained in the twelve penny pieces should be worth or nearly worth a shilling. . . . At the present day bronze worth only twopence is coined into twelve penny pieces. . . . The effect of Wood's patent was that a mass of copper worth about £60,000 became worth £100,800 in the shape of halfpenny pieces. There was, therefore, a balance of about £40,000 to pay for the expenses of coinage. It would have been waste to get rid of this by putting more copper in the coins; but if so large a profit arose from the transaction, it would go to somebody. At the present day it would be brought into the national treasury. This was not the way in which business was done in Ireland. Wood was to pay £1,000 a year for fourteen years to the Crown. But £14,000 still leaves a large margin for profit. What was to become of it. According to the admiring biographer of Sir R. Walpole the patent had been originally given by Lord Sunderland to the Duchess of Kendal, a lady whom the King delighted to honour. . . . It was right and proper that a profit should be made on the transaction, but shameful that it should be divided between the King's mistress and William Wood, and that the bargain should be struck without consulting the Irish represen-

tatives, and maintained in spite of their protests. The Duchess of Kendal was to be allowed to take a share of the wretched halfpence in the pocket of every Irish beggar. A more disgraceful transaction could hardly be imagined, or one more calculated to justify Swift's view of the selfishness and corruption of the English rulers. Swift saw his chance and went to work in characteristic fashion, with unscrupulous audacity of statement, guided by the keenest strategical instinct. . . . The patent was surrendered, and Swift might congratulate himself upon a complete victory. . . . The Irish succeeded in rejecting a real benefit at the cost of paying Wood the profit which he would have made, had he been allowed to confer it."—L. Stephen, *Swift* (*Eng. Men of Letters*), ch. 7.

A. D. 1760-1798.—Whiteboys.—Oak Boys.—Steel Boys.—Peep of Day Boys.—Catholic Defenders.—"The peasantry continued to regard the land as their own; and with the general faith that wrong cannot last forever, they waited for the time when they would once more have possession of it. 'The lineal descendants of the old families,' wrote Arthur Young in 1774, 'are now to be found all over the kingdom, working as cottiers on the lands which were once their own.' . . . With the growth of what was called civilization, absenteeism, the worst disorder of the country, had increased. . . . The rise in prices, the demand for salt beef and salt butter for exportation and for the fleets, were revolutionizing the agriculture of Munster. The great limestone pastures of Limerick and Tipperary, the fertile meadow universality, was falling into the hands of capitalist graziers, in whose favour the landlords, or the landlords' agents, were evicting the smaller tenants. . . . To the peasantry these men were a curse. Common lands, where their own cows had been fed, were inclosed and taken from them. The change from tillage to grazing destroyed their employment. Their sole subsistence was from their potato gardens, the rents of which were heavily raised, while, by a curious mockery of justice, the grass lands were exempt from tithe, and the burden of maintaining the rectors and vicars of the Established Church was cast exclusively on the Catholic poor. Among a people who are suffering under a common wrong there is a sympathy of resentment which links them together without visible or discoverable bond. In the spring of 1760 Tipperary was suddenly overrun by bands of midnight marauders. Who they were was a mystery. Rumours reached England of insurgent regiments drilling in the moonlight; of French officers observed passing and repassing the Channel; but no French officer could be detected in Munster. The most rigid search discovered no stands of arms, such as soldiers use or could use. This only was certain, that white figures were seen in vast numbers, like moving clouds, flitting silently at night over field and moor, leaving behind them the tracks of where they had passed in levelled fences and houghed and moaning cattle; where the owners were specially hateful, in blazing homesteads, and the inmates' bodies blackening in the ashes. Arrests were generally useless. The country was sworn to secrecy.

Through the entire central plains of Ireland the people were bound by the most solemn oaths never to reveal the name of a confederate, or give evidence in a court of justice. . . . Thus it was long uncertain how the movement originated, who were its leaders, and whether there was one or many. Letters signed by Captain Dwyer or Joanna Meskell were left at the doors of obnoxious persons, ordering lands to be abandoned under penalties. If the commands were uncomplished with, the penalties were inexorably inflicted. . . . Torture usually being preferred to murder, male offenders against the Whiteboys were houghed like their cattle, or their tongues were torn out by the roots."—J. A. Froude, *The Eng. in Ireland*, bk. 5, ch. 1 (v. 2).—The Whiteboys took their name from the practice of wearing a white shirt drawn over their other clothing, when they were out upon their nocturnal expeditions. "The Oak Boy movement took place about 1761-2. . . . The injustice which led to the formation of the 'Oak Boys,' one of the best known of the colonial societies, was duty work on roads. Every householder was bound to give six days' labour in making and repairing the public roads; and if he had a horse, six days' labour of his horse. It was complained that this duty work was only levied on the poor, and that they were compelled to work on private job roads, and even upon what were the avenues and farm roads of the gentry. The name Oak Boys, or Hearts of Oak Boys, was derived from the members in their raids wearing an oak branch in their hats. The organization spread rapidly over the greater part of Ulster. Although the grievances were common to Protestant and Catholic workmen, and there was nothing religious in the objects or constitution of the Oak Boys, the society was an exclusively Protestant body, owing to the total absence at the period of any association between the Protestants and Catholics. . . . The Steel Boys, or Hearts of Steel Boys, followed the Oak Boys [about 1771]. They also were exclusively Protestant; the origin of this organization was the extravagance and profligacy of a bad landlord, the representative of the great land thief, Chichester, of the Plantation of King James I. . . . The Oak Boys and Steel Boys did not last long."—W. K. Sullivan, pt. 1 of *Two Centuries of Irish Hist.*, ch. 5, with foot-note.—The landlord here referred to, as having provoked the organization of the Steel Boys, was the Marquis of Donegal. "Many of his Antrim leases having fallen in simultaneously, he demanded £100,000 in fines for the renewal of them. The tenants, all Protestants, offered the interest of the money in addition to the rent. It could not be. Speculative Belfast capitalists paid the fine and took the lands over the heads of the tenants, to sublet. . . . The most substantial of the expelled tenantry gathered their effects together and sailed to join their countrymen in the New World. . . . Between those who were too poor to emigrate, and the Catholics who were in possession of their homes, there grew a protracted feud, which took form at last in the conspiracy of the Peep of Day Boys; in the fierce and savage expulsion of the intruders, who were bidden to go to hell or Connaught; and in the counter-organization of the Catholic Defenders, which spread over the whole island, and made the army of insurrection in 1798."—J. A. Froude, *The Eng. in Ireland*, bk. 5, ch. 2, sect. 6 (v. 2).

A. D. 1778-1794.—Concession of Legislative independence by the so-called **Constitution of 1782**.—"England's difficulty was Ireland's opportunity. Over in the American colonies Mr. Washington and his rebels were pressing hard upon the troops of King George. More than one garrison had been compelled to surrender, more than one general had given up his bright sword to a revolutionary leader. On the hither side of the Atlantic the American flag was scarcely less dreaded than at Yorktown and Saratoga. . . . Ireland, drained of troops, lay open to invasion. The terrible Paul Jones was drifting about the seas; descents upon Ireland were dreaded; if such descents had been made the island was practically defenceless. An alarmed Mayor of Belfast, appealing to the Government for military aid, was informed that no more serious and more formidable assistance could be rendered to the chief city of the North than might be given by half a troop of dismounted cavalry and half a troop of invalids. If the French-American enemy would consent to be scared by such a muster, well and good; if not Belfast, and for the matter of that, all Ireland, must look to itself. Thereupon Ireland, very promptly and decisively, did look to itself. A Militia Act was passed empowering the formation of volunteer corps—consisting, of course, solely of Protestants—for the defence of the island. A fever of military enthusiasm swept over the country; north and south and east and west men caught up arms, nominally to resist the French, really, though they knew it not, to effect one of the greatest constitutional revolutions in history. Before a startled Government could realise what was occurring 60,000 men were under arms. For the first time since the surrender of Limerick there was an armed force in Ireland able and willing to support a national cause. Suddenly, almost in the twinkling of an eye, Ireland found herself for the first time for generations in the possession of a well-armed, well-disciplined, and well-generalled military force. The armament that was organised to insure the safety of England was destined to achieve the liberties of Ireland. . . . All talk of organisation to resist foreign invasion was silenced; in its place the voice of the nation was heard loudly calling for the redress of its domestic grievances. Their leader was Charlemont; Grattan and Flood were their principal colonels."—J. H. McCarthy, *Ireland Since the Union*, ch. 3.—"When the Parliament met, Grattan moved as an amendment to the Address, 'that it was by free export and import only that the Nation was to be saved from impending ruin'; and a corps of Volunteers, commanded by the Duke of Leinster, lined Dame Street as the Speaker and the Commons walked in procession to the Castle. Another demonstration of Volunteers in College Green excited Dublin a little later on, and (15th November, 1779) a riotous mob clamoured for Free Trade at the very doors of the House. . . . These events resulted in immediate success. Lord North proposed in the British Parliament three articles of relief to Irish trade—(1) to allow free export of wool, woollens, and wool-flocks; (2) to allow a free export of glass; (3) to allow, under certain conditions, a free trade to all the British colonies. When the news reached Ireland excessive joy prevailed. . . . But this was only a beginning. Poynings' Law, and the

6th of George I., required to be swept away too, so that Ireland might enjoy not only Free Trade, but also Self-government. Grattan moved his two famous resolutions:—1. That the King, with the consent of the Lords and Commons of Ireland, is alone competent to enact laws to bind Ireland. 2. That Great Britain and Ireland are inseparably united under one Sovereign. In supporting these resolutions, Grattan cited England's dealings with America, to show what Ireland too might effect by claiming her just rights. . . . The Earl of Carlisle became Viceroy in 1781, with Mr. Eden as Secretary. Viewing England's embroilment in war—in America, in India, with France, and Spain, and Holland—the Irish Volunteers, whose numbers had swelled, Grattan said, to well-nigh 100,000 men, held meetings and reviews in various parts of the country. . . . The 16th of April, 1782, was a memorable day for Dublin. On that date, in a city thronged with Volunteers, with bands playing, and banners blazoned with gilded harps fluttering in the wind, Grattan, in an amendment to the Address which was always presented to the King at the opening of Parliament, moved, 'That Ireland is a distinct Kingdom, with a separate Parliament, and that this Parliament alone has a right to make laws for her.' On the 17th of May, the two Secretaries of State, Lord Shelburne in the Lords, and Charles James Fox in the Commons of Great Britain—proposed the repeal of the 6th of George I., a statute which declared the right of the English Parliament to make laws for Ireland. The English Government frankly and fully acceded to the demands of Ireland. Four points were granted—(1) an Independent Irish Parliament; (2) the abrogation of Poynings' Law, empowering the English Privy Council to alter Irish Bills; (3) the introduction of a Biennial Mutiny Bill; (4) the abolition of the right of appeal to England from the Irish law courts. These concessions were announced to the Irish Parliament at once: in their joy the Irish Houses voted £100,000, and 20,000 men to the navy of Great Britain. Ireland had at last achieved political freedom. Peace and prosperity seemed about to bless the land. . . . That there might be no misunderstanding as to the deliberate intention of the English Parliament in granting Irish legislative independence, Lord Shelburne had passed an Act of Renunciation, declaring that 'the Right claimed by the people of Ireland, to be bound only by laws enacted by His Majesty and the Parliament of that Kingdom, is hereby declared to be established and ascertained for ever, and shall at no time hereafter be questioned or questionable.' During the same session (1782), the two Catholic Relief Bills proposed by Luke Gardiner, who afterwards became Viscount Mountjoy, were passed. These measures gave Catholics the right to buy freeholds, to teach schools, and to educate their children as they pleased. The Habeas Corpus Act was now extended to Ireland; and marriages by Presbyterian ministers were made legal."—W. F. Collier, *Hist. of Ireland for Schools*, period 5, ch. 3. —"Had the Irish demanded a complete separation it would have been yielded without resistance. It would have been better had it been. The two countries would have immediately joined on terms of equality and of mutual confidence and respect. But the more the English Cabinet gave

way the less were the Irish disposed to press their advantage. A feeling of warm attachment to England rapidly took the place of distrust. There never existed in Ireland so sincere and friendly a spirit of spontaneous union with England as at this moment, when the formal bond of union was almost wholly dissolved. From the moment when England made a formal surrender of her claim to govern Ireland a series of inroads commenced on the various interests supposed to be left to their own free development by that surrender. Ireland had not, like England, a body of Cabinet Ministers responsible to her Parliament. The Lord Lieutenant and the Irish Secretary held their offices and received their instructions from the English minister. There was greater need than ever before for a bribed majority in the Irish Commons, and the machinery for securing and managing it remained intact."—W. A. O'Connor, *Hist. of the Irish People*, bk. 4, ch. 2, sect. 2 (v. 2).—"The history of these memorable eighteen years [1782-1800] has never been written, and yet these years are the . . . key to Irish political opinion in the 19th [century]. The Government which granted the constitution of 1782 began to conspire against it immediately. They had taken Poynings' Act away from the beginning of its proceedings, and they clapped it on to the end of its proceedings, as effectually as if the change had not been made. They developed in the Irish mind that distrust of all government which has made it so turbulent and so docile—turbulent to its administrators, docile to its popular leaders."—J. E. Thorold Rogers, in *Ireland* (A. Reid, ed.), p. 25.

Also in: W. E. H. Lecky, *Leaders of Public Opinion in Ireland: Henry Grattan*.—J. G. MacCarthy, *Henry Grattan*.

A. D. 1784.—Peep-o'-Day Boys and Defenders.—"Disturbances . . . commenced in the north between two parties called Peep-o'-Day Boys and Defenders. They originated in 1784 among some country people, who appear to have been all Protestants or Presbyterians; but Catholics having sided with one of the parties, the quarrel quickly grew into a religious feud, and spread from the county of Armagh, where it commenced, to the neighbouring districts of Tyrone and Down. Both parties belonged to the humblest classes of the community. The Protestant party were well armed, and assembling in numbers, attacked the houses of Catholics under pretence of searching for arms; insulting their persons, and breaking their furniture. These wanton outrages were usually committed at an early hour in the morning, whence the name of Peep-o'-Day Boys; but the faction was also known as 'Protestant Boys,' and 'wreckers,' and ultimately merged in the Orange Society."—M. Haverty, *Hist. of Ireland*, p. 722.

A. D. 1793.—Passage of the Catholic Relief Bill.—"On February 4 (1793) Hobart [Chief Secretary] moved for leave to bring in his Catholic Relief Bill, and stated the nature of its provisions. It was of a kind which only a year before would have appeared utterly impossible, and which was in the most glaring opposition to all the doctrines which the Government and its partisans had of late been urging. . . . This great measure was before Parliament, with several intermissions, for rather more than five weeks. . . . The vast preponderance of speakers were in favour of relief to Catholics, though

there were grave differences as to the degree, and speakers of the highest authority represented the genuine Protestant feeling of the country as being in its favour. . . . Few things in Irish parliamentary history are more remarkable than the facility with which this great measure was carried, though it was in all its aspects thoroughly debated. It passed its second reading in the House of Commons with only a single negative. It was committed with only three negatives, and in the critical divisions on its clauses the majorities were at least two to one. The qualification required to authorise a Catholic to bear arms was raised in committee on the motion of the Chancellor, and in addition to the oath of allegiance of 1774, a new oath was incorporated in the Bill, copied from one of the declarations of the Catholics, and abjuring certain tenets which had been ascribed to them, among others the assertion that the infallibility of the Pope was an article of their faith. For the rest the Bill became law almost exactly in the form in which it was originally designed. It swept away the few remaining disabilities relating to property which grew out of the penal code. It enabled Catholics to vote like Protestants for members of Parliament and magistrates in cities or boroughs; to become elected members of all corporations except Trinity College; to keep arms subject to some specified conditions; to hold all civil and military offices in the kingdom from which they were not specifically excluded; to hold the medical professorships on the foundation of Sir Patrick Dun; to take degrees and hold offices in any mixed college connected with the University of Dublin that might hereafter be founded. It also threw open to them the degrees of the University, enabling the King to alter its statutes to that effect. A long clause enumerated the prizes which were still withheld. Catholics might not sit in either House of Parliament; they were excluded from almost all Government and judicial positions; they could not be Privy Councillors, King's Counsel, Fellows of Trinity College, sheriffs or sub-sheriffs, or generals of the staff. Nearly every post of ambition was still reserved for Protestants, and the restrictions weighed most heavily on the Catholics who were most educated and most able. In the House of Lords as in the House of Commons the Bill passed with little open opposition, but a protest, signed among other peers by Charlemont, was drawn up against it. . . . The Catholic Relief Bill received the royal assent in April, 1793, and in the same month the Catholic Convention dissolved itself. Before doing so it passed a resolution recommending the Catholics 'to co-operate in all loyal and constitutional means' to obtain parliamentary reform. . . . The Catholic prelates in their pastorals expressed their gratitude for the Relief Bill. The United Irishmen on their side issued a proclamation warmly congratulating the Catholics on the measure for their relief, but also urging in passionate strains that parliamentary reform was the first of needs."—W. E. H. Lecky, *Ilist. of Eng. in the 18th Century*, ch. 25 (v. 6).

A. D. 1793-1798.—Organization of the United Irishmen.—Attempted French invasions.—The rising of '98.—"Nothing could be less sinister than the original aims and methods of the Society of United Irishmen, which was conceived in the idea of uniting Catholics and Protestants

'in pursuit of the same object—a repeal of the penal laws, and a (parliamentary) reform including in itself an extension of the right of suffrage.' This union was founded at Belfast, in 1791, by Theobald Wolfe Tone, a young barrister of English descent, and, like the majority of the United Irishmen, a Protestant. Some months later a Dublin branch was founded, the chairman being the hon. Simon Butler, a Protestant gentleman of high character, and the secretary a tradesman named James Napper Tandy. The society grew rapidly, and branches were formed throughout Ulster and Leinster. The religious strife of the Orange boys and Defenders was a great trouble to the United men, who felt that these creed animosities among Irishmen were more ruinous to the national cause than any corruption of parliament or coercion of government could possibly be. Ireland, united, would be quite capable of fighting her own battles, but these party factions rendered her contemptible and weak. The society accordingly set itself the impossible task of drawing together the Defenders and the Orangemen. Catholic emancipation—one of the great objects of the union—naturally appealed very differently to the rival parties: it was the great wish of the Defenders, the chief dread of the Orangemen. Both factions were composed of the poorest and most ignorant peasantry in Ireland, men whose political views did not soar above the idea that 'something should be done for old Ireland.' The United Irishmen devoted themselves to the regeneration of both parties, but the Orangemen would have none of them, and the Protestant United men found themselves drifting into partnership with the Catholic Defenders. To gain influence with this party, Tandy took the Defenders' oath. He was informed against; and, as to take an illegal oath was then a capital offence in Ireland, he had to fly for his life to America. This adventure made Tandy the hero of the Defenders, who now joined the union in great numbers; but the whole business brought the society into disrepute, and connected it with the Defenders, who, like the Orange boys, were merely a party of outrage. . . . One night in the May of '94 a government raid was made upon the premises of the union. The officers of the society were arrested, their papers seized, the type of their newspaper destroyed, and the United Irish Society was proclaimed as an illegal organisation. Towards the close of this year all need for a reform society seemed to have passed. Fitzwilliam was made viceroy, and emancipation and reform seemed assured. His sudden recall, the reversal of his appointments, the rejection of Grattan's Reform Bill, and the renewal of the old coercive system, convinced the United men of the powerlessness of peaceful agitation to check the growth of the system of government by corruption. They accordingly reorganised the union, but as a secret society, and with the avowed aim of separating Ireland from the British empire. The Fitzwilliam affair had greatly strengthened the union, which was joined by many men of high birth and position, among them lord Edward Fitzgerald, brother of the duke of Leinster, and Arthur O'Connor, nephew to lord Longueville, both of whom had been members of the House of Commons. . . . But the ablest man of the party was Thomas Addis Emmet, a barrister, and the elder brother of Robert Emmet. The

society gradually swelled to the number of 5,000 members, but throughout its existence it was perfectly riddled with spies and informers, by whom government was supplied with a thorough knowledge of its doings. It became known to Pitt that the French government had sent an Englishman, named Jackson, as an emissary to Ireland. Jackson was convicted of treason, and hanged, and Wolfe Tone was sufficiently implicated in his guilt . . . to find it prudent to fly to America. But before leaving Ireland he arranged with the directors of the union to go from America to France, and to try to persuade the French government to assist Ireland in a struggle for separation. While Tone was taking his circuitous route to Paris, government, to meet the military development of the society, placed Ulster and Leinster under a stringent Insurrection Act; torture was employed to wring confession from suspected persons, and the Protestant militia and yeomanry were drafted at free quarters on the wretched Catholic peasantry. The barbarity of the soldiers lashed the people of the northern provinces into a state of fury. . . . In the meantime the indomitable Tone—unknown, without credentials, without influence, and ignorant of the French language—had persuaded the French government to lend him a fleet, 10,000 men, and 40,000 stand of arms, which armament left Brest for Bantry Bay on the 16th December, 1796. Ireland was now in the same position as England had been when William of Orange had appeared outside Torbay. Injustice, corruption, and oppression had in both cases goaded the people into rebellion. A calm sea and a fierce gale made the difference between the English patriot of 1688 and the Irish traitor of 1796. Had the sea been calm in the Christmas week of '96, nothing could have stopped the French from marching on to Dublin, but just as the ships put in to Bantry Bay, so wild a wind sprang up that they were driven out to sea, and blown and buffeted about. For a month they tossed about within sight of land, but the storm did not subside, and, all chance of landing seeming as far off as ever, they put back into the French port.—Wm. S. Gregg, *Irish History for English Readers*, ch. 23.—“After the failure of Hoche's expedition, another great armament was fitted out in the Texel, where it long lay ready to come forth, while the English fleet, the only safeguard of our coasts, was crippled by the mutiny at the Nore. But the wind once more fought for England, and the Batavian fleet came out at last only to be destroyed at Camperdown. Tone was personally engaged in both expeditions, and his lively Diary, the image of his character, gives us vivid accounts of both. The third effort of the French Government was feeble, and ended in the futile landing of a small force under Humbert. . . . In the last expedition Tone himself was taken prisoner, and, having been condemned to death, committed suicide in prison. . . . It was well for Ireland, as well as for England, that Tone failed in his enterprise. Had he succeeded, his country would for a time have been treated as Switzerland and the Batavian Republic were treated by their French regenerators, and, in the end, it would have been surely reconquered and punished by the power which was mistress of the sea. . . . But now that all is over, we can afford to say that Tone gallantly ventured his life in

what naturally appeared to him, and would to a high-spirited Englishman under the same circumstances have appeared, a good cause. One of his race had but too much reason then to ‘hate the very name of England,’ and to look forward to the burning of her cities with feelings in which pity struggled with revenge for mastery, but revenge prevailed. . . . From the Republicans the disturbance spread, as in 1641, to that mass of blind disaffection and hatred, national, social, agrarian, and religious, which was always smouldering among the Catholic peasantry. With these sufferers the political theories of the French Revolutionists had no influence; they looked to French invasion, as well as to domestic insurrection, merely as a deliverance from the oppression under which they groaned. . . . The leading Roman Catholics, both clerical and lay, were on the side of the government. The mass of the Catholic priesthood were well inclined to take the same side. They could have no sympathy with an Atheist Republic, red with the blood of priests, as well as with the blood of a son of St. Louis. If some of the order were concerned in the movement, it was as demagogues, sympathizing with their peasant brethren, not as priests. Yet the Protestants insisted on treating the Catholic clergy as rebels by nature. They had assuredly done their best to make them so. . . . No sooner did the Catholic peasantry begin to move and organize themselves than the Protestant gentry and yeomanry as one man became Cromwellians again. Then commenced a Reign of Terror scarcely less savage than that of the Jacobins, against whom Europe was in arms, as a hideous and portentous brood of evil, the scourge and horror of the whole human race. The suspected conspirators were intimidated, and confessions, or pretended confessions, were extorted by loosing upon the homes of the peasantry the license and barbarity of an irregular soldiery more cruel than a regular invader. Flogging, half-hanging,* pitch-capping, picketing, went on over a large district, and the most barbarous scourgings, without trial, were inflicted in the Riding-house at Dublin, in the very seat of government and justice. This was styled, ‘exerting a vigour beyond the law;’ and to become the object of such vigour, it was enough, as under Robespierre, to be suspected of being suspect. No one has yet fairly undertaken the revolting but salutary task of writing a faithful and impartial history of that period; but from the accounts we have, it appears not unlikely that the peasantry, though undoubtedly in a disturbed state, and to a great extent secretly organized, might have been kept quiet by measures of lenity and firmness; and that they were gratuitously scourged and tortured into open rebellion. When they did rebel, they shewed, as they had shewn in 1641, what the galley-slave is when, having long toiled under the lash, he contrives in a storm to slip his chains and become master of the vessel. The atrocities of Wexford and Vinegar-Hill rivalled the atrocities of Port-nadown. Nor when the rebellion was vanquished did the victors fail to renew the famous feats of Sir Charles Coote and of the regiment of Cole. We now possess terrible and overwhelming evidence of their sanguinary ferocity in the correspondence of Lord Cornwallis, who was certainly no friend to rebels, having fought against

them in America, but who was a man of sense and heart, most wisely sent over to quench the insurrection, and pacify the country. . . . The murders and other atrocities committed by the Jacobins were more numerous than those committed by the Orangemen, and as the victims were of higher rank they excited more indignation and pity; but in the use of torture the Orangemen seem to have reached a pitch of fiendish cruelty which was scarcely attained by the Jacobins. . . . The Jacobin party was almost entirely composed of men taken from the lowest of the people, whereas among the Irish terrorists were found men of high social position and good education."—Goldwin Smith, *Irish Hist. and Irish Character*, pp. 166-175.

A. D. 1795-1796.—Formation of the Orange Society.—Battle of the Diamond.—Persecution of Catholics by Protestant mobs.—"The year 1795 is very memorable in Irish history, as the year of the formation of the Orange Society, and the beginning of the most serious disturbances in the county of Armagh. . . . The old popular feud between the lower ranks of Papists and Presbyterians in the northern counties is easy to understand, and it is not less easy to see how the recent course of Irish politics had increased it. A class which had enjoyed and gloried in uncontested ascendancy, found this ascendancy passing from its hands. A class which had formerly been in subjection, was elated by new privileges, and looked forward to a complete abolition of political disabilities. Catholic and Protestant tenants came into a new competition, and the demeanour of Catholics towards Protestants was sensibly changed. There were boasts in taverns and at fairs, that the Protestants would speedily be swept away from the land and the descendants of the old proprietors restored, and it was soon known that Catholics all over the country were forming themselves into committees or societies, and were electing representatives for a great Catholic convention at Dublin. The riots and outrages of the Peep of Day Boys and Defenders had embittered the feeling on both sides. . . . Members of one or other creed were attacked and insulted as they went to their places of worship. There were fights on the high roads, at fairs, wakes, markets, and country sports, and there were occasionally crimes of a much deeper dye. . . . In September 1795 riots broke out in this county [Armagh], which continued for some days, but at length the parish priest on the one side, and a gentleman named Atkinson on the other, succeeded in so far appeasing the quarrel that the combatants formally agreed to a truce, and were about to retire to their homes, when a new party of Defenders, who had marched from the adjoining counties to the assistance of their brethren, appeared upon the scene, and on September 21 they attacked the Protestants at a place called the Diamond. The Catholics on this occasion were certainly the aggressors, and they appear to have considerably outnumbered their antagonists, but the Protestants were better posted, better armed,

and better organised. A serious conflict ensued, and the Catholics were completely defeated, leaving a large number—probably twenty or thirty—dead upon the field. It was on the evening of the day on which the battle of the Diamond was fought, that the Orange Society was formed. It was at first a league of mutual defence, binding its members to maintain the laws and the peace of the country, and also the Protestant Constitution. No Catholic was to be admitted into the society, and the members were bound by oath not to reveal its secrets. The doctrine of Fitzgibbon, that the King, by assenting to Catholic emancipation, would invalidate his title to the throne, was remarkably reflected in the oath of the Orangemen, which bound them to defend the King and his heirs, 'so long as he or they support the Protestant ascendancy.' The society took its name from William of Orange, the conqueror of the Catholics, and it agreed to celebrate annually the battle of the Boyne. In this respect there was nothing in it particularly novel. Protestant associations, for the purpose of commemorating the events and maintaining the principles of the Revolution, had long been known. . . . A very different spirit, however, animated the early Orangemen. The upper classes at first generally held aloof from the society; for a considerable time it appears to have been almost confined to the Protestant peasantry of Ulster, and the title of Orangemen was probably assumed by numbers who had never joined the organisation, who were simply Peep of Day Boys taking a new name, and whose conduct was certainly not such as those who instituted the society had intended. A terrible persecution of the Catholics immediately followed. The animosities between the lower orders of the two religions, which had long been little bridled, burst out afresh, and after the battle of the Diamond, the Protestant rabble of the county of Armagh, and of part of the adjoining counties, determined by continuous outrages to drive the Catholics from the country. Their cabins were placarded, or, as it was termed, 'papered,' with the words, 'To hell or Connaught,' and if the occupants did not at once abandon them, they were attacked at night by an armed mob. The webs and looms of the poor Catholic weavers were cut and destroyed. Every article of furniture was shattered or burnt. The houses were often set on fire, and the inmates were driven homeless into the world. The rioters met with scarcely any resistance or disturbance. Twelve or fourteen houses were sometimes wrecked in a single night. Several Catholic chapels were burnt, and the persecution, which began in the county of Armagh, soon extended over a wide area in the counties of Tyrone, Down, Antrim, and Derry. . . . The outrages continued with little abatement through a great part of the following year. As might have been expected, there were widely differing estimates of the number of the victims. According to some reports, which were no doubt grossly exaggerated, no less than 1,400 families, or about 7,000 persons, were driven out of the county of Armagh alone. Another, and much more probable account, spoke of 700 families, while a certain party among the gentry did their utmost to minimise the persecutions."—W. E. H. Lecky, *Hist. of Eng. in the 18th Cent'y*, ch. 27 (v. 7).

A. D. 1798-1800.—The Legislative Union with Great Britain.—"No sooner had the

rebellion been suppressed than the Government proposed, to the Parliament of each country, the union of Great Britain and Ireland under a common legislature. This was no new idea. It had frequently been in the minds of successive generations of statesmen on both sides of the Channel; but had not yet been seriously discussed with a view to immediate action. Nothing could have been more safely predicted than that Ireland must, sooner or later, follow the precedent of Scotland, and yield her pretensions to a separate legislation. The measures of 1782, which appeared to establish the legislative independence of Ireland, really proved the vanity of such a pretension. . . . On the assembling of the British Parliament at the commencement of the year [1799], the question of the Union was recommended by a message from the Crown; and the address, after some opposition, was carried without a division. Pitt, at this, the earliest stage, pronounced the decision at which the Government had arrived to be positive and irrevocable. . . . Lord Cornwallis [then Lord Lieutenant of Ireland] also expressed his conviction that union was the only measure which could preserve the country. . . . The day before the intended Union was signified by a royal message to the English Parliament, the Irish Houses assembled; and the Viceroy's speech, of course, contained a paragraph relative to the project. The House of Lords, completely under the control of the Castle, agreed to an address in conformity with the speech, after a short and languid debate, by a large majority; but the Commons were violently agitated. . . . An amendment to the address pledging the House to maintain the Union was lost by one vote, after the House had sat twenty-one hours; but, on the report, the amendment to omit the paragraph referring to the Union was carried by a majority of four. . . . When it was understood that the Government was in earnest . . . there was little difficulty in alarming a people among whom the machinery of political agitation had, for some years, been extensively organised. The bar of Dublin took the lead, and it at once became evident that the policy of the Government had effected a union among Irishmen far more formidable than that which all the efforts of sedition had been able to accomplish. The meeting of the bar included not merely men of different religious persuasions, but, what was of more importance in Ireland, men of different sides in politics. . . . However conclusive the argument in favour of Union may appear to Englishmen, it was difficult for an Irishman to regard the Union in any other view than as a measure to deprive his country of her independent constitution, and to extinguish her national existence. Mr. Foster, the Speaker, took this view. . . . Sir John Parnell, the Chancellor of the Exchequer, followed the Speaker. Mr. Fitzgerald, the Prime Serjeant, a law officer of the Crown, was on the same side. Ponsonby, the leader of the Whigs, was vehement against the scheme; so was Grattan; so was Curran. Great efforts were made by the Government to quiet the Protestants, and to engage the Catholics to support the Union. These efforts were so far successful that most of the Orange lodges were persuaded to refrain from expressing any opinion on the subject. The Catholic hierarchy were conciliated by the promise of a provision for the clergy, and of an

adjustment of the Tithe question. Hopes were held out, if promises were not actually made, to the Catholic community, that their civil disabilities would be removed. . . . If the Union was to be accomplished by constitutional means, it could be effected only by a vote of the Irish Parliament, concurring with a vote of the English Parliament; and if the Irish assembly were to pronounce an unbiassed judgment on the question of its extinction, it is certain that a very small minority, possibly not a single vote, would be found to support the measure. . . . The vote on the address was followed, in a few days, by an address to the Crown, in which the Commons pledged themselves to maintain the constitution of 1782. The majority in favour of national independence had already increased from five to twenty. . . . The votes of the Irish Commons had disposed of the question for the current session; but preparations were immediately made for its future passage through the Irish Houses. The foremost men in Ireland . . . had first been tempted, but had indignantly refused every offer to betray the independence of their country. Another class of leading persons was then tried, and from these, for the most part, evasive answers were received. The minister understood the meaning of these dubious utterances. There was one mode of carrying the Union, and one mode only. Bribery of every kind must be employed without hesitation and without stint." —W. Massey, *Hist. of Eng.: Reign of Geo. III.*, ch. 38 (v. 4). —"Lord Cornwallis had to work the system of 'negotiating and jobbing,' by promising an Irish Peerage, or a lift in that Peerage, or even an English Peerage, to a crowd of eager competitors for honours. The other specific for making converts was not yet in complete operation. Lord Castlereagh [the Irish Chief Secretary] had the plan in his portfolio:—borough proprietors to be compensated; . . . fifty barristers in parliament, who always considered a seat as the road to preferment, to be compensated; the purchasers of seats to be compensated; individuals connected either by residence or property with Dublin to be compensated. 'Lord Castlereagh considered that £1,500,000 would be required to effect all these compensations.' The sum actually paid to the borough-mongers alone was £1,260,000. Fifteen thousand pounds were allotted to each borough; and 'was apportioned amongst the various patrons.' . . . It had become a contest of bribery on both sides. There was an 'Opposition stock-purse,' as Lord Castlereagh describes the fund against which he was to struggle with the deeper purse at Whitehall. . . . During the administration of Lord Cornwallis, 29 Irish Peerages were created; of which seven only were unconnected with the question of Union. Six English Peerages were granted on account of Irish services; and there were 19 promotions in the Irish Peerage, earned by similar assistance." The question of Union was virtually decided in the Irish House of Commons on the 6th of February, 1800. Lord Castlereagh, on the previous day, had read a message from the Lord Lieutenant, communicating resolutions adopted by the parliament of Great Britain in the previous year. "The question was debated from four o'clock in the afternoon of the 5th to one o'clock in the afternoon of the 6th. During that time the streets of Dublin were the scene of a great riot, and the peace of the city was

maintained only by troops of cavalry. . . . On the division of the 6th there was a majority of 43 in favour of the Union." It was not, however, until the 7th of June, that the final legislative enactment—the Union Bill—was passed in the Irish House of Commons. The first article provided "that the kingdoms of Great Britain and Ireland should, upon the 1st of January, 1801, be united into one kingdom, by the name of The United Kingdom of Great Britain and Ireland. The United Kingdom was to be represented in one and the same parliament. In the United Parliament there were to be 28 temporal Peers, elected for life by the Irish Peerage; and four spiritual Peers, taking their places in rotation. There were to be 100 members of the Lower House; each county returning two, as well as the cities of Dublin and Cork. The University returned one, and 31 boroughs each returned one. Of these boroughs 23 remained close boroughs till the Reform Bill of 1831. . . . The Churches of England and Ireland were to be united. The proportion of Revenue to be levied was fixed at fifteen for Great Britain and two for Ireland, for the succeeding twenty years. Countervailing duties upon imports to each country were fixed by a minute tariff, but some commercial restrictions were to be removed."—C. Knight, *Popular Hist. of England*, v. 7, ch. 21.—"If the Irish Parliament had consisted mainly, or to any appreciable extent, of men who were disloyal to the connection, and whose sympathies were on the side of rebellion or with the enemies of England, the English Ministers would, I think, have been amply justified in employing almost any means to abolish it. . . . But it cannot be too clearly understood or too emphatically stated, that the legislative Union was not an act of this nature. The Parliament which was abolished was a Parliament of the most unqualified loyalists; it had shown itself ready to make every sacrifice in its power for the maintenance of the Empire, and from the time when Arthur O'Connor and Lord Edward Fitzgerald passed beyond its walls, it probably did not contain a single man who was really disaffected. . . . It must be added, that it was becoming evident that the relation between the two countries established by the Constitution of 1782 could not have continued unchanged. . . . Even with the best dispositions, the Constitution of 1782 involved many and grave probabilities of difference. . . . Sooner or later the corrupt borough ascendancy must have broken down, and it was a grave question what was to succeed it. . . . An enormous increase of disloyalty and religious animosity had taken place during the last years of the century, and it added immensely to the danger of the democratic Catholic suffrage, which the Act of 1793 had called into existence. This was the strongest argument for hurrying on the Union; but when all due weight is assigned to it, it does not appear to me to have justified the policy of Pitt."—W. E. H. Lecky, *Hist. of Eng. in the 18th Century*, ch. 32 (v. 8).

A. D. 1801.—Pitt's promise of Catholic Emancipation broken by the king. See ENGLAND: A. D. 1801-1806.

A. D. 1801-1803.—The Emmet insurrection. —"Lord Hardwicke succeeded Lord Cornwallis as viceroy in May [1801]; and for two years, so far as the British public knew, Ireland was undisturbed. The harvest of 1801 was abundant. The island was occupied by a military force of 125,000 men. Distant rumours of disturbances in Limerick, Tipperary, and Waterford were faintly audible. Imports and exports increased. The debt increased likewise, but, as it was met by loans and uncontrolled by any public assembly, no one protested, and few were aware of the fact. Landlords and middlemen threw on high rents, and peasants as yet could live. . . . Early in 1803 the murmurs in the south-west became louder. Visions of a fixed price for potatoes began to shape themselves, and the invasion of 'strangers' ready to take land from which tenants had been ejected was resisted. The magistrates urged the viceroy to obtain and exercise the powers of the Insurrection Act; but the evil was not thought of sufficient magnitude, and their request was refused. Amidst the general calm, the insurrection of Robert Emmett in July broke like a bolt from the blue. A young republican visionary, whose brother had taken an active part in the rebellion, he had inspired a few score comrades with the quixotic hope of rekindling Irish nationality by setting up a factory of pikes in a back street of Dublin. On the eve of St. James's Day, Quigley, one of his associates, who had been sowing vague hopes among the villages of Kildare, brought a mixed crowd into Dublin. When the evening fell, a sky-rocket was fired. Emmett and his little band sallied from Marshalsea Lane into St. James's Street, and distributed pikes to all who would take them. The disorderly mob thus armed proceeded to the debtors' prison, which they attacked, killing the officer who defended it. Emmett urged them on to the Castle. They followed, in a confused column, utterly beyond his power to control. On their way they fell in with the carriage of the Chief Justice, Lord Kilwarden, dragged him out, and killed him. By this time a few handfuls of troops had been collected. In half an hour two subalterns, with fifty soldiers each, had dispersed the whole gathering. By ten o'clock all was over, with the loss of 20 soldiers and 50 insurgents. Emmett and Russell, another of the leaders who had undertaken the agitation of Down and Antrim, were shortly afterwards taken and executed; Quigley escaped. Such was the last reverberation of the rebellion of 1798, or rather of the revolutionary fervour that led the way to that rebellion, before it had been tainted with religious animosity. Emmett died as Shelley would have died, a martyr and an enthusiast; but he knew little of his countrymen's condition, little of their aspirations, nothing of their needs. He had no successors."—J. H. Bridges, *pt. 3 of Two Centuries of Irish Hist.*, ch. 2.—"Emmet might easily have escaped to France if he had chosen, but he delayed till too late. Emmet was a young man, and Emmet was in love. 'The idol of his heart,' as he calls her in his dying speech, was Sarah Curran, the daughter of John Philpot Curran. . . . Emmet was determined to see her before he went. He placed his life upon the cast and lost it. . . . The White Terror which followed upon the failure of Emmet's rising was accompanied by almost all the horrors

which marked the hours of repression after the rebellion of '98. . . . The old devil's dance of spies and informers went merrily forward; the prisons were choked with prisoners."—J. H. McCarthy, *Ireland since the Union*, ch. 5-6.

A. D. 1811-1829.—O'Connell and the agitation for Catholic Emancipation and the Repeal of the Union.—Catholic disabilities removed. — "There is much reason to believe that almost from the commencement of his career" Daniel O'Connell, the great Irish agitator, "formed one vast scheme of policy which he pursued through life with little deviation, and, it must be added, with little scruple. This scheme was to create and lead a public spirit among the Roman Catholics; to wrest emancipation by this means from the Government; to perpetuate the agitation created for that purpose till the Irish Parliament had been restored; to disendow the Established Church; and thus to open in Ireland a new era, with a separate and independent Parliament and perfect religious equality. It would be difficult to conceive a scheme of policy exhibiting more daring than this. The Roman Catholics had hitherto shown themselves absolutely incompetent to take any decisive part in politics. . . . O'Connell, however, perceived that it was possible to bring the whole mass of the people into the struggle, and to give them an almost unexampled momentum and unanimity by applying to politics a great power that lay dormant in Ireland—the power of the Catholic priesthood. To make the priests the rulers of the country, and himself the ruler of the priests, was his first great object. . . . There was a party supported by Keogh, the leader in '93, who recommended what was called 'a dignified silence'—in other words, a complete abstinence from petitioning and agitation. With this party O'Connell successfully grappled. His advice on every occasion was, 'Agitate, agitate, agitate!' and Keogh was so irritated by the defeat that he retired from the society." O'Connell's leadership of the movement for Catholic Emancipation became virtually established about the beginning of 1811. "He avowed himself repeatedly to be an agitator with an 'ulterior object,' and declared that that object was the repeal of the Union. 'Desiring, as I do, the repeal of the Union,' he said in one of his speeches, in 1813, 'I rejoice to see how our enemies promote that great object. . . . They delay the liberties of the Catholics, but they compensate us most amply because they advance the restoration of Ireland. By leaving one cause of agitation, they have created, and they will embody and give shape and form to, a public mind and a public spirit.' . . . Nothing can be more untrue than to represent the Repeal agitation as a mere afterthought designed to sustain his flagging popularity. Nor can it be said that the project was first started by him. The deep indignation that the Union had produced in Ireland was fermenting among all classes, and assuming the form, sometimes of a French party, sometimes of a social war, and sometimes of a constitutional agitation. . . . It would be tedious to follow into minute detail the difficulties and the mistakes that obstructed the Catholic movement, and were finally overcome

by the energy or the tact of O'Connell. . . . Several times the movement was menaced by Government proclamations and prosecutions. Its great difficulty was to bring the public opinion of the whole body of the Roman Catholics actively and habitually into the question. . . . All preceding movements since the Revolution (except the passing excitement about Wood's halfpence) had been chiefly among the Protestants or among the higher order of the Catholics. The mass of the people had taken no real interest in politics, had felt no real pain at their disabilities, and were politically the willing slaves of their landlords. For the first time, under the influence of O'Connell, the great swell of a really democratic movement was felt. The simplest way of concentrating the new enthusiasm would have been by a system of delegates, but this had been rendered illegal by the Convention Act. On the other hand, the right of petitioning was one of the fundamental privileges of the constitution. By availing himself of this right O'Connell contrived, with the dexterity of a practised lawyer, to violate continually the spirit of the Convention Act, while keeping within the letter of the law. Proclamation after proclamation was launched against his society, but by continually changing its name and its form he generally succeeded in evading the prosecutions of the Government. These early societies, however, all sink into insignificance compared with that great Catholic Association which was formed in 1824. The avowed objects of this society were to promote religious education, to ascertain the numerical strength of the different religions, and to answer the charges against the Roman Catholics embodied in the hostile petitions. It also 'recommended' petitions (unconnected with the society) from every parish, and aggregate meetings in every county. The real object was to form a gigantic system of organisation, ramifying over the entire country, and directed in every parish by the priests, for the purpose of petitioning and in every other way agitating in favour of emancipation. The Catholic Rent [a system of small subscriptions—as small as a penny a month—collected from the poorest contributors, throughout Ireland] was instituted at this time, and it formed at once a powerful instrument of cohesion and a faithful barometer of the popular feeling. . . . The success of the Catholic Association became every week more striking. The rent rose with an extraordinary rapidity [from £350 a week in October to £700 a week in December, 1824]. The meetings in every county grew more and more enthusiastic, the triumph of priestly influence more and more certain. The Government made a feeble and abortive effort to arrest the storm by threatening both O'Connell and Sheil [Richard Lalor] with prosecution for certain passages in their speeches. . . . The formation of the Wellington Ministry [Wellington and Peel, 1828] seemed effectually to crush the present hopes of the Catholics, for the stubborn resolution of its leader was as well known as his Tory opinions. Yet this Ministry was destined to terminate the contest by establishing the principle of religious equality. . . . On the accession of the Wellington Ministry to power the Catholic Association passed a resolution to the effect that they would oppose with their whole energy any Irish member who consented to accept office under it. . . . An oppor-

tunity for carrying the resolution into effect soon occurred. Mr. Fitzgerald, the member for Clare, accepted the office of President of the Board of Trade, and was consequently obliged to go to his constituents for re-election. O'Connell entered the lists against him. "The excitement at this announcement rose at once to fever height. It extended over every part of Ireland, and penetrated every class of society. The whole mass of the Roman Catholics prepared to support him, and the vast system of organisation which he had framed acted effectually in every direction." For the first time, the landlords found that the voting of their tenants could not be controlled. Fitzgerald withdrew from the contest and O'Connell was elected. "Ireland was now on the very verge of revolution. The whole mass of the people had been organised like a regular army, and taught to act with the most perfect unanimity. . . . The Ministers, feeling further resistance to be hopeless, brought in the Emancipation Bill, confessedly because to withhold it would be to kindle a rebellion that would extend over the length and breadth of the land."—W. E. H. Lecky, *Leaders of Public Opinion in Ireland: O'Connell*.—"Peel introduced the Relief Bill on the 5th March [1829]. The king had given to it a reluctant assent. At the last hour, the intrigues of Eldon and the Duke of Cumberland had so far influenced his weak and disingenuous mind that he withdrew his assent to his ministers' policy, on the pretence that he had not expected, and could not sanction, any modification of the Oath of Supremacy. He parted from his ministers with kisses and courtesy, and for a few hours their resignation was in his hands. But with night his discretion waxed as his courage waned; his ministers were recalled, and their measure proceeded. In its main provisions it was thorough and far-reaching. It admitted the Roman Catholic to Parliament, and to all lay offices under the Crown, except those of Regent, Lord Chancellor, whether of England or of Ireland, and Lord Lieutenant. It repealed the oath of abjuration, it modified the oath of supremacy. . . . It approximated the Irish to the English county franchise by abolishing the forty-shilling freeholder, and raising the voters' qualifications to £10. All monasteries and institutions of Jesuits were suppressed; and Roman Catholic bishops were forbidden to assume titles of sees already held by bishops of the Church of Ireland. Municipal and other officials were forbidden to wear the insignia of their office at Roman Catholic ceremonies. Lastly, the new Oath of Supremacy was available only for persons thereafter to be elected to Parliament"—which nullified O'Connell's election at Clare. This petty stroke of malice is said to have been introduced in the bill for the gratification of the king. The vote in the Commons on the Bill was 353 against 180, and in the Lords 217 to 112. It received the Royal assent on the 13th of April.—J. A. Hamilton, *Life of Daniel O'Connell*, ch. 5.

ALSO IN: J. McCarthy, *Sir Robert Peel*, ch. 2-7.—W. J. Fitzpatrick, *Correspondence of Daniel O'Connell, with notices of his Life and Times*, v. 1, ch. 1-5.—W. J. Amherst, *Hist. of Catholic Emancipation*.—W. C. Taylor, *Life and Times of Sir Robert Peel*, v. 1, ch. 16-18 and v. 2, ch. 1-2.

A. D. 1820-1826.—Rise of the Ribbon Society.—"Throughout the half-century extending

from 1820 to 1870, a secret oath-bound agrarian confederacy, known as the 'Ribbon Society,' was the constant affliction and recurring terror of the landed classes of Ireland. The Vehmgericht itself was not more dreaded. . . . It is assuredly strange—indeed, almost incredible—that although the existence of this organisation was, in a general way, as well and as widely known as the fact that Queen Victoria reigned, or that Daniel O'Connell was once a living man; although the story of its crimes has thrilled judge and jury, and parliamentary committees have filled ponderous blue-books with evidence of its proceedings, there is to this hour the widest conflict of assertion and conclusion as to what exactly were its real aims, its origin, structure, character, and purpose. . . . I long ago satisfied myself that the Ribbonism of one period was not the Ribbonism of another; that the version of its aims and character prevalent amongst its own members in one county or district differed widely from that existing elsewhere. In Ulster it professed to be a defensive or retaliatory league against Orangeism. In Munster it was at first a combination against tithe-proctors. In Connaught it was an organisation against rack-renting and evictions. In Leinster it often was mere trade-unionism. . . . The Ribbon Society seems to have been wholly confined to small farmers, cottiers, labourers, and, in the towns, petty shopkeepers, in whose houses the 'lodges' were held. . . . Although from the inception, or first appearance, of Ribbonism the Catholic clergy waged a determined war upon it . . . the society was exclusively Catholic. Under no circumstances would a Protestant be admitted to membership. . . . The name 'Ribbon Society' was not attached to it until about 1826. It was previously known as 'Liberty Men'; the 'Religious Liberty System'; the 'United Sons of Irish Freedom'; 'Sons of the Shamrock'; and by other names. . . . It has been said, and probably with some truth, that it has been too much the habit to attribute erroneously to the Ribbon organisation every atrocity committed in the country, every deed of blood apparently arising out of agrarian combination or conspiracy. . . . But vain is all pretence that the Ribbon Society did not become, whatever the original design or intention of its members may have been, a hideous organisation of outrage and murder. . . . There was a period when Ribbon outrages had, at all events, a conceivable provocation; but there came a time when they sickened the public conscience by their wantonness. The vengeance of the society was ruthless and terrible. . . . From 1835 to 1855 the Ribbon organisation was at its greatest strength. . . . With the emigration of the labouring classes it was carried abroad, to England and to America. At one time the most formidable lodges were in Lancashire."—A. M. Sullivan, *New Ireland*, ch. 4.

A. D. 1832.—Parliamentary Representation increased by the Reform Bill. See ENGLAND: A. D. 1830-1832.

A. D. 1840-1841.—Discontent with the results of the Union.—Condition of the people.—O'Connell's revival of agitation for Repeal.—"The Catholics were at length emancipated in 1829; and now, surely, their enemies suggested,

they must be contented and grateful for evermore? Perverse must the people be who, having got what they asked, are not satisfied. Let us see. What they asked was to be admitted to their just share, or, at any rate to some share, of the government of their native country, from which they had been excluded for five generations. But on the passing of the Emancipation Act not a single Catholic was admitted to an office of authority, great or small. The door was opened, indeed, but not a soul was permitted to pass in. There were murmurs of discontent, and the class who still enjoyed all the patronage of the State, the Church, the army, the magistracy, and the public service, demanded if there was any use in attempting to conciliate a people so intractable and unreasonable? The Catholic Association, which had won the victory, was rewarded for its public spirit by being dissolved by Act of Parliament. Its leader, who had been elected to the House of Commons, had his election declared void by a phrase imported into the Emancipation Act for this special purpose. The forty-shilling freeholders, whose courage and magnanimity had made the cause irresistible, were immediately deprived of the franchise. By means of a high qualification and an ingeniously complicated system of registry, the electors in twelve counties were reduced from upwards of 100,000 to less than 10,000. Englishmen cannot comprehend our dissatisfaction. . . . Emancipation was speedily followed by a Reform of the House of Commons. In England a sweeping and salutary change was made both in the franchise, and in the distribution of seats; but Ireland did not obtain either the number of representatives she was demonstrably entitled to by population and resources, or such a reduction of the franchise as had been conceded to England. The Whigs were in power, and Ireland was well-disposed to the party. . . . But the idea of treating Ireland on perfectly equal terms, and giving her the full advantage of the Union which had been forced on her, did not exist in the mind of a single statesman of that epoch. After Emancipation and Reform, O'Connell had a fierce quarrel with the Whigs, during which he raised the question of Ireland's right to be governed exclusively by her own Parliament. The people responded passionately to his appeal. The party of Protestant Ascendancy had demanded the Repeal of the Union before Emancipation, but that disturbing event altered their policy, and they withheld all aid from O'Connell. After a brief time he abandoned the experiment, to substitute for it an attempt to obtain what was called 'justice to Ireland.' In furtherance of this project he made a compact with the Whigs that the Irish Party under his lead should support them in parliament. The Whigs in return made fairer appointments to judicial and other public employments, restrained jury packing, and established an unsectarian system of public education; but the national question was thrown back for more than a generation. In 1840-1 O'Connell revived the question of Repeal, on the ground that the Union had wholly failed to accomplish the end for which it was said to be designed. Instead of bringing Ireland prosperity, it had brought her ruin. The social condition of the country during the half-century, then drawing to a close was, indeed, without parallel in

Europe. The whole population were dependent on agriculture. There were minerals, but none found in what miners call 'paying quantities.' There was no manufacture except linen, and the remnant of a woollen trade, slowly dying out before the pitiless competition of Yorkshire. What the island chiefly produced was food; which was exported to richer countries to enable the cultivator to pay an inordinate rent. Foreign travellers saw with amazement an island possessing all the natural conditions of a great commerce, as bare of commerce as if it lay in some byeway of the world, where enterprise had not yet penetrated. . . . The great proprietors were two or three hundred—the heirs of the Undertakers, for the most part, and Absentees; the mass of the country was owned by a couple of thousand others, who lived in splendour, and even profusion; and for these the peasant ploughed, sowed, tended, and reaped a harvest which he never shared. Rent, in other countries, means the surplus after the farmer has been liberally paid for his skill and labour; in Ireland it meant the whole produce of the soil except a potato-pit. If a farmer strove for more, his master knew how to bring him to speedy submission. He could carry away his implements of trade by the law of distress, or rob him of his sole pursuit in life by the law of eviction. He could, and habitually did, seize the growing crop, the stools and pots in his miserable cabin, the blanket that sheltered his children, the cow that gave them nourishment. There were just and humane landlords, men who performed the duties which their position imposed, and did not exaggerate their rights; but they were a small minority. . . . Famines were frequent, and every other year destitution killed a crowd of peasants. For a hundred and fifty years before, whoever has described the condition of Ireland—English official, foreign visitor, or Irish patriot—described a famine more or less acute. Sometimes the tortured serfs rose in nocturnal jacquerie against the system; and then a cry of 'rebellion' was raised, and England was assured that these intractable barbarians were again (as the indictment always charged) 'levying war against the King's majesty.' There were indeed causes enough for national disaffection, but of these the poor peasant knew nothing; he was contending for so much miserable food as would save his children from starvation. There were sometimes barbarous agrarian murders—murders of agents and bailiffs chiefly, but occasionally of landlords. It would be shameful to forget that these savage crimes were often the result of savage provocation. . . . The country was naked of timber, the cabins of the peasantry were squalid and unfurnished. Mr. Carlyle reproves a lazy, thriftless people, who would not perform the simple operation of planting trees; and Mr. Froude frowns upon cottages whose naked walls are never draped by climbing roses or flowering creepers. But how much more eloquent is fact than rhetoric? The Irish landlords made a law that when the tenant planted a tree it became not his own property but his master's; and the established practice of four-fifths of the Irish landlords, when a tenant exhibited such signs of prosperity as a garden, or a white-washed cabin, was to reward his industry by increasing his rent. Peasants will not plant or make improvements on these

conditions, nor, I fancy, would philosophers. . . . It was sometimes made a boast in those days that rank, property, station, and professional success distinguished the minority in Ireland who were imperialists and Protestants. It was not an amazing phenomenon, that those upon whom the law had bestowed a monopoly of rank, property, and station, for a hundred and fifty years, should have still maintained the advantage a dozen years after Emancipation. It was a subject of scornful reproach that the districts inhabited by Protestants were peaceful and prosperous, while the Catholic districts were often poor and disorderly. There is no doubt of the facts; the contrast certainly existed. But the mystery disappears when one comes to reflect that in Down and Antrim the Squire regarded his tenantry with as much sympathy and confidence as a Squire in Devon or Essex, that their sons were trained to bear arms, and taught from the pulpit and platform that they belonged to a superior race, that all the local employments, paid out of the public purse, were distributed among them, that they had certain well understood rights over their holdings on which no landlord could safely trench, and that they met their masters, from time to time, in the friendly equality of an Orange lodge; while in Tipperary, the farmer was a tenant at will who never saw his landlord except when he followed the hounds across his corn, or frowned at him from the bench; whose rent could be raised, or his tenancy terminated at the pleasure of his master; who, on the smallest complaint, was carried before a bench of magistrates, where he had no expectation, and little chance, of justice; and who wanted the essential stimulus to thrift and industry, the secure enjoyment of his earnings. As a set-off to this long catalogue of discouragements, there were two facts of happy augury. In 1842 half a million of children were receiving education in the National Schools under a system designed to establish religious equality, and administered by Catholic and Protestant Commissioners. And the Teetotal movement was at its height. Thousands were accepting every week a pledge of total abstinence from Father Mathew, a young priest whom the gifts of nature and the accidents of fortune combined to qualify for the mission of a Reformer. . . . There was the beginning of political reforms also. The Whigs sent a Lord Lieutenant and Chief Secretary to Ireland who, for the first time since the fall of Limerick, treated the bulk of the nation as the social and political equals of the minority. The minority had been so long accustomed to make and administer the laws, and to occupy the places of authority and distinction, that they regarded the change as a revolt; and Lord Mulgrave and Thomas Drummond as the successors of Tyrconnel and Nugent. In the interval, since Emancipation, a few Catholics were elected to Parliament, two Catholic lawyers were raised to the bench, and smaller appointments distributed among laymen. . . . The exclusion of Catholics from juries was restrained, and the practice of appointing partisans of too shameful antecedents to public functions was interrupted. . . . It was under these circumstances that O'Connell for the second time summoned the Irish people to demand a Repeal of the Union."—Sir C. G. Duffy, *A Bird's-Eye View of Irish Hist.*, rev. ed., pp. 242-275.

A. D. 1841-1848.—O'Connell's last agitation.—His trial, imprisonment and release.—His death.—The "Young Ireland" Party and its rebellion.—In 1841, O'Connell "left England and went to Ireland, and devoted himself there to the work of organization. A succession of monster meetings were held all over the country, the far-famed one on Tara Hill being, as is credibly asserted, attended by no less than a quarter of a million of people. Over this vast multitude gathered together around him the magic tones of the great orator's voice swept triumphantly; awakening anger, grief, passion, delight, laughter, tears, at its own pleasure. They were astonishing triumphs, but they were dearly bought. The position was, in fact, an impossible one to maintain long. O'Connell had carried the whole mass of the people with him up to the very brink of the precipice, but how to bring them safely and successfully down again was more than even he could accomplish. Resistance he had always steadily denounced, yet every day his own words seemed to be bringing the inevitable moment of collision nearer and nearer. The crisis came on October the 5th. A meeting had been summoned to meet at Clontarf, near Dublin, and on the afternoon of the 4th the Government suddenly came to the resolution of issuing a proclamation forbidding it to assemble. The risk was a formidable one for responsible men to run. Many of the people were already on their way, and only O'Connell's own rapid and vigorous measures in sending out in all directions to intercept them hindered the actual shedding of blood. His prosecution and that of some of his principal adherents was the next important event. By a Dublin jury he was found guilty, sentenced to two years' imprisonment, and conveyed to prison, still earnestly entreating the people to remain quiet, an order which they strictly obeyed. The jury by which he had been condemned was known to be strongly biassed against him, and an appeal had been forwarded against his sentence to the House of Lords. So strong there, too, was the feeling against O'Connell, that little expectation was entertained of its being favourably received. Greatly to its honour, however, the sentence was reversed and he was set free. . . . The enthusiasm shown at his release was frantic and delirious. None the less those months in Richmond prison proved the death-knell of his power. He was an old man by this time; he was already weakened in health, and that buoyancy which had hitherto carried him over any and every obstacle never again revived. The 'Young Ireland' party, the members of which had in the first instance been his allies and lieutenants, had now formed a distinct section, and upon the vital question of resistance were in fierce hostility to all his most cherished principles. The state of the country, too, preyed visibly upon his mind. By 1846 had begun that succession of disastrous seasons which, by destroying the feeble barrier which stood between the peasant and a cruel death, brought about a national tragedy, the most terrible perhaps with which modern Europe has been confronted. This tragedy, though he did not live to see the whole of it, O'Connell—

himself the incarnation of the people—felt acutely. Deep despondency took hold of him. He retired, to a great degree, from public life, leaving the conduct of his organization in the hands of others. . . . In 1847 he resolved to leave Ireland, and to end his days in Rome. His last public appearance was in the House of Commons, where an attentive and deeply respectful audience hung upon the faltering and barely articulate accents which fell from his lips. In a few deeply moving words he appealed for aid and sympathy for his suffering countrymen, and left the House. . . . The camp and council chamber of the 'Young Ireland' party was the editor's room of 'The Nation' newspaper. There it found its inspiration, and there its plans were matured—so far, that is, as they can be said to have been ever matured. For an eminently readable and all things considered a wonderfully impartial account of this movement, the reader cannot do better than consult Sir Charles Gavan Duffy's 'Four Years of Irish History,' which has the immense advantage of being history taken at first hand, written that is by one who himself took a prominent part in the scenes which he describes. The most interesting figure in the party had, however, died before those memorable four years began. Thomas Davis, who was only thirty at the time of his death in 1845, was a man of large gifts, nay, might fairly be called a man of genius. . . . The whole movement in fact was, in the first instance, a literary quite as much as a political one. Nearly all who took part in it—Gavan Duffy, John Mitchell, Meagher, Dillon, Davis himself—were very young men, many fresh from college, all filled with zeal for the cause of liberty and nationality. The graver side of the movement only showed itself when the struggle with O'Connell began. At first no idea of deposing, or even seriously opposing the great leader seems to have been intended. The attempt on O'Connell's part to carry a formal declaration against the employment under any circumstances of physical force was the origin of that division, and what the younger spirits considered 'truckling to the Whigs' helped to widen the breach. When, too, O'Connell had partially retired into the background, his place was filled by his son, John O'Connell, the 'Head conciliator,' between whom and the 'Young Irelanders' there waged a fierce war, which in the end led to the indignant withdrawal of the latter from the Repeal council. Before matters reached this point, the younger camp had been strengthened by the adhesion of Smith O'Brien, who, though not a man of much intellectual calibre, carried no little weight in Ireland. . . . Early in January, 1847, O'Connell left on that journey of his which was never completed, and by the middle of May Ireland was suddenly startled by the news that her great leader was dead. The effect of his death was to produce a sudden and immense reaction. A vast revulsion of love and reverence sprang up all over the country; an immense sense of his incomparable services, and with it a vehement anger against all who had opposed him. Upon the 'Young Ireland' party, as was inevitable, the weight of that anger fell chiefly, and from the moment of O'Connell's death whatever claim they had to call themselves a national party vanished utterly. The men 'who killed the Liberator' could never again hope to carry with them the suffrages of any number

of their countrymen. This contumely, to a great degree undeserved, naturally reacted upon the subjects of it. The taunt of treachery and ingratitude flung at them wherever they went stung and nettled. In the general reaction of gratitude and affection for O'Connell, his son John succeeded easily to the position of leader. The older members of the Repeal Association thereupon rallied about him, and the split between them and the younger men grew deeper and wider. A wild, impracticable visionary now came to play a part in the movement. A deformed misanthrope, called James Lalor, endowed with a considerable command of vague, passionate rhetoric, began to write incentives to revolt in 'The Nation.' These growing more and more violent were by the editor at length prudently suppressed. The seed, however, had already sown itself in another mind. John Mitchell is described by Mr. Justin McCarthy as 'the one formidable man amongst the rebels of '48; the one man who distinctly knew what he wanted, and was prepared to run any risk to get it.' . . . To him it was intolerable that any human being should be willing to go further and to dare more in the cause of Ireland than himself, and the result was that after awhile he broke away from his connection with 'The Nation,' and started a new organ under the name of 'The United Irishmen,' one definitely pledged from the first to the policy of action. From this point matters gathered speedily to a head. Mitchell's newspaper proceeded to fling out challenge after challenge to the Government, calling upon the people to gather and to 'sweep this island clear of the English name and nation.' For some months these challenges remained unanswered. It was now, however, '48,' and nearly all Europe was in revolution. The necessity of taking some step began to be evident, and a Bill making all written incitement of insurrection felony was hurried through the House of Commons, and almost immediately after Mitchell was arrested. Even then he seems to have believed that the country would rise to liberate him. The country, however, showed no disposition to do anything of the sort. He was tried in Dublin, found guilty, sentenced to fourteen years' transportation, and a few days afterwards put on board a vessel in the harbour and conveyed to Spike Island, whence he was sent to Bermuda, and the following April in a convict vessel to the Cape, and finally to Tasmania. The other 'Young Irelanders,' stung apparently by their own previous inaction, thereupon rushed frantically into rebellion. The leaders—Smith O'Brien, Meagher, Dillon, and others—went about the country holding reviews of 'Confederates,' as they now called themselves, a proceeding which caused the Government to suspend the Habeas Corpus Act, and to issue a warrant for their arrest. A few more gatherings took place in different parts of the country, a few more ineffectual attempts were made to induce the people to rise, one very small collision with the police occurred, and then the whole thing was over. All the leaders in the course of a few days were arrested and Smith O'Brien and Meagher were sentenced to death, a sentence which was speedily changed into transportation. Gavan Duffy was arrested and several times tried, but the jury always disagreed, and in the end his prosecution was abandoned. The 'Young

Ireland' movement, however, was dead, and never again revived."—E. Lawless, *The Story of Ireland*, ch. 55-56.

A. D. 1843-1848.—The Devon Commission.

—The Encumbered Estates Act.—In 1843,

Mr. Sharman Crawford "succeeded in obtaining

the appointment of a Royal Commission to investigate the 'occupation of land in Ireland.'

This Commission, known from its chairman,

Lord Devon, as the Devon Commission, marks a

great epoch in the Irish land question. The

Commissioners, in their Report, brought out

strongly the facts that great misery existed in

Ireland, and that the cause of the misery was the

system of land tenure. The following extract

from the Report indicates the general nature of

its conclusions: 'A reference to the evidence of

most of the witnesses will show that the agricul-

tural labourer of Ireland continues to suffer the

greatest privations and hardships; that he con-

tinues to depend upon casual and precarious

employment for subsistence; that he is badly

housed, badly fed, badly clothed, and badly paid

for his labour. Our personal experience and

observations during our enquiry have afforded

us a melancholy confirmation of these statements,

and we cannot forbear expressing our strong

sense of the patient endurance which the labour-

ing classes have generally exhibited under suf-

ferings greater, we believe, than the people of

any other country in Europe have to sustain.'

And the remedy for the evil is to be found, con-

tinues the Report, in 'an increased and improved

cultivation of the soil,' to be gained by securing

for the tenant 'fair remuneration for the outlay

of his capital and labour.' No sooner was this

Report issued than great numbers of petitions

were presented to the House of Lords, and sup-

ported by Lord Devon, praying for legislative

reform of the land evils; and in June, 1845, a

bill was introduced into the House of Lords by

Lord Stanley, on behalf of the government of

Sir Robert Peel, for 'the purpose of providing

compensation to tenants in Ireland, in certain

cases, on being dispossessed of their holdings,

for such improvements as they may have made

during their tenancy.' By the selfish opposition

of the Irish landlords this bill was thrown out.

Two days after its rejection in the House of

Lords Mr. Sharman Crawford brought into the

House of Commons a Tenant Right Bill, and

met with as little success. In 1846 a government

bill was introduced, bearing a strong resemblance

to that of Lord Stanley; but the ministry was

overthrown, and the bill was dropped. A Liberal

ministry under Lord John Russell came into

power in July, 1846, and Irish hopes again began

to rise. In 1847 the indefatigable Mr. Crawford

brought in a bill, whose purpose was to extend

the Ulster custom to the whole of Ireland; it was

thrown out. A well-meant but in the end un-

successful attempt to relieve the burdens of

embarrassed landlords without redressing the

grievances of rack-rented tenants, was made in

1848 by the measure well known as the Encum-

bered Estates Act. This Act had for its object

to restore capital to the land; but with capital

it brought in a class of proprietors who lacked

the virtues as well as the vices of their predeces-

sors, and were even more oppressive to the tenantry."—E. Thursfield, *England and Ireland*, ch. 10.

tions, ch. 15.—D. B. King, *The Irish Question*,

ch. 9.

A. D. 1844.—The Maynooth Grant.—To-

wards the close of the session of Parliament in

1844, Sir Robert Peel undertook a measure

"dealing with higher education in Ireland.

Means were to be found, in some way, for the

education of the upper classes of the Irish, and

for the more efficient education of candidates for

the Roman Catholic priesthood. Some provision

already existed for the education of the Irish peo-

ple. Trinity College, with its considerable endow-

ments, afforded opportunities to wealthy Irish.

The National Board, which Stanley had institu-

ted, had under its control 3,153 schools, and

395,000 scholars. But Trinity College retained

most of its advantages for the benefit of its

Protestant students, and the 395,000 scholars,

whom the National Board was educating, did

not, after all, include one person in every twenty

alive in Ireland. The Roman Catholic, since

1793, had been allowed to graduate at Trinity;

but he could hold neither scholarship nor profes-

sorship. . . . Some steps had, indeed, been

taken for the education of the Roman Catholic

priesthood. In 1795, Fitzwilliam had proposed,

and his successor, Camden, had approved, the

appropriation of an annual sum of money to a

college formed at Maynooth for the education of

Roman Catholic priests. The Irish parliament

had readily sanctioned the scheme; the payment

of the grant had been continued, after the Union,

by the Parliament of the United Kingdom, and,

though the sums voted had been reduced to

£9,000 a year in 1808, this amount had been

thenceforward regularly allotted to Maynooth.

In some respects the grant was actually disad-

vantageous to the college; it was too small to

maintain the institution; it was large enough to

discourage voluntary contributions. The sur-

roundings of the college were squalid; its pro-

fessors were wretchedly paid; it was even im-

possible to assign to each of the 440 students a

separate room; it was dubbed by Macaulay, in a

memorable speech, a 'miserable Dotheboys'

Hall,' and it was Peel's deliberate opinion that

the absolute withdrawal of the grant would be

better than the continuance of the niggardly

allowance." The Government "asked Parlia-

ment to vote a sum of £30,000 to improve the

buildings at Maynooth; it proposed that the

Board of Works should in future be responsible

for keeping them in repair; it suggested that the

salaries of professors should be more than

doubled; that the position of the students should

be improved; that the annual grant should be

raised from about £9,000 to about £26,000, and

that this sum, instead of being subject to the

approval of the legislature once a year, should

be placed on the Consolidated Fund. Then

arose a series of debates which have no parallel

in the history of the British Parliament. . . .

'The Orangeman raises his howl,' said Macaulay,

'and Exeter Hall sets up its bray, and Mr. Mac-

Neile is horrified to think that a still larger grant

is intended for the priests of Baal at the table

of Jezebel, and the Protestant operatives of

Dublin call for the impeachment of Ministers in

exceedingly bad English.' A few years later a

man, who was both a Christian and a gentleman, declared the Irish famine to be a dispensation of Providence in return for the Maynooth grant. . . . Night after night it rained petitions; 298 petitions against the bill were presented on the 3rd of April, when Peel explained his scheme; 148 on the 8th; 254 on the 9th; 552 on the 10th; 2,262 on the 11th, when the bill was put down for a second reading; 662 on the 14th; 581 on the 15th; 420 on the 16th; 335 on the 17th; 371 on the 18th. The petitions hardly allowed a doubt to remain as to the opinion of the country. Peel, indeed, was again exposed to the full force of the strongest power which any British Minister can encounter. The Mussulman, driven to his last defence, raises the standard of the Prophet, and proclaims a holy war. But the Englishman, if Protestantism be in danger, shouts, 'No Popery!' and creates equal enthusiasm. . . . Yet, vast as was the storm which the Minister had provoked, the issues which he had directly raised were of the smallest proportions. Hardly anyone ventured to propose that the original vote to Maynooth should be withdrawn. A grant, indeed, which had been sanctioned by George III., which had been fixed by Perceval, which had been voted in an unreformed Parliament, almost without debate, and which had been continued for fifty years, could not be withdrawn. Peel's opponents, therefore, were compelled to argue that there was no harm in sacrificing £9,000 a year to Baal, but that a sacrifice of £26,000 was full of harm. . . . They debated the second reading of the bill for six nights, the third reading for three nights, and they seized other opportunities for protracting the discussion. Even the Lords forgot their customary habits and sat up till a late hour on three successive evenings to discuss an amendment for inquiring into the class of books used at Maynooth. But this unusual display of zeal proved useless. A majority in both Houses steadily supported the Minister, and zealous Protestants and old-fashioned Tories were unable to defeat a scheme which was proposed by Peel and supported by Russell."—S. Walpole, *Hist. of Eng. from 1815, ch. 19* (v. 4).

Also in: H. Martineau, *Hist. of the Thirty Years' Peace, bk. 6, ch. 8*.

A. D. 1845-1847.—The Famine.—"In 1841 the population of Ireland was 8,175,124 souls. By 1845 it had probably reached to nearly nine millions. . . . To any one looking beneath the surface the condition of the country was painfully precarious. Nine millions of a population living at best in a light-hearted and hopeful hand-to-mouth contentment, totally dependent on the hazards of one crop, destitute of manufacturing industries, and utterly without reserve or resource to fall back upon in time of reverse; what did all this mean but a state of things critical and alarming in the extreme? Yet no one seemed conscious of danger. The potato crop had been abundant for four or five years, and respite from dearth and distress was comparative happiness and prosperity. Moreover, the temperance movement [of Father Mathew] had come to make the 'good times' still better. Everything looked bright. No one concerned himself to discover how slender and treacherous was the foundation for this general hopefulness and confidence. Yet signs of the coming storm had been given. Partial famine caused by

failing harvests had indeed been intermittent in Ireland, and, quite recently, warnings that ought not to have been mistaken or neglected had given notice that the esculent which formed the sole dependence of the peasant millions was subject to some mysterious blight. In 1844 it was stricken in America, but in Ireland the yield was healthy and plentiful as ever. The harvest of 1845 promised to be the richest gathered for many years. Suddenly, in one short month, in one week it might be said, the withering breath of a simoom seemed to sweep the land, blasting all in its path. I myself saw whole tracts of potato growth changed in one night from smiling luxuriance to a shrivelled and blackened waste. A shout of alarm arose. But the buoyant nature of the Celtic peasant did not yet give way. The crop was so profuse that it was expected the healthy portion would reach an average result. Winter revealed the alarming fact that the tubers had rotted in pit and store-house. Nevertheless the farmers, like hapless men who double their stakes to recover losses, made only the more strenuous exertions to till a larger breadth in 1846. Although already feeling the pinch of sore distress, if not actual famine, they worked as if for dear life; they begged and borrowed on any terms the means whereby to crop the land once more. The pawn-offices were choked with the humble finery that had shone at the village dance or the christening feast; the banks and local money-lenders were besieged with appeals for credit. Meals were stinted, backs were bared. Anything, anything to tide over the interval to the harvest of 'Forty-six.' O God, it is a dreadful thought that all this effort was but more surely leading them to ruin! It was this harvest of Forty-six that sealed their doom. Not partially but completely, utterly, hopelessly, it perished. As in the previous year, all promised brightly up to the close of July. Then, suddenly, in a night, whole areas were blighted; and this time, alas! no portion of the crop escaped. A cry of agony and despair went up all over the land. The last desperate stake for life had been played, and all was lost. The doomed people realised but too well what was before them. Last year's premonitory sufferings had exhausted them, and now?—they must die! My native district figures largely in the gloomy record of that dreadful time. I saw the horrible phantasmagoria—would God it were but that!—pass before my eyes. Blank stolid dismay, a sort of stupor, fell upon the people, contrasting remarkably with the fierce energy put forth a year before. It was no uncommon sight to see the cottier and his little family seated on the garden fence gazing all day long in moody silence at the blighted plot that had been their last hope. Nothing could arouse them. You spoke; they answered not. You tried to cheer them; they shook their heads. I never saw so sudden and so terrible a transformation. When first in the autumn of 1845 the partial blight appeared, wise voices were raised in warning to the Government that a frightful catastrophe was at hand; yet even then began that fatal circumlocution and inaptness which it maddens one to think of. It would be utter injustice to deny that the Government made exertions which judged by ordinary emergencies would be prompt and considerable. But judged by the awful magnitude of the evil then at hand or

actually befallen, they were fatally tardy and inadequate. When at length the executive did hurry, the blunders of precipitancy outdid the disasters of excessive deliberation. . . . In October 1845 the Irish Mansion House Relief Committee implored the Government to call Parliament together and throw open the ports. The Government refused. Again and again the terrible urgency of the case, the magnitude of the disaster at hand, was pressed on the executive. It was the obstinate refusal of Lord John Russell to listen to these remonstrances and entreaties, and the sad verification subsequently of these apprehensions, that implanted in the Irish mind the bitter memories which still occasionally find vent in passionate accusation of 'England.' Not but the Government had many and weighty arguments in behalf of the course they took. . . . The situation bristled with difficulties. . . . At first the establishment of public soup-kitchens under local relief committees, subsidised by Government, was relied upon to arrest the famine. I doubt if the world ever saw so huge a demoralisation, so great a degradation, visited upon a once high-spirited and sensitive people. All over the country large iron boilers were set up, in which what was called 'soup' was concocted; later on Indian-meal stirabout was boiled. Around these boilers on the roadside there daily moaned and shrieked and fought and scuffled crowds of gaunt, cadaverous creatures that once had been men and women made in the image of God. The feeding of dogs in a kennel was far more decent and orderly. . . . I frequently stood and watched the scene till tears blinded me and I almost choked with grief and passion. . . . The conduct of the Irish landlords throughout the famine period has been variously described, and has been, I believe, generally condemned. I consider the censure visited on them too sweeping. . . . On many of them no blame too heavy could possibly fall. A large number were permanent absentees; their ranks were swelled by several who early fled the post of duty at home—cowardly and selfish deserters of a brave and faithful people. Of those who remained, some may have grown callous; it is impossible to contest authentic instances of brutal heartlessness here and there. But . . . the overwhelming balance is the other way. The bulk of the resident Irish landlords manfully did their best in that dread hour. . . . In the autumn of 1846 relief works were set on foot, the Government having received parliamentary authority to grant baronial loans for such undertakings. There might have been found many ways of applying these funds in reproductive employment, but the modes decided on were draining and road-making. . . . The result was in every sense deplorable failure. The wretched people were by this time too wasted and emaciated to work. The endeavour to do so under an inclement winter sky only hastened death. They tottered at day-break to the roll-call; vainly tried to wheel the barrow or ply the pick, but fainted away on the 'cutting,' or lay down on the wayside to rise no more. As for the roads on which so much money was wasted, and on which so many lives were sacrificed, hardly any of them were finished. Miles of grass-grown earthworks throughout the country now mark their course and commemorate for posterity one of the gigantic blunders of the famine time. The first remarkable sign of the

havoc which death was making was the decline and disappearance of funerals. . . . Soon, alas! neither coffin nor shroud could be supplied. Daily in the street and on the footway some poor creature lay down as if to sleep, and presently was stiff and stark. In our district it was a common occurrence to find, on opening the front door in early morning, leaning against it, the corpse of some victim who in the night-time had 'rested' in its shelter. We raised a public subscription, and employed two men with horse and cart to go around each day and gather up the dead. One by one they were taken to a great pit at Ardnabrahair Abbey and dropped through the hinged bottom of a 'trap-coffin' into a common grave below. In the remoter rural districts even this rude sepulture was impossible. In the field and by the ditchside the victims lay as they fell, till some charitable hand was found to cover them with the adjacent soil. It was the fever which supervened on the famine that wrought the greatest slaughter and spread the greatest terror. . . . To come within the reach of this contagion was certain death. Whole families perished unvisited and unassisted. By levelling above their corpses the sheeling in which they died, the neighbours gave them a grave."—A. M. Sullivan, *New Ireland*, ch. 6.—"In July 1847 as many as three millions of persons were actually receiving separate rations. A loan of £8,000,000 was contracted by the Government, expressly to supply such wants, and every step was taken by two successive administrations, Sir Robert Peel's and Lord John Russell's, to alleviate the sufferings of the people. Nor was private benevolence lacking. The Society of Friends, always ready in acts of charity and love, was foremost in the good work. A British Association was formed for the relief of Ireland, including Jones Lloyd (Lord Overstone), Thomas Baring, and Baron Rothschild. A Queen's letter was issued. . . . Subscriptions were received from almost every quarter of the world. The Queen's letter alone produced £171,533. The British Association collected £263,000; the Society of Friends £43,000; and £168,000 more were entrusted to the Dublin Society of Friends. The Sultan of Turkey sent £1,000. The Queen gave £2,000, and £500 more to the British Ladies' Clothing Fund. Prince Albert gave £500. The National Club collected £17,930. America sent two ships of war, the 'Jamestown' and the 'Macedonian,' full of provisions; and the Irish residents in the United States sent upwards of £200,000 to their relatives, to allow them to emigrate."—L. Levi, *Hist. of British Commerce*, pt. 4, ch. 4.—"By the end of 1847 cheap supplies of food began to be brought into the country by the ordinary operation of the laws of supply and demand, at far cheaper rates, owing to an abundant harvest abroad, than if the Government had tried to constitute itself the sole distributor. The potato harvest of 1847, if not bountiful, was at least comparatively good. . . . By March, 1848, the third and last period of the famine may be said to have terminated. But, though the direct period of distress was over, the economic problems which remained for solution were of overwhelming magnitude. . . . A million and a half of the people had disappeared. The land was devastated with fever and the diseases which dog the steps of famine. . . . The waters of the great deep were indeed going down, but the

land was seen to be without form and void."—Lord E. Fitzmaurice and J. R. Thursfield, *pt. 4 of Two Centuries of Irish Hist., ch. 4.*—"The famine and plague of 1846-47 was accompanied, and succeeded, by a wholesale clearance of congested districts and by cruel evictions. The new landlords [who had acquired property under the Encumbered Estates Act], bent on consolidating their property, turned out their tenants by regiments, and in the autumn of 1847 enormous numbers were deported. It is absolutely necessary to bear this strictly in mind, if we would judge of the intense hatred which prevails amongst the Irish in America to Great Britain. The children of many of those who were exiled then have raised themselves to positions of affluence and prosperity in the United States. But they have often heard from their fathers, and some of them may perhaps recall, the circumstances under which they were driven from their old homes in Ireland. . . . But there is a further and awful memory connected with that time. The people who had been suffering from fever carried the plague with them on board, and the vessels sometimes became floating charnel-houses. During the year 1847, out of 106,000 emigrants who crossed the Atlantic for Canada and New Brunswick, 6,100 perished on the ocean, 4,100 immediately on landing, 5,200 subsequently in the hospitals, and 1,900 in the towns to which they repaired. . . . Undoubtedly, historical circumstances have . . . had much to do with the political hatred to Great Britain; but its newly acquired intensity is owing to the still fresh remembrances of what took place after the famine, and to the fact that the wholesale clearances of Irish estates were, to say the least, not discouraged in the writings and speeches of English lawgivers, economists and statesmen."—Sir R. Blennerhassett, *Ireland ("Reign of Queen Victoria," ed. by T. H. Ward, v. 1, p. 563-565).*—"The deaths from fever in the year 1846 were 17,145, in the following year 57,000, to which 27,000 by dysentery must be added."—J. F. Bright, *Hist. of Eng., period 4, p. 164.*—"Between the years 1847 and 1851 (both inclusive) the almost incredible number of over one million Irish—men, women, and children—were conveyed in emigrant ships to America—a whole population. In 1847, 215,444 emigrated; in 1849, 218,842, and in 1851, 249,721."—H. L. Jephson, *Notes on Irish Questions, p. 298.*—"The population of Ireland by March 30, 1851, at the same ratio of increase as held in England and Wales, would have been 9,018,799—it was 6,552,385. It was the calculation of the Census Commissioners that the deficit, independently of the emigration, represented by the mortality in the five famine years, was 985,366."—T. P. O'Connor, *The Parnell Movement, p. 125.*

See ENGLAND: A. D. 1846.

A. D. 1848-1852.—Tenant organizations.—The Ulster Tenant Right.—The Tenant League.—"The famine . . . and the evictions that followed it made the people more discontented than ever with the land system. The Democratic Association, organized about this time, adopted as its rallying cry, 'the land for the people.' . . . This association, whose aims are said to have been 'largely communistic and revolutionary,' opposed the Irish Alliance, the Nationalist Society organized by Charles Gavan

Duffy. . . . During the years '49 and '50 numerous Tenant Protection Societies were formed throughout the country, the Presbyterians of Ulster taking quite as active a part as the Celtic Catholics of the other provinces. In May, 1850, the Presbyterian Synod of Ulster . . . resolved, against the protest, it is true, of the more conservative men, to petition Parliament to extend to the rest of Ireland the benefits of rights and securities similar to those of the Ulster custom. . . . The Ulster tenant right . . . has occupied an important place in the Irish land question for a long time. . . . The right differs much on different estates. On no two does it seem to be precisely the same. It is therefore not a right capable of being strictly defined. Nor did it have any legal sanction until the year 1870. The law did not recognize it. One of its chief incidents was that the tenant was entitled to live on his farm from year to year indefinitely on condition of acting properly, and paying his rent, which the landlord might raise from time to time to a reasonable extent, but not so as to extinguish the tenant's interest. In the second place, if the tenant got in debt, and could not pay the rent, or wished for any other reason to leave the holding, he could sell his interest, but the landlord had a right to be consulted, and could object to the purchaser. In the third place, the landlord, if he wanted to take the land for his own purposes, must pay the tenant a fair sum for his tenant-right. In the fourth place, all arrears of rent must be paid before the interest was transferred. These are said to be universal characteristics of every Ulster tenant-right custom. There were often additional restrictions or provisions, usually in limitation of the tenant's right to sell, or of the landlord's right to raise the rent, veto the sale of land, or take it for his own use. There were commonly established usages in reference to fixing a fair rent. Valuers were generally employed, and on their estimates, and not on competition in open market, the rent was fixed. . . . The Irish Tenant League was organized August 6, 1850, in Dublin. Among the resolutions adopted was one, calling for 'a fair valuation of rent between landlord and tenant in Ireland,' and another, 'that the tenant should not be disturbed in his holding as long as he paid his rent.' The question of arrears received a great deal of attention. The great majority of the tenants of Ireland were in arrears, owing to the successive failures of the crops, and were of course liable to eviction. . . . The Tenant League was a very popular one and spread throughout the country. There was much agitation, and in the general election in 1852, when the excitement was at its height, fifty-eight Tenant Leaguers were elected to Parliament. The Tenant League members resolved to hold themselves 'independent of and in opposition to all governments which do not make it a part of their policy' to give the tenants a measure of relief such as the League desired. It looked as though the party would hold the balance of power and be able to secure its objects. When however Sadlier and Keogh, two of the most prominent men in the party and men of great influence, accepted positions in the new government, 'bribed by office,' it has always been charged by the Irish, 'to betray the cause to which they had been most solemnly pledged,' the party was broken up without accomplishing

its purpose."—D. B. King, *The Irish Question*, ch. 5 and 9.

A. D. 1858-1867.—The Fenian Movement.—"The Fenian movement differed from nearly all previous movements of the same kind in Ireland, in the fact that it arose and grew into strength without the patronage or the help of any of those who might be called the natural leaders of the people. . . . Its leaders were not men of high position, or distinguished name, or proved ability. They were not of aristocratic birth; they were not orators; they were not powerful writers. It was not the impulse of the American Civil War that engendered Fenianism; although that war had great influence on the manner in which Fenianism shaped its course. Fenianism had been in existence, in fact, although it had not got its peculiar name, long before the American War created a new race of Irishmen—the Irish-American soldiers—to turn their energies and their military inclination to a new purpose. . . . The suspension of the Habeas Corpus Act, in consequence of the 1848 movement, led, as a matter of course, to secret association. Before the trials of the Irish leaders were well over in that year, a secret association was formed by a large number of young Irishmen in cities and towns. . . . After two or three attempts to arrange for a simultaneous rising had failed, or had ended only in little abortive and isolated ebullitions, the young men became discouraged. Some of the leaders went to France, some to the United States, some actually to England; and the association melted away. . . . Some years after this, the 'Phoenix' clubs began to be formed in Ireland. They were for the most part associations of the peasant class, and were on that account, perhaps, the more formidable and earnest. . . . The Phoenix clubs led to some of the ordinary prosecutions and convictions; and that was all. . . . After the Phoenix associations came the Fenians. 'This is a serious business now,' said a clever English literary man when he heard of the Fenian organisation; 'the Irish have got hold of a good name this time; the Fenians will last.' The Fenians are said to have been the ancient Irish militia. . . . There was an air of Celtic antiquity and of mystery about the name of Fenian which merited the artistic approval given to it by the impartial English writer whose observation has just been quoted. The Fenian agitation began about 1858, and it came to perfection about the middle of the American Civil War. It was ingeniously arranged on a system by which all authority converged towards one centre [called the Head-Centre], and those farthest away from the seat of direction knew proportionately less and less about the nature of the plans. They had to obey instructions only, and it was hoped that by this means weak or doubtful men would not have it in their power prematurely to reveal, to betray, or to thwart the purposes of their leaders. A convention was held in America, and the Fenian Association was resolved into a regular organised institution. A provisional government was established in the neighbourhood of Union Square, New York, with all the array and the mechanism of an actual working administration. . . . The Civil War had introduced a new

figure to the world's stage. This was the Irish-American soldier. . . . Many of these men—thousands of them—were as sincerely patriotic in their way as they were simple and brave. It is needless to say that they were fastened on in some instances by adventurers, who fomented the Fenian movement out of the merest and the meanest self-seeking. . . . Some were making a living out of the organisation—out of that, and apparently nothing else. The contributions given by poor Irish hack-drivers and servant girls, in the sincere belief that they were helping to man the ranks of an Irish army of independence, enabled some of these self-appointed leaders to wear fine clothes and to order expensive dinners. . . . But in the main it is only fair to say that the Fenian movement in the United States was got up, organised and manned by persons who . . . were single-hearted, unselfish, and faithfully devoted to their cause. . . . After a while things went so far that the Fenian leaders in the United States issued an address, announcing that their officers were going to Ireland to raise an army there for the recovery of the country's independence. Of course the Government here were soon quite prepared to receive them; and indeed the authorities easily managed to keep themselves informed by means of spies of all that was going on in Ireland. . . . Meanwhile the Head Centre of Fenianism in America, James Stephens, who had borne a part in the movement of 1848, arrived in Ireland. He was arrested . . . [and] committed to Richmond Prison, Dublin, early in November, 1865; but before many days had passed the country was startled by the news that he had contrived to make his escape. The escape was planned with skill and daring. For a time it helped to strengthen the impression on the mind of the Irish peasantry that in Stephens there had at last been found an insurgent leader of adequate courage, craft, and good fortune. Stephens disappeared for a moment from the stage. In the meantime disputes and dissensions had arisen among the Fenians in America. The schism had gone so far as to lead to the setting up of two separate associations. There were of course distracted plans. One party was for an invasion of Canada; another pressed for operations in Ireland itself. The Canadian attempt actually was made [see CANADA: A. D. 1866-1871]. . . . Then Stephens came to the front again. It was only for a moment. He had returned to New York, and he now announced that he was determined to strike a blow in Ireland. Before long the impression was spread abroad that he had actually left the States to return to the scene of his proposed insurrection. The American-Irish kept streaming across the Atlantic, even in the stormy winter months, in the firm belief that before the winter had passed away, or at the farthest while the spring was yet young, Stephens would appear in Ireland at the head of an insurgent army. . . . Stephens did not reappear in Ireland. He made no attempt to keep his warlike promise. He may be said to have disappeared from the history of Fenianism. But the preparations had gone too far to be suddenly stopped. . . . It was hastily decided that something should be done. One venture was a scheme for the capture of Chester Castle [and the arms it contained]. . . . The Government were fully informed of the plot in advance; the police were actually on the

look-out for the arrival of strangers in Chester, and the enterprise melted away. In March, 1867, an attempt at a general rising was made in Ireland. It was a total failure; the one thing on which the country had to be congratulated was that it failed so completely and so quickly as to cause little bloodshed. Every influence combined to minimise the waste of life. The snow fell that spring as it had scarcely ever fallen before in the soft, mild climate of Ireland. . . . It made the gorges of the mountains untenable, and the gorges of the mountains were to be the encampments and the retreats of the Fenian insurgents. The snow fell for many days and nights, and when it ceased falling the insurrectionary movement was over. The insurrection was literally buried in that unlooked-for snow. There were some attacks on police barracks in various places—in Cork, in Kerry, in Limerick, in Tipperary, in Louth; there were some conflicts with the police; there were some shots fired, many captures made, a few lives lost; and then for the time at least all was over. The Fenian attempt thus made had not from the beginning a shadow of hope to excuse it." Some months afterwards a daring rescue of Fenian prisoners at Manchester stirred up a fresh excitement in Fenian circles. A policeman was killed in the affair, and three of the rescuers were hanged for his murder. On the 13th of December, 1867, an attempt was made to blow up the Clerkenwell House of Detention, where two Fenian prisoners were confined. "Six persons were killed on the spot; about six more died from the effects of the injuries they received; some 120 persons were wounded. . . . It is not necessary to follow out the steps of the Fenian movement any further. There were many isolated attempts; there were many arrests, trials, imprisonments, banishments. The effect of all this, it must be stated as a mere historical fact, was only to increase the intensity of dissatisfaction and discontent among the Irish peasantry. . . . There were some public men who saw that the time had come when mere repression must no longer be relied upon as a cure for Irish discontent."—J. McCarthy, *Hist. of Our Own Times*, ch. 53 (v. 4).

A. D. 1870-1894.—The land question and the recent land laws.—"The reason for exceptional legislation in Ireland rested chiefly on the essential difference between the landlord and tenant systems in England and in Ireland. In 1845 the Devon Royal Commission reported that the introduction of the English system would be extremely difficult, if not impracticable. The difference, it said, between the English and Irish systems 'consisted in this, that in Ireland the landlord builds neither dwelling-house nor farm offices, nor puts fences, gates, etc., into good order before he lets his land. In most cases, whatever is done in the way of building or fencing is done by the tenant; and, in the ordinary language of the country, houses, farm buildings, and even the making of fences are described by the general word "improvements," which is thus

employed to denote the necessary adjuncts to a farm without which in England or Scotland no tenant would be found to rent it.' Thirty years later, John Bright summarized the matter by saying that if the land of Ireland were stripped of the improvements made upon it by the labor of the occupier, the face of the country would be 'as bare and naked as an American prairie.' This fundamental difference between the English and Irish land systems has never been fully appreciated in England, where the landlord's expenditure on buildings, fences, drainage, farm roads, etc., and on maintenance absorbs a large part of the rental. Reform of the Irish system began in 1870. Before that time little had been done to protect the Irish tenant except to forbid evictions at night, on Christmas Day, on Good Friday, and the pulling off the roofs of houses until the inmates had been removed. The Land Act of 1870 recognized, in principle, the tenant's property in his improvements by giving him a right to claim compensation if disturbed or evicted. This was not what the tenants wanted, viz., security of tenure. The results of compensation suits by 'disturbed' tenants were uncertain; compensation for improvements was limited in various ways, and the animus of the courts administering the act was distinctly hostile to the tenants. Many works necessary to the existence of tenants on small farms were not improvements in the eyes of the landlord, of the law, or of the judges; it was often impossible to adduce legal evidence of costly works done little by little, and at intervals, representing the savings of labor embodied in drainage, reclamation, or fencing. Buildings and other works of a superior character might be adjudged 'unsuitable' to small farms, and therefore not the subject of any compensation; moreover, it was expressly laid down that the use and enjoyment by the tenant of works effected wholly at his expense were to be accounted compensation to him by the landlord, and that, therefore, by lapse of time, the tenant's improvements became the landlord's property. The act of 1870 tended to make capricious and heartless evictions expensive and therefore less common; but it gave no security of tenure, and left the landlord still at liberty to raise the rent of improving tenants. It left the tenant still in a state of dependence and servility; it gave him no security for his expenditure, for the landlord's right to keep the rent continually rising was freely exercised. Even if the act had been liberally administered, it would have failed to give contentment, satisfy the demands of justice, or encourage the expenditure of capital by tenant farmers. Measure after measure proposed by Irish members for further reforms were rejected by Parliament between 1870 and 1880, and discontent continued to increase. . . . The Land Law Act of 1881 was based on the Report in 1880 of the Bessborough Royal Commission, but many of the most useful suggestions made were disregarded. This act purported to give the Irish yearly tenants (1) the right to sell their tenancies and improvements; (2) the right to have a 'fair' rent fixed by the land courts at intervals of fifteen years; (3) security of tenure arising from this right to have the rent fixed by the court instead of by the landlord. . . . No definition of what constituted a fair rent was embodied in the act, but what is known as the Healy clause provided that 'no

rent shall be allowed or made payable in respect of improvements made by a tenant or his predecessors.' . . . When the Irish courts came to interpret it, they held that the term 'improvements' meant only that interest in his improvements for which the tenant might have obtained compensation under the Land Act of 1870 if he had been disturbed or evicted, and that the time during which the tenant had had the use and enjoyment of his own expenditure was still to be accounted compensation made to him by his landlord, so that by mere lapse of time the tenant's improvements became the landlord's property. . . . In view of the continually falling prices of agricultural produce and diminishing farm profits, the operation of the land laws has not brought about peace between landlords and tenants. . . . In 1887 the Cowper Commission reported that the 200,000 rents which had been fixed were too high in consequence of the continued fall in prices. As a result of the report of this commission the fair-rent provisions of the law were extended to leaseholders holding for less than sixty years; but the courts still adhering to their former methods of interpretation, numbers of leaseholders who had made and maintained all the buildings, improvements, and equipments of their farms found themselves either excluded on narrow and technical points, or expressly rented on their own expenditure. In 1891 the fair-rent provisions were further extended to leaseholders holding for more than sixty years by the Redemption of Rent Act, under which long leasehold tenants could compel their landlords either to sell to them, or allow a fair rent to be fixed on their farms. . . . Concurrently with these attempts to place the relations of landlord and tenant on a peaceful and equitable basis, a system of State loans to enable tenants to buy their farms has been in operation. . . . It is now proposed to have an inquiry by a select committee of the House of Commons into (1) the principles adopted in fixing fair rents, particularly with respect to tenants' improvements; (2) the system of purchase and security offered for the loans of public money; (3) the organization and administrative work of the Land Commission—a department which has cost the country about £100,000 a year since 1881. The popular demand for inquiry and reform comes as much from the Protestant North as from the Catholic South."—*The Nation*, Feb. 15, 1894.

A. D. 1873-1879.—The Home Rule Movement.—Organization of the Land League.—"For some years after the failure of the Fenian insurrection there was no political agitation in Ireland; but in 1873 a new national movement began to make itself felt; this was the Home Rule Movement. It had been gradually formed since 1870 by one or two leading Irishmen, who thought the time was ripe for a new constitutional effort; chief among them was Mr. Isaac Butt, a Protestant, an eminent lawyer, and an earnest politician. The movement spread rapidly, and took a firm hold of the popular mind. After the General Election of 1874, some sixty Irish Members were returned who had stood before their constituencies as Home Rulers. The Home Rule demand is clear and simple enough; it asks for Ireland a separate Government, still allied with the Imperial Government, on the principles which regulate the alliance between the United

States of America. The proposed Irish Parliament in College Green would bear just the same relation to the Parliament at Westminster that the Legislature and Senate of every American State bear to the head authority of the Congress in the Capitol at Washington. All that relates to local business it was proposed to delegate to the Irish Assembly; all questions of imperial policy were still to be left to the Imperial Government. There was nothing very startling, very daringly innovating, in the scheme. In most of the dependencies of Great Britain, Home Rule systems of some kind were already established. In Canada, in the Australasian Colonies, the principle might be seen at work upon a large scale; upon a small scale it was to be studied nearer home in the neighbouring Island of Man. . . . At first the Home Rule Party was not very active. Mr. Butt used to have a regular Home Rule debate once every Session, when he and his followers stated their views, and a division was taken and the Home Rulers were of course defeated. Yet, while the English House of Commons was thus steadily rejecting year after year the demand made for Home Rule by the large majority of the Irish Members, it was affording a strong argument in favour of some system of local Government, by consistently outvoting every proposition brought forward by the bulk of the Irish Members relating to Irish Questions. . . . Mr. Butt and his followers had proved the force of the desire for some sort of National Government in Ireland, but the strength of the movement they had created now called for stronger leaders. A new man was coming into Irish political life who was destined to be the most remarkable Irish leader since O'Connell. Mr. Charles Stuart Parnell, who entered the House of Commons in 1875 as Member for Meath, was a descendant of the English poet Parnell, and of the two Parnells, father and son, John and Henry, who stood by Grattan to the last in the struggle against the Union. He was a grand-nephew of Sir Henry Parnell, the first Lord Congleton, the advanced Reformer and friend of Lord Grey and Lord Melbourne. He was Protestant, and a member of the Protestant Synod. Mr. Parnell set himself to form a party of Irishmen in the House of Commons who should be absolutely independent of any English political party, and who would go their own way with only the cause of Ireland to influence them. Mr. Parnell had all the qualities that go to make a good political leader, and he succeeded in his purpose. The more advanced men in and out of Parliament began to look up to him as the real representative of the popular voice. In 1878 Mr. Butt died. . . . The leadership of the Irish Parliamentary Party was given to Mr. William Shaw, Member for Cork County, an able, intelligent man, who proved himself in many ways a good leader. In quieter times his authority might have remained unquestioned, but these were unquiet times. The decorous and demure attitude of the early Home Rule Party was to be changed into a more aggressive action, and Mr. Parnell was the champion of the change. It was soon obvious that he was the real leader recognised by the majority of the Irish Home Rule Members, and by the country behind them. Mr. Parnell and his following have been bitterly denounced for pursuing an obstructive policy. They are often written about

as if they had invented obstruction; as if obstruction of the most audacious kind had never been practised in the House of Commons before Mr. Parnell entered it. It may perhaps be admitted that the Irish Members made more use of obstruction than had been done before their time. . . . The times undoubtedly were unquiet; the policy which was called in England obstructive and in Ireland active was obviously popular with the vast majority of the Irish people. The Land Question, too, was coming up again, and in a stronger form than ever. Mr. Butt, not very long before his death, had warned the House of Commons that the old land war was going to break out anew, and he was laughed at for his vivid fancy by the English Press and by English public opinion; but he proved a true prophet. Mr. Parnell had carefully studied the condition of the Irish tenant, and he saw that the Land Act of 1870 was not the last word of legislation on his behalf. Mr. Parnell was at first an ardent advocate of what came to be known as the Three F's, fair rent, fixity of tenure, and free sale. But the Three F's were soon to be put aside in favour of more advanced ideas. Outside Parliament a strenuous and earnest man was preparing to inaugurate the greatest land agitation ever seen in Ireland. Mr. Michael Davitt was the son of an evicted tenant. . . . When he grew to be a young man he joined the Fenians, and in 1870, on the evidence of an informer, he was arrested and sentenced to fifteen years' penal servitude; seven years later he was let out on ticket-of-leave. In his long imprisonment he had thought deeply upon the political and social condition of Ireland and the best means of improving it; when he came out he had abandoned his dreams of armed rebellion, and he went in for constitutional agitation to reform the Irish land system. The land system needed reforming; the condition of the tenant was only humanly endurable in years of good harvest. The three years from 1876 to 1879 were years of successive bad harvests. . . . Mr. Davitt had been in America, planning out a land organization, and had returned to Ireland to carry out his plan. Land meetings were held in many parts of Ireland, and in October Mr. Parnell, Mr. Davitt, Mr. Patrick Egan, and Mr. Thomas Brennan founded the Irish National Land League, the most powerful political organization that had been formed in Ireland since the Union. The objects of the Land League were the abolition of the existing landlord system and the introduction of peasant proprietorship."—J. H. McCarthy, *Outline of Irish Hist.*, ch. 11.

A. D. 1880.—The breach between the Irish Party and the English Liberals.—"The new Irish party which followed the lead of Mr. Parnell has been often represented by the humourist as a sort of Falstaffian 'ragged regiment.' . . . From dint of repetition this has come to be almost an article of faith in some quarters. Yet it is curiously without foundation. A large proportion of Mr. Parnell's followers were journalists. . . . Those who were not journalists in the Irish party were generally what is called well-to-do. . . . At first there seemed no reason to expect any serious disunion between the Irish

members and the Liberal party. . . . The Irish vote in England had been given to the Liberal cause. The Liberal speakers and statesmen, without committing themselves to any definite line of policy, had manifested friendly sentiments towards Ireland; and though indeed nothing was said which could be construed into a recognition of the Home Rule claim, still the new Ministry was known to contain men favourable to that claim. The Irish members hoped for much from the new Government; and, on the other hand, the new Government expected to find cordial allies in all sections of the Irish party. The appointment of Mr. Forster to the Irish Secretaryship was regarded by many Irishmen, especially those allied to Mr. Shaw and his following, as a marked sign of the good intentions of the Government towards Ireland. . . . The Queen's Speech announced that the Peace Preservation Act would not be renewed. This was a very important announcement. Since the Union Ireland had hardly been governed by the ordinary law for a single year. . . . Now the Government was going to make the bold experiment of trying to rule Ireland without the assistance of coercive and exceptional law. The Queen's Speech, however, contained only one other reference to Ireland, in a promise that a measure would be introduced for the extension of the Irish borough franchise. This was in itself an important promise. . . . But extension of the borough franchise did not seem to the Irish members in 1880 the most important form that legislation for Ireland could take just then. The country was greatly depressed by its recent suffering; the number of evictions was beginning to rise enormously. The Irish members thought that the Government should have made some promise to consider the land question, and above all should have done something to stay the alarming increase of evictions. Evictions had increased from 463 families in 1877 to 980 in 1878, to 1,238 in 1879; and they were still on the increase, as was shown at the end of 1880, when it was found that 2,110 families were evicted. An amendment to the Address was at once brought forward by the Irish party, and debated at some length. The Irish party called for some immediate legislation on behalf of the land question. Mr. Forster replied, admitting the necessity for some legislation, but declaring that there would not be time for the introduction of any such measure that session. Then the Irish members asked for some temporary measure to prevent the evictions. . . . ; but the Chief Secretary answered that while the law existed it was necessary to carry it out, and he could only appeal to both sides to be moderate. Matters slowly drifted on in this way for a short time. . . . Evictions steadily increased, and Mr. O'Connor Power brought in a Bill for the purpose of staying evictions. Then the Government, while refusing to accept the Irish measure, brought in a Compensation for Disturbance Bill, which adopted some of the Irish suggestions. . . . On Friday, June 25, the second reading of the Bill was moved by Mr. Forster, who denied that it was a concession to the anti-rent agitation, and strongly denounced the outrages which were taking place in Ireland. . . . This was the point at which difference between the Irish party and the Government first became marked. The increase of evictions in Ireland, following as it did

upon the widespread misery caused by the failure of the harvests and the partial famine, had generated—as famine and hunger have always generated—a certain amount of lawlessness. Evictions were occasionally resisted with violence; here and there outrages were committed upon bailiffs, process-servers, and agents. In different places, too, injuries had been inflicted upon the cattle and horses of landowners and land agents. . . . There is no need, there should be no attempt, to justify these crimes. But, while condemning all acts of violence, whether upon man or beast, it must be remembered that these acts were committed by ignorant peasants of the lowest class, maddened by hunger, want, and eviction, driven to despair by the sufferings of their wives and children, convinced of the utter hopelessness of redress, and longing for revenge. . . . The Compensation for Disturbance Bill was carried in the Commons after long debates in which the Irish party strove to make its principles stronger. . . . It was sent up to the Lords, where it was rejected on Tuesday, August 3, by a majority of 231. The Government answered the appeals of Irish members by refusing to take any steps to make the Lords retract their decision, or to introduce any similar measure that session. From that point the agitation and struggle of the past four years [1880-1884] may be said to date.”—J. H. McCarthy, *England under Gladstone, 1880-1884*, ch. 6.

A. D. 1881-1882.—The Coercion Bill and the Land Act.—Arrest of the Irish leaders.—Suppression of the Land League.—The alleged Kilmainham Treaty, and release of Mr. Parnell and others.—Early in 1881, the Government armed itself with new powers for suppressing the increased lawlessness which showed itself in Ireland, and for resisting the systematic policy of intimidation which the Nationalists appeared to have planned, by the passage of a measure known as the Coercion Bill. This was followed, in April, by the introduction of a Land Bill, intended to redress the most conspicuous Irish grievance by establishing an authoritative tribunal for the determination of rents, and by aiding and facilitating the purchase of small holdings by the peasants. The Land Bill became law in August; but it failed to satisfy the demands of the Land League or to produce a more orderly state of feeling in Ireland. Severe proceedings were then decided upon by the Government. “The Prime Minister, during his visit to Leeds in the first week of October, had used language which could bear only one meaning. The question, he said, had come to be simply this, ‘whether law or lawlessness must rule in Ireland;’ the Irish people must not be deprived of the means of taking advantage of the Land Act by force or fear of force. He warned the party of disorder that ‘the resources of civilisation were not yet exhausted.’ A few days later Mr. Gladstone, speaking at the Guildhall, amid enthusiastic cheers, was able to announce that the long-delayed blow had fallen. Mr. Parnell was arrested in Dublin under the Coercion Act, and his arrest was followed by those of Mr. Sexton, Mr. Dillon, Mr. O’Kelly, and other prominent leaders of the agitation. The warnings of the Government had been met at first with derision and defiance, and the earlier arrests were furiously

denounced; but the energy and persistence of the Government soon began to make an impression. . . . A Parthian shot was fired in the issue of a manifesto, purporting to be signed, not only by the ‘suspects’ in Kilmainham, but also by [Michael] Davitt, . . . in Portland Prison, which adjured the tenantry to pay no rent whatever until the Government had done penance for its tyranny and released the victims of British despotism. This open incitement to defiance of legal authority and repudiation of legal right was instantly met by the Irish Executive in a resolute spirit. On the 20th of October a proclamation was issued declaring the League to be ‘an illegal and criminal association, intent on destroying the obligation of contracts and subverting law,’ and announcing that its operations would thenceforward be forcibly suppressed, and those taking part in them held responsible.”

—*Annual Summaries reprinted from The Times*, v. 2, p. 153.—“In the month of April [1882] Mr. Parnell was released from Kilmainham on parole—urgent business demanding his presence in Paris. This parole the Irish National leader faithfully kept. Whether the sweets of liberty had special charms for Mr. Parnell does not appear: but certain it is that after his return to Kilmainham, the Member for Cork wrote to Captain O’Shea, one of the Irish Members, and indirectly to the Government, intimating that if the question of arrears could be introduced in Parliament by way of relieving the tenants of holdings and lessening greatly the number of evictions in the country for non-payment of rent, and providing the purchase clauses of the Land Bill were discussed, steps might be taken to lessen the number of outrages. The Government had the intimation conveyed to them, in short, which gave to their minds the conviction that Messrs. Parnell, Dillon, and O’Kelly, once released, and having in view the reforms indicated to them, would range themselves on the side of law and order in Ireland. Without any contract with the three members the release of Messrs. Parnell, Dillon, and O’Kelly was ordered, after they had been confined for a period bordering on three months. Michael Davitt had been released, likewise, and had been elected for Meath; but the seat was declared vacant again, owing to the conditions of his ticket-of-leave not permitting his return. Much has been said, and much has been written with regard to the release of the three Irish M. P.’s. The ‘Kilmainham Treaty’ has been . . . a term of scorn addressed to Mr. Gladstone and his colleagues. . . . As a fact . . . there was no Kilmainham Treaty. . . . Mr. Forster [the Secretary for Ireland] resigned because he did not think it right to share the responsibility of the release of Messrs. Parnell, Dillon, and O’Kelly. The Government had detained the Queen’s subjects in prison without trial for the purpose of preventing crime, not for punishment, Mr. Forster said in vindication. Mr. Forster contended that the unwritten law, as promulgated by them, had worked the ruin and the injury of the Queen’s subjects by instructions of one kind and another—biddings carried out to such a degree that no power on earth could have allowed it to continue without becoming a Government not merely in name but in shame. Mr. Forster would have given the question of the release of the three consideration, if they had pledged themselves not to set their law up

against the law of the land, or if Ireland had been quiet, or if there had been an accession of fresh powers on behalf of the Government; but these conditions were wanting. What Mr. Forster desired was an avowal of a change of purpose. He entreated his colleagues 'not to try to buy obedience,' as he termed it, and not to rely on appearances. The Government did rely on the intimation of Mr. Parnell . . . ; there was no treaty."—W. M. Pimblett, *English Political History*, 1880-1885, ch. 10.

A. D. 1882.—The Phoenix Park murders.—Mr. Forster, Chief Secretary for Ireland, resigned in April, 1882, and was succeeded by Lord Frederick Cavendish, brother of the Marquis of Hartington and son of the Duke of Devonshire. Earl Spencer at the same time became Viceroy, in place of Lord Cowper, resigned. "On the night of Friday, May 5th, Earl Spencer and Lord Frederick Cavendish crossed over to Ireland, and arrived in Dublin on the following day. The official entry was made in the morning, when the reception accorded by the populace to the new officials was described as having been very fairly favourable. Events seemed to have taken an entirely prosperous turn, and it was hoped that at last the long winter of Irish discontent had come to an end. On Sunday morning there spread through the United Kingdom the intelligence that the insane hatred of English rule had been the cause of a crime, even more brutal and unprovoked than any of the numerous outrages that had, during the last three years, sullied the annals of Ireland. It appeared that Lord Frederick Cavendish, having taken the oaths at the Castle, took a car about half-past seven in order to drive to the Viceregal Lodge. On the way he met Mr. Burke, the Permanent Under-Secretary, who, though his life had been repeatedly threatened, was walking along, according to his usual custom, without any police escort. Lord Frederick dismissed his car, and walked with him through the Phoenix Park. There, in broad daylight—for it was a fine summer evening—and in the middle of a public recreation ground, crowded with people, they were surrounded and murdered. More than one spectator witnessed what they imagined to be a drunken brawl, saw six men struggling together, and four of them drive off outside a car, painted red, which had been waiting for them the while, the carman sitting still and never turning his head. The bodies of the two officials were first discovered by two shop-boys on bicycles who had previously passed them alive. Lord Frederick Cavendish had six wounds, and Mr. Burke eleven, dealt evidently with daggers used by men of considerable strength. Lord Spencer himself had witnessed the struggle from the windows of the Viceregal Lodge, and thinking that some pickpockets had been at work sent a servant to make inquiries. A reward of £10,000, together with full pardon to anyone who was not one of the actual murderers, was promptly offered, but for many long months the telegrams from Dublin closed with the significant information—'No definite clue in the hands of the police.' All parties in Ireland at once united to express their horror and detestation at this dastardly crime."—*Cassell's Illustrated History of England*, v. 10, ch. 50.

A. D. 1885-1886.—Change of opinion in England.—Mr. Gladstone's first Home Rule Bill and Irish Land Bill and their defeat.—"All through the Parliament which sat from 1880 till 1885, the Nationalists' party, led by Mr. Parnell, and including at first less than half, ultimately about half, of the Irish members, was in constant and generally bitter opposition to the Government of Mr. Gladstone. But during these five years a steady, although silent and often unconscious, process of change was passing in the minds of English and Scotch members, especially Liberal members, due to their growing sense of the mistakes which Parliament committed in handling Irish questions, and of the hopelessness of the efforts which the Executive was making to pacify the country on the old methods. First, they came to feel that the present system was indefensible. Then, while still disliking the notion of an Irish Legislature, they began to think it deserved consideration. Next they admitted, though usually in confidence to one another, that although Home Rule might be a bad solution, it was a probable one, toward which events pointed. Last of all, and not till 1884, they asked themselves whether, after all, it would be a bad solution, provided a workable scheme could be found. But as no workable scheme had been proposed, they still kept their views, perhaps unwisely, to themselves, and although the language held at the general election of 1885 showed a great advance in the direction of favoring Irish self-government, beyond the attitude of 1880, it was still vague and hesitating, and could the more easily remain so because the constituencies had not (strange as it may now seem) realized the supreme importance of the Irish question. Few questions were put to candidates on the subject, for both candidates and electors wished to avoid it. It was disagreeable; it was perplexing; so they agreed to leave it on one side. But when the result of the Irish elections showed, in December, 1885, an overwhelming majority in favor of the Home Rule party, and when they showed, also, that this party held the balance of power in Parliament, no one could longer ignore the urgency of the issue. There took place what chemists call a precipitation of substance held in solution. Public opinion on the Irish question had been in a fluid state. It now began to crystalize, and the advocates and opponents of Irish self-government fell asunder into two masses, which soon solidified. This process was hastened by the fact that Mr. Gladstone's view, the indications of which, given by himself some months before, had been largely overlooked, now became generally understood. . . . In the spring of 1886 the question could be no longer evaded or postponed. It was necessary to choose between . . . two courses; the refusal of the demand for self-government, coupled with the introduction of a severe Coercion Bill, or the concession of it by the introduction of a Home Rule Bill. . . . How the Government of Ireland Bill was brought into the House of Commons on April 8th, amid circumstances of curiosity and excitement unparalleled since 1832; how, after debates of almost unprecedented length, it was defeated in June, by a majority of thirty; how the policy it embodied

was brought before the country at the general election, and failed to win approval; how the Liberal party has been rent in twain upon the question; how Mr. Gladstone resigned, and has been succeeded by a Tory Ministry, which the dissentient Liberals, who condemn Home Rule, are now supporting—all this is . . . well known [see ENGLAND: A. D. 1885-1886]. . . . But the causes of the disaster may not be equally understood. . . . First, and most obvious, although not most important, was the weight of authority arrayed against the scheme. . . . The two most eminent leaders of the moderate Liberal, or, as it is often called, Whig, party, Lord Hartington and Mr. Goschen, both declared against the bill, and put forth all their oratory and influence against it. At the opposite extremity of the party, Mr. John Bright, the veteran and honored leader of the Radicals, Mr. Chamberlain, the younger and latterly more active and prominent chief of that large section, took up the same position of hostility. Scarcely less important was the attitude of the social magnates of the Liberal party all over the country. . . . As, at the preceding general election, in December, 1885, the Liberals had obtained a majority of less than a hundred over the Tories, a defection such as this was quite enough to involve their defeat. Probably the name of Mr. Bright alone turned the issue in some twenty constituencies, which might otherwise have cast a Home Rule vote. The mention of this cause, however, throws us back on the further question, Why was there such a weight of authority against the scheme proposed by Mr. Gladstone? How came so many of his former colleagues, friends, supporters, to differ and depart from him on this occasion? Besides some circumstances attending the production of the bill, . . . which told heavily against it, there were three feelings which worked upon men's minds, disposing them to reject it. The first of these was dislike and fear of the Irish Nationalist members. In the previous House of Commons this party had been uniformly and bitterly hostile to the Liberal Government. Measures intended for the good of Ireland, like the Land Act of 1881, had been ungraciously received, treated as concessions extorted, for which no thanks were due— inadequate concessions, which must be made the starting-point for fresh demands. Obstruction had been freely practised to defeat not only bills restraining the liberty of the subject in Ireland, but many other measures. Some members of the Irish party, apparently with the approval of the rest, had systematically sought to delay all English and Scotch legislation, and, in fact, to bring the work of Parliament to a dead stop. . . . There could be no doubt as to the hostility which they, still less as to that which their fellow-countrymen in the United States, had expressed toward England, for they had openly wished success to Russia while war seemed impending with her, and the so-called Mahdi of the Sudan was vociferously cheered at many a Nationalist meeting. . . . To many Englishmen, the proposal to create an Irish Parliament seemed nothing more or less than a proposal to hand over to these men the government of Ireland, with all the opportunities thence arising to oppress the opposite party in Ireland and to worry England herself. It was all very well to urge that the tactics which the Nationalists had pursued

when their object was to extort Home Rule would be dropped, because superfluous, when Home Rule had been granted; or to point out that an Irish Parliament would probably contain different men from those who had been sent to Westminster as Mr. Parnell's nominees. Neither of these arguments could overcome the suspicious antipathy which many Englishmen felt. . . . The internal condition of Ireland supplied more substantial grounds for alarm. . . . Three-fourths of the people are Roman Catholics, one-fourth Protestants, and this Protestant fourth subdivided into bodies not fond of one another, who have little community of sentiment. Besides the Scottish colony in Ulster, many English families have settled here and there through the country. They have been regarded as intruders by the aboriginal Celtic population, and many of them, although hundreds of years may have passed since they came, still look on themselves as rather English than Irish. . . . Many people in England assumed that an Irish Parliament would be under the control of the tenants and the humbler class generally, and would therefore be hostile to the landlords. They went farther, and made the much bolder assumption that as such a Parliament would be chosen by electors, most of whom were Roman Catholics, it would be under the control of the Catholic priesthood, and hostile to Protestants. Thus they supposed that the grant of self-government to Ireland would mean the abandonment of the upper and wealthier class, the landlords and the Protestants, to the tender mercies of their enemies. . . . The fact stood out that in Ireland two hostile factions had been contending for the last sixty years, and that the gift of self-government might enable one of them to tyrannize over the other. True, that party was the majority, and, according to the principles of democratic government, therefore entitled to prevail. But it is one thing to admit a principle and another to consent to its application. The minority had the sympathy of the upper classes in England, because the minority contained the landlords. It had the sympathy of a large part of the middle class, because it contained the Protestants. . . . There was another anticipation, another forecast of evils to follow, which told most of all upon English opinion. This was the notion that Home Rule was only a stage in the road to the complete separation of the two islands."—J. Bryce, *Past and Future of the Irish Question* (New Princeton Rev., Jan., 1887).

A. D. 1886.—The "Plan of Campaign."—On the 11th of September Mr. Parnell had introduced in the House of Commons a bill to make temporary provision for the relief of suffering tenants in Ireland, and it had been defeated after a sharp debate by a majority of 95. The chief argument for the bill had been that "something must be done to stay evictions during the approaching winter. The rents would be due in November, and the fall in agricultural prices had been so great, that the sale of their whole produce by the tenants would not, it was contended, bring in money enough to enable them to pay in full. . . . The greatest public interest in the subject was roused by Lord Clanricarde's evictions at Woodford in Galway. . . . His quarrel with his Woodford tenants was of old standing. When the Home Rule Bill was before Parliament the National League urged them not to bring

matters to a crisis, but their sufferings were too great to be borne, and they set the National League at defiance, and established a Plan of Campaign of their own. Lord Clanricarde would grant them no reduction, and they leagued themselves together, 316 in number, and when the November rent day came round in 1885 they resolved not to pay any rent at all if twenty-five per cent. reduction was refused. This was refused, and they withheld their rent. . . . The eviction of four of these tenants, in August, 1886, attracted general attention by the long fight the people made for their homes. Each house was besieged and defended like some mediæval city. One stone house, built by a tenant at a cost of £200, got the name of Saunders's fort. It was held by a garrison of 24, who threw boiling water on their assailants, and in one part of the fight threw out among them a hive of bees. . . . To evict these four men the whole available forces of the Crown in Galway were employed from Thursday the 19th of August to Friday the 27th. Seven hundred policemen and soldiers were present to protect the emergency men who carried out the evictions, and 60 peasants were taken to Galway gaol. It was to meet cases of this kind that, after the rejection of Mr. Parnell's Tenants' Relief Bill, the Plan of Campaign was started. In a speech at Woodford on the 17th of October Mr. John Dillon gave an outline of the scheme on which he thought a tenants' campaign against unjust rents might be started and carried on all over the country. . . . On the 23rd of October the 'Plan of Campaign' was published in full detail in 'United Ireland.' The first question to be answered, said the 'Plan,' was, How to meet the November demand for rent? On every estate the tenantry were to come together and decide whether to combine or not in resistance to exorbitant rent. When they were assembled, if the priest were not with them, they were to 'appoint an intelligent and sturdy member of their body as chairman, and after consulting, decide by resolution on the amount of abatement they will demand.' A committee of six or more and the chairman were then to be elected, to be called a Managing Committee, to take charge of the half year's rent of each tenant should the landlord refuse it. Every one present was to pledge himself (1) To abide by the decision of the majority; (2) To hold no communication with the landlord or his agents, except in presence of the body of the tenantry; (3) To accept no settlement for himself that was not given to every tenant on the estate. Having thus pledged themselves each to the others they were to go to the rent office in a body on the rent day, or the gale day, as it is called in Ireland, and if the agent refused to see them in a body they were to depute the chairman to act as their spokesman and tender the reduced rent. If the agent refused to accept it, then the money was to be handed to the Managing Committee 'to fight the landlord with.' The fund thus got together was to be employed in supporting tenants who were dispossessed by sale or ejectment. The National League was to guarantee the continuance of the grants if needful after the fund was expended, or as long as the majority of the tenants held out."—P. W. Clayden, *England under the Coalition*, ch. 8.

A. D. 1888-1889.—The Parnell Commission. —Early in 1887, certain letters appeared in "The

Times" newspaper, of London, one of which, printed in facsimile, "implied Mr. Parnell's sanction to the Park murders of 1882." It created a great sensation, and, "after many bitter debates in Parliament, a commission was appointed (1888) consisting of three judges to inquire not only into the authenticity of this and other letters attributed to several persons as their authors, but into the whole course of conduct pursued by many of the Irish Members of Parliament, in reference to the previous agitation in Ireland and their connexion with an extreme faction in America, who tried to intimidate this country by dastardly attempts to blow up our public buildings on several occasions between the years 1884 and 1887. The court sat from the winter months of 1888 until the summer of the following year, and examined dozens of witnesses, including Mr. Parnell and most of the other accused members, as well as dozens of the Irish peasantry who could give evidence as to outrages in their several districts. One of the witnesses, a mean and discarded Dublin journalist named Pigott, turned out to be the forger of the letters; and, having fled from the avenging hand of justice to Madrid, there put an end to his life by means of a revolver. Meantime, the interest in the investigation had flagged, and the report of the Commission, which deeply implicated many of the Irish members as to their connexion with the Fenian Society previous to their entrance to Parliament, on their own acknowledgment, fell rather flat on the public ear, wearied out in reiteration of Irish crime from the introduction of the Land League until the attempt to blow up London Bridge by American filibusters (1886). The unfortunate man Pigott had sold his forged letters to the over credulous Times newspaper at a fabulous price; and even experts in handwriting, so dexterously had they been manipulated, were ready to testify in open court to the genuineness of the letters before the tragic end of their luckless author left not a particle of doubt as to their origin."—R. Johnston, *Short Hist. of the Queen's Reign*, p. 65.

A. D. 1889-1891.—Political fall and death of Mr. Parnell.—On the 28th of December, 1889, Captain O'Shea, one of the Irish Nationalist Members of Parliament, filed a petition for divorce from his wife on the ground of adultery with Mr. Parnell. The Irish leader tacitly confessed his guilt by making no answer, and in November, 1890, the divorce was granted to Captain O'Shea. In the following June Mr. Parnell and Mrs. O'Shea were married. The stigma which this affair put upon Mr. Parnell caused Mr. Gladstone, on behalf of the English Liberals, to demand his retirement from the leadership of the Home Rule Party. He refused to give way, and was supported in the refusal by a minority of his party. The majority, however, took action to depose him, and the party was torn asunder. A sudden illness ended Mr. Parnell's life on the 6th of October, 1891; but his death failed to restore peace, and the Irish Nationalists are still divided.

IRON CROWN OF LOMBARDY, The. See LOMBARDY, THE IRON CROWN OF.

IRON MASK, The Man in the. — "It is known that a masked and unknown prisoner, the object of extraordinary surveillance, died, in 1703, in the Bastille, to which he had been taken from the St. Marguerite Isles in 1698; he had remained about ten years incarcerated in these isles, and traces of him are with certainty found in the fort of Exilles, and at Pignerol, as far back as about 1681. This singular fact, which began to be vaguely bruited a little before the middle of the 18th century, excited immense curiosity after Voltaire had availed himself of it in his 'Siècle de Louis XIV.', wherein he exhibited it in the most touching and tragic light. A thousand conjectures circulated: no great personage had disappeared in Europe about 1680. What interest so powerful had the government of Louis XIV. for concealing this mysterious visage from every human eye? Many explanations more or less plausible, more or less chimerical, have been attempted in regard to the 'man with the iron mask' (an erroneous designation that has prevailed; the mask was not of iron, but of black velvet; it was probably one of those 'loupes' so long in use), when, in 1837, the bibliophile Jacob (M. Paul Lacroix) published a very ingenious book on this subject, in which he discussed all the hypotheses, and skilfully commented on all the facts and dates, in order to establish that, in 1680, Fouquet was represented as dead; that he was masked, sequestered anew, and dragged from fortress to fortress till his real death in 1703. It is impossible for us to admit this solution of the problem; the authenticity of the minister Louvois' correspondence with the governor of the prison of Pignerol, on the subject of Fouquet's death, in March, 1680, appears to us incontestable; and did this material proof not exist, we still could not believe in a return of rigor so strange, so barbarous, and so unaccountable on the part of Louis XIV., when all the official documents attest that his resentment had gradually been appeased, and that an old man who asked nothing more than a little free air before dying had ceased to be feared. There are many more presumptions in favor of Baron Heiss' opinion, reproduced by several writers, and, in the last instance, by M. Delort ('Histoire de l'homme au masque de fer'; 1825), — the opinion that the 'man with a mask' was a secretary of the Duke of Mantua, named Mattioli, carried off by order of Louis XIV. in 1679, for having deceived the French government, and having sought to form a coalition of the Italian princes against it. But however striking, in certain respects, may be the resemblances between Mattioli and the 'iron mask,' equally guarded by the governor St. Mars at Pignerol and at Ex-

illes, however grave may be the testimony according to which Mattioli was transferred to the St. Marguerite Isles, the subaltern position of Mattioli, whom Catinat and Louvois, in their letters, characterize as a 'knave' and St. Mars threatens with a cudgel, ill accords, we do not say with the traditions relating to the profound respect shown the prisoner by the keepers, the governor, and even the minister, — these traditions may be contested, — but with the authentic details and documents given by the learned and judicious Father Griffet in regard to the extreme mystery in which the prisoner at the Bastille was enveloped, more than twenty years after the abduction of the obscure Mattioli, in regard to the mask that he never put off, in regard to the precautions taken after his death to annihilate the traces of his sojourn at the Bastille, which explains why nothing was found concerning him after the taking of that fortress. Many minds will always persist in seeking, under this impenetrable mask, a more dangerous secret, a mysterious accusing resemblance; and the most popular opinion, although the most void of all proof, will always doubtless be that suffered to transpire by Voltaire, under cover of his publisher, in the eighth edition of his 'Dictionnaire philosophique' (1771). According to this opinion, the honor of the royal household was involved in the secret, and the unknown victim was an illegitimate son of Anne of Austria. The only private crime of which Louis XIV. was perhaps capable, was a crime inspired by fanaticism for monarchical honor. However this may be, history has no right to pronounce upon what will never emerge from the domain of conjecture." — H. Martin, *Hist. of France: Age of Louis XIV.*, v. 1, p. 40, foot-note. — "The Paris correspondent of the 'Daily Telegraph' records a fact which, if it is correctly reported, goes a long way towards clearing up one of the problems of modern history. A letter to Louvois by Louis XIV., written in cipher, has been long in the archives of the Ministry of War, and has at length been deciphered. In it the King orders Louvois to arrest General de Burlonde for having raised the siege of Conti without permission, to send him to Pignerol, and to conceal his features under a 'loup' or black-velvet mask. The order was executed, and the presumption is therefore violent that the 'Man in the Iron Mask' — it was a black-velvet one with iron springs — was General de Burlonde. The story tallies with the known fact that the prisoner made repeated attempts to communicate his name to soldiers, that he was treated with respect by his military jailors, and that Louis XV., who knew the truth of the whole affair, declared it to be a matter of no importance. The difficulty is to discover the King's motive for such a precaution; but he may have feared discontent among his great officers, or the soldiery." — *The Spectator*, Oct. 14, 1893. — The cipher despatch above referred to, and the whole subject of the imprisonment of General de Burlonde, are discussed at length, in the light of official records and correspondence, by M. Émile Burgaud and Commandant Bazeries (the latter of whom discovered the key to the cipher), in a book entitled "Le Masque de Fer: Révélation de la correspondance chiffrée de Louis XIV.," published at Paris in 1893. It seems to leave small doubt that the mysteriously masked prisoner was no other than General de Burlonde.

IRONCLAD OATH.—An oath popularly styled the "Ironclad oath" was prescribed by the Congress of the United States, during the War of the Rebellion, in July, 1862, to be taken by every person elected or appointed to any office under the Government of the United States, the President only excepted. He was required to swear that he had "never voluntarily borne arms against the United States"; that he had "voluntarily given no aid, countenance, counsel, or encouragement to persons engaged in armed hostility to the National Government"; that he had "neither sought nor accepted, nor attempted to exercise the functions of any office whatever under authority or pretended authority in hostility to the United States"; that he had "never yielded a voluntary support to any pretended Government within the United States, hostile or inimical thereto."—J. G. Blaine, *Twenty Years of Congress*, v. 2, p. 88.

"IRONSIDES, Old."—A name popularly given to the American frigate "Constitution." See UNITED STATES OF AM.: A. D. 1814.

IROQUOIS CONFEDERACY, The.—According to their traditions, the founder of the League or confederacy which united the five nations of the Iroquois—the Mohawks, the Onondagas, the Oneidas, the Cayugas, and the Senecas (see AMERICAN ABORIGINES: IROQUOIS CONFEDERACY), was Hiawatha, the hero of Iroquois legend. He was an Onondaga chief, and is supposed to have lived about the middle of the 15th century. "Hiawatha had long beheld with grief the evils which afflicted not only his own nation, but all the other tribes about them, through the continual wars in which they were engaged, and the misgovernment and miseries at home which these wars produced. With much meditation he had elaborated in his mind the scheme of a vast confederation which would ensure universal peace. In the mere plan of a confederation there was nothing new. There are probably few, if any, Indian tribes which have not, at one time or another, been members of a league or confederacy. It may almost be said to be their normal condition. But the plan which Hiawatha had evolved differed from all others in two particulars. The system which he devised was to be not a loose and transitory league, but a permanent government. While each nation was to retain its own council and its management of local affairs, the general control was to be lodged in a federal senate, composed of representatives elected by each nation, holding office during good behavior, and acknowledged as ruling chiefs throughout the whole confederacy. Still further, and more remarkably, the confederation was not to be a limited one. It was to be indefinitely expansible. The avowed design of its proposer was to abolish war altogether. He wished the federation to extend until all the tribes of men should be included in it, and peace should everywhere reign. Such is the positive testimony of the Iroquois themselves; and their statement, as will be seen,

is supported by historical evidence. . . . His conceptions were beyond his time, and beyond ours; but their effect, within a limited sphere, was very great. For more than three centuries the bond which he devised held together the Iroquois nations in perfect amity. It proved, moreover, as he intended, elastic. The territory of the Iroquois, constantly extending as their united strength made itself felt, became the 'Great Asylum' of the Indian tribes. . . . Among the interminable stories with which the common people [of the Five Nations] beguile their winter nights, the traditions of Atotarho and Hiawatha became intermingled with the legends of their mythology. An accidental similarity, in the Onondaga dialect, between the name of Hiawatha and that of one of their ancient divinities, led to a confusion between the two, which has misled some investigators. This deity bears, in the sonorous Canienga tongue, the name of Taronhiawagon, meaning 'the Holder of the Heavens.' The Jesuit missionaries style him 'the great god of the Iroquois.' Among the Onondagas of the present day, the name is abridged to Taonhiawagi, or Tahiaawagi. The confusion between this name and that of Hiawatha (which, in another form, is pronounced Tahionwatha) seems to have begun more than a century ago. . . . Mr. J. V. H. Clark, in his interesting History of Onondaga, makes the name to have been originally Ta-own-ya-wat-ha, and describes the bearer as 'the deity who presides over fisheries and hunting-grounds.' He came down from heaven in a white canoe, and after sundry adventures, which remind one of the labors of Hercules, assumed the name of Hiawatha (signifying, we are told, 'a very wise man'), and dwelt for a time as an ordinary mortal among men, occupied in works of benevolence. Finally, after founding the confederacy and bestowing many prudent counsels upon the people, he returned to the skies by the same conveyance in which he had descended. This legend, or, rather, congeries of intermingled legends, was communicated by Clark to Schoolcraft, when the latter was compiling his 'Notes on the Iroquois.' Mr. Schoolcraft, pleased with the poetical cast of the story, and the euphonious name, made confusion worse confounded by transferring the hero to a distant region and identifying him with Manabozho, a fantastic divinity of the Ojibways. Schoolcraft's volume, which he chose to entitle 'The Hiawatha Legends,' has not in it a single fact or fiction relating either to Hiawatha himself or to the Iroquois deity Taronhiawagon. Wild Ojibway stories concerning Manabozho and his comrades form the staple of its contents. But it is to this collection that we owe the charming poem of Longfellow; and thus, by an extraordinary fortune, a grave Iroquois lawgiver of the fifteenth century has become, in modern literature, an Ojibway demigod, son of the West Wind, and companion of the tricky Paupukkeewis, the boastful Iagoo, and the strong Kwasind. If a Chinese traveler, during the middle ages, inquiring into the history and religion of the western nations, had confounded King Alfred with King Arthur, and both with Odin, he would not have made a more preposterous confusion of names and characters than that which has hitherto disguised the genuine personality of the great Onondaga reformer."—H. Hale, ed., *The Iroquois Book of*

Rites (Brinton's *Library of Aboriginal Am. Literature*, no. 2, pp. 21-36).

IRREDENTISTS.—"This is the name given to a political organisation formed in 1878, with the avowed object of freeing all Italians from foreign rule, and of reuniting to the Italian kingdom all those portions of the Italy of old which have passed under foreign dominion. The operations of the 'Italia Irredenta' party are chiefly carried on against Austria, in consequence of the retention by that Empire of Trieste and the Southern Tyrol. Until these territories have been relinquished, Italy, or at least a certain part of it, will remain unsatisfied."—J. S. Jeans, *Italy* (*National Life and Thought*, ch. 8).

ISAURIANS, The.—The Isaurians were a fierce and savage race of mountaineers, who occupied anciently a district in Asia Minor, between Cilicia and Pamphylia on the south and Phrygia on the north. They were persistently a nation of robbers, living upon the spoils taken from their neighbors, who were never able to punish them justly in their mountain fastnesses. Even the iron hand of the Romans failed to reduce the Isaurians to order, although P. Servilius, in 78 B. C., destroyed most of their strongholds, and Pompey, eleven years later, in his great campaign against the pirates, put an end to the lawless depredations on sea and land of the Cilicians, who had become confederated with the Isaurians. Five centuries afterwards, in the days of the Eastern Empire, the Isaurians were the best soldiers of its army, and even gave an emperor to the throne at Constantinople in the person of Zeno or Zenon.—E. W. Brooks, *The Emperor Zenon and the Isaurians* (*English Historical Rev.*, April, 1893).

ISCA.—The name of two towns in Roman Britain, one of which is identified with modern Exeter and the other with Caerleon-on-Usk. The latter was the station of the 2d legion.—T. Mommsen, *Hist. of Rome*, bk. 8, ch. 5.—See EXETER, ORIGIN OF; also, CAERLEON.

ISLAM.—"The religion founded by Mahomet is called Islam, a word meaning 'the entire surrender of the will to God'; its professors are called Mussulmans—'those who have surrendered themselves,' or 'Believers,' as opposed to the 'Rejectors' of the Divine messengers, who are named 'Kafirs,' or 'Mushrikin,' that is,

'those who associate, are companions or sharers with the Deity.' Islam is sometimes divided under the two heads of Faith and Practical Religion. 1. Faith (Iman) includes a belief in one God, omnipotent, omniscient, all-merciful, the author of all good; and in Mahomet as his prophet, expressed in the formula 'There is no God but God, and Mahomet is the Prophet of God.' It includes, also, a belief in the authority and sufficiency of the Koran, in angels, genii, and the devil, in the immortality of the soul, the resurrection, the day of judgment and in God's absolute decree for good and evil. II. Practical religion (Din) consists of five observances: (1) Recital of the formula of Belief, (2) Prayer with Ablution, (3) Fasting, (4) Almsgiving, (5) the Pilgrimage. . . . The standard of Moslem orthodoxy is essentially the Koran and to it primary reference is made; but . . . some more extended and discriminating code became necessary. The deficiency was supplied by the compilation of the 'Sunnah,' or Traditional Law, which is built upon the sayings and practices of Mahomet, and, in the opinion of the orthodox, is invested with the force of law, and with some of the authority of inspiration. . . . In cases where both the Koran and the Sunnah afford no exact precept, the 'Rule of Faith' in their dogmatic belief, as well as the decisions of their secular courts, is based upon the teaching of one of the four great Imams, or founders of the orthodox sects, according as one or another of these prevails in any particular country. . . . The great Sunni sect is divided among the orthodox schools mentioned above, and is so called from its reception of the 'Sunnah,' as having authority concurrent with and supplementary to the Koran. In this respect it differs essentially from the Shias, or partisans of the house of Ali [the nephew of Mahomet and husband of his daughter Fatima] who, adhering to their own traditions, reject the authority of the 'Sunnah.' These two sects, moreover, have certain observances and matters of belief peculiar to themselves, the chief of which is the Shia doctrine, that the sovereign Imam, or temporal and spiritual lordship over the faithful, was by divine right vested in Ali and in his descendants, through Hasan and Hosein, the children of Fatima, the daughter of the prophet. And thus the Persian Shias add to the formula of belief the confession, 'Ali is the Caliph of God.' In Persia the Shia doctrines prevail, and formerly so intense was sectarian hatred that the Sunni Mahometans paid a higher capitation tax there than the infidels. In Turkey the great majority are Sunni. In India the Shias number about one in twenty. The Shias, who reject this name, and call themselves Adliyah, or the 'Society of the Just,' are subdivided into a great variety of minor sects; but these . . . are united in asserting that the first three Caliphs, Abu Bekr, Omar, and Othman were usurpers, who had possessed themselves of the rightful and inalienable inheritance of Ali."—J. W. H. Stobart, *Islam and its Founder*, ch. 10.—"The twelve Imams, or pontiffs, of the Persian creed, are Ali, Hassan, Hosein, and the lineal descendants of Hosein to the ninth generation. Without arms, or treasures, or subjects, they successively enjoyed the veneration of the people and provoked the jealousy of the reigning caliphs. . . . The twelfth and last of the Imams, conspicuous by the title of Mabadi, or the Guide,

surpassed the solitude and sanctity of his predecessors. He concealed himself in a cavern near Bagdad: the time and place of his death are unknown; and his votaries pretend that he still lives and will appear before the day of judgment."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 50.

ITALY.

Ancient.—Early Italians.—"It was not till the close of the Republic, or rather the beginning of the Empire, that the name of Italy was employed, as we now employ it, to designate the whole Peninsula, from the Alps to the Straits of Messina [see ROME: B. C. 275]. The term Italia, borrowed from the name of a primæval tribe who occupied the southern portion of the land, was gradually adopted as a generic title in the same obscure manner in which most of the countries of Europe, or (we may say) the Continents of the world, have received their appellations. In the remotest times the name only included Lower Calabria: from these narrow limits it gradually spread upwards, till about the time of the Punic Wars, its northern boundary ascended the little river Rubicon (between Umbria and Cisalpine Gaul), then followed the

ridge of the Appennines westward to the source of the Macra, and was carried down the bed of that small stream to the Gulf of Genoa. When we speak of Italy, therefore, in the Roman sense of the word, we must dismiss from our thoughts all that fertile country which was at Rome entitled the provincial district of Gallia Cisalpina, and Liguria."—H. G. Liddell, *Hist. of Rome*, introd., sect. 2.—"Philological research teaches us to distinguish three primitive Italian stocks, the Iapygian, the Etruscan, and that which we shall call the Italian. The last is divided into two main branches,—the Latin branch, and that to which the dialects of the Umbri, Marsi, Volsci and Samnites belong. As to the Iapygian stock, we have but little information. At the south-eastern extremity of Italy, in the Messapian or Calabrian peninsula, inscriptions in a peculiar

extinct language have been found in considerable numbers; undoubtedly remains of the dialect of the Iapygians, who are very distinctly pronounced by tradition also to have been different from the Latin and Samnite stocks. . . . With the recognition of . . . a general family relationship or peculiar affinity between the Iapygians and Hellenes (a recognition, however, which by no means goes so far as to warrant our taking the Iapygian language to be a rude dialect of Greek), investigation must rest content. . . . The middle of the peninsula was inhabited, as far back as reliable tradition reaches, by two peoples or rather two branches of the same people, whose position in the Indo-Germanic family admits of being determined with greater precision than that of the Iapygian nation. We may with propriety call this people the Italian, since upon it rests the historical significance of the peninsula. It is divided into the two branch-stocks of the Latins and the Umbrians; the latter including their southern off-shoots, the Marsians and Samnites, and the colonies sent forth by the Samnites in historical times. . . . These examples [philological examples, given in the work, but omitted from this quotation], selected from a great abundance of analogous phenomena, suffice to establish the individuality of the Italian stock as distinguished from the other members of the Indo-Germanic family, and at the same time show it to be linguistically the nearest relative, as it is geographically the next neighbour, of the Greek. The Greek and the Italian are brothers; the Celt, the German and the Slavonian are their cousins. . . . Among the languages of the Italian stock, again, the Latin stands in marked contrast with the Umbro-Samnite dialects. It is true that of these only two, the Umbrian and the Samnite or Oscan, are in some degree known to us. . . . A conjoint view, however, of the facts of language and of history leaves no doubt that all these dialects belonged to the Umbro-Samnite branch of the great Italian stock. . . . It may . . . be regarded as certain that the Italians, like the Indians, migrated into their peninsula from the north. The advance of the Umbro-Sabellian stock along the central mountain-ridge of Italy, in a direction from north to south, can still be clearly traced; indeed its last phases belong to purely historical times. Less is known regarding the route which the Latin migration followed. Probably it proceeded in a similar direction along the west coast, long, in all likelihood, before the first Sabellian stocks began to move."—T. Mommsen, *Hist. of Rome*, bk. I, ch. 2-3.—See, also, ETRUSCANS; LATIUM; SABINES; SAMNITES; UMBRIANS; MAGNA GRÆCIA; also, ROME: B. C. 343-290, and 339-338.—"In the February number of the 'Civiltà Cattolica,' Padre de Cara pleads for a national effort on the part of Italian archaeologists to solve the question of the origin of their country's civilisation by the systematic exploration and excavation of Pelasgic Italy. . . . In a series of articles, extending over several years, the learned father has contended for the identity of the Hittites and Proto-Pelasgians on archaeological, etymological, and historical grounds; and he here repeats that, if 'Italic' means Aryan, then it is among the peoples speaking Oscan, Umbrian, Latin, and other dialects of the Indo-European family that the parentage of Italian civilisation must be sought; but that 'Italy'

meant in the first place the country of the Hittites (Hethi), and hence of the Pelasgians, and that name and civilisation are alike Pelasgic. Those who hold it to have been Aryan have not only the testimony of Greek and Roman writers against them, but also the facts that there were Pelasgians in Italy whose stone constructions are standing to this day, and that the Etruscan language and culture had no Aryan affinities. The writer further points out that the walls of Pelasgic cities, whether in Italy, Greece, or Asia Minor, all resemble each other, and that the origin of Greek civilisation was also Pelasgian. In Greece, as in Italy, the Aryans followed centuries after the Hittite-Pelasgians, and Aryan Greece carried the arts of Pelasgic Greece to perfection. He believes that, of two migratory bands of Hittites, one invaded Greece and the other Italy, about the same time. He also draws attention to the coincidence that it is not very long since Greece, like Italy at the present time, could date its civilisation no further back than 700 or 800 B. C. Schliemann recovered centuries for Greece, but 'Italy still remains imprisoned in the iron circle of the seventh century.' To break it, she must follow Schliemann's plan; and as he had steady faith in the excavation of the Pelasgic cities and cemeteries of Greece, so will like faith and conduct on the part of Italian archaeologists let in light upon this once dark problem."—*Academy*, March 31, 1894, p. 273.

A. D. 568-800.—Lombard conquests and kingdom.—Rise of the Papal power at Rome.—Alliance of the Papacy with the sovereigns of the Franks.—Revival of the Roman Empire under Charlemagne.—"Since the invasion of Alboin, Italy had groaned under a complication of evils. The Lombards who had entered along with that chief in A. D. 568 [see LOMBARDS: A. D. 568-573, and after] had settled in considerable numbers in the valley of the Po, and founded the duchies of Spoleto and Benevento, leaving the rest of the country to be governed by the exarch of Ravenna as viceroy of the Eastern crown. This subjection was, however, little better than nominal. Although too few to occupy the whole peninsula, the invaders were yet strong enough to harass every part of it by inroads which met with no resistance from a population unused to arms, and without the spirit to use them in self-defence. . . . Tormented by their repeated attacks, Rome sought help in vain from Byzantium, whose forces, scarce able to repel from their

walls the Avars and Saracens, could give no support to the distant exarch of Ravenna. The Popes were the Emperor's subjects; they awaited his confirmation, like other bishops; they had more than once been the victims of his anger. But as the city became more accustomed to independence, and the Pope rose to a predominance, real if not yet legal [see ROME: A. D. 590-640, and PAPACY: A. D. 728-774], his tone grew bolder than that of the Eastern patriarchs. In the controversies that had raged in the Church, he had had the wisdom or good fortune to espouse (though not always from the first) the orthodox side: it was now by another quarrel of religion that his deliverance from an unwelcome yoke was accomplished. The Emperor Leo, born among the Isaurian mountains, where a purer faith may yet have lingered, and stung by the Mohammedan taunt of idolatry, determined to abolish the worship of images, which seemed fast obscuring the more spiritual part of Christianity. An attempt sufficient to cause tumults among the submissive Greeks, excited in Italy a fiercer commotion. The populace rose with one heart in defence of what had become to them more than a symbol: the exarch was slain: the Pope, though unwilling to sever himself from the lawful head and protector of the Church, must yet excommunicate the prince whom he could not reclaim from so hateful a heresy [see ICONOCLASTIC CONTROVERSY]. Liudprand, king of the Lombards, improved his opportunity: falling on the exarchate as the champion of images, on Rome as the minister of the Greek Emperor, he overran the one, and all but succeeded in capturing the other. The Pope escaped for the moment, but saw his peril: placed between a heretic and a robber, he turned his gaze beyond the Alps, to a Catholic chief who had just achieved a signal deliverance for Christendom on the field of Poitiers. Gregory II. had already opened communications with Charles Martel, mayor of the palace, and virtual ruler of the Frankish realm. As the crisis becomes more pressing, Gregory III. finds in the same quarter his only hope, and appeals to him in urgent letters, to haste to the succour of Holy Church. . . . Charles died before he could obey the call; but his son Pipin (surnamed the Short) made good use of the new friendship with Rome. He was the third of his family who had ruled the Franks with a monarch's full power [see FRANKS: A. D. 511-752]: it seemed time to abolish the pageant of Merovingian royalty; yet a departure from the ancient line might shock the feelings of the people. A course was taken whose dangers no one then foresaw: the Holy Sec, now for the first time invoked as an international power, pronounced the deposition of Childeric, and gave to the royal office of his successor Pipin a sanctity hitherto unknown. . . . The compact between the chair of Peter and the Teutonic throne was hardly sealed, when the latter was summoned to discharge its share of the duties. Twice did Aistulf the Lombard assail Rome, twice did Pipin descend to the rescue: the second time at the bidding of a letter written in the name of St. Peter himself. Aistulf could make no resistance; and the Frank bestowed on the Papal chair all that belonged to the exarchate in North Italy, receiving as the meed of his services the title of Patrician [754]. . . . When on Pipin's death the restless Lombards again

took up arms and menaced the possessions of the Church, Pipin's son Charles or Charlemagne swept down like a whirlwind from the Alps at the call of Pope Hadrian, seized king Desiderius in his capital, assumed himself the Lombard crown, and made northern Italy thenceforward an integral part of the Frankish empire [see GERMANY: A. D. 687-800]. . . . For the next twenty-four years Italy remained quiet. The government of Rome was carried on in the name of the Patrician Charles, although it does not appear that he sent thither any official representative; while at the same time both the city and the exarchate continued to admit the nominal supremacy of the Eastern Emperor, employing the years of his reign to date documents."—J. Bryce, *The Holy Roman Empire*, ch. 4.—"Thus, by German hands, the internal ascendancy of the German race in Italy, which had lasted, first under the Goths, and then under the Lombards, for 281 years, was finally broken. A German was still king over Italy, as for ages Germans were still to be. But Roman and native influence reconquered its supremacy in Italy, under the management and leadership of the bishops of Rome. The Lombards, already becoming Italianized, melted into provincial Italians. The Teutonic language disappeared, leaving a number of words to Italian dialects, and a number of names to Italian families. The last king of the Lombards bore an Italian name, Desiderius. The latest of Italian national heroes bears the Bavarian and Lombard name of Garihaldi. But the overthrow of the Lombards, and the gift of provinces and cities to St. Peter had even more eventful results. The alliance between the king of the Franks and the bishop of Rome had become one of the closest kind. . . . The German king and the Italian pope found themselves together at the head of the modern world of the West. But the fascination of the name of Rome still, as it had done for centuries, held sway over the Teutonic mind. . . . It was not unnatural that the idea should recommend itself, both to the king and the pope, of reviving in the West, in close connexion with the Roman primacy, that great name which still filled the imagination of the world, and which in Roman judgments, Greek Byzantium had wrongfully stolen away—the name of Cæsar Augustus, the claim to govern the world. There was a longing in the West for the restoration of the name and authority, 'lest,' as the contemporary writers express it, 'the heathen should mock at the Christian if the name of Emperor had ceased among them.' And at this moment, the government at Constantinople was in the hands of a woman, the Empress Irene. Charles's services to the pope were recompensed, and his victorious career of more than thirty years crowned, by the restoration at Rome, in his person, of the Roman empire and the imperial dignity. The same authority which had made him 'patrician,' and consecrated him king, now created him Emperor of the Romans. On Christmas day, 800, when Charles came to pay his devotions before the altar of St. Peter's, Pope Leo III.—without Charles's knowledge or wish, so Charles declared to his biographer, Einhard, and, it may be, prematurely, as regards Charles's own feeling—placed a golden crown on his head, while all the people shouted, 'to Charles, the most pious Augustus, crowned of God, the

great and peace-giving Emperor of the Romans, life and victory. . . . Thus a new power arose in Europe, new in reality and in its relations to society, though old in name. It was formally but the carrying on the line of the successors of Augustus and Constantine. But substantially it was something very different. Its authors could little foresee its destinies; but it was to last, in some sort the political centre of the world which was to be, for 1,000 years. And the Roman Church, which had done such great things, which had consecrated the new and mighty kings of the Franks, and had created for the mightiest of them the imperial claim to universal dominion, rose with them to a new attitude in the world. . . . The coronation of Charles at Rome, in the face of an imperial line at Constantinople, finally determined, though it did not at once accomplish, the separation of East and West, of Greek and Latin Christianity. This separation had long been impending, perhaps, becoming inevitable. . . . One Roman empire was still the only received theory. But one Roman empire, with its seat in the West, or one Roman empire, governed in partnership by two emperors of East and West, had become impossible in fact. The theory of its unity continued for ages; but whether the true successor of Augustus and Theodosius sat at Constantinople, or somewhere in the West, remained in dispute, till the dispute was ended by the extinction of the Eastern empire by the Turks on May 29, 1453."—R. W. Church, *The Beginning of the Middle Ages*, ch. 7.—See, also, FRANKS: A. D. 768-814.

A. D. 781.—Erected into a separate kingdom by Charlemagne.—In the year 781 Charlemagne erected Italy and Aquitaine into two separate kingdoms, placing his infant sons Pipin and Ludwig on the thrones.—P. Godwin, *Hist. of France: Ancient Gaul*, ch. 16.

(Southern): A. D. 800-1016.—Conflict of Greeks, Saracens and Franks.—"The southern provinces [of Italy], which now compose the kingdom of Naples, were subject, for the most part [in the 8th and 9th centuries], to the Lombard dukes and princes of Beneventum—so powerful in war that they checked for a moment the genius of Charlemagne—so liberal in peace that they maintained in their capital an academy of thirty-two philosophers and grammarians. The division of this flourishing state produced the rival principalities of Benevento, Salerno, and Capua; and the thoughtless ambition or revenge of the competitors invited the Saracens to the ruin of their common inheritance. During a calamitous period of two hundred years, Italy was exposed to a repetition of wounds which the invaders were not capable of healing by the union and tranquillity of a perfect conquest. Their frequent and almost annual squadrons issued from the port of Palermo and were entertained with too much indulgence by the Christians of Naples: the more formidable fleets were prepared on the African coasts. . . . A colony of Saracens had been planted at Bari, which commands the entrance of the Adriatic Gulf; and their impartial depredations provoked the resentment and conciliated the union of the two emperors. An offensive alliance was concluded between Basil the Macedonian [of the Byzantine

Empire], the first of his race, and Lewis, the great grandson of Charlemagne; and each party supplied the deficiencies of his associate. . . . The fortress of Bari was invested by the infantry of the Franks and by the cavalry and galleys of the Greeks; and, after a defence of four years, the Arabian emir submitted [A. D. 871] to the clemency of Lewis, who commanded in person the operations of the siege. This important conquest had been achieved by the concord of the East and West; but their recent amity was soon embittered by the mutual complaints of jealousy and pride. . . . Whoever might deserve the honour, the Greek emperors, Basil and his son Leo, secured the advantage of the reduction of Bari. The Italians of Apulia and Calabria were persuaded or compelled to acknowledge their supremacy, and an ideal line from Mount Garganus to the Bay of Salerno leaves the far greater part of the [modern] kingdom of Naples under the dominion of the Eastern empire. Beyond that line the dukes or republics of Amalfi and Naples, who had never forfeited their voluntary allegiance, rejoiced in the neighbourhood of their lawful sovereign; and Amalfi was enriched by supplying Europe with the produce and manufactures of Asia. But the Lombard princes of Benevento, Salerno, and Capua, were reluctantly torn from the communion of the Latin world, and too often violated their oaths of servitude and tribute. The city of Bari rose to dignity and wealth as the metropolis of the new theme or province of Lombardy; the title of Patrician, and afterwards the singular name of Catapan, was assigned to the supreme governor. . . . As long as the sceptre was disputed by the princes of Italy, their efforts were feeble and adverse; and the Greeks resisted or eluded the forces of Germany which descended from the Alps under the imperial standard of the Otthos. The first and greatest of those Saxon princes was compelled to relinquish the siege of Bari: the second, after the loss of his stoutest bishops and barons, escaped with honour from the bloody field of Crotona (A. D. 983). On that day the scale of war was turned against the Franks by the valour of the Saracens. . . . The Caliph of Egypt had transported 40,000 Moslems to the aid of his Christian ally. The successors of Basil amused themselves with the belief that the conquest of Lombardy had been achieved, and was still preserved, by the justice of their laws, the virtues of their ministers, and the gratitude of a people whom they had rescued from anarchy and oppression. A series of rebellions might dart a ray of truth into the palace of Constantinople; and the illusions of flattery were dispelled by the easy and rapid success of the Norman adventurers."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 56.

A. D. 843-951.—In the breaking up of Charlemagne's Empire.—The founding of the Holy Roman Empire.—In the partition of Charlemagne's Empire among his three grandsons, by the treaty of Verdun, A. D. 843, Italy, together

with the new kingdom called Lotharingia, or Lorraine, was assigned to the elder, Lothar, who bore the title of Emperor. Lothar, who died in 855, redivided his dominions among three sons, and Lorraine, separated from Italy, was soon dismembered and shared between Germany and France. The Italian kingdom fell to Louis or Ludwig II., who was crowned Emperor, and on his death without issue, A. D. 875, it was seized, together with the imperial title, by the French Carolingian king, Charles the Bald. Two years afterwards he died, and Italy, together with the imperial crown, was acquired by the last legitimate survivor of the German Carolingian line, Charles the Fat, who died in 888. "At that memorable era (A. D. 888) the four kingdoms which this prince [Charles the Fat] had united fell asunder: West France, where Odo or Eudes [Duke of Paris, ancestor of the royal line of Capet] then began to reign, was never again united to Germany; East France (Germany) chose Arnulf; Burgundy split up into two principalities, in one of which (Transjurane) Rudolf proclaimed himself king, while the other (Cisjurane with Provence) submitted to Boson; while Italy was divided between the parties of Berengar of Friuli and Guido of Spoleto. The former was chosen king by the estates of Lombardy; the latter, and on his speedy death his son Lambert, was crowned Emperor by the Pope. Arnulf's [the German king's] descent chased them away and vindicated the claims of the Franks, but on his flight Italy and the anti-German faction at Rome became again free. Berengar was made king of Italy, and afterwards Emperor. Lewis of Burgundy, son of Boson, renounced his fealty to Arnulf, and procured the imperial dignity, whose vain title he retained through years of misery and exile, till A. D. 928. None of these Emperors were strong enough to rule well even in Italy; beyond it they were not so much as recognized. . . . In A. D. 924 died Berengar, the last of these phantom Emperors. After him Hugh of Burgundy and Lothar his son reigned as kings of Italy, if puppets in the hands of a riotous aristocracy can be so called. Rome was meanwhile ruled by the consul or senator Alberic [called variously senator, consul, patrician, and prince of the Romans], who had renewed her never quite extinct republican institutions, and in the degradation of the papacy was almost absolute in the city." Affairs in Italy were at this stage when Otto or Otho, the vigorous and chivalrous German king of the new line, came in 951 to re-establish and reconstitute the Roman Empire of Charlemagne (see GERMANY: A. D. 936-973) and to make it a lasting entity in European politics—the "Holy Roman Empire" of modern history.—J. Bryce, *The Holy Roman Empire*, ch. 6.

ALSO IN: F. Guizot, *Hist. of Civilization*, lect. 24.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 49.—See, also, ROME: A. D. 903-964; and ROMAN EMPIRE, THE HOLY: A. D. 963.

A. D. 900-924.—Ravaged by the Hungarians.—"The vicinity of Italy had tempted their early inroads; but from their camp on the Brenta they beheld with some terror the apparent strength and populousness of the new-discovered country. They requested leave to retire; their request was proudly rejected by the Italian king; and the lives of 20,000 Christians paid the forfeit of his obstinacy and rashness. Among the cities

of the West the royal Pavia was conspicuous in fame and splendour; and the pre-eminence of Rome itself was only derived from the relics of the apostles. The Hungarians appeared; Pavia was in flames; forty-three churches were consumed; and, after the massacre of the people, they spared about 200 wretches who had gathered some bushels of gold and silver (a vague exaggeration) from the smoking ruins of their country. In these annual excursions from the Alps to the neighbourhood of Rome and Capua, the churches that yet escaped resounded with a fearful litany: 'Oh! save and deliver us from the arrows of the Hungarians!' But the saints were deaf or inexorable; and the torrent rolled forward, till it was stopped by the extreme land of Calabria."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 55.

A. D. 961-1039.—Subjection to Germany.—"Otho I., his son Otho II., and his grandson Otho III., were successively acknowledged emperors and kings of Italy, from 961 to 1002. When this branch of the house of Saxony became extinct, Henry II. of Bavaria, and Conrad the Salic of Franconia, filled the throne from 1004 to 1039. During this period of nearly eighty years, the German emperors twelve times entered Italy at the head of their armies, which they always drew up in the plains of Roncaglia near Placentia; there they held the states of Lombardy, received homage from their Italian feudatories, caused the rents due to be paid, and promulgated laws for the government of Italy. A foreign sovereign, however, almost always absent, known only by his incursions at the head of a barbarous army, could not efficaciously govern a country which he hardly knew, and where his yoke was detested. . . . The emperors were too happy to acknowledge the local authorities, whatever they were, whenever they could obtain from them their pecuniary dues: sometimes they were dukes or marquises, whose dignities had survived the disasters of various invasions and of civil wars; sometimes the archbishops and bishops of great cities, whom Charlemagne and his successors had frequently invested with duchies and counties escheated to the crown, reckoning that lords elected for life would remain more dependent than hereditary lords; sometimes, finally, they were the magistrates themselves, who, although elected by the people, received from the monarch the title of imperial vicars, and took part with the nobles and prelates in the Placids (placita), or diets of Roncaglia. After a stay of some months, the emperor returned with his army into Germany; the nobles retired to their castles, the prelates and magistrates to their cities; neither of these last acknowledged a superior authority to their own, nor reckoned on any other force than what they could themselves employ to assert what they called their rights. Opposite interests could not fail to produce collision, and the war was universal."—J. C. L. de Sismondi, *Hist. of the Italian Republics*, ch. 1.—During the reign of Henry II. (A. D. 1002-1024), against whom a rival king of Italy was set up by the Italians, "there was hardly any recognised government, and the Lombards became more and more accustomed, through necessity, to protect themselves, and to provide for their own internal police. Meanwhile the German nation had become odious to the Italians. The rude soldiery, insolent and

addicted to intoxication, were engaged in frequent disputes with the citizens, wherein the latter, as is usual in similar cases, were exposed first to the summary vengeance of the troops, and afterwards to penal chastisement for sedition. In one of these tumults, at the entry of Henry II. in 1004, the city of Pavia was burned to the ground, which inspired its inhabitants with a constant animosity against that emperor. Upon his death, in 1024, the Italians were disposed to break once more their connexion with Germany, which had elected as sovereign Conrad duke of Francouia. They offered their crown to Robert king of France and to William duke of Guienne." But neither of these princes would accept the troublesome diadem; and, in the end, the archbishop of Milan and other Lombard lords "repaired to Constance and tendered the crown to Conrad, which he was already disposed to claim as a sort of dependency upon Germany. It does not appear that either Conrad or his successors were ever regularly elected to reign over Italy; but whether this ceremony took place or not, we may certainly date from that time the subjection of Italy to the Germanic body. It became an unquestionable maxim, that the votes of a few German princes conferred a right to the sovereignty of a country which had never been conquered, and which had never formally recognised this superiority."—H. Hallam, *The Middle Ages*, ch. 3, pt. 1 (v. 1).—"The Italian Kingdom of the Karlings, the kingdom which was reunited to Germany under Otto the Great, was . . . a continuation of the old Lombard kingdom. It consisted of that kingdom, enlarged by the Italian lands which fell off from the Eastern Empire in the eighth century; that is by the Exarchate and the adjoining Pentapolis, and the immediate territory of Rome itself."—E. A. Freeman, *Historical Geog. of Europe*, ch. 8, sect. 3.

(Southern): A. D. 1000-1090.—**Conquests and settlement of the Normans.**—"A pilgrimage first took the Normans to Southern Italy, where they were to found a kingdom. Here there were, if I may so speak, three wrecks, three ruins of nations—Lombards in the mountains, Greeks in the ports, Sicilian and African Saracens rambling over the coasts. About the year 1000, some Norman pilgrims assist the inhabitants of Salerno to drive out a party of Arabs, who were holding them to ransom. Being well paid for the service, these Normans attract others of their countrymen hither. A Greek of Bari, named Melo or Meles, takes them into pay to free his city from the Greeks of Byzantium. Next they are settled by the Greek republic of Naples at the fort of Aversa, which lay between that city and her enemies, the Lombards of Capua (A. D. 1026). Finally, the sons of a poor gentleman of the Cotentin, Tancred of Hauteville, seek their fortune here. Tancred had twelve children; seven by the same mother. It was during William's [the Conqueror's] minority, when numbers of the barons endeavoured to withdraw themselves from the Bastard's yoke, that these sons of Tancred's directed their steps towards Italy, where it was said that a simple Norman knight had become count of Aversa. They set off penniless, and defrayed the expenses of their journey by the sword (A. D. 1037?). The Byzantine governor, or Katapan, engaged their services, and led them against the

Arabs. But their countrymen beginning to flock to them, they no sooner saw themselves strong enough than they turned against their paymasters, seized Apulia [A. D. 1042], and divided it into twelve countships. This republic of Condottieri held its assemblies at Melfi. The Greeks endeavoured to defend themselves, but fruitlessly. They collected an army of 60,000 Italians; to be routed by the Normans, who amounted to several hundreds of well-armed men. The Byzantines then summoned their enemies, the Germans, to their aid; and the two empires, of the East and West, confederated against the sons of the gentleman of Coutances. The all-powerful emperor, Henry the Black (Henry III.), charged Leo IX., who had been nominated pope by him, and who was a German and kin to the imperial family, to exterminate these brigands. The pope led some Germans and a swarm of Italians against them [1053]; but the latter took to flight at the very beginning of the battle, and left the warlike pontiff in the hands of the enemy. Too wary to ill-treat him, the Normans piously cast themselves at their prisoner's feet, and compelled him to grant them, as a fief of the Church, all that they had taken or might take possession of in Apulia, Calabria, and on the other side of the strait; so that, in spite of himself, the pope became the suzerain of the kingdom of the Two Sicilies (A. D. 1052-1053)."—J. Michelet, *Hist. of France*, bk. 4, ch. 2.—The two elder of the sons of Tancred were now dead, and the third son, Humphrey, died not long after. A fourth brother, Robert, surnamed Guiscard, who had lately arrived from Normandy with reinforcements, then established himself (A. D. 1057) with some difficulty in the leadership and succession. "He accomplished the reduction of almost all the country which composes the present kingdom of Naples, and, extinguishing the long dominion of the Beneventine Lombards and of the eastern empire in Italy [see BENEVENTUM, and AMALFI], finally received from Pope Nicholas II. the confirmation of the titles which he had assumed, of duke of Calabria and Apulia [A. D. 1080]. . . . While Robert Guiscard was perfecting his dominion on the continent, his younger brother Roger engaged in the astonishing design of conquering the large and beautiful island of Sicily from the Saracens with a few Norman volunteers. An air of romantic extravagance breathes over all the enterprises of the Normans in Italy; and, even if we discard the incredible tales which the legends and chronicles of the times have preserved of the valour and corporeal strength of these northern warriors, enough will remain in the authentic results of their expeditions to stagger the reason and warm the imagination with attractive visions of chivalrous achievement. . . . We are assured that 300 Christian knights were the greatest number which Roger could for many years bring into the field; and that 136 routed a prodigious host of Saracens at the battle of Ceramio. . . . But the Saracens were embroiled in internal discord, and their island was broken up into numerous petty states; we may, therefore, attribute to their dissensions a great part of the success which the chroniclers of the Normans have assigned to their good swords alone. Roger had, however, embarked in an arduous and laborious undertaking, which it required the unending perseverance and patient valour of thirty years

[A. D. 1060-1090] to accomplish. . . . At length, all Sicily bowed to his sway: Norman barons were incited over its surface; and Roger, with the title of great count, held the island as a fief of his brother's duchy."—G. Proctor, *Hist. of Italy*, ch. 2, pt. 2.

A. D. 1056-1122.—Beginning of the conflict of the Popes with the Emperors.—Hildebrand and Henry IV.—The War of Investitures. See PAPACY: A. D. 1056-1122; and GERMANY: A. D. 973-1122.

A. D. 1056-1152.—The rise of the republican cities.—"The war of investitures, which lasted more than sixty years, accomplished the dissolution of every tie between the different members of the kingdom of Italy. Civil wars have at least this advantage,—that they force the rulers of the people to consult the wishes of their subjects, oblige them to gain affections which constitute their strength, and to compensate, by the granting of new privileges, the services which they require. The prelates, nobles, and cities of Italy obeyed, some the emperor, others the pope; not from a blind fear, but from choice, from affection, from conscience, according as the political or religious sentiment was predominant in each. The war was general, but everywhere waged with the national forces. Every city armed its militia, which, headed by the magistrates, attacked the neighbouring nobles or towns of a contrary party. While each city imagined it was fighting either for the pope or the emperor, it was habitually impelled exclusively by its own sentiments: every town considered itself as a whole, as an independent state, which had its own allies and enemies; each citizen felt an ardent patriotism, not for the kingdom of Italy, or for the empire, but for his own city. At the period when either kings or emperors had granted to towns the right of raising fortifications, that of assembling the citizens at the sound of a great bell, to concert together the means of their common defence, had been also conceded. This meeting of all the men of the state capable of bearing arms was called a parliament. It assembled in the great square, and elected annually two consuls, charged with the administration of justice at home, and the command of the army abroad. . . . The parliament, which named the consuls, appointed also a secret council, called a *Consiglio di Credenza*, to assist the government, composed of a few members taken from each division; besides a grand council of the people, who prepared the decisions to be submitted to the parliament. . . . As industry had rapidly increased, and had preceded luxury,—as domestic life was sober, and the produce of labour considerable,—wealth had greatly augmented. The citizens allowed themselves no other use of their riches than that of defending or embellishing their country. It was from the year 900 to the year 1200 that the most prodigious works were undertaken and accomplished by the towns of Italy. . . . These three regenerating centuries gave an impulse to architecture, which soon awakened the other fine arts. The republican spirit which now fermented in every city, and gave to each of them constitutions so wise, magistrates so zealous, and citizens so patriotic, and so capable of great achievements,

had found in Italy itself the models which had contributed to its formation. The war of investitures had given wing to this universal spirit of liberty and patriotism in all the municipalities of Lombardy, in Piedmont, Venetia, Romagna, and Tuscany. But there existed already in Italy other free cities. . . . Venice, . . . Ravenna, . . . Genoa, . . . Pisa, . . . Rome, Gaëta, Naples, Amalfi, Bari, were either never conquered by the Lombards, or in subjection too short a time to have lost their ancient walls, and the habit of guarding them. These cities served as the refuge of Roman civilization. . . . Those cities which had accumulated the most wealth, whose walls inclosed the greatest population, attempted, from the first half of the twelfth century, to secure by force of arms the obedience of such of the neighbouring towns as did not appear sufficiently strong to resist them, . . . to force them into a perpetual alliance, so as to share their good or evil fortune, and always place their armed force under the standard of the dominant city. . . . Two great towns in the plains of Lombardy surpassed every other in power and wealth: Milan, which habitually directed the party of the church; and Pavia, which directed that of the empire. Both towns, however, seem to have changed parties during the reigns of Lothario III. and Conrad II., who, from the year 1125 to 1152 placed in opposition the two houses of Guelphs and Ghibelines in Germany. . . . Among the towns of Piedmont, Turin took the lead, and disputed the authority of the counts of Savoy, who called themselves imperial vicars in that country. . . . The family of the Veronese marquises, . . . who from the time of the Lombard kings had to defend the frontier against the Germans, were extinct; and the great cities of Verona, Padua, Vicenza, Treviso, and Mantua, nearly equal in power, maintained their independence. Bologna held the first rank among the towns south of the Po. . . . Tuscany, which had also had its powerful marquises, saw their family become extinct with the countess Matilda, the contemporary and friend of Gregory VII. Florence had since risen in power, destroyed Fiesole, and . . . was considered the head of the Tuscan league; and the more so that Pisa at this period thought only of her maritime expeditions. . . . Such was the state of Italy, when the Germanic diet, assembled at Frankfort in 1152, conferred the crown on Frederick Barbarossa, duke of Swabia, and of the house of Hohenstaufen."—J. C. L. de Sismondi, *Hist. of the Italian Republics*, ch. 1-2.

(Southern): **A. D. 1081-1194.—Robert Guiscard's invasions of the Eastern Empire.—Union of Sicily with Apulia, and creation of the Kingdom of the Two Sicilies, or Naples.**—"The success of his brother [Roger, in Sicily]—see above: A. D. 1000-1090] furnished another

spurred to the ambition of Robert Guiscard. Taking advantage of a dynastic revolution at Constantinople, he and his son Bohemund commenced a series of invasions of the Eastern Empire [see BYZANTINE EMPIRE: A. D. 1081-1085] which only ended with his death. These, though unsuccessful in their ultimate result, were influential causes of the first crusade, and deeply affected the relations of East and West for years to come. Meanwhile in Sicily Roger had been succeeded by his son [Roger II.], and, in 1127, this heir of the destinies of his race added the dukedom of Apulia to that of Sicily, obtained from Pope Anacletus the title of king, and finally established the Norman kingdom of Naples [also called the Kingdom of the Two Sicilies]. His character is thus described by a contemporary chronicler: 'He was a lover of justice and most severe avenger of crime. He abhorred lying; did everything by rule, and never promised what he did not mean to perform. He never persecuted his private enemies; and in war endeavoured on all occasions to gain his point without shedding of blood. Justice and peace were universally observed throughout his dominions.' During his reign the intercourse between England and Sicily was close. The government was organized on principles very similar to that of England. . . . Under his wise rule and that of his immediate successors, the south of Italy and Sicily enjoyed a transient gleam of prosperity and happiness. Their equal and tolerant government, far surpassing anything at that day in Europe, enabled the Saracen, the Greek, and the Italian to live together in harmony elsewhere unknown. Trade and industry flourished, the manufacture of silk enriched the inhabitants, and the kingdom of Naples was at peace until she was crushed under the iron heel of a Teutonic conqueror."—A. H. Johnson, *The Normans in Europe*, ch. 6.

A. D. 1154-1162.—The first and second expeditions of Frederick Barbarossa.—Frederick I., the second of the emperors of the Hohenstaufen line, called by the Italians Frederick Barbarossa (Redbeard), was elected king at Frankfort in March, 1152. In October, 1154, he crossed the Alps and entered Italy with a strong German army, having two purposes in view: 1. To receive the imperial crown, from the hands of the Pope, and to place on his own head, at Pavia, the iron crown of Lombardy or Italy. 2. To reduce to order and submission the rising city-republics of Lombardy and Tuscany, which had been growing rapidly in independence and power during the last four troubled imperial reigns. At Roncaglia, he held the diet of the kingdom, and listened to many complaints, especially against Milan, which had undoubtedly oppressed the weaker towns of its neighbourhood and abused its strength. Then he moved through the country, making a personal inspection of affairs, and giving a taste of his temper by burning the villages which failed to supply

provisions to his troops with satisfactory promptitude. At Tortona he ordered the inhabitants to renounce their alliance with the Milanese. They refused, and endured in the upper portion of the city a siege of two months. Forced by want of water to surrender, at last, they were permitted to go free, but their town was sacked and burned. Asti, Chieri, Rosate, and other places of more or less importance, were destroyed. Frederick did not venture yet to attack Milan, but proceeded to Rome, demanding the imperial crown. The pope (Adrian IV.) and the Romans were alike distrustful of him, and he was not permitted to bring his army into the city. After no little wrangling over ceremonious details, and after being compelled to lead the horse and to hold the stirrup of the haughty pontiff, Barbarossa was finally crowned at St. Peter's, in the Vatican suburb. The Romans attempted to interrupt the coronation, and a terrible tumult occurred in which a thousand of the citizens were slain. But the Germans made no attempt to take possession of the city. On the contrary, they withdrew with haste, and the emperor led his army back to Germany, burning Spoleto on the way, because it failed in submissiveness, and marking a wide track of ruin and desolation through Italy as he went. This was in the summer of 1155. Three years passed, during which the Italian cities grew more determined in their independence, the emperor and his German subjects more bitter in hostility to them, and the pope and the emperor more antagonistic in their ambitions. In 1158 Frederick led a second expedition into Italy, especially determined to make an end of the contumacy of Milan. He began operations by creating a desert of blackened country around the offending city, being resolved to reduce it by famine. Mediators, however, appeared, who brought about a treaty of pacification, which interrupted hostilities for a few weeks. Then the Milanese found occasion to accuse the emperor of a treacherous violation of the terms of the treaty and again took up arms. The war was now to the death. But, before settling to the siege of Milan, Frederick gave himself the pleasure, first, of reducing the lesser city of Crema, which continued to be faithful among the allies of the Milanese. He held some children of the town in his hands, as hostages, and he bound them to the towers which he moved against the walls, compelling the wretched citizens to kill their own offspring in the act of their self-defense. By such atrocities as this, Crema was taken, at the end of seven months, and destroyed. Then Milan was assailed and beleaguered, harassed and blockaded, until, at the beginning of March, 1162, the starved inhabitants gave up their town. Frederick ordered the doomed city "to be completely evacuated, so that there should not be left in it a single living being. On the 25th of March, he summoned the militias of the rival and Ghibelline cities, and gave them orders to rase to the earth the houses as well as the walls of the town, so as not to leave one stone upon another. Those of the inhabitants of Milan whom their poverty, labour and industry attached to the soil, were divided into four open villages, built at a distance of at least two miles from the walls of their former city. Others sought hospitality in the neighbouring towns of Italy. . . . Their sufferings, the extent of their sacrifices, the recollection

of their valour, and the example of their noble sentiments, made proselytes to the cause of liberty in every city into which they were received." Meantime Frederick Barbarossa returned to Germany, with his fame as a puissant monarch much augmented.—J. C. L. de Sismondi, *Hist. of the Italian Republics*, ch. 2.

A. D. 1163-1164.—Third visitation of Frederick Barbarossa.—The rival Popes.—Frederick Barbarossa entered Italy for the third time in 1163, without an army, but imposingly escorted by his German nobles. He imagined that the country had been terrorized sufficiently by the savage measures of his previous visitation to need no more military repression. But he found the Lombard cities undismayed in the assertion of their rights, and drawing together in unions which had never been possible among them before. The hostility of his relations with the Papacy and with the greater part of the Church gave encouragement to political revolt. His quarrel with Pope Hadrian had been ended by the death of the latter, in 1159, but only to give rise to new and more disturbing contentions. It had grown so bitter before Hadrian died that the Pope had allied himself by treaty with Milan, Crema, and other cities resisting Frederick, and had promised to excommunicate the emperor within forty days. Sudden death frustrated the combination. At the election of Hadrian's successor there was a struggle of factions, each determined to put its representative in the papal chair, and each claiming success. Two rival popes were proclaimed and consecrated, one under the name of Alexander III., the other as Victor IV. Frederick recognized the latter, who made himself the emperor's creature. The greater part of Christendom soon gave its recognition to the former, although he had been driven to take refuge in France. Pope Alexander excommunicated Frederick and Frederick's pope, and Pope Victor retorted like anathemas. Whether the curses of Alexander were more effectual, or for other reasons, the authority of Victor dwindled, and he himself presently died (April 1164), while Frederick was making his third inspection of affairs in Italy. The emperor found it impossible to execute his unbending will without an army. Verona, Vicenza, Padua, and Treviso held a congress and openly associated themselves for common defense. Frederick attempted to make use of the militia forces of Pavia, Cremona, and other Ghibelline towns against them; but he found even these citizen-soldiers so mutinous with disaffection that he dared not pursue the undertaking. He returned to Germany for an army more in sympathy with his obstinate designs against Italian liberty.—U. Balzani, *The Popes and the Hohenstaufen*, ch. 4-5.

A. D. 1166-1167.—The fourth expedition of Frederick Barbarossa.—The League of Lombardy.—"When Frederick, in the month of October, 1166, descended the mountains of the Grisons to enter Italy [for the fourth time] by

the territory of Brescia, he marched his army directly to Lodi, without permitting any act of hostility on the way. At Lodi, he assembled, towards the end of November, a diet of the kingdom of Italy, at which he promised the Lombards to redress the grievances occasioned by the abuses of power by his podestas, and to respect their just liberties; he was desirous of separating their cause from that of the pope and the king of Sicily; and to give greater weight to his negotiation, he marched his army into central Italy. . . . The towns of the Veronese marches, seeing the emperor and his army pass without daring to attack them, became bolder: they assembled a new diet, in the beginning of April, at the convent of Pontida, between Milan and Bergamo. The consuls of Cremona, of Bergamo, of Brescia, of Mantua and Ferrara met there and joined those of the marches. The union of the Guelphs and Ghibellines, for the common liberty, was hailed with universal joy. The deputies of the Cremonese, who had lent their aid to the destruction of Milan, seconded those of the Milanese villages in imploring aid of the confederated towns to rebuild the city of Milan. This confederation was called the League of Lombardy. The consuls took the oath, and their constituents afterwards repeated it, that every Lombard should unite for the recovery of the common liberty; that the league for this purpose should last twenty years; and, finally, that they should aid each other in repairing in common any damage experienced in this sacred cause, by any one member of the confederation: extending even to the past this contract for reciprocal security, the league resolved to rebuild Milan. The militias of Bergamo, Brescia, Cremona, Mantua, Verona, and Treviso, arrived the 27th of April, 1167, on the ground covered by the ruins of this great city. They apportioned among themselves the labour of restoring the inclosing walls; all the Milanese of the four villages, as well as those who had taken refuge in the more distant towns, came in crowds to take part in this pious work; and in a few weeks the new-grown city was in a state to repel the insults of its enemies. Lodi was soon afterwards compelled, by force of arms, to take the oath to the league; while the towns of Venice, Placentia, Parma, Modena, and Bologna voluntarily and gladly joined the association."—J. C. L. de Sismondi, *Hist. of the Italian Republics*, ch. 2.—Meantime Frederick Barbarossa had made himself master of the city of Rome. The Roman citizens had boldly ventured out to meet his German army and its allies on the Tusculan hills and had suffered a frightful defeat. Then some part of the walls of the Leonine City were carried by assault and the castellated church of St. Peter's was entered with ax and sword. Two German archbishops were among the leaders of the force which took the altars of the temple by storm and which polluted its floors with blood. Frederick's new anti-pope, Paschal III., successor to Victor IV., was now enthroned, and the empress was formally crowned in the apostolic basilica. Pope Alexander, who had been in possession of the city, withdrew, and the victorious emperor appeared to have the great objects of his burning ambition within his grasp. "Destiny willed otherwise. It was now August; the sun was burning the arid Campagna and oppressing the weary German troops. A slight

rain came to refresh them, but the following day sudden destruction fell upon the camp. Deadly fever attacked the army with terrible violence and reduced it daily. The men fell in heaps, and when struck down in the morning were dead by night. The disease took stronger hold owing to the superstitious fears of the army and the idea of divine vengeance, for the soldiers remembered in terror the profanation of St. Peter's, and they felt the keen edge of the destroying angel's sword. Decimated, dismayed, demoralised, the imperial army was hopelessly defeated, and Frederick was compelled to strike his tents and fly before the invisible destroyer. . . . The flower of his troops lay unburied in the furrows, and with difficulty could he manage to carry back to their native land the bodies of his noblest and truest knights. Never perhaps before had Frederick given proofs of such unshaken strength of mind. . . . He returned to Germany alone and almost a fugitive, his bravest knights dead, his army destroyed, and leaving behind him a whole nation of proud and watchful enemies. He returned alone, but his spirit was undaunted and dreamt of future victory and of final revenge."—U. Balzani, *The Popes and the Hohenstaufen*, ch. 5.

A. D. 1174-1183.—The last expedition of Frederick Barbarossa.—The Battle of Legnano, and the Peace of Constance.—It was not until 1174—seven years after his flight from the Roman pestilence—that Barbarossa was able to return to Italy and resume his struggle with Pope Alexander and the Lombard cities. He had been detained by troubles in Germany—the growing quarrel with his most powerful vassal, Henry the Lion, of Saxony, more particularly. Meantime, the League of the Lombard cities had spread and gained strength, and Pope Alexander III. was in active co-operation with it. To better fortify the frontiers of Lombardy, the League had built a strong new city, at the junction of the Tanaro and Bormida, had given it an immediate population of 15,000 people and had named it Alessandria, after the Pope. "The Emperor, whose arrival in Italy was urgently implored, was retained in Germany by his mistrust of Henry the Lion, who, in order to furnish himself with a pretext for refusing his assistance in the intended campaign without coming to an open breach, undertook a pilgrimage to Jerusalem, A. D. 1171; whence, after performing his devotions at the holy sepulchre, without unsheathing his sword in its defence, he returned to his native country. . . . At length, in 1174, Frederick Barbarossa persuaded the sullen duke to perform his duty in the field, and for the fourth time [with an army] crossed the Alps. A terrible revenge was taken upon Susa, which was burnt to the ground. Alexandria [Alessandria] withstood the siege. The military science of the age, every 'ruse de guerre,' was exhausted by both the besiegers and the besieged, and the whole of the winter was fruitlessly expended without any signal success on either side. The Lombard league meanwhile assembled an immense army in order to oppose Frederick in the open field, whilst treason threatened him on another side. . . . Henry also at length acted

with open disloyalty, and declared to the emperor, who lay sick at Chiavenna, on the lake of Como, his intention of abandoning him; and, unshaken by Frederick's exhortation in the name of duty and honour to renounce his perfidious plans, offered to provide him with money on condition of receiving considerable additions to his power in Germany, and the free imperial town of Goslar in gift. . . . Frederick, reduced to the alternative of either following his insolent vassal, or of exposing himself and his weakened forces to total destruction by remaining in his present position, courageously resolved to abide the hazard, and to await the arrival of fresh reinforcements from Germany; the Lombards, however, saw their advantage, and attacked him at Legnano, on the 29th of May, 1176. The Swabians (the southern Germans still remaining true to their allegiance) fought with all the courage of despair, but Berthold von Zähringen was taken prisoner, the emperor's horse fell in the thickest of the fight, his banner was won by the 'Legion of Death,' a chosen Lombard troop, and he was given up as dead. He escaped almost by a miracle, whilst his little army was entirely overwhelmed."—W. Menzel, *Hist. of Germany*, ch. 151.—After the disastrous battle of Legnano, Frederick "was at length persuaded, through the mediation of the republic of Venice, to consent to a truce of six years, the provisional terms of which were all favourable to the league. . . . At the expiration of the truce Frederick's anxiety to secure the crown for his son overcame his pride, and the famous Peace of Constance [A. D. 1183] established the Lombard republics in real independence. By the treaty of Constance the cities were maintained in the enjoyment of all the regalian rights, whether within their walls or in their district, which they could claim by usage. Those of levying war, of erecting fortifications, and of administering civil and criminal justice, were specially mentioned. The nomination of their consuls, or other magistrates, was left absolutely to the citizens; but they were to receive the investiture of their office from an imperial legate. The customary tributes of provision during the emperor's residence in Italy were preserved; and he was authorized to appoint in every city a judge of appeal in civil causes. The Lombard league was confirmed, and the cities were permitted to renew it at their own discretion; but they were to take every ten years an oath of fidelity to the emperor. This just compact preserved, along with every security for the liberties and welfare of the cities, as much of the imperial prerogatives as could be exercised by a foreign sovereign consistently with the people's happiness. . . . The Peace of Constance presented a noble opportunity to the Lombards of establishing a permanent federal union of small republics. . . . But dark, long-cherished hatreds, and that implacable vindictiveness which, at least in former ages, distinguished the private manners of Italy, deformed her national character. . . . For revenge she threw away the pearl of great price, and sacrificed even the recollection of that liberty which had stalked like a majestic spirit among the ruins of Milan."—H. Hallam, *The Middle Ages*, ch. 3, pt. 1 (p. 1).

A. D. 1183-1250.—Frederick II. and the end of the Hohenstaufen struggles.—After the settlement of the Peace of Constance, Frederick Barbarossa made no further attempt to destroy the now well established liberties of the north Italian cities. On the contrary, he devoted himself, with considerable success, to the regaining of their confidence and good-will, as against the papacy, with which his relations were not improved. In southern Italy, he acquired an important footing by the marriage of his son Henry (already crowned King of Rome, as Henry VI.), to Constance, the sole heiress of the Norman kingdom of the Two Sicilies. Soon after which he went crusading to the Holy Land, and perished in Asia Minor (A. D. 1190). His son and successor, Henry VI., who survived him but seven years, was occupied so much in securing the Kingdom of the Two Sicilies, already fallen to his wife (1194) by the death of the last of the Norman kings, that he had little time to trouble the peace of Lombardy or Germany. He was one of the meanest of kings, faithless and cold-blooded,—brutal to the Normans of the Sicilies and contemptible in his treatment of the English King Richard, when his vassal of Austria made a chance captive of the lion-hearted prince. He died in 1197, leaving as his heir a son but four years old—the Frederick II. of later years. There was war at once. Two rival kings were elected in Germany, by the two factions, Guelf and Ghibelline. The next year, one of them, Philip I., the Ghibelline, a younger son of Frederick Barbarossa, was assassinated; the other, Otto IV., a son of Henry the Lion, was recognized by his opponents, and went to Rome to claim the imperial crown. He received it, but soon quarrelled, as all his predecessors had done, with the pope (the great pope Innocent III. being now on the throne), and, Guelf as he was, began to put himself in alliance with the Ghibellines of Italy. Meantime, the boy Frederick had become king of the Two Sicilies by the death of his mother, and Pope Innocent was his guardian. He was now brought forward by the latter as a claimant of the Germanic crown, against Otto, and was sent into Germany to maintain his claim. The civil war which followed was practically ended by the battle of Bouvines (July 27, 1214—see BOUVINES) in which Otto's cause was lost. Four years after, the latter died, and Frederick reigned in Germany, Italy and the Two Sicilies, without a rival, holding the three separate crowns for five years before he received the imperial crown, in 1220. Meantime Innocent III. died, and Frederick became involved, even more bitterly than his father or his grandfather had been, in quarrels with the succeeding popes. He was a man far beyond his age in intellectual independence (see GERMANY: A. D. 1183-1268) and freedom from superstitious servility to the priesthood. His tastes were cultivated, his accomplishments were many. He welcomed the refinements which Europe at that time could borrow from the Saracens, and his court was one of gaiety and splendor. His papal enemies execrated him as a heretic, a blasphemer and an "apocalyptic beast." His greatest original offenses had grown out of two promises which he made in his youth: 1. To lead a crusade for the recovery of Jerusalem,—which he was slow in fulfilling; 2. To resign his Italian possessions to his son, retaining only the sovereignty of Ger-

many for himself,—which promise he did not fulfil at all. The war of the Church against him was implacable, and he was under its ban when he died. The pope even pursued him with maledictions when he went, at last, upon his crusade, in 1228, and when he did, by negotiations, free Jerusalem for a time from the Moslems (see CRUSADES: A. D. 1216-1229). He was involved, moreover, in conflicts with the Lombard cities (see FEDERAL GOVERNMENT: MEDIEVAL LEAGUE) which the papacy encouraged and stimulated, and, in 1236, he won a great victory over the League, at Cortenuova, capturing the famous "Carroccio" of the Milanese and sending it as a gift to the Roman Senate. But, attempting to use his victory too inflexibly, he lost the fruits of it, and all his later years were years of trouble and disastrous war—disastrous to Italy and to himself. He died on the 13th of December 1250. "Out of the long array of the Germanic successors of Charles, he [Frederick II.] is, with Otto III., the only one who comes before us with a genius and a frame of character that are not those of a Northern or a Teuton. There dwelt in him, it is true, all the energy and knightly valour of his father Henry and his grandfather Barbarossa. But along with these, and changing their direction, were other gifts, inherited perhaps from his Italian mother and fostered by his education among the orange-groves of Palermo—a love of luxury and beauty, an intellect refined, subtle, philosophical. Through the mist of calumny and fable it is but dimly that the truth of the man can be discerned, and the outlines that appear serve to quicken rather than appease the curiosity with which we regard one of the most extraordinary personages in history. A sensualist, yet also a warrior and a politician; a profound lawgiver and an impassioned poet; in his youth fired by crusading fervour, in later life persecuting heretics while himself accused of blasphemy and unbelief; of winning manners and ardently beloved by his followers, but with the stain of more than one cruel deed upon his name, he was the marvel of his own generation, and succeeding ages looked back with awe, not unmingled with pity, upon the inscrutable figure of the last Emperor who had braved all the terrors of the Church and died beneath her ban, the last who had ruled from the sands of the ocean to the shores of the Sicilian sea. But while they pitied they condemned. The undying hatred of the Papacy threw round his memory a lurid light; him and him alone of all the imperial line, Dante, the worshipper of the Empire, must perforce deliver to the flames of hell."—J. Bryce, *The Holy Roman Empire*, ch. 13. —"The Emperor Frederick was a poet who could not only celebrate the charms of his sovereign lady, 'the flower of all flowers, the rose of May,' but could also exhibit his appreciation for the beauties of nature. . . . Frederick also delighted in sculpture, painting, and architecture. . . . Under his fostering influence every branch of learning was starting into life after the slumber of ages. Frederick's age can only be compared to that glorious era of the Renaissance, when the sun of learning, no longer shorn of his beams, poured a flood of light over the dark places of Europe. Frederick was not only distinguished for his love of polite literature, but also for his ardour in the pursuit of scientific knowledge. He was himself an author on

medical subjects. He was a great patron of natural history. He used his friendly relations with eastern kings to form a collection of animals not often seen in Europe — the elephant, camel, giraffe, and camelopard. He also wrote a treatise on Hawking, which is still cited with respect. He classifies birds, and treats generally of their habits. . . . But poetry and science were very far from occupying all the thoughts of this distinguished monarch. His great concern was the internal regulation of the kingdom committed to his charge. His code in Sicily and Naples was framed with the special view of securing equal rights to all classes of his subjects, and of delivering them from the yoke of the feudal oppressor. He stripped the nobles and prelates of their jurisdiction in criminal cases. He also decreed that any count or baron, carrying on war on his own account, should lose his head and his goods. These were amazing strides in the right direction, but the former was quite unprecedented in feudal kingdoms. Many justiciaries were appointed throughout the kingdom. No one might hold this office without the authorisation of the crown. He strove to make his officials as righteous as he was himself. He himself came before his courts. So great was his love of justice, that he would rather lose his cause than win it if he were in the wrong. No advocates were allowed to practise without an examination by the judicial bench. They were obliged to take an oath that they would allege nothing against their conscience. The court furnished widows, orphans, and the poor with champions free of expense. The law, by which it was guided, endeavoured to secure an even-handed administration of justice."—A. B. Pennington, *The Emperor Frederick II. (Royal Hist. Soc., Trans., new series, v. 1)*.—Although arbitrary and despotic in temper, the political intelligence of Frederick led him to practical ideas of government which were extraordinarily liberal for his age. In his Sicilian kingdom "the towns were shorn to a great extent of their local privileges, but were taught to unite their strength for the common good. Twice, at least, in the course of his reign, in 1232 and in 1240, Frederick summoned their deputies to a conference or Parliament, 'for the weal of the Kingdom and the general advantage of the State.' Forty-seven cities, all belonging to the Imperial domain, sent two deputies each to the Assembly convoked, which must not be confounded with the Solemn Courts held by the Sovereign and his Barons for the purpose of revising charters, enacting Constitutions, and regulating the government. We should be mistaken in supposing that the Sicilian Parliament enjoyed much of the power implied by the name. There is no trace of any clamour against grievances, of any complaints against officials, or of any refusal to grant supplies. The only function of the deputies summoned seems to have been the assessing of the public burdens. The Emperor demanded a certain sum of money, and the deputies, meekly complying, regulated the ways and means of raising it. 'Send your messengers,' thus runs the writ, 'to see the Serenity of our face on your behalf, and to bring you back our will.' Later in the century, the Assembly acquired greater authority. It is just possible that Simon de Montfort, who is known to have visited the Imperial Court, may have borrowed

his famous improvement on the old English constitution from an Apulian source; the gathering of the Commons at Foggia certainly preceded their first meeting at Westminster by thirty years. Other countries besides our own were indebted to Frederick for a better mode of legislation. Shortly after his death, many of his innovations were borrowed by his cousin Alouzo the Wise, and were inserted in *Las Siete Partidas*, the new Code of Castile. The ideas of the Sabaian Emperor were evidently the model followed by St. Louis and his successors; in France, as well as in Southern Italy, the lawyer was feeling his way towards the enjoyment of the power wielded of old by the knight and the churchman; Philip the Fair was able to carry out the projects which Frederick had merely been able to sketch. The world made rapid strides between 1230 and 1300. The Northern half of Italy, distracted by endless struggles, was not insensible to the improvements introduced into the South by her mighty son. But in the North two fatal obstacles existed, the Papal power and the municipal spirit of the various States, which marred all Frederick's efforts in behalf of Italian unity." Frederick's court was the most brilliant and refined in Europe. Mr. Kington, his historian, introduces us to one of the Emperor's banquets, in the following description: "A great variety of strangers meet at the banqueting hour. Ambassadors from the Greek Monarch arrive with a present of falcons. Some clerical visitors from Germany are astounded to find themselves seated close to the turbaned men of the East, and shudder on hearing that these are envoys from the Sultan of Cairo and the Old Man of the Mountain. The honest Germans whisper among themselves some remarks on the late end of the Duke of Bavaria, who was stabbed at Kelheim by a man, suspected to be an assassin, employed by the mysterious Old Man on Frederick's behalf. The Emperor himself eats and drinks very little. He is the very model of a host. . . . The Emperor, it must be allowed, is rather loose in his talk. Speaking of his late Crusade, he remarks: 'If the God of the Jews had seen my Kingdom, the Terra di Lavoro, Calabria, Sicily, and Apulia, he would not have so often praised that land which he promised to the Jews and bestowed upon them.' The Bishops treasure up this unlucky speech, which will one day be noised abroad all over Italy. When the meal is over, the company are amused by the feats of some of the Almehs, brought from the East. Two young Arab girls of rare beauty place themselves each upon two balls in the middle of the flat pavement. On these they move backwards and forwards, singing and beating time with cymbals and castanets, while throwing themselves into intricate postures. Games and musical instruments, procured for the Empress, form part of the entertainment. We hear moreover of a Saracen dancer from Aquitaine. Such sports are relished by the guests quite as much as the Greek wine and the viands prepared by Berard the Court cook, who is famous for his scapece; this dish, consisting of fish boiled in salt water and sprinkled with saffron, popular to this day in the province of Lecce, has been derived from Apicius. . . . The Emperor now shows his guests the wild beasts, which he has brought from Africa and the East. There is the huge elephant, soon to be sent to Cremona, the

bearer of the Imperial banner, guarded by a troop of Saracens. There is the female camelopard, called Seraph by the Arabs and Italians. Next come the camels and dromedaries which carry the Emperor's treasures when he is on the march. Lions, leopards, panthers, and rare birds form part of the collection, and are tended by Saracen keepers. Frederick perhaps wishes to show his friends some sport in the Apulian plains; he has hawks of all breeds, each of which has its name; but what most astonishes strangers is his method of bringing down the deer. The cheetahs, or hunting leopards of the East, are mounted on horseback behind their keepers; these animals, as the Emperor says, 'know how to ride.' He is a strict preserver of game; he gives orders that the wolves and foxes, which prey upon the small animals in his warren at Melazzo, be destroyed by means of a poison called wolf's powder. He has many parks and fishponds, to which he contrives to attend, even in the midst of Lombard wars. He directs the plantation of woods, and when a storm blows down his trees, the timber is to be sold at Naples. . . . The treasures, with which Frederick dazzles the eyes of his visitors, rival those of Solomon. The Sultan of Egypt has given his Christian brother a tent of wonderful workmanship, displaying the movements of the sun and moon, and telling the hours of the day and night. This prodigy, valued at 20,000 marks, is kept at Venosa. There is also a throne of gold, decked with pearls and precious stones, doomed to become the prey of Charles of Anjou and Pope Clement. There are purple robes embroidered with gold, silks from Tripoli, and the choicest works of the Eastern loom. Frederick charms the ears of his guests with melodies played on silver trumpets by black slaves, whom he has had trained. He himself knows how to sing. Travellers, jesters, poets, philosophers, knights, lawyers, all find a hearty welcome at the Apulian Court; if they are natives of the Kingdom they address its Lord in the customary second person singular, 'Tu, Messer.' He can well appreciate the pretensions of each guest, since he is able to converse with all his many subjects, each in his own tongue. The Arab from Palestine, the Greek from Calabria, the Italian from Tuscany, the Frenchman from Lorraine, the German from Thuringia, find that Caesar understands them all. With Latin, of course, he is familiar. Very different is Frederick from his Northern grandsire, who could speak nothing but German and very bad Latin. Troubadour, Crusader, Lawgiver; German by blood, Italian by birth, Arab by training; the pupil, the tyrant, the victim of Rome; accused by the world of being by turns a Catholic persecutor, a Mohammedan convert, an Infidel freethinker; such is Frederick the Second. His character has been sketched for us by two men of opposite politics, Salimbene the Guelph and Jansilla the Ghibelline, both of whom knew him well. Each does justice to the wonderful genius of the Emperor, and to the rapid development of the arts and commerce under his fostering care. But all is not fair, whatever appearances may be. Every generation of the Hohenstaufen Kaisers seemed to add a vice to the shame of their house. Cruelty is the one dark stain in the character of Barbarossa; cruelty and treachery mar the soaring genius of Henry the Sixth; cruelty, treachery, and lewd-

ness are the three blots that can never be wiped away from the memory of Frederick the Second. He has painted his likeness with his own hand. His Registers with their varied entries throw more light upon his nature than any panegyrics or diatribes can do. One example will be enough. If he wishes to get an impregnable castle into his hands, he thus writes to his general:—'Pretend some business, and warily call the Castellan to you; seize on him if you can, and keep him till he cause the castle to be surrendered to you.' . . . Frederick's cruelty is indisputable. His leaden copes, which weighed down the victims of his wrath until death came to the rescue, were long the talk of Italy and are mentioned by Dante."—T. L. Kingdon, *Hist. of Frederick the Second, Emperor of the Romans*, v. 1, ch. 9. —'After the death of Frederick II., an interval of twenty-three years passed without the appointment of a king of the Romans [the Great Interregnum—see GERMANY: A. D. 1250-1272], and an interval of sixty years without the recognition of an emperor in Italy.' Frederick's son Conrad, whom he had caused to be crowned, was driven out of Germany and died in 1254. Another son, Manfred, acquired the crown of Sicily and reigned for a time; but the unrelenting pope persuaded Charles of Anjou to make a conquest of the kingdom, and Manfred was slain in battle (A. D. 1266). Conrad's young son, Conradin, then attempted to recover the Sicilian throne, but was defeated, taken prisoner, and perished on the scaffold (1268). He was the last of the Hohenstaufen.—O. Browning, *Guelphs and Ghibellines*, ch. 2-3.

A. D. 1198-1216.—The establishing of Papal Sovereignty in the States of the Church. See PAPACY: A. D. 1198-1216.

13th Century.—Political conditions which prepared the way for the despots.—'The struggle between the Popes and the Hohenstaufen left Italy in a political condition which differed essentially from that of the other countries of the West. While in France, Spain, and England the feudal system was so organised that, at the close of its existence, it was naturally transformed into a unified monarchy, and while in Germany it helped to maintain, at least outwardly, the unity of the empire, Italy had shaken it off almost entirely. The Emperors of the fourteenth century, even in the most favourable case, were no longer received and respected as feudal lords, but as possible leaders and supporters of powers already in existence; while the Papacy, with its creatures and allies, was strong enough to hinder national unity in the future, not strong enough itself to bring about that unity. Between the two lay a multitude of political units—republics and despots—in part of long standing, in part of recent origin, whose existence was founded simply on their power to maintain it. In them for the first time we detect the modern political spirit of Europe, surrendered freely to its own instincts, often displaying the worst features of an unbridled egoism, outraging every right, and killing every germ of a healthier culture. But, wherever this vicious tendency is overcome or in any way

compensated, a new fact appears in history—the state as the outcome of reflection and calculation, the state as a work of art. This new life displays itself in a hundred forms, both in the republican and in the despotic states, and determines their inward constitution, no less than their foreign policy. . . . The internal condition of the despotically governed states had a memorable counterpart in the Norman Empire of Lower Italy and Sicily, after its transformation by the Emperor Frederick II. Bred amid treason and peril in the neighbourhood of the Saracens, Frederick, the first ruler of the modern type who sat upon a throne, had early accustomed himself, both in criticism and action, to a thoroughly objective treatment of affairs. His acquaintance with the internal condition and administration of the Saracenic states was close and intimate; and the mortal struggle in which he was engaged with the Papacy compelled him, no less than his adversaries, to bring into the field all the resources at his command. Frederick's measures (especially after the year 1231) are aimed at the complete destruction of the feudal state, at the transformation of the people into a multitude destitute of will and of the means of resistance, but profitable in the utmost degree to the exchequer. He centralised, in a manner hitherto unknown in the West, the whole judicial and political administration by establishing the right of appeal from the feudal courts, which he did not, however, abolish, to the imperial judges. No office was henceforth to be filled by popular election, under penalty of the devastation of the offending district and of the enslavement of its inhabitants. Excise duties were introduced; the taxes, based on a comprehensive assessment, and distributed in accordance with Mohammedan usages, were collected by those cruel and vexatious methods without which, it is true, it is impossible to obtain any money from Orientals. Here, in short, we find, not a people, but simply a disciplined multitude of subjects. . . . The internal police, and the kernel of the army for foreign service, was composed of Saracens who had been brought over from Sicily to Nocera and Luceria—men who were deaf to the cry of misery and careless of the ban of the Church. At a later period the subjects, by whom the use of weapons had long been forgotten, were passive witnesses of the fall of Manfred and of the seizure of the government by Charles of Anjou; the latter continued to use the system which he found already at work. At the side of the centralising Emperor appeared an usurper of the most peculiar kind: his vicar and son-in-law, Ezzelino da Romano. . . . The conquests and usurpations which had hitherto taken place in the Middle Ages rested on real or pretended inheritance and other such claims, or else were effected against unbelievers and excommunicated persons. Here for the first time the attempt was openly made to found a throne by wholesale murder and endless barbarities, by the adoption, in short, of any means with a view to nothing but the end pursued. None of his successors, not even Caesar Borgia, rivalled the colossal guilt of Ezzelino; but the example once set was not forgotten. . . . Immediately after the fall of Frederick and Ezzelino, a crowd of tyrants appeared upon the scene. The struggle between Guelph and Ghibelline was their opportunity. They came for-

ward in general as Ghibelline leaders, but at times and under conditions so various, that it is impossible not to recognise in the fact a law of supreme and universal necessity."—J. Burckhardt, *The Renaissance in Italy*, pt. 1, ch. 1, (v. 1).

A. D. 1215.—The beginning, at Florence, the causes and the meaning of the strife of the Guelphs and Ghibellines.—“In the year 1215 it chanced that a quarrel occurred at a festival between some young nobles of Florence. It was an event of as frivolous, and apparently unimportant, a character as thousands of other such broils; but this obscure quarrel has been treated by the whole body of Florentine historians as the origin and starting point of that series of civil wars which shaped the entire future fortunes of the community, and shook to its centre the whole fabric of society throughout central Italy. The story of it has become memorable therefore in Florentine annals, and has been rendered famous not only by the writers of history, but by many generations of poets, painters, novelists, and sculptors.” Briefly sketched, the story is this: A handsome youth of the Buondelmonti family, mixing in a quarrel at the festival alluded to, struck one Oddo Arringhi dei Fifi with his poniard. Common friends of the two brought about a reconciliation, by means of an arrangement of marriage between Buondelmonte and a niece of the injured man. But the lady was plain, and Buondelmonte, falling madly in love with another, more charming, whom evil chance and a scheming mother threw temptingly in his way, did not scruple to break his engagement, and to do it with insult. He wedded his new love, who was of the Donati family, on Easter Day, and on that same day he was slain by the Amidei, whose house he had so grossly affronted. “The assassins retired to their fortress houses, and left the bridal party to form itself as it might into a funeral procession. ‘Great was the uproar in the city. He was placed on a bier; and his wife took her station on the bier also, and held his head in her lap, violently weeping; and in that manner they carried him through the whole of the city; and on that day began the ruin of Florence.’ The last phrase of the above citation marks the significance which the Tuscan historians have attributed to this incident, and the important place that has always been assigned to it in Florentine history. We are told by all the earliest historians, especially by Malispini, in whose childhood these events must have happened, and whom Villani copies almost word for word, that from this quarrel began the great, fatal, and world-famous division of Florence into the parties of Guelph and Ghibelline. Dante goes so far as to consider the conduct of Buondelmonte in this affair so entirely the cause of the evils that arose from the Guelph and Ghibelline wars, that, had that cause not existed, no such misfortunes would have arisen. . . . Yet the historians admit that the party names of Guelph and Ghibelline were known in Florence long before; but they say that not till then did the city divide itself into two hostile camps under those rallying cries. It is curiously clear, from the accounts of Malispini and Villani, that, as usual in such matters, the Florentines had but a very hazy notion as to the meaning and origin of the two names [see GUELPHS AND Ghibellines, and GERMANY: A.D.

1138-1268], for the sake of which they were prepared to cut each other's throats. Any name or watchword is good enough for a party rallying cry, when once passions have been connected with it; but the Florentines understood that Ghibelline meant attachment to the Empire in opposition to the Church, and Guelph attachment to the Church in opposition to the Empire. . . . But the quarrel of Guelph with Ghibelline in Florence was the expression of a still wider spread and more perennial conflict. . . . The Ghibellines were the old Imperial nobles, who, whether more anciently or more recently incorporated into the body of Florentine citizens, formed the aristocracy of the social body, and were naturally Imperialist in their sympathies. These Ghibellines were the high Tories of the Florentine community. The body of the people were Guelphs, naming themselves after the party professing attachment to the Church only because the Papacy was in opposition to the Empire. The Guelphs were the Whigs of Florence. The Radicals appeared on the scene in due time and normal sequence." From Florence, as its center, the strife of the two factions spread throughout Italy. "Ghibellinism was nearly universal in the north of Italy, divided among a number of more or less well known great families, of whom the principal were the Visconti at Milan, and the Della Scala at Verona. Naples and the States of the Church were Guelph; the former, as need hardly be suggested, from political circumstances, from opposition to the Empire, and from connection, rather than from principle. Tuscany and the whole of Central Italy were divided between the two, although the real strength and stronghold of genuine Guelphism was there. Without Florence, there would have been no Guelph party. Had those stout sandalled and leather-jerkined Florentine burghers of the 13th century not undertaken and persevered in that crusade against the feudal nobles and the Ghibelline principle, which . . . was the leading occupation and idea of the Commonwealth during all that century, Ghibellinism and Imperialism would have long since possessed and ruled Italy from the Alps to the toe of the boot."—T. A. Trollope, *Hist. of the Commonwealth of Florence*, bk. 1, ch. 3, and bk. 3, ch. 1 (v. 1).—"One party called themselves the Emperor's liegemen, and their watchword was authority and law; the other side were the liegemen of Holy Church, and their cry was liberty; and the distinction as a broad one is true. But a democracy would become Ghibelline, without scruple, if its neighbour town was Guelph; and among the Guelph liegemen of the Church and liberty, the pride of blood and love of power were not a whit inferior to that of their opponents. Yet . . . it is not impossible to trace in the two factions differences of temper, of moral and political inclinations, which, though visible only on a large scale and in the mass, were quite sufficient to give meaning and reality to their mutual opposition. . . . The Ghibellines as a body reflected the worldliness, the license, the irreligion, the reckless selfishness, the daring insolence, and at the same time the gaiety and pomp, the princely magnificence and generosity and largeness of mind of the House of Swabia [the Hohenstaufen]; they were the men of the court and camp. . . . The Guelphs, on the other hand, were the party of the middle classes; they

rose out of and held to the people; they were strong by their compactness, their organisation in cities, their commercial relations and interests, their command of money. Further, they were professedly the party of strictness and religion. . . . The genuine Guelph spirit was austere, frugal, independent, earnest, religious, fond of its home and Church, and of those celebrations which bound together Church and home; . . . in its higher form intolerant of evil, but intolerant always of whatever displeased it. Yet there was a grave and noble manliness about it which long kept it alive in Florence."—R. W. Church, *Dante and other Essays*, pp. 15-18.—See, also, FLORENCE: A. D. 1215-1250.

(Southern): A. D. 1250-1268.—Invasion and conquest of the Kingdom of the Two Sicilies by Charles of Anjou, on the invitation of the Pope.—"The death of the Emperor Frederic II., in 1250, had been followed in less than four years by that of his son and successor Conrad IV., from whose son Conradin, at that time an infant, the Crown of the Two Sicilies was usurped by his uncle Manfred, a natural child of the deceased Frederic. The hatred of the See of Rome, notwithstanding the frequent changes which had occurred in the Papal Chair, still pursued the Line of Hohenstaufen, even in this illegitimate branch, and it was transmitted as an hereditary possession from Innocent IV. through Alexander IV. and Urban IV., to the IVth Clement. Interference in Germany itself was forbidden by the independence of the Electoral Princes; and when it was found impossible to obtain the nomination of an Emperor decidedly in the Guelph interest, Alexander contented himself by endeavouring to separate the Throne of the Two Sicilies from that of Germany, and to establish upon the former a Feudatory, and therefore a Champion, of the Church. Various alliances for this purpose were projected by Alexander, and by his successors who adopted a similar policy; and the Crown, which was in truth to be conquered from Manfred, was offered as an investiture which Rome had a full right to bestow." After long negotiations with Henry III. of England, who coveted the Sicilian prize for his second son, Edmund, and who paid large sums to the papal treasury by way of earnest money, but who showed little ability to oust the possessor, Pope Urban, at length, closed a bargain with that ambitious speculator in royal claims and titles, Charles of Anjou, brother of St. Louis, king of France. The honesty of Louis was somewhat troubled by the unscrupulous transaction; but his conscience submitted itself to the instructions of the Holy Father, and he permitted his brother to embark in the evil enterprise. "Charles, accordingly, having first accepted the Senatorship of Rome, with which high magistracy he was invested by her citizens, negotiated with the Holy See, most ably and much to his advantage, for the loftier dignity of Kingship. In little more than a month after he had received his Crown from the hands of Clement IV., who had become Pope, he totally defeated and killed his

opponent Manfred, in the battle of Grandella [near Benevento, February, 1266]. Conradin, who had now arrived at years of discretion, was still his rival; but the capture of the young Prince at Tagliacozzo [1268], and his speedy committal to the executioner, confirmed Charles of Anjou in his Kingdom, at the everlasting expense of his good name. Few incidents in History are more calculated to awaken just indignation than the untimely end of the brave, wronged, and gallant Conradin. Charles of Anjou thus founded the first dynasty of his House which reigned over the Sicilies. The pretensions which Aragon afterwards advanced to the Crown of that Kingdom rested on a marriage between Pedro, the eldest son of King James, and Constance, a daughter of Manfred."—E. Smedley, *Hist. of France*, pt. 1, ch. 6.

A. D. 1250-1520.—The Age of the Despots.—The rise of Principalities.—"From the death of Frederick the Second [A. D. 1250] . . . all practical power of an imperial kingdom in Italy may be said to have passed away. Presently begins the gradual change of the commonwealths into tyrannies, and the grouping together of many of them into larger states. We also see the beginning of more definite claims of temporal dominion on behalf of the Popes. In the course of the 300 years between Frederick the Second and Charles the Fifth, these processes gradually changed the face of the Italian kingdom. It became in the end a collection of principalities, broken only by the survival of a few oligarchic commonwealths and by the anomalous dominion of Venice on the mainland. Between Frederick the Second and Charles the Fifth, we may look on the Empire as practically in abeyance in Italy. The coming of an Emperor always caused a great stir for the time, but it was only for the time. After the grant of Rudolf of Habsburg to the Popes, a distinction was drawn between Imperial and papal territory in Italy. While certain princes and commonwealths still acknowledged at least the nominal superiority of the Emperor, others were now held to stand in the same relation of vassalage to the Pope."—

E. A. Freeman, *Historical Geog. of Europe*, ch. 8, sect. 3.—"During the 14th and 15th centuries we find, roughly speaking, six sorts of despots in Italian cities. Of these the First class, which is a very small one, had a dynastic or hereditary right accruing from long seigniorial possession, of their several districts. The most eminent are the houses of Montferrat and Savoy, the Marquises of Ferrara, the Princes of Urbino. . . . The Second class comprise those nobles who obtained the title of Vicars of the Empire, and built an illegal power upon the basis of imperial right in Lombardy. Of these, the Della Scala and Visconti families are illustrious instances. . . . The Third class is important. Nobles charged with military or judicial power, as Capitani or Podestas, by the free burghs, used their authority to enslave the cities they were chosen to administer. It was thus that almost

all the numerous tyrants of Lombardy, Carraresi at Padua, Gonzaghi at Mantua, Rossi and Correggi at Parma, Torrensi and Visconti at Milan, Scotti at Piacenza, and so forth, erected their despotic dynasties. . . . In the Fourth class we find the principle of force still more openly at work. To it may be assigned those Condottieri who made a prey of cities at their pleasure. The illustrious Ugucione della Faggiuola, who neglected to follow up his victory over the Guelphs at Monte Catini, in order that he might cement his power in Lucca and Pisa, is an early instance of this kind of tyrant. His successor, Castruccio Castracane, the hero of Machiavelli's romance, is another. But it was not until the first half of the 15th century that professional Condottieri became powerful enough to found such kingdoms as that, for example, of Francesco Sforza at Milan. The Fifth class includes the nephews or sons of Popes. The Riario principality of Forlì, the Della Rovere of Urbino, the Borgia of Romagna, the Farnese of Parma, form a distinct species of despotisms; but all these are of a comparatively late origin. Until the papacy of Sixtus IV. and Innocent VIII. the Popes had not bethought them of providing in this way for their relatives. . . . There remains the Sixth and last class of despots to be mentioned. This again is large and of the first importance. Citizens of eminence, like the Medici at Florence, the Bentivogli at Bologna, the Baglioni of Perugia, the Gambacorti of Pisa, like Pandolfo Petrucci in Siena (1502), Roméo Pepoli, the usurer of Bologna (1323), the plebeian Altichino and Agolanti of Padua (1313), acquired more than their due weight in the conduct of affairs, and gradually tended to tyranny. In most of these cases great wealth was the original source of despotic ascendancy. It was not uncommon to buy cities together with their Signory. . . . But personal qualities and nobility of blood might also produce despots of the Sixth class."—J. A. Symonds, *Renaissance in Italy: The Age of the Despots*, ch. 2.

(Southern): **A. D. 1282-1300.—The Sicilian Vespers.—Severance of the Two Sicilies.—End of the House of Anjou in the insular kingdom.**—"Peter, King of Aragon, had married Constance, the daughter of Manfred, and laid claim to the kingdom of Sicily in her right. He sent for help to Michael Palaiologos, the restorer of the Eastern Empire. The Emperor agreed to his proposals, for his Empire was threatened by Charles of Anjou. These negotiations were, it is said, carried on through Giovanni di Procida, a Sicilian exile, who, as the story goes, had suffered cruel wrongs from the French. Charles knew something of the plans of the allies, and both parties were preparing for war, but affairs

were brought to a crisis by a chance occurrence. On March 30, 1282, a brutal insult was offered by a French soldier to a bride in the presence of her friends and neighbours outside the walls of Palermo, and the smothered hatred of the people broke out into open violence. The cry 'Death to the French' was raised, and all who belonged to that nation in Palermo were slain without mercy. This massacre, which is called 'The Sicilian Vespers,' spread through the whole island; the yoke of the oppressor was broken and the land was delivered. Charles laid siege to Messina, but he was forced to retire by Peter of Aragon, who landed and was received as King. Pope Martin in vain excommunicated the rebels and their allies, and, in 1284, Charles received a great blow, for his son was defeated and taken prisoner by Roger of Loria, the Admiral of the Catalan fleet. Charles of Anjou died in 1286, and two years later his son, also called Charles, ransomed himself from prison."—W. Hunt, *Hist. of Italy*, ch. 4.—Charles of Anjou "died of grief, leaving his son, the prince of Salerno, a prisoner, and Martin followed him, before he could proclaim a general crusade against the invader of the apostolic fief. Pedro, having enjoyed his two crowns to the day of his death, left them to his sons, Alphonso and James respectively, and both were excommunicated by Honorius IV. for their accession. The prince of Salerno, obtaining his release by the mediation of Edward of England, was absolved by Nicholas IV. from the conditions to which he had sworn, and crowned at Rome king of Apulia (i. e., Naples) and Sicily, A. D. 1289. His hopes of regaining the island were constantly disappointed. James, having succeeded to the crown of Arragon by the death of Alphonso, was persuaded to resign Sicily to Charles on condition of receiving his daughter in marriage, with an ample dowry. Boniface VIII. also graciously gave him leave to conquer the islands of Corsica and Sardinia, from the republics of Pisa and Genoa. The Sicilians, however, declining to be so bartered, bestowed their crown on James's brother Frederic [1295]; and though James contributed his fleet to reduce him, he retained the island throne [1300], while Charles and the pope were obliged to rest content with the continental kingdom. Their only satisfaction was to persist in calling Naples by the name of Sicily, and to stigmatise their rival as king of 'Trinacria.'"—G. Trevor, *Rome: from the Fall of the Western Empire*, p. 240.

14th Century.—The Renaissance in its beginning.—"It was not the revival of antiquity alone, but its union with the genius of the Italian people, which achieved the conquest of the Western world. . . . The civilisation of Greece and Rome, which, ever since the fourteenth century, obtained so powerful a hold on Italian life, as the source and basis of culture, as the object and ideal of existence, partly also as an avowed reaction against preceding tendencies—this civilisation

had long been exerting a partial influence on mediæval Europe, even beyond the boundaries of Italy. The culture of which Charles the Great was a representative was, in face of the barbarism of the seventh and eighth centuries, essentially a Renaissance, and could appear under no other form. . . . But the resuscitation of antiquity took a different form in Italy from that which it assumed in the North. The wave of barbarism had scarcely gone by before the people, in whom the former life was but half effaced, showed a consciousness of its past and a wish to reproduce it. Elsewhere in Europe men deliberately and with reflection borrowed this or the other element of classical civilisation; in Italy the sympathies both of the learned and of the people were naturally engaged on the side of antiquity as a whole, which stood to them as a symbol of past greatness. The Latin language, too, was easy to an Italian, and the numerous monuments and documents in which the country abounded facilitated a return to the past. With this tendency other elements—the popular character which time had now greatly modified, the political institutions imported by the Lombards from Germany, chivalry and other northern forms of civilisation, and the influence of religion and the Church—combined to produce the modern Italian spirit, which was destined to serve as a model and ideal for the whole western world. How antiquity began to work in plastic art, as soon as the flood of barbarism had subsided, is clearly shown in the Tuscan buildings of the twelfth and in the sculptures of the thirteenth centuries. . . . But the great and general enthusiasm of the Italians for classical antiquity did not display itself before the fourteenth century. For this a development of civic life was required, which took place only in Italy, and there not till then. It was needful that noble and burgher should first learn to dwell together on equal terms, and that a social world should arise which felt the want of culture, and had the leisure and the means to obtain it. But culture, as soon as it freed itself from the fantastic bonds of the Middle Ages, could not at once and without help find its way to the understanding of the physical and intellectual world. It needed a guide, and found one in the ancient civilisation, with its wealth of truth and knowledge in every spiritual interest. Both the form and the substance of this civilisation were adopted with admiring gratitude; it became the chief part of the culture of the age."—J. Burckhardt, *The Renaissance in Italy*, pt. 3, ch. 1 (v. 1).

A. D. 1310-1313.—Visitation of the Emperor Henry VII.—Hostility of Florence and siege of the city.—Repulse from Rome.—The Emperor's death.—"No Emperor had come into Italy since the death of Frederic II. [1250]. Neither Rudolf nor his two successors [see GERMANY: A. D. 1273-1308] had been crowned Emperor, but on the death of Albert of Austria, the King of the Romans, in 1308, the electors chose Henry, Count of Luxemburg [Henry VII.]. In 1310 he entered Italy with a small German army. Unlike most of these Imperial expeditions, this

was approved of by the Pope. The French King Philip IV. was really master of Pope Clement V., who did not live in Italy, but sometimes within the French kingdom, or in the English territory of Bordeaux, or in Avignon, a city of the Empire. But Clement did not like bearing the French yoke, and was fearful lest some one of greater talents than Charles of Valois should make an attempt on Italy, and make it impossible for the Pope to get free from the power of the French. He therefore favoured the expedition of King Henry, and hoped that it would revive the Ghibelin party and counteract the influence of the Guelfs, who were on the side of France. Dante tells us the feelings which were roused by the coming of the King. He seemed to come as God's vicegerent, to change the fortunes of men and bring the exiled home; by the majesty of his presence to bring the peace for which the banished poet longed, and to administer to all men justice, judgment and equity. Henry was worthy of these high hopes; for he was wise, just, and gracious, courageous in fight and honourable in council; but the task was too hard for him. At first all seemed to go well with him. The Ghibelins were ready to receive him as their natural lord; the Guelfs were inclined towards him by the Pope. In Milan the chief power was in the hands of Guido della Torre, the descendant of Pagano della Torre, who had done good service to the city after the battle of Corte Nuova. He was a strong Guelf, and was at the head of a large number of troops; for he was very rich. His great enemy was the Ghibelin Matteo Visconti, who continually struggled with Guido for the mastery. The king was willingly received by the Milanese, and Guido was not behindhand in bidding him welcome. While he was at Milan, on Christmas Day, 1310, he was crowned with the iron crown of the Italian kingdom, which was made of steel in the shape of laurel leaves, and studded with gems. He made both parties enter into an outward reconciliation, and the chiefs of both vied with one another in making him large presents. The King's need of money soon tired out the Milanese, and an insurrection was made in which both Matteo and Guido joined; but Matteo betrayed his rival, and Guido and all the Guelfs were driven out of Milan, which henceforth remained in the power of the Ghibelin Visconti [see MILAN: A. D. 1277-1447]. The King's demands for money made him unpopular, and each city, as he left it, rose against him. Pisa, and the other Tuscan enemies of Florence, received him with joy. But the great Guelfic city shut her gates against him, and made alliance with Robert, the Angevin King of Naples, the grandson of Charles of Anjou, and afterwards gave him [Robert] the signoria. Rome received a garrison from Naples, and the Imperial coronation had to be performed in the Church of St. John Lateran, — Henry being repulsed in an attempt to force his entrance to the quarter of the Vatican. — W. Hunt, *Hist. of Italy*, ch. 4. — "The city [of Rome] was divided in feeling, and the emperor's position so precarious that he retired to Tivoli at the end of August, and moved towards Tuscany, ravaging the Perugian territory on his way, being determined to bring Florence and all her allies to submission." By rapid movements he reached Florence and invested the city before his intentions were

understood. "A sudden assault would probably have carried the city, for the inhabitants were taken by surprise, were in a state of consternation, and could scarcely believe that the emperor was there in person: their natural energy soon returned, the Gonfaloniers assembled their companies, the whole population armed themselves, even to the bishop and clergy; a camp was formed within the walls, the outer ditch palisaded, the gates closed, and thus for two days they remained hourly expecting an assault. At last their cavalry [which had been cut off by the emperor's movement] were seen returning by various ways and in small detachments; succours also poured in from Lucca, Prato, Pistoia, Volterra, Colle, and San Gimignano; and even Bologna, Rimini, Ravenna, Faenza, Cesina, Agobbio, Città di Castello with several other places rendered their assistance: indeed so great and extensive was Florentine influence and so rapid the communication, that within eight days after the investment 4,000 men at arms and innumerable infantry were assembled at Florence! As this was about double the imperial cavalry and four times its infantry, the city gates were thrown open and business proceeded as usual, except through that entrance immediately opposite to the enemy. For two and forty days did the emperor remain within a mile of Florence, ravaging all the country, but making no impression on the town; after which he raised the siege and moved to San Casciano, eight miles south." Later, the Imperialist army was withdrawn to Poggibonzi, and in March, 1313, it was moved to Pisa, to prepare for a new campaign. "The Florentines had thus from the first, without much military skill or enterprise, proved themselves the boldest and bitterest enemies of Henry; their opposition had never ceased; by letters, promises, and money, they corrupted all Lombardy. . . . Yet party quarrels did not cease. . . . The emperor now turned all his energies to the conquest of Naples, as the first step towards that of Italy itself. For this he formed a league with Sicily and Genoa; assembled troops from Germany and Lombardy; filled his treasury in various ways, and soon found himself at the head of 2,500 German cavalry and 1,500 Italian men-at-arms, besides a Genoese fleet of 70 galleys under Lamba Doria and 50 more supplied by the King of Sicily, who with 1,000 men-at-arms had already invaded Calabria by capturing Reggio and other places." On the 5th of August, the emperor left Pisa upon his expedition against Naples; on the 24th of the same month he died at Buonconvento — not without suspicions of poison, although his illness began before his departure from Pisa. "The intelligence of this event spread joy and consternation amongst his friends and enemies; the army soon separated, and his own immediate followers with the Pisan auxiliaries carried his body back to Pisa where it was magnificently interred." — H. E. Napier, *Florentine History*, bk. 1, ch. 15 (c. 1).

Castruccio Castracani.—Siege of Genoa.—Visit of the Emperor Louis of Bavaria.—Subjection and deliverance of Pisa.—"While the unexpected death of Henry VII. deprived the Ghibelin party of its leader, and long wars between rival candidates for the succession to the German throne placed the imperial authority over Italy in abeyance [see GERMANY: A. D. 1314-1347], Robert, king of Naples, the chief of the Guelf party, the possessor of Provence, and the favourite of the church, began to aspire to the general sovereignty of Italy. He had succeeded to the crowns of Naples and Provence on the death of his father, Charles II., in opposition to the recognized laws of inheritance (A. D. 1309). His elder brother, Charles Martel, by his marriage with the heiress of Hungary, had been called to the throne of that kingdom, and had died before his father. His son, Carobert, the reigning king of Hungary, on the death of his grandfather, Charles II., asserted his just rights to all the dominions of that monarch; but Robert, hastening to Avignon, whither Clement V. had now removed his court, obtained from the pope, as feudal superior of the royal fief of Naples, a sentence which set aside the claims of his nephew in his own favour. The king of Hungary did not seriously attempt to oppose this decision, and Robert, a prince of wisdom and address, though devoid of military talents, soon extended his ambitious views beyond the kingdom over which he reigned undisturbed." The death of Henry VII. "left him every opportunity both to attempt the subjugation of the Ghibelin states, and to convert his alliance with the Guelfs into the relation of sovereign and subject. . . . It was in Tuscany that the storm first broke over the Ghibelins after the loss of their imperial chief, and that the first ray of success unexpectedly beamed on their cause. Florence and the other Guelf cities of the province were no sooner delivered from the fear of Henry VII. than they prepared to wreak their vengeance against Pisa for the succours which she had furnished to the emperor. But that republic, in consternation at her danger, had taken into pay 1,000 German cavalry, the only part of the imperial army which could be prevailed upon to remain in Italy, and had chosen for her general Uguccone della Faggiuola, a celebrated Ghibelin captain. The ability of this commander, and the confidence with which he inspired the Pisans, turned the tide of fortune. . . . The vigour of his arms reduced the Guelf people of Lucca to sue for peace; they were compelled to restore their Ghibelin exiles; and then Uguccone, fomenting the dissensions which were thus created within the walls, easily subjected one of the most wealthy and flourishing cities of Tuscany to his sword (A. D. 1314). The loss of so valuable an ally as Lucca alarmed the Florentines, and the whole Guelf party. . . . King Robert sent two of his brothers into Tuscany with a body of gens-d'armes; the Florentines and all the Tuscan Guelfs uniting their forces to this succour formed a large army; and the confederates advanced to relieve the castle of Montecatini which Uguccone was besieging." The Ghibelin commander had a much smaller force to resist them with; but he gained, notwithstanding, "a memorable victory, near Montecatini, in which both a brother and a nephew of the king of Naples were numbered with the

slain (A. D. 1315). This triumph rendered Uguccone more formidable than ever; but his tyranny became insupportable both to the Pisans and Lucchese, and a conspiracy was formed in concert in both cities. . . . Excluded from both places and deserted by his troops, he retired to the court of the Scala at Verona (A. D. 1316). So Pisa recovered her liberty, but Lucca was less fortunate or wise, for her citizens only transferred the power which Uguccone had usurped to the chief of the Ghibelins, Castruccio Castracani degli Interminelli, one of the most celebrated names in Italian history. This extraordinary man . . . had early in life shared the common fate of exile with the White Guelfs or Ghibelins of Lucca. Passing ten years of banishment in England, France, and the Ghibelin cities of Lombardy, he had served a long apprenticeship to arms under the best generals of the age. . . . He had no sooner returned to Lucca with the Ghibelin exiles, who were restored by the terms of the peace with Pisa, than he became the first citizen of the state. His skill and courage mainly contributed to the subsequent victory of Montecatini, and endeared him to the Lucchese; his influence and intrigues excited the jealousy of Uguccone, and caused his imprisonment; and the insurrection which delivered Lucca from that chief, liberated Castruccio from chains and impending death to sovereign command. Chosen annual captain of the people at three successive elections, he at length demanded and obtained the suffrages of the senate and citizens for his elevation to the dignity of signor (A. D. 1320). . . . Under his government Lucca enjoyed repose for some years. . . . During these transactions in Tuscany, the Lombard plains were still desolated by incessant and unsparing warfare. The efforts of the Neapolitan king were mainly directed to crush Matteo Visconti [see MILAN: A. D. 1277-1447] and the Ghibelins in this part of Italy;" but the power of the latter was continually spreading. "In this prosperous state of the Ghibelin interests the domestic feuds of Genoa attracted the tide of war to her gates. The ambitious rivalry of her four great families, of the Grimaldi, the Fieschi, the Spinola, and the Doria, had long agitated the bosom of the republic; and at the period before us the two former, who headed the Guelf party, had, after various convulsions, gained possession of the government. The Spinola and Doria, retiring from the city, fortified themselves in the smaller towns of the Genoese territory, and immediately invited the Ghibelin chiefs of Lombardy to their aid. The lords of Milan and Verona promptly complied with the demand, . . . and laid siege to the capital. The rulers of Genoa could then resort in their terror to no other protection than that of the Neapolitan king. Robert, conscious of the importance of preserving the republic from subjection to his enemies, hastened by sea to its defence, and obtained the absolute cession of the Genoese liberties into his hands for ten years as the price of his services. . . . After the possession of the suburbs and outworks of Genoa had been obstinately contested during ten months, the Ghibelins were compelled to raise the siege. But Robert had scarcely quitted the city to pass into Provence, when the exiles with aid from Lombardy again approached Genoa, and during four years continued a war of posts in its vicinity. But neither the Lombard signors nor

Robert engaged in this fruitless contest, and Lombardy again became the great theatre of warfare." But the power which Matteo Visconti was steadily building at Milan, for his family, could not be shaken, even though an invasion from France (1320), and a second from Germany (1322), was brought about through papal influence. At the same time Castruccio Castracani, having consolidated his despotism at Lucca, was making war upon the Florentines. When, in 1325, he succeeded in gaining possession of the Guelph city of Pistoia, "this acquisition, which was highly dangerous to Florence, produced such alarm in that republic that she called out her whole native force for the more vigorous prosecution of the war." Castruccio was heavily outnumbered in the campaign, but he gained, nevertheless, a great victory over the Florentines near the castle of Altopascio (November 23, 1325). "The whole Florentine territory was ravaged and plundered, and the conqueror carried his insults to the gates of the capital. . . . In the ruin which threatened the Guelph party in Tuscany, the Florentines had recourse to King Robert of Naples, with entreaties for aid," which he brought to them in 1326, but only on the condition "that his absolute command over the republic, which had expired in 1321, should be renewed for ten years in favour of his son Charles, duke of Calabria." But now a new danger to the Guelph interests appeared, in the approach of the emperor, Louis IV. of Bavaria. "After a long contest for the crown of Henry VII., Louis of Bavaria had triumphed over his rival, Frederic of Austria, and taken him prisoner at the sanguinary battle of Muhldorf, in 1322. Having since passed five years in confirming his authority in Germany, Louis was now tempted by ambition and cupidity to undertake an expedition into Italy (A. D. 1327)." Halting for some time at Milan, where he received the iron crown of Lombardy, and where he deposed and imprisoned Galeazzo Visconti, he proceeded into Tuscany "on his march to Rome, where he intended to receive the imperial crown. He was welcomed with joy by the signor of Lucca, and the superior genius of Castruccio at once acquired the entire ascendancy over the weaker mind of Louis. Against the united forces of the emperor and of Castruccio, the duke of Calabria and his Guelph army cautiously maintained themselves on the defensive; but the passage of Louis through Tuscany was attended with disastrous consequences to the most famous Ghibelin city of that province." Pisa, notwithstanding the long fidelity of that republic to the Ghibelin cause, was sacrificed by the emperor to the covetous ambition of Castruccio. The forces of the two were joined in a siege to which the unfortunate city submitted after a month. "She thus fell in reality into the hands of Castruccio, who shortly established his absolute authority over her capital and territory. After extorting a heavy contribution from the Pisans, and rewarding the services of Castruccio by erecting the state of Lucca into an imperial duchy in his favour, the rapacious emperor pursued his march to Rome. There he consumed in the frivolous ceremony of his coronation [January 17, 1328], and in the vain endeavour to establish an antipope, the time which he might have employed, with the forces at his command, and in conjunction with Frederic, king of Sicily, in crushing for ever the power of Rob-

ert of Naples and of all the Guelphs of Italy who depended on that monarch." In August of the same year Castruccio, who "had now attained an elevation which seemed to threaten . . . the total subjugation of all Italy," died suddenly of a fever. "Florence breathed again from impending oppression, Pisa recovered her freedom, and Lucca sank from ephemeral splendour into lasting obscurity. By the death of Castruccio the emperor had lost his best counsellor and firmest support, and he soon ceased to be formidable to the Guelphs. . . . Hastily returning into Tuscany, he plundered the infant orphans of Castruccio of their inheritance to sell Lucca to a new signor, and to impose ruinous contributions upon the Pisans, before his return into Lombardy delivered them from tyranny. . . . The first proceeding of Louis in Lombardy had been to ruin the Visconti, and to drain their states of money; almost his last act in the province was to make the restoration of this family to power a new source of profit." In 1330 the emperor returned to Germany, recalled by troubles in that part of his dominions.—G. Procter, *Hist. of Italy*, ch. 4, pt. 2.

(Southern): **A. D. 1343-1389.**—Troubled reign of Joanna I. in Naples.—Murder of her husband, Andrew of Hungary.—Political effects of the great Schism in the Church.—The war of Charles of Durazzo and Louis of Anjou.—Violent course of Pope Urban VI.—"In Naples itself the house of Anjou fell into disunion. Charles II. of Naples gained by marriage the dowry of Hungary [see HUNGARY: A. D. 1301-1342], which passed to his eldest son Charles Martel, while his second son, Robert, ruled in Naples. But Robert survived his only son, and left as heiress of the kingdom [1343] his grand-daughter Giovanna [better known as Joan, or Joanna]. The attempt to give stability to the rule of a female by marriage with her cousin, Andrew of Hungary, only aroused the jealousy of the Neapolitan nobles and raised up a strong party in opposition to Hungarian influence. Charles II. of Naples, Giovanna's great-grandfather, had left many sons and daughters, whose descendants of the great houses of Durazzo and Tarento, like those of the sons of Edward III. in England, hoped to exercise the royal power. When, in 1345, Pope Clement VI. was on the point of recognising Andrew as King of Naples, a conspiracy was formed against him, and he was murdered, with the connivance, as it was currently believed, of the Queen. Hereon the feuds in the kingdom blazed forth more violently than before; the party of Durazzo ranged itself against that of Tarento, and demanded punishment of the murderers. Giovanna I., to protect herself, married Lewis of Tarento in 1347. King Lewis of Hungary, aided by the party of Durazzo, entered Naples to avenge his brother's death, and for a while all was confusion. On the death of Lewis of Tarento (1362),

Giovanna I. married James, King of Majorca, and on his death (1374), Otto, Duke of Brunswick. Giovanna I. was childless, and the slight lull which in the last years had come over the war of factions in Naples was only owing to the fact that all were preparing for the inevitable conflict which her death would bring." Neapolitan affairs were at this stage when the great schism occurred (see PAPACY: A. D. 1377-1417), which enthroned two rival popes, one (Urban VI.) at Rome, and one (Clement VII.) at Avignon. Queen Giovanna had inclined first to Urban, but was repelled, and gave her adhesion to Clement. Thereupon, Urban, on the 21st of April, 1380, "declared her deposed from her throne as a heretic, schismatic, and traitor to the Pope. He looked for help in carrying out his decree to King Lewis of Hungary, who had for a time laid aside his desire for vengeance against Giovanna, but was ready to resume his plans of aggrandisement when a favourable opportunity offered. . . . Lewis was not himself disposed to leave his kingdom; but he had at his court the son of his relative, Lewis of Durazzo, whom he had put to death in his Neapolitan campaign for complicity in Andrew's murder. Yet he felt compassion for his young son Charles, brought him to Hungary, and educated him at his court. As Giovanna was childless, Charles of Durazzo, or Carlo della Pace, as he was called in Italy, had a strong claim to the Neapolitan throne at her death." Charles of Durazzo was accordingly furnished with Hungarian troops for an expedition against Naples, and reached Rome in November, 1380. "Clement VII. on his side bestirred himself in behalf of his ally Giovanna, and for this purpose could count on the help of France. Failing the house of Durazzo, the house of Valois could put forward a claim to the Neapolitan throne, as being descended from the daughter of Charles II. The helpless Giovanna I. in her need adopted as her heir and successor Louis, Duke of Anjou, brother of the French king, and called him to her aid. Clement VII. hastened to confer on Louis everything that he could; he even formed the States of the Church into a kingdom of Adria, and bestowed them on Louis; only Rome itself, and the adjacent lands in Tuscany, Campania Maritima, and Sabina were reserved for the Pope. The Avignonese pretender was resolved to show how little he cared for Italy or for the old traditions of the Italian greatness of his office. Charles of Durazzo was first in the field, for Louis of Anjou was detained in France by the death of Charles V. in September, 1380. The accession of Charles VI. at the age of twelve threw the government of the kingdom upon the Council of Regency, of which Louis of Anjou was the chief member. He used his position to gratify his chief failing, avarice, and gathered large sums of money for his Neapolitan campaign. Meanwhile Charles of Durazzo was in Rome, where Urban VI. equipped him for his undertaking." In June, 1381, Charles marched against Naples, defeated Otto, the husband of Giovanna, at San Germano, and had the gates of Naples opened to him by a rising within the city on the 16th of July. Giovanna took refuge in the Castel Nuovo, but surrendered it on the 26th of August. After nine months of captivity, the unfortunate queen was "strangled in her prison on May 12, 1382, and her corpse was exposed for six days before burial that the certainty of her

death might be known to all. Thenceforth the question between Charles III. and Louis was not complicated by any considerations of Giovanna's rights. It was a struggle of two dynasties for the Neapolitan crown, a struggle which was to continue for the next century. Crowned King of Naples by Clement VII., Louis of Anjou quitted Avignon at the end of May, accompanied by a brilliant array of French barons and knights. He hastened through North Italy, and disappointed the hopes of the fervent partisans of Clement VII. by pursuing his course over Aquila, through the Abruzzi, and refusing to turn aside to Rome, which, they said, he might have occupied, seized Urban VI., and so ended the Schism. When he entered the territory of Naples he soon received large accessions to his forces from discontented barons, while 22 galleys from Provence occupied Ischia and threatened Naples." Charles, having inferior forces, could not meet his adversary in the field, but showed great tactical skill, acting on the defensive, "cutting off supplies, and harassing his enemy by unexpected sallies. The French troops perished miserably from the effects of the climate; . . . Louis saw his splendid army rapidly dwindling away." But quarrels now arose between Charles and Pope Urban; the latter went to Naples to interfere in affairs; the King made him practically a prisoner and extorted from him agreements which were not to his liking. But Urban, on the 1st of January, 1384, "proclaimed a crusade against Louis as a heretic and schismatic, and Charles unfurled the banner of the Cross." In May the Pope withdrew from Naples to Nocera, and there began a series of interferences which convinced Charles "that Urban was a more serious adversary than Louis." With the summer came attacks of the plague upon both armies; but that of Louis suffered most, and Louis himself died, in September, bequeathing his claims on Naples to his eldest son. "On the death of Louis the remnant of his army dispersed, and Charles was free from one antagonist. . . . War was now declared between the Pope and the King. . . . Charles found adherents amongst Urban's Cardinals." Urban discovered the plots of the latter and threw six of them into a dungeon, where he tortured them with brutality. Charles attacked Nocera and took the town, but the castle in which the Pope had fortified himself resisted a long siege. "Three or four times a day the dauntless Pope appeared at a window, and with bell and torch cursed and excommunicated the besieging army." In August, 1385, Urban was rescued by some of his partisans, who broke through the camp of the besiegers and carried him off, still clinging to his captive cardinals, all but one of whom he subsequently put to death. He made his way to Trani and was there met by Genoese galleys which conveyed him and his party to Genoa. He resided in Genoa rather more than a year, very much to the discomfort and expense of the Genoese, and then, after much difficulty, found shelter at Lucca until September, 1387. Meantime Charles III. had left Naples, returning to Hungary to head a revolt against the widowed queen and young daughter of Lewis, who died in 1382. There he was assassinated in February, 1386. "The death of Charles III. again plunged the kingdom of Naples into confusion. The Angevin party, which had been powerless against Charles, raised against

his son Ladislas, a boy of twelve years old, the claims of Louis II. of Anjou. The exactions of the Queen Regent Margaret awoke dissatisfaction, and led to the appointment in Naples of a new civic magistracy, called the Otto di Buono Stato, who were at variance with Margaret. The Angevins rallied under Tommaso of Sanseverino, and were reinforced by the arrival of Otto of Brunswick. The cause of Louis was still identified with that of Clement VII., who, in May 1385, had solemnly invested him with the kingdom of Naples. Urban VI., however, refused to recognise the claims of the son of Charles, though Margaret tried to propitiate him . . . and though Florence warmly supported her prayers for help." The Pope continued obstinate in this refusal until his death. He declared that the kingdom of Naples had lapsed to the Holy See, and he tried to gather money and troops for an expedition to secure it. As a means to that end, he ordered that the year 1390 should be a year of jubilee—a decade before the end of the century. It was his last desperate measure to obtain money. On the 15th of October 1389 he died and one of the most disastrous pontificates in the history of the Papacy came to an end.—M. Creighton, *Hist. of the Papacy during the Period of the Reformation*, bk. 1, ch. 1 (p. 1).

A. D. 1343-1393.—The "Free Companies."—Their depredations and the wars employing them.—The Great Company.—The Company of Sir John Hawkwood.—"The practice of hiring troops to fight the battles of the Commonwealth [of Florence—but in other Italian states no less] had for some time past been continually on the increase. . . . The demand for these mercenary troops,—a demand which . . . preferred strangers from beyond the Alps,—had filled Italy with bands of free lances, ready to take service with any tyrant, or any free city that was willing to pay them. They passed from one service to another, and from one side of a quarrel to the other, with the utmost indifference and impartiality. But from this manner of life to setting up for themselves and warring for their own behoof there was but one step. And no prudent man could have doubted that this step would ere long be taken. Every circumstance of the age and country combined to invite and facilitate it. . . . Already, immediately after the fall of the Duke of Athens [at Florence, 1343], a German adventurer, one Werner, known in Italian history as the Duke Guarnieri, had induced a large number of the hired troops, who were then 'unattached' in Italy, mainly those dismissed at that time from the service of Pisa, to form themselves into an independent company and recognize him as their leader. With equal effrontery and accuracy this ruffian styled himself 'The enemy of God, of Pity, and of Mercy.' . . . This gang of bandits numbered more than 2,000 horsemen. Their first exploit was to threaten the city of Siena. Advancing through the Siennese territory towards the city, plundering, killing, and burning indiscriminately as they went, they inspired so sudden and universal a terror that the city was glad to buy them off with a sum of 12,000 florins. From the Siennese territory they passed to that of Arezzo, and thence

to the district around Perugia; and then turning towards the Adriatic, overran Romagna, and the Rimini country, then governed by the Malatesta family. It is difficult adequately to describe, or even to conceive the sufferings, the destruction, the panic, the horror, which marked the track of such a body of miscreants." Finally, by the skilful management of the Lord of Bologna, the company was bought up and sent across the Alps, out of Italy, in detachments. "The relief was obtained in a manner which was sure to operate as an encouragement to the formation of other similar bands. And now, after the proclamation of the peace between Florence and the Visconti, on the 1st of April, 1353, . . . the experiment which had answered so well in the hands of the German 'Enemy to God and to Mercy,' was repeated on a larger scale by a French Knight Hospitaller of the name of Montreal, known in Italian history as Frà Moriale. . . . Being out of place, it occurred to him to collect all the fighting men in Italy who were similarly circumstanced, and form an independent company after the example of Guarnieri, with the avowed purpose of living by plunder and brigandage. He was so successful that he collected in a very short time 1,500 men-at-arms and 2,000 foot soldiers; who were subsequently increased to 5,000 cavaliers and 7,000 infantry; and this band was known as 'the Great Company.'" There was an attempt made, at first, to combine Florence, Siena and Perugia, with the Romagna, in resistance to the marauders; but it failed. "The result was that the Florentines were obliged to buy off the terrible Frà Moriale with a bribe of 28,000 florins, and Pisa with one of 16,000. . . . The chief . . . after Frà Moriale himself, was one Conrad, Count of Lando; and under him the Company marched towards Lombardy in search of fresh booty, while Moriale himself, remaining temporarily behind, went to Rome to confer privately, as it was believed, with the Colonna chiefs, respecting a project of employing his band against Rienzi, the tribune. But whether such was the object of his journey to Rome or not, it was fatal to the brigand chief. For Rienzi no sooner knew that the notorious Frà Moriale was within his jurisdiction than he arrested him, and summarily ordered him to execution as a common malefactor. The death of the chief, however, did not put an end to 'the Great Company'; for Conrad of Lando remained, and succeeded to the command of it." From 1356 to 1359, Italy in different parts was preyed upon by 'the Great Company,' sometimes in the service of the league of the lesser Lombard princes against the Visconti of Milan, and once in the employ of Siena against Perugia; but generally marauding on their own account, independently. Florence, alone, stood out in resistance to their exactions, and finally sent into the field against them 2,000 men-at-arms, all tried troops, 500 Hungarians, and 2,500 cross-bowmen, besides the native troops of the city. Subsequently the Florentine forces were joined by others from Milan, Padua, and elsewhere. The bandits marched all around the Florentine frontier, with much bluster, making great threats, but constantly evading an engagement. At length, on the 20th of July, 1359, the two armies were in such a position that "it was thought in the Florentine camp that a decisive battle would be fought on the morrow.

But when that July morning dawned, Lando and his bandit host were already in full march northwards towards Genoa, with a precipitation that had all the appearance of flight. . . . 'The Great Company never again dared to show its face in Tuscany.'—T. A. Trollope, *Hist. of the Commonwealth of Florence*, bk. 3, ch. 6 (v. 2).—“Another company, consisting principally of Englishmen [lately turned loose in France by the Peace of Bretigny, 1360, which terminated the invasion of Edward III.], was brought into Italy at a somewhat later period by the Marquis of Montferrat. . . . About the same time another, composed principally of Germans, and commanded by Amichino Baumgarten, was raised by Galeazzo Visconti, and afterwards employed by the Pisans. Another, entitled that of St. George, was formed by Ambrose, the natural son of Bernabos Visconti, and let loose by him on the territories of Perugia and Sienna. Thus, at the end of the 14th century, Italy was devastated at one and the same time by these four companies of adventurers, or, as they might more justly be called, professional robbers. . . . Of all these companies, the military reputation of the English was undoubtedly the greatest—a circumstance which may be ascribed, in some degree, to the physical superiority of the men, but still more to the talents of Sir John Hawkwood, by whom they were commanded.”—W. P. Urquhart, *Life and Times of Francesco Sforza*, bk. 2, ch. 1 (v. 1).—One of the marauding companies left in France after the Peace of Bretigny, and which afflicted that wretched country so sorely (see FRANCE: A. D. 1360-1380), was called the White Company, and Sir John Hawkwood was one of its commanders. “The White Company crossed into Lombardy, under the command of one Albaret, and took service under the Marquis of Montferrat, then at war with the Duke of Milan. Hawkwood [called Giovanni Aguto by the Italians] entered the Pisan service, and next year, when the marquis, being unable to maintain his English troops, disbanded them, the Pisans engaged them, and gave Hawkwood the command.” Hawkwood and his company served Pisa, in war with Florence, until 1364, when they experienced a great defeat, which led to peace and their discharge. During the next three years they lived as independent freebooters, the territories of Siena suffering most from their depredations. Then they took service with Bernabo Visconti, Lord of Milan, making war for him on Florence and its allies; but very soon their arms were turned against Milan, and they were fighting in the pay of Florence and the Pope. “Within the next five years he changed sides twice. He served Galeazzo Visconti against the Papal States; and then, brought back to fight for Holy Church, defeated his late employer in two pitched battles.” After this, when the league against an aggressive and ambitious pontiff extended, and Florence, Bologna and other cities joined Milan, Hawkwood took money from both at the same time, and cheated both, preliminarily to fighting each in turn. While serving the Pope his ruffians wantonly destroyed the captured town of Casena, massacring between 4,000 and 5,000 people, women and children included. In 1378, when Gregory XI. died, peace followed, and Hawkwood's company resumed its old freebooting. In 1381 he was engaged in the Neapolitan civil war. In 1387 he seems to have be-

come permanently engaged in the service of Florence against the Duke of Milan. “In 1391, Florence concluded a general peace with all her enemies. Her foreign auxiliaries were dismissed, with the exception of Sir John Hawkwood and 1,000 men. Hawkwood henceforth remained in her service till his death, which took place on the 6th of March, 1393. He was buried at the public expense, as a valiant servant of the State.”—*Sir John Hawkwood* (Bentley's *Miscellany*, v. 54, pp. 284-291).

(Southern): A. D. 1386-1414.—Renewed Civil War in Naples.—Defeat of the Angevins and triumph of Ladislaus.—His ambitious career.—His capture and recapture of Rome.—“The death of Charles III. involved the kingdom of Naples in the most ruinous anarchy; and delivered it for many years a prey to all the disorders of a long minority and a disputed throne. Charles had left two children, Ladislaus, a boy of ten years old, and a daughter, Joanna; and his widow Margaret acted as regent for her son. On the other hand, the Sanseverini and other baronial families, rallying the Angevin party, proclaimed the young son of the late duke of Anjou king,—also under the guardianship of his mother, Maria,—by the title of Louis II. Thus Naples was disturbed by the rival pretensions of two boys, placed beneath the guidance of ambitious and intriguing mothers, and severally protected by two popes, who excommunicated each other, and laboured to crush the minors whom they respectively opposed, only that they might establish their own authority over the party which they supported. . . . For several years the Angevin party seemed to maintain the ascendancy. Louis II. was withheld in Provence from the scene of danger by his mother; but the barons who had raised his standard, forcing Margaret of Durazzo and the adherents of her son to retire to Gata, possessed themselves of the capital and great part of the kingdom. When Louis II., therefore, was at length suffered by his mother to appear at Naples, attended by a powerful fleet and a numerous train of the warlike nobles of France (A. D. 1390), he disembarked at the capital amidst the acclamations of his people, and would probably have overpowered the party of Durazzo with ease, if, as he advanced towards manhood, he had displayed any energy of character. But he proved very unequal, by his indolence and love of pleasure, to contend with the son of Charles III. Educated in the midst of alarms and danger, and surrounded from his infancy by civil wars and conspiracies, Ladislaus had early been exercised in

courageous enterprise, and trained to intrigue and dissimulation. At the age of 16, his mother Margaret committed him to the barons of her party to make his first essay in arms; and from this period he was ever at the head of his troops. . . . A fortunate marriage, which his mother had effected for him with Constance di Clermont, the heiress of the most opulent noble of Sicily, increased his resources by an immense dowry; and while he made an able use of these riches [meanly and heartlessly divorcing the wife who brought them to him, when they had been spent], the new Italian pope, Boniface IX., the successor of Urban VI., recognized him for the legitimate son and vassal of the church, because Louis was supported by the Avignon pontiff. This decision gained him many partizans; . . . his talents and valour hourly advanced his success; and at last the Sanseverini and all the barons of the Angevin party, following the tide of fortune, went over to his standards, and opened to him the gates of Naples (A. D. 1399). Louis . . . retired by sea to his Provençal dominions, and finally abandoned the kingdom of Naples. Ladislaus, having thus triumphed over his sluggish antagonist, had leisure to consolidate his stern authority over the licentious and turbulent feudal aristocracy of his kingdom. . . . He . . . crushed the Sanseverini and other great families, whose power might make them dangerous; and having rooted out the seeds of all resistance to his sway in his own dominions, he prepared to direct his vigorous ambition to schemes of foreign conquest."—G. Procter, *Hist. of Italy*, ch. 5, pt. 3.—Until the death of Pope Boniface IX., Ladislas supported that pontiff through the hard struggle in which he crushed the rebellious Colonna and made himself master of the city of Rome. But when Boniface died, in 1404, the Neapolitan king began to scheme for bringing the ancient capital and the possessions of the Church under his own control. "His plan was to set the Pope [the newly elected Innocent VII.] and the Roman people against one another, and by helping now one and now the other to get them both into his power. . . . He trusted that the rebellious Romans would drive the Pope from the city, and would then be compelled to submit to himself." He had entered Rome, four days after the papal election, ostensibly as a mediator between the rival factions, and between the Pope and the Roman people; and he was easily able to bring about an arrangement which gave him every opportunity for interference and for turning circumstances to his own advantage. Events soon followed as he had expected them, and as he helped, through his agents, to guide them. The turbulence of the people increased, until, in 1405, the Pope was driven to flight. "No sooner had the Pope left Rome than Giovanni Colonna, at the head of his troops, burst into the Vatican, where he took up his quarters. . . . The Vatican was sacked; even the Papal archives were pillaged, and Bulls, letters and registers were scattered about the streets. Many of these were afterwards restored, but the loss of historic documents must have been great." Ladislas now thought his time for seizing Rome was come; but when he sent 5,000 horse to join the Colonna, the Romans took alarm, repelled the Neapolitan troops, and called back the Pope, who returned in January, 1406, but who died in the following November. Under the next Pope, Gregory XII.,

there were negotiations with Avignon for the ending of the great schism; and all the craft of Ladislas was exerted to defeat that purpose; because a reunion of western Christendom would not be favorable to his designs. At last, a conference of the rival popes was arranged, to take place at Savona, near Genoa, and in August, 1407, Gregory XII. left Rome, moving slowly northwards, but finding reasons, equally with his competitor, for never presenting himself at the appointed meeting-place. In his absence the disorders of Rome increased, and when Ladislas, in April, 1408, appeared before the city with an army of 12,000 horse and as many foot, it was surrendered to him without resistance. "The craft of Ladislas had gained its end, and the temporal power of the Papacy had passed into his hands. . . . So utterly had the prestige of Rome, the memories of her glories, passed away from men's minds, that her sister republic of Florence could send and congratulate Ladislas on the triumphal victory which God and his own manhood had given him in the city of Rome." When, in 1408, the disgusted cardinals of both papal courts joined in calling a general Council of the Church, to meet at Pisa the following year, Ladislas threatened to prevent it. By this time "Gregory had sunk to the lowest pitch of degradation: he sold to Ladislas for the small sum of 25,000 florins the entire States of the Church, and even Rome itself. After this bargain Ladislas set out for Rome, intending to proceed into Tuscany and break up the Council." Early in April, 1409, he marched northwards and threatened Siena. But Florence had now undertaken the defense of the Council, and resisted him so effectually that the meeting at Pisa was undisturbed. The immediate result of the Council was the election of a third claimant of the Papacy, Alexander V. (see PAPACY: A. D. 1377-1417). Around the new Pope a league was now formed which embraced Florence, Siena, and Louis of Anjou, whose claim upon Naples was revived. The league made an attempt on Rome in the autumn of 1409, and failed; but the following January the Neapolitans were expelled and the city was occupied by the papal forces. In May, 1410, Alexander V. died, and was succeeded by Baldassare Cossa, who took the name of John XXIII. The new Pope hastened to identify his cause with Louis of Anjou, and succeeded, by his energy, in putting into the field an army which comprised the four chief "condottieri" in Italy, with their veteran followers. Ladislas was attacked and routed completely at Rocca Secca, on the 19th of May, 1411. But the worthlessness of Louis and the mercenary character of his generals made the victory of no effect. Ladislas bought over the best of the troops and their leaders, and before the end of summer Louis was back in Provence, again abandoning his Neapolitan claims. Ladislas made peace, first, with Florence, by selling Cortona to that city, and then with the Pope, who recognized him as king, not only of Naples, but of Sicily as well. But Ladislas was only gaining time by these treaties. In June, 1413, he drove the Pope from Rome, and his troops again occupied the city. He seemed to be now well prepared for realizing his ambition to found an extended Italian kingdom; but his career was cut short by a mortal disease, which ended his life on the 6th of August, 1414.—M. Creighton, *Hist. of the Papacy during the Period of the Reformation*, bk. 1, ch. 3-8 (c. 1).

A. D. 1402-1406.—The crumbling of the Visconti dominion.—Aggrandizement of Venice.—Florentine purchase and conquest of Pisa.—Decline of that city.—“The little states of Romagna, which had for the most part been conquered by Gian-Galeazzo [Visconti, Duke of Milan], were at his death [1402] overrun by the Count of Barbiano, who with his famous company entered the service of Pope Boniface IX. . . . The Count of Savoy, the Marquess of Montferrat, and the lords of Padua, Ferrara, and Mantua, were the only independent Sovereigns in North Italy in 1402. Of these Francesco, lord of Padua, was soon to fall. On the death of Gian-Galeazzo he seized on Verona. Venice would not allow her old enemy to gain this advantage, and made alliance with Francesco di Gonzaga, lord of Mantua, and with his help took Verona, and closely besieged Padua. After a gallant resistance Francesco da Carrara was forced to yield, and he and his two sons were taken prisoners to Venice, and were there strangled by order of the Council of Ten. This war gave the Venetians great power on the mainland. They reconquered Treviso, and gained Feltro, Verona [1405], Vicenza, and Padua [1405], and from this time Venice became an Italian power. In Tuscany, the death of her great enemy delivered Florence from her distress, and Siena, which now regained her liberty, placed herself under her protection. Pisa [which had been betrayed to Gian-Galeazzo in 1399] had been left to Gabriello Visconti, a bastard son of the late Duke. He put himself under the protection of Jean Boucicault, who governed Genoa for Charles VI., King of France, and with his consent he sold Pisa to the Florentines. The Pisans resisted this sacrifice of their freedom, and the war lasted a year, but in 1406 the city was forced to surrender. Many of the people left their homes; for, though Florence acted fairly towards her old enemy and new subject, yet the Pisans could not bear the yoke, and the greatness of the city, its trade and its wealth, vanished away.”—W. Hunt, *Hist. of Italy*, ch. 6.—“From that day to this it [Pisa] has never recovered,—not its former greatness, wealth, and energy,—but even sufficient vitality to arrest it on the downward course. . . . Of the two great political tendencies which were then disputing the world between them it made itself the champion and the symbol of the losing one. Pisa went down in the world together with the feudalism and Ghibellinism with which it was identified.”—T. A. Trollope, *Hist. of the Commonwealth of Florence*, bk. 4, ch. 6 (v. 2).—*The City in the Sea*, ch. 16.

A. D. 1409.—The Council of Pisa. See PAPACY: A. D. 1377-1417.

A. D. 1412-1447.—Renewed civil war in Naples.—Defeat of the Angevins by Alfonso of Aragon and Sicily.—Reconquest of Lom-

bardy by Filippo Maria Visconti, and his wars with Florence, Venice and Naples.—On the death of Ladislaus, king of Naples (1414), “his sister, Joan II., widow of the son of the duke of Austria, succeeded him. She was 40 years of age; and, like her brother, abandoned to the most unrestrained libertinism. She left the government of her kingdom to her lovers, who disputed power by arms: they called into her service, or into that of her second husband, or of the rival princes whom she in turn adopted, the two armies of Sforza and Braccio [the two great mercenary captains of that time]. The consequence was the ruin of the kingdom of Naples; which ceased to menace the rest of Italy. The moment Ladislaus disappeared, a new enemy arose to disturb the Florentines—Filippo Maria Visconti [duke of Milan, second son of Gian Galeazzo Visconti, and successor to his elder brother Gian Maria, on the assassination of the latter, in 1412]. . . . Filippo . . . married the widow of Facino Cane, the powerful condottiere who had retained Gian Maria in his dependence, and who died the same day that Gian Maria was assassinated. By this sudden marriage he secured the army of Facino Cane,—which was, in fact, master of the greater part of the Milanese: with its aid he undertook, without delay, to recover the rest of his states from the hands of those tyrants who had divided amongst them the dominions of his father. . . . During the first year of his reign, which was to decide his existence as prince or subject, he fought with determined courage; but from that time, though he continually made war, he never showed himself to his armies. . . . In the battle of Monza, by which he acquired his brother's inheritance, and the only battle in which he was ever present, he remarked the brilliant courage of Francesco Carmagnola, a Piedmontese soldier of fortune, and immediately gave him a command. Carmagnola soon justified the duke's choice by the most distinguished talents for war, the most brilliant victories, and the most noble character. Francesco Carmagnola was, after a few years, placed at the head of the duke's armies; and, from the year 1412 to that of 1422, successively attacked all the tyrants who had divided the heritage of Gian Galeazzo, and brought those small states again under the dominion of the duke of Milan. Even the republic of Genoa submitted to him, in 1421, on the same conditions as those on which it had before submitted to the king of France,—reserving all its liberties; and granting the duke's lieutenant, who was Carmagnola himself, only those prerogatives which the constitution yielded to the doge. As soon as Filippo Maria had accomplished the conquest of Lombardy, he resumed the projects of his father against Romagna and Tuscany. He . . . renewed his intrigues against the republic of Florence, and combined them with those which he at the same time carried on in the kingdom of Naples. Joan, who had sent back to France her second husband, Jaques, count de la Marche, and who had no children, was persuaded, in 1420, by one of her lovers, to adopt Alphonso the Magnanimous, king of Aragon and Sicily, to whom she intrusted some of the fortresses of Naples. She revoked this adoption in 1423; and substituted in his place Louis III. of Anjou, son of Louis II. The former put himself at the head of the ancient party of Durazzo; the latter, of that of Anjou.

The consequence was a civil war, in which the two great captains, Sforza and Braccio, were opposed to each other, and acquired new titles to glory. The duke of Milan made alliance with Joan II. and Louis III. of Anjou: Sforza, named great constable of the kingdom, was their general. The Florentines remained constant to Braccio, whom Alphonso had made governor of the Abruzzi; and who had seized, at the same time, the signoria of Perugia, his native city. . . . But Sforza and Braccio both perished, as Italy awaited with anxiety the result of the struggle about to be commenced. Sforza was drowned at the passage of the Pescara, on the 4th of January, 1424; Braccio was mortally wounded at the battle of Aquila, on the 2d of June of the same year. Francesco, son of the former, succeeded to his father's name and the command of his army, both of which he was destined to render still more illustrious. The son of Braccio, on the contrary, lost the sovereignty of Perugia, which resumed its freedom on the 29th of July of the same year; and the remnant of the army formed by this great captain elected for his chief his most able lieutenant, Nicolo Piccinino. This was the moment which Filippo Maria chose to push on his army to Romagna, and vigorously attack the Florentines. . . . The Florentines, having no tried general at the head of their troops, experienced, from the 6th of September, 1423, to the 17th of October, 1425, no less than six successive defeats, either in Liguria or Romagna [at Forlì, 1423, Zagonara, 1424, Lamone, Rapallo, Anghiari and Faggiola, 1425]. Undismayed by defeat, they reassembled their army for the seventh time: the patriotism of their rich merchants made up for the penury of their exhausted treasury. They, at the same time, sent their most distinguished statesmen as ambassadors to Venice, to represent to that republic that, if it did not join them while they still stood, the liberty of Italy was lost forever. . . . An illustrious fugitive, Francesco Carmagnola, who arrived about this time at Venice, accomplished what Florence had nearly failed in, by discovering to the Venetians the project of the duke of Milan to subjugate them." Carmagnola had been disgraced and discharged from employment by Filippo Maria, whose jealousy was alarmed by his great reputation, and he now took service against his late patron. "A league, formed between Florence and Venice, was successively joined by the marquis of Ferrara, the lord of Mantua, the Siennese, the duke Amadeus VIII. of Savoy, and the king Alphonso of Naples, who jointly declared war against Filippo Maria Visconti, on the 27th of January, 1426. . . . The good fortune of Carmagnola in war still attended him in the campaign of 1426. He was as successful against the duke of Milan as he had been for him: he took from him the city and whole province of Brescia. The duke ceded this conquest to the Venetians by treaty on the 30th of December; but he employed the winter in assembling his forces; and in the beginning of spring renewed the war." An indecisive engagement occurred at Casalesecco, July 12, 1427, and on the 11th of October following, in a marsh near Macalo, Carmagnola completely defeated the Milanese army commanded by Carlo Malatesta. A new peace was signed on the 18th of April, 1428; but war recommenced in the latter part of 1430. Fortune now abandoned Car-

magnola. He suffered a surprise and defeat at Soncino, May 17, 1431, and the suspicious senate of Venice caused him to be arrested, tortured and put to death. "During the remainder of the reign of Filippo Maria he was habitually at war with the two republics of Venice and Florence. He . . . almost always lost ground by his distrust of his own generals, his versatility, his taste for contradictory intrigues, his eagerness to sign peace every year, and to recommence hostilities a few weeks afterwards." In 1441, on making peace with the two republics, he granted his daughter Bianca in marriage to their general, Francesco Sforza, with two lordships for her dowry. But he was soon intriguing against his son-in-law, soon at war again with Florence and Venice, and Sforza was again in the service of the latter. But in 1447 he made offers of reconciliation which were accepted, and Sforza was on his way to Milan when news came to him of the death of the duke, which occurred August 13. "The war of Lombardy was complicated by its connexion with another war which at the same time ravaged the kingdom of Naples. The queen, Joan II., had died there, on the 2d of February, 1435; three months after the death of her adopted son, Louis III. of Anjou: by her will she had substituted for that prince his brother René, duke of Lorraine. But Alphonso, king of Aragon and Sicily, whom she had primarily adopted, . . . claimed the succession, on the ground of this first adoption, as well as of the ancient rights of Manfred, to whom he had succeeded in the female line. The kingdom of Naples was divided between the parties of Aragon and Anjou. The Genoese, who had voluntarily ranged themselves under the protection of the duke of Milan, offered their assistance to the duke of Anjou. . . . On the 5th of August, 1435, their fleet met that of Alphonso, before the island of Ponza. They defeated it in a great battle, in which Alphonso had been made prisoner." Delivered to the duke of Milan, Alphonso soon convinced the latter that his alliance with the French interest at Naples was a mistake and a danger to him, and was set at liberty, with promises of aid. The Genoese were indignant at this and drove the Milanese garrison from their city, in December, 1435, recovering their freedom. "Alphonso, seconded by the duke of Milan, recommenced the war against René of Anjou with greater advantage. On the 2d of June, 1442, he took from him the city of Naples; from that time peace was re-established in that kingdom, and Alphonso . . . established himself amidst a people which he had conquered, but whose hearts he gained; and returned no more either to Sicily or Aragon. He died at Naples, on the 27th of June, 1458."—J. C. L. de Sismondi, *Hist. of the Italian Republics*, ch. 9-10.

A. D. 1447-1480.—The Pontificate of Nicolas V.—Regeneration of the Papacy.—Revival of letters and art.—Threatening advance of the Turks.—Fresh troubles in Naples.—Expulsion of the French from Genoa.—“The failure of the Council of Basel [see PAPACY: A. D. 1431-1448] restored the position of the Papacy, and set it free from control. The character and ability of Pope Nicolas [V., 1447-1455] made him respected, and the part which he took in politics made him rank amongst the great temporal powers in Italy. From this time onwards to the end of our history we shall see the Popes the undisputed Princes of Rome, and the lords of all that part of Italy which they claimed from the gift of Kings and Emperors, and not least from the will of the Countess Matilda. Pope Nicolas used this power better than any of those who came after him, for he used it in the cause of peace, and to forward learning and artistic taste. He applied himself to the general pacification of Italy, and brought about the Peace of Lodi in 1454, which was signed by Venice and Milan and by King Alfonso. Christendom had great need of peace, for, in 1453, Constantinople had been taken by the Infidels and Mahomet the Second was spreading his conquest over the East of Europe. Before the fall of the city a great many Greeks had come to Italy, on different missions, and especially to attend a Council at Florence, where terms of union were made between the Greek and Latin Churches. Their coming revived the taste for Greek learning, which had been so powerfully felt by Petrarca and Boccaccio. Pope Nicolas made Rome the centre of this literature, and others followed his example. Theodore of Gaza, George of Trebizond, and many more, found enlightened patrons in the Pope, the King of Naples, Cosmo de' Medici, and Federigo, Count of Urbino. The Pope was a lover and patron of art as well as of literature. He rebuilt the churches, palaces, and fortifications of Rome and the Roman States, and formed the scheme of raising a church worthy of the memory of St. Peter, and left behind him the Vatican Palace as a worthy residence for the Apostle's successors. The Papal Library had been scattered during the Captivity and the Schism, but Pope Nicolas made a large collection of manuscripts, and thus founded the Library of the Vatican. The introduction of printing into Italy about this time gave great strength to the revival of learning. In 1452 the Pope crowned Frederic the Third Emperor at Rome with great magnificence. But he was not without danger in his city, for the next year a wild plot was made against him. A large number of Romans were displeased at the great power of the Pope. They were headed by Stefano Porcario, who declared that he would free the city which had once been mistress of the world from the yoke of priests. The rising was to be ushered in by the slaughter of the Papal Court and the plunder of its treasures. The plot was discovered, and was punished with great severity. This was the last and most unworthy of the various attempts of the Romans to set up self-government. The advance of the Ottoman Turks during the latter part of the 15th century [see TURKS: A. D. 1451-1481] caused the greatest

alarm in Italy. Venice, from her possessions and her trade in the Levant, was most exposed to the attacks of the Infidels, and she became the great champion against them. The learned Æneas Sylvius was chosen Pope, in 1458, and took the title of Pius the Second. He caused a crusade to be preached against the Turks, but he died in 1464, while the forces were gathering. The Venetians were constantly defeated in the Archipelago, and lost Eubœa, Lesbos, and other islands [see GREECE: A. D. 1454-1479]. In 1477 a large Turkish army entered Italy by Friuli, defeated the Venetians, and crossed the Tagliamento. They laid waste the country as far as the Piave, and their destroying fires could be seen from the Campanile of St. Mark's. In 1480 Mahomet's great general, Ahmed Keduk, took the strong city of Otranto, and massacred its inhabitants. This expedition was secretly favoured by the Venetians to spite the King of Naples. The danger to all Italy was very great, for the Sultan eagerly longed to conquer the older Rome, but the death of Mahomet the Second, and a disputed succession to his throne, fortunately checked the further advance of the invaders. When Alfonso, King of Aragon, Naples, and Sicily, died in 1458, he left Aragon and Sicily, which he had inherited, to his legitimate son John; but the crown of Naples, which he had won for himself, he left to Ferdinand, his illegitimate son. Ferdinand was a cruel and suspicious man, and the barons invited John of Calabria to come and help them against him. John of Calabria was the son of René, who had been adopted by Queen Joanna, and who called himself King. He was the French Governor of Genoa, and so already had a footing in Italy. He applied to Sforza to help him, but the Duke of Milan was firmly attached to the Peace of Lodi, and was too justly fearful of the French power to do so. Lewis the Eleventh, King of France, was too wise to meddle in Italian politics. Florence, which was usually on the French side, was now under the influence of Cosmo de' Medici, and Cosmo was under the influence of Francesco Sforza, so that the Duke of Calabria found no allies. The Archbishop of Genoa, Paola Fregoso, excited the people to drive out the French [see GENOA: A. D. 1458-1464] and the Doge Prospero Adorno, who belonged to their party. He then defeated King René, and the Duke of Calabria was forced to give up his attempt on Naples [1464]. The new government of Genoa was so oppressive that the Genoese put themselves under the protection of Francesco; Lewis the Eleventh ceded all his rights to him, and the city thus became part of the Duchy of Milan. The hopes of the French party in Italy were thus for the present entirely crushed.”—W. Hunt, *Hist. of Italy*, ch. 6.

A. D. 1492-1494.—Charles VIII. of France invited across the Alps to possess Naples.—

The hostile disunion of the Italian states.—With the death of Lorenzo de Medici, which occurred at Florence in the spring of 1492, "the power vanished which had hitherto kept Naples and Milan quiet, and which, with subtle diplomatic skill, had postponed the breach of the peace in Italy. We find the comparison used, that Florence with Lorenzo at her head stood like a rocky dam between two stormy seas. Italy was at that time a free land and independent of foreign policy. Venice, with her well-established nobles at her head; Naples under the Aragonese, a branch of the family ruling in Spain; Milan, with Genoa, under Sforza—all three able powers by land and sea—counterbalanced each other. Lorenzo ruled central Italy; the small lords of the Romagna were in his pay, and the pope was on the best terms of relationship with him. But in Milan the mischief lay hidden. Ludovico Sforza, the guardian of his nephew Gian Galeazzo, had completely usurped the power. He allowed his ward to pine away mentally and bodily; he was bringing the young prince slowly to death. But his consort, a Neapolitan princess, saw through the treachery, and urged her father to change by force their insufferable position. Sforza could not alone have resisted Naples. No dependence was to be placed on the friendship of Venice; Lorenzo mediated as long as he lived, but now, on his death, Naples was no longer to be restrained. The first thing that happened was [Piero de Medici's] alliance with this power, and at the same time Ludovico's appeal for help to France, where a young and ambitious king had ascended the throne. The death of Innocent VIII., and the election of Alexander Borgia to the papacy, completed the confusion which was impending. Long diplomatic campaigns took place before war actually broke out. The matter in question was not the interests of nations—of this there was no thought—nor even the caprices of princes alone. The nobles of Italy took a passionate concern in these disputes. The contests of corresponding intrigues were fought out at the French court. France had been robbed of Naples by the Aragonese. The exiled Neapolitan barons, French in their interests, whose possessions the Aragonese had given to their own adherents, ardently seized the idea of returning victoriously to their country; the cardinals, hostile to Borgia—foremost among these stood the Cardinal of San Piero in Vincula, a nephew of the old Sixtus, and the Cardinal Ascanio Sforza, Ludovico's brother—urged for war against Alexander VI.; the Florentine nobles, anticipating Piero's violent measures, hoped for deliverance through the French, and advocated the matter at Lyons, where the court was stationed, and a whole colony of Florentine families had in time settled. Sforza held out the bait of glory and his just claims to the old legitimate possession. The Aragonese, on the other hand, proposed an accommodation. Spain, who would not forsake her belongings, stood at their side; the pope and Piero dei Medici adhered to Naples, and the French nobility were not in favour of an expedition to Italy. Venice remained neutral; still she might gain by the war, and she did not dissuade from it; and this opinion, that something was to be gained, gradually took possession of all parties, even of those who had at first wished to preserve peace. Spain was a direct gainer from the first. France ceded to King

Ferdinand a disputed province, on the condition that he would afford no support to his Neapolitan cousins. Sforza, as lord of Genoa, wished to have Lucca and Pisa again, with all that belonged to them; the Visconti had possessed them of old, and he raised their claims afresh. We have said what were the hopes of Piero dei Medici [that he should be able to make himself Duke of Florence]. Pisa hoped to become free. The pope hoped by his alliance with Naples to make the first step towards the attainment of the great plans which he cherished for himself and his sons; he thought one day of dividing Italy among them. The French hoped to conquer Naples, and then to drive away the Turks in a vast crusade. As if for a crusade, the king raised the loan in his own country, which he required for the campaign. The Venetians hoped to bring the coast cities of the Adriatic Sea as much as possible under their authority. In the autumn of 1494, Charles of France placed himself at the head of his knights and mercenary troops, and crossed the Alps; whilst his fleet and artillery, the most fearful weapon of the French, went by sea from Marseilles to Genoa."—H. Grimm, *Life of Michael Angelo*, ch. 3, sect. 2 (v. 1).

A. D. 1494-1496.—The invasion by Charles VIII.—His triumphant march, his easy conquest of Naples, and the speedy retreat.—Effects of the expedition on France and Europe.—"On the 1st of March [1494] Charles VIII. made his state entry into Lyons, to assume the command of the expedition; an advanced guard under the Scotchman d'Aubigny was already pushing towards the Neapolitan frontier, and the Duke of Orleans was at Genoa. The Neapolitans on their side sent the Prince of Altamura with 30 galleys towards Genoa, while the Duke of Calabria, an inexperienced youth, entered the Pontifical States, under the guidance of tried generals. . . . The Pope seemed to have lost his head, and no longer knew what course to adopt. . . . Charles the VIII., having passed the Monginevra, entered Asti in the first days of September. He soon received intelligence that Don Federico and the Neapolitan fleet had been repulsed with heavy losses before Porto Venere, and that the Duke of Orleans and his Swiss had entered Rapallo, sacked the place, and put all the inhabitants, even the sick in the hospital, to the sword, thereby striking terror into the Italians, who were unaccustomed to carry on war in so sanguinary a fashion. On reaching Piacenza, the king learnt that Gio. Galeazzo, whom he had recently seen at Pavia, had just died there, poisoned, as all men said, by the Moor [Lodovico, the usurping uncle of Gio. Galeazzo the young Duke of Milan, was so called], who, after celebrating his obsequies at Milan, had entered St. Ambrogio, at the hour indicated by his astrologer, to consecrate the investiture already granted to him by Maximilian, King of the Romans. All this filled the minds of the French with suspicion, almost with terror; they were beginning to understand the nature of their closest ally's good faith. In fact, while Ludovico with one hand collected men and money for their cause, with the other he wove the threads

of a league intended to drive them from Italy, when the moment should arrive. . . . Nevertheless the fortunes of the French prospered rapidly. The Duke of Calabria, having entered Romagna, withdrew across the Neapolitan frontier at the first glimpse of D'Aubigny's forces; and the bulk of the French army, commanded by the King in person, marched through the Lunigiana without encountering obstacles of any kind. After taking Fivizzano, sacking it, and putting to the sword the hundred soldiers who defended it, and part of the inhabitants, they pushed on towards Sarzana, through a barren district, between the mountains and the sea, where the slightest resistance might have proved fatal to them. But the small castles, intended for the defence of these valleys, yielded one after the other, without any attempt to resist the invaders: and hardly had the siege of Sarzana commenced than Piero dei Medici arrived, frightened out of his senses, surrendered at discretion, and even promised to pay 200,000 ducats. But on Piero's return to Florence, on the 8th of November, he found that the city had risen in revolt, and sent ambassadors to the French King on its own account to offer him an honourable reception; but that at the same time it was making preparations for defence in case of need [see FLORENCE: A. D. 1490-1498]. So great was the public indignation that Piero took flight to Venice, where his own ambassador, Soderini, hardly deigned to look at him, having meanwhile declared for the republican government just proclaimed in Florence, where everything had been rapidly changed. The houses of the Medici and their garden at St. Mark had been pillaged, exiles had been recalled and acquitted; a price put on Piero's head and that of his brother, the Cardinal. . . . The fabric, so long and so carefully built up by the Medici, was now suddenly crumbling into dust. On the 17th November Charles VIII., at the head of his formidable army, rode into Florence with his lance in rest, believing that that fact sufficed to make him master of the city. But the Florentines were armed, they had collected 6,000 soldiers within the walls, and they knew perfectly well that, from the vantage posts of towers and houses, they could easily worst an army scattered through the streets. They therefore repulsed the King's insolent proposals, and when he threatened to sound his trumpets, Piero Capponi, tearing up the offered treaty, replied that the Florentines were more ready to ring their bells. Through this firmness equitable terms were arranged. The Republic was to pay 120,000 florins in three quotas; the fortresses, however, were to be speedily restored to her. On the 28th November the French left the city, but not without stealing all that remained of the collection of antiquities in the Medici Palace. . . . Nevertheless the citizens were thankful to be finally delivered alike from old tyrants and new in vaders. Having reached Rome, Charles VIII., in order to have done with the Pope, who now seemed inclined for resistance, pointed his guns against the Castle of St. Angelo, and thus matters were soon settled. . . . Scarcely encountering any obstacles, Charles led his army on to Naples." Ferdinand I., or Ferrante, had died on the 25th of January, 1494, and had been succeeded by his son Alfonso II., a prince more cruel and more hated than himself. The latter now renounced the throne in favor of his son,

Ferdinand II., and fled to Sicily. "Ferdinand II., or Ferrandino, as he was called, after vainly seeking aid from all, even from the Turk, made a fruitless stand at Monte San Giovanni, which was taken, destroyed, and all its population put to the sword. . . . Naples rebelled in favour of the French, who marched in on the 22d of February [1495]. The following day Ferrandino fled to Ischia, then to Messina. And shortly the ambassadors of the Italian States appeared to offer congratulations to the conqueror. Now at last the Venetians were aroused, and having sent their envoys to Milan to know if Ludovico were disposed to take up arms to drive out the French, they found him not only ready to do so, but full of indignation. . . . He advised that money should be sent to Spain and to Maximilian, to induce them to attack France; but added that care must be taken not to call them into Italy, 'since having already one fever here, we should then have two.' A league was in fact concluded between the Venetians, Ludovico, the Pope, Spain and Maximilian. . . . The Neapolitans, soon wearied of bad government, had risen in revolt, and Charles VIII. after a stay of only 50 days in Naples had to make his departure with excessive haste, before every avenue of retreat should be cut off, leaving hardly more than 6,000 men in the kingdom, and taking with him a numerous army, which however only numbered 10,000 real combatants. On the 6th of July a pitched battle took place at Fornuovo near the river Taro. The allies had assembled about 30,000 men, three-fourths of whom were Venetians, the rest composed of Ludovico's soldiers and a few Germans sent by Maximilian. . . . The battle was bloody, and it was a disputed question which side obtained the victory; but although the Italians were not repulsed, remaining indeed masters of the field, the French succeeded in cutting their way through, which was the chief object they had in view. . . . Ludovico, taking advantage of the situation, soon made an agreement with the French on his own account, without concerning himself about the Venetians. . . . The fortunes of the French now declined rapidly in Italy, and all the more speedily owing to their bad government in the Neapolitan kingdom, and their abominable behaviour towards the few friends who had remained faithful to them. . . . Ferdinand II., with the aid of the Spaniards under Consalvo di Cordova, advanced triumphantly through Calabria and entered Naples on the 7th of July, 1496. In a short time all the Neapolitan fortresses capitulated, and the French who had held them returned to their own country, more than decimated and in an altogether deplorable condition. On the 6th of October Ferdinand II. breathed his last, worn out by the agitation and fatigues of the war, and was succeeded by his uncle Don Federico, the fifth King [counting Charles VIII. of France] who had ascended the Neapolitan throne within the last five years. . . . Naples was now in the absolute power of the Spaniards, who were already maturing their iniquitous designs upon the kingdom; these, however, were only discovered at a later period."—P. Villari, *Machiavelli and his Times*, v. 1, ch. 4, sect. 2.—"In spite of its transitory character the invasion of Charles VIII. . . . was a great fact in the history of the Renaissance. It was, to use the pregnant phrase of Michelet, no less than the

revelation of Italy to the nations of the North. Like a gale sweeping across a forest of trees in blossom, and bearing their fertilizing pollen, after it has broken and deflowered their branches, to far distant trees that hitherto have bloomed in barrenness, the storm of Charles's army carried far and wide through Europe thought-dust, imperceptible, but potent to enrich the nations. The French, alone, says Michelet, understood Italy. . . . From the Italians the French communicated to the rest of Europe what we call the movement of the Renaissance. There is some truth in this panegyric of Michelet's. The passage of the army of Charles VIII. marks a turning point in modern history, and from this epoch dates the diffusion of a spirit of culture over Europe."—J. A. Symonds, *Renaissance in Italy: The Age of the Despots*, ch. 9.

A. D. 1499-1500.—Invasion and conquest of the Milanese by Louis XII. of France.—His claim in right of Valentine Visconti.—Charles VIII. died in April, 1498, and was succeeded by Louis of Orleans, who ascended the throne as Louis XII. On his coronation, Louis XII. "assumed, besides his title of King of France, the titles of King of Naples and of Jerusalem, and Duke of Milan. This was as much as to say that he would pursue . . . a warlike and adventurous policy abroad. . . . By his policy at home Louis XII. deserved and obtained the name of 'Father of the People'; by his enterprises and wars abroad he involved France still more deeply than Charles VIII. had in that mad course of distant, reckless, and incoherent conquests for which his successor, Francis I., was destined to pay by capture at Pavia and by the lamentable treaty of Madrid, in 1526, as the price of his release. . . . Outside of France, Milaness (the Milanese district) was Louis XII.'s first thought, at his accession, and the first object of his desire. He looked upon it as his patrimony. His grandmother, Valentine Visconti, widow of that Duke of Orleans who had been assassinated at Paris in 1407 by order of John the Fearless, Duke of Burgundy, had been the last to inherit the duchy of Milan, which the Sforzas, in 1450, had seized. When Charles VIII. invaded Italy in 1494, 'Now is the time,' said Louis, 'to enforce the rights of Valentine Visconti, my grandmother, to Milaness.' And he, in fact, asserted them openly, and proclaimed his intention of vindicating them so soon as he found the moment propitious. When he became king, his chance of success was great. The Duke of Milan, Ludovic, the Moor, had by his sagacity and fertile mind, by his taste for arts and sciences and the intelligent patronage he bestowed upon them, by his ability in speaking, and by his facile character, obtained in Italy a position far beyond his real power. . . . Ludovic was, nevertheless, a

turbulent rascal and a greedy tyrant. . . . He had, moreover, embroiled himself with his neighbours, the Venetians, who were watching for an opportunity of aggrandizing themselves at his expense." Louis XII. promptly concluded a treaty with Venice, which provided for the making of war in common upon the Duke of Milan, to recover the patrimony of the king—the Venetians to receive Cremona and certain forts and territory adjacent as their share of the expected spoils. "In the month of August, 1499, the French army, with a strength of from 20,000 to 25,000 men, of whom 5,000 were Swiss, invaded Milaness. Duke Ludovic Sforza opposed to it a force pretty near equal in number, but far less full of confidence and of far less valour. In less than three weeks the duchy was conquered; in only two cases was any assault necessary; all the other places were given up by traitors or surrendered without a show of resistance. The Venetians had the same success on the eastern frontier of the duchy. . . . Louis was at Lyons when he heard of his army's victory in Milaness and of Ludovic Sforza's flight. He was eager to go and take possession of his conquest, and, on the 6th of October, 1499, he made his triumphal entry into Milan amidst cries of 'Hurrah! for France.' He reduced the heavy imports established by the Sforzas, revoked the vexatious game-laws, instituted at Milan a court of justice analogous to the French parliaments, loaded with favours the scholars and artists who were the honour of Lombardy, and recrossed the Alps at the end of some weeks, leaving as governor of Milaness John James Trivulzio, the valiant Condottiere, who, four years before, had quitted the service of Ferdinand II., King of Naples, for that of Charles VIII. Unfortunately Trivulzio was himself a Milanese and of the faction of the Guelphs. He had the passions of a partisan and the habits of a man of war; and he soon became as tyrannical and as much detested in Milaness as Ludovic the Moor had but lately been. A plot was formed in favour of the fallen tyrant, who was in Germany expecting it, and was recruiting, during expectancy, amongst the Germans and Swiss, in order to take advantage of it. On the 25th of January, 1500, the insurrection broke out; and two months later Ludovic Sforza had once more become master of Milaness, where the French possessed nothing but the castle of Milan. . . . Louis XII., so soon as he heard of the Milanese insurrection, sent into Italy Louis de la Trémoille, the best of his captains, and the Cardinal d'Amboise, his privy councillor and his friend. . . . The campaign did not last long. The Swiss who had been recruited by Ludovic and those who were in Louis XII.'s service had no mind to fight one another; and the former capitulated, surrendered the strong place of Novara, and promised to evacuate the country on condition of a safe-conduct for themselves and their booty." Ludovic attempted flight in disguise, but fell into the hands of the French and remained in captivity, at the castle of Loches, in Touraine, during the remainder of his life—eight years. "And 'thus was the duchy of Milan, within seven months and a half, twice conquered by the French,' says John d'Auton in his 'Chronique,' 'and for the nonce was ended the war in Lombardy, and the authors thereof were captives and exiles.'"—F. P. Guizot, *Popular Hist. of France*, ch. 27.

15-16th Centuries.—Renaissance.—Intellectual advance and moral decline.—"At the end of the fifteenth century, Italy was the centre of European civilization: while the other nations were still plunged in a feudal barbarism which seems almost as far removed from all our sympathies as is the condition of some American or Polynesian savages, the Italians appear to us as possessing habits of thought, a mode of life, political, social, and literary institutions, not unlike those of to-day; as men whom we can thoroughly understand, whose ideas and aims, whose general views, resemble our own in that main, indefinable characteristic of being modern. They had shaken off the morbid monastic ways of feeling, they had thrown aside the crooked scholastic modes of thinking, they had trampled under foot the feudal institutions of the Middle Ages; no symbolical mists made them see things vague, strange, and distorted; their intellectual atmosphere was as clear as our own, and, if they saw less than we do, what they did see appeared to them in its true shape and proportions. Almost for the first time since the ruin of antique civilization, they could show well-organized, well-defined States; artistically disciplined armies; rationally devised laws; scientifically conducted agriculture; and widely extended, intelligently undertaken commerce. For the first time, also, they showed regularly built, healthy, and commodious towns; well-drained fields; and, more important than all, hundreds of miles of country owned not by feudal lords, but by citizens; cultivated not by serfs, but by free peasants. While in the rest of Europe men were floundering among the stagnant ideas and crumbling institutions of the effete Middle Ages, with but a vague half-consciousness of their own nature, the Italians walked calmly through a life as well arranged as their great towns, bold, inquisitive, and sceptical: modern administrators, modern soldiers, modern politicians, modern financiers, scholars, and thinkers. Towards the end of the fifteenth century, Italy seemed to have obtained the philosophic, literary, and artistic inheritance of Greece; the administrative, legal, and military inheritance of Rome, increased threefold by her own strong, original, essentially modern activities. Yet, at that very time, and almost in proportion as all these advantages developed, the moral vitality of the Italians was rapidly decreasing, and a horrible moral gangrene beginning to spread: liberty was extinguished; public good faith seemed to be dying out; even private morality flickered ominously; every free State became subject to a despot, always unscrupulous and often infamous; warfare became a mere pretext for the rapine and extortions of mercenaries; diplomacy grew to be a mere swindle; the humanists inoculated literature with the filthiest refuse cast up by antiquity; nay, even civic and family ties were loosened; assassinations and fratricides began to abound, and all law, human and divine, to be set at defiance. . . . The men of the Renaissance had to pay a heavy price for . . . intellectual freedom and self-cognizance, which they not only enjoyed themselves, but transmitted to the rest of the world; the price was the loss of all moral standard, of all fixed

public feeling. They had thrown aside all accepted rules and criteria, they had cast away all faith in traditional institutions, they had destroyed and could not yet rebuild. In their instinctive and universal disbelief in all that had been taught them, they lost all respect for opinion, for rule, for what had been called right and wrong. Could it be otherwise? Had they not discovered that what had been called right had often been unnatural, and what had been called wrong often natural? Moral teachings, remonstrances, and judgments belonged to that dogmatism from which they had broken loose; to those schools and churches where the foolish and the unnatural had been taught and worshipped; to those priests and monks who themselves most shamefully violated their teachings. To profess morality was to be a hypocrite; to reprobate others was to be narrow-minded. There was so much error mixed up with truth that truth had to share the discredit of error."—Vernon Lee, *Euphorion*, v. 1, pp. 27-29, 47-48.—"The conditions under which the Italians performed their task in the Renaissance were such as seem at first sight unfavourable to any great achievement. Yet it is probable that, the end in view being the stimulation of mental activity, no better circumstances than they enjoyed could have been provided. Owing to a series of adverse accidents, and owing also to their own instinctive preference for local institutions, they failed to attain the coherence and the centralised organisation which are necessary to a nation as we understand that word. Their dismemberment among rival communities proved a fatal source of political and military weakness, but it developed all their intellectual energies by competition to the utmost. At the middle of the fifteenth century their communes had lost political liberty, and were ruled by despots. Martial spirit declined. Wars were carried on by mercenaries; and the people found itself in a state of practical disarmament, when the neighboring nations quarrelled for the prize of those rich provinces. At the same time society underwent a rapid moral deterioration. When Machiavelli called Italy 'the corruption of the world,' he did not speak rhetorically. An impure and worldly clergy; an irreligious, though superstitious, laity; a self-indulgent and materialistic middle class; an idle aristocracy, excluded from politics and unused to arms; a public given up to pleasure and money-getting; a multitude of scholars, devoted to trifles, and vitiated by studies which clashed with the ideals of Christianity—from such elements in the nation proceeded a widely-spread and ever-increasing degeneracy. Public energy, exhausted by the civil wars and debilitated by the arts of the tyrants, sank deep and deeper into the lassitude of acquiescent lethargy. Religion expired in laughter, irony and licence. Domestic simplicity yielded to vice, whereof the records are precise and unmistakable. The virile virtues disappeared. What survived of courage assumed the forms of ruffianism, ferocity and treasonable daring. Still, simultaneously with this decline in all the moral qualities which constitute a powerful people, the Italians brought their arts and some departments of their literature to a perfection that can only be paralleled by ancient Greece. The anomaly implied in this statement is striking; but it is revealed to us by evidence too overwhelming to be rejected. . . . It was through

art that the creative instincts of the people found their true and adequate channel of expression. Paramount over all other manifestations of the epoch, fundamental beneath all, penetrative to the core of all, is the artistic impulse. The slowly self-consolidating life of a great kingdom, concentrating all elements of national existence by the centripetal force of organic unity, was wanting. Commonwealths and despotisms, representing a more imperfect stage of political growth, achieved completion and decayed. But art survived this disintegration of the medieval fabric; and in art the Italians found the cohesion denied them as a nation. While speaking thus of art, it is necessary to give a wide extension to that word. It must be understood to include literature. . . . We are justified in regarding the literary masterpieces of the sixteenth century as the fullest and most representative expression of the Italian temperament at the climax of its growth. The literature of the golden age implies humanism, implies painting. . . . It is not only possible but right to speak of Italy collectively when we review her work in the Renaissance. Yet it should not be forgotten that Italy at this time was a federation, presenting upon a miniature scale the same diversities in her component parts as the nations of Europe do now. . . . At the beginning of such a review, we cannot fail to be struck with the predominance of Florence. The superiority of the Tuscans was threefold. In the first place, they determined the development of art in all its branches. In the second place, they gave a language to Italy, which, without obliterating the local dialects, superseded them in literature when the right moment for intellectual community arrived. That moment, in the third place, was rendered possible by the humanistic movement, which began at Florence. . . . What the Lombards and Venetians produced in fine art and literature was of a later birth. Yet the novelists of Lombardy, the Latin lyrists of Garda, the school of romantic and dramatic poets at Ferrara, the group of sculptors and painters assembled in Milan by the Sforza dynasty, the macaronic Muse of Mantua, the unrivalled magnificence of painting at Venice, the transient splendour of the Parmese masters, the wit of Modena, the learning of the princes of Mirandola and Carpi, must be catalogued among the most brilliant and characteristic manifestations of Italian genius. In pure literature Venice contributed but little. . . . Her place, as the home of Aldo's Greek press, and as the refuge for adventurers like Aretino and Folengo, when the rest of Italy was yielding to reactionary despotism, has to be commemorated. . . . The Romans who advanced Italian culture, were singularly few. The work of Rome was done almost exclusively by aliens, drawn for the most part from Tuscany and Lombardy. After Frederick II.'s brilliant reign, the Sicilians shared but little in the intellectual activity of the nation."—J. A. Symonds, *Renaissance in Italy: Italian Literature*, ch. 17.

A. D. 1501-1504.—Perfidious treaty for the partition of Naples between Louis XII. of France and Ferdinand of Aragon.—Their joint conquest.—Their quarrel and war.—The French expelled.—The Spaniards in possession.—“In the spring of 1501, the French army was ready to pursue its march to Naples. King Frederick, alarmed at the storm which was gath-

ering round his head, had some months before renewed the propositions formerly made by his father Ferdinand to Charles VIII.; namely, to acknowledge himself a feudatory of France, to pay an annual tribute, and to pledge several maritime towns as security for the fulfilment of these conditions. Louis, however, would not hear of these liberal offers, although Ferdinand the Catholic [of Aragon] undertook to guarantee the payment of the tribute proffered by Frederick, and strongly remonstrated against the contemplated expedition of the French King. Ferdinand finding that he could not divert Louis from his project, proposed to him to divide Naples between them, and a partition was arranged by a treaty concluded between the two monarchs at Granada, November 11th, 1500. Naples, the Terra di Lavoro, and the Abruzzi were assigned to Louis, with the title of King of Naples and Jerusalem; while Ferdinand was to have Calabria and Apulia with the title of Duke.” This perfidious arrangement was kept secret, of course, from Frederick. “Meanwhile the forces of Ferdinand, under Gonsalvo of Cordova [the ‘Great Captain,’ as he was styled after his Italian campaign], were admitted as friends into the Neapolitan fortresses, which they afterwards held as enemies. Frederick opened to them without suspicion his ports and towns, and thus became the instrument of his own ruin. The unhappy Frederick had in vain looked around for assistance. He had paid the Emperor Maximilian 40,000 ducats to make a diversion in his favour by attacking Milan, but Maximilian was detached from the Neapolitan alliance by a counter bribe, and consented to prolong the truce with France. Frederick had then had recourse to Sultan Bajazet II., with as little effect; and this application only served to throw an odium on his cause. . . . The French army, which did not exceed 13,000 men, began its march towards Naples about the end of May, 1501, under the command of Stuart d’Aubigny, with Cæsar Borgia [son of Pope Alexander VI.] for his lieutenant. When it arrived before Rome, June 25th, the French and Spanish ambassadors acquainted the Pope with the treaty of Granada, and the contemplated partition of Naples, in which the suzerainty of this kingdom was guaranteed to the Holy See; a communication which Alexander received with more surprise than displeasure, and he proceeded at once to invest the Kings of France and Aragon with the provinces which they respectively claimed. Attacked in front by the French, in the rear by Gonsalvo, Frederick did not venture to take the field. He cantoned his troops in Naples, Aversa, and Capua, of which the last alone made any attempt at defence. It was surprised by the French while in the act of treating for a capitulation (July 24th), and was subjected to the most revolting cruelty; 7,000 of the male inhabitants were massacred in the streets; the women were outraged; and forty of the handsomest reserved for Borgia’s harem at Rome; where they were in readiness to amuse the Court at the extraordinary and disgusting fête given at the fourth marriage of Lucretia. Rather than expose his subjects to the horrors of a useless war, Frederick entered into negotiations with d’Aubigny, with the view of surrendering himself to Louis XII. . . . In October, 1501, he sailed for France with a small squadron, which remained to him. In return

for his abandonment of the provinces assigned to the French King, he was invested with the county of Maine, and a life pension of 30,000 ducats, on condition that he should not attempt to quit France; a guard was set over him to enforce the latter proviso, and this excellent prince died in captivity in 1504. Meanwhile Gonsalvo of Cordova was proceeding with the reduction of Calabria and Apulia. . . . The Spaniards entered Taranto March 1st, 1502; the other towns of southern Italy were soon reduced, and the Neapolitan branch of the House of Aragon fell for ever, after reigning 65 years. In the autumn of 1501, Louis had entered into negotiations with the Emperor, in order to obtain formal investiture of the Duchy of Milan. With this view, Louis's daughter Claude, then only two years of age, was affianced to Charles [afterwards the Emperor, Charles V.], grandson of Maximilian, the infant child of the Archduke Philip and Joanna of Aragon. A treaty was subsequently signed at Trent, October 13th, 1501, by Maximilian and the Cardinal d'Amboise, to which the Spanish sovereigns and the Archduke Philip were also parties. By this instrument Louis engaged, in return for the investiture of Milan, to recognise the pretensions of the House of Austria to Hungary and Bohemia, and to second Maximilian in an expedition which he contemplated against the Turks. It was at this conference that those schemes against Venice began to be agitated, which ultimately produced the League of Cambray. The treaty between Louis and Ferdinand for the partition of Naples was so loosely drawn, that it seemed purposely intended to produce the quarrels which occurred." Disputes arose as to the possession of a couple of provinces, and the Spaniards were driven out. "In the course of 1502 the Spaniards were deprived of everything, except Barletta and a few towns on the coast of Bari. It was in the combats round this place that Bayard, by his deeds of courage and generosity, won his reputation as the model of chivalry, and became the idol of the French soldiery." The crafty and unscrupulous king of Aragon now amused Louis with the negotiation of a treaty for the relinquishment of the whole Neapolitan domain to the lately affianced infants, Charles of Austria and Claude of France, while he diligently reinforced the "Great Captain." Then "Gonsalvo suddenly resumed the offensive with extraordinary vigour and rapidity, and within a week two decisive battles were fought"—at Seminara, in Calabria, April 21, 1503, and at Cerignola, near Barletta, April 28. In the last named battle the French army was dispersed and almost destroyed. On the 14th of May, Gonsalvo entered Naples, and by the end of July the French had completely evacuated the Neapolitan territory. The king of France made prompt preparations for vigorous war, not only in Naples but in Spain itself, sending two armies to the Pyrenees and one across the Alps. The campaign of the latter was ruined by Cardinal d'Amboise, who stopped its march near Rome, to support his candidacy for the papal chair, just vacated by the death of Alexander VI. Malaria made havoc in the ranks of the French, and they were badly commanded. They advanced to the seat of war in October, and forced the passage of the Garigliano, November 9. "Here their progress was arrested. . . . The seasons themselves were hostile to the

French; heavy rains set in with a constancy quite unusual in that climate; and the French soldiers perished by hundreds in the mud and swamps of the Garigliano. The Spanish army, encamped near Sessa, was better supplied and better disciplined; and at length, after two months of inaction, Gonsalvo, having received some reinforcements, assumed the offensive, and in his turn crossed the river. The French, whose quarters were widely dispersed, were not prepared for this attack, and attempted to fall back upon Gaeta; but their retreat soon became a disorderly flight; many threw down their arms without striking a blow; and hence the affair has sometimes been called the rout of the Garigliano [December 29, 1503]. Peter de' Medici, who was following the French army, perished in this retreat. . . . Very few of the French army found their way back to France. Gaeta surrendered at the first summons, January 1st, 1504. This was the most important of all Gonsalvo's victories, as it completed the conquest of Naples. The two attacks on Spain had also miscarried. . . . A truce of five months was concluded, November 15th, which was subsequently converted into a peace of three years."—T. H. Dyer, *Hist. of Modern Europe*, bk. 1, ch. 5-6 (v. 1).

A. D. 1504-1506.—The Treaties of Blois.—Tortuous diplomacy of Louis XII.—His double renunciation of Naples.—"There was danger [to Louis XII. of France] that the loss of the Milanese should follow that of the kingdom of Naples. Maximilian was already preparing to assert his imperial rights beyond the Alps, and Gonsalvo de Cordova was marching toward the northern part of the peninsula. Louis XII. divided and disarmed his enemies by three treaties, signed at Blois on the same day (1504). By the first Louis and Maximilian agreed to attack Venice, and to divide the spoil; by the second Louis promised the king of the Romans 200,000 francs in return for the investiture of the Milanese; by the third he renounced the kingdom of Naples in favor of Maximilian's grandson Charles, who was to marry Claude, daughter of Louis XII., and receive as her dowry three French provinces,—Burgundy, Brittany, and Blois. A more disastrous agreement could not have been made. Charles was to obtain by inheritance from his father, Philip the Handsome, the Netherlands; from his mother, Castile; from his paternal grandfather, Austria; from his maternal grandfather, Aragon. And now he was assured of Italy, and France was to be dismembered for him. This was virtually giving him the empire of Europe. France protested, and Louis XII. seized the first occasion to respond to her wishes. He found it in 1505, when Ferdinand the Catholic married Germaine de Foix, niece of Louis XII. Louis by treaty made a second cession of his rights over the kingdom of Naples to his niece, thus breaking one of the principal conditions of his treaty with Maximilian. He convoked the States-General at Tours in order openly to break the others (1506). The Assembly

declared that the fundamental law of the state did not permit alienations of the domains of the crown, and besought the king to give his daughter in marriage to his heir presumptive, Francis, Duke of Angoulême, in order to insure the integrity of the territory and the independence of France. Louis XII. found little difficulty in acceding to their request. Maximilian and Ferdinand were at the time unable to protest."—V. Duruy, *Hist. of France*, ch. 38.

A. D. 1508-1509.—The League of Cambrai against Venice.—The continental provinces of the Republic torn away. See VENICE: A. D. 1508-1509.

A. D. 1510-1513.—Dissolution of the League of Cambrai and formation of the Holy League against France.—The French expelled from Milan and all Italy.—Restoration of the Medici.—Recovery of Venetian territories.—As the League of Cambrai began to weaken and fall in pieces, the vigorous republic of Venice "came forth again, retook Padua, and kept it through a long and terrible siege, at last forcing the Emperor to withdraw and send back his French allies. The Venetians recovered Vicenza, and threatened Verona; Maximilian, once more powerless, appealed to France to defend his conquests. Thus things stood [1510] when Julius II. made peace with Venice and began to look round him for allies against Louis XII. He negotiated with the foreign kings; but that was only in order thereby to neutralise their influence, sowing discord among them; it was on the Swiss mercenaries that he really leant. Now that he had gained all he wanted on the northern frontier of the States of the Church, he thought that he might safely undertake the high duty of protecting Italy against the foreigner: he would accomplish what Caesar Borgia had but dreamed of doing, he would chase the Barbarian from the sacred soil of culture. . . . He 'thanked God,' when he heard of the death of the Cardinal of Amboise, 'that now he was Pope alone!' . . . He at once set himself to secure the Swiss, and found a ready and capable agent in Matthew Schynner, Bishop of Sion in the Valais. . . . Bishop Schynner was rewarded for this traffic with a cardinal's hat. And now, deprived by death of the guiding hand [of Cardinal d'Amboise], Louis XII. began to follow a difficult and dangerous line of policy: he called a National Council at Tours, and laid before it, as a case of conscience, the question whether he might make war on the Pope. The Council at once declared for the King, distinguishing, as well they might under Julius II., between the temporal and the spiritual in the Papacy, and declaring that any papal censure that might be launched would be null and void. Above all, an appeal was made to a General Council. . . . Meanwhile war went on in Italy. A broadly-planned attack on the Milanese, on Genoa, and Ferrara, concerted by Julius II. with the Venetians and Swiss, had come to nothing. Now the warlike pontiff—one knows his grim face from Raphael's picture, and his nervous grasp of the arms of his chair, as though he were about to spring forward into action—took the field in person. At Bologna he fell ill; they thought he would die; and Chaumont of Amboise was marching up with the French at his heels to surround and take him there. But by skilful treating with the French general Julius gained time, till a strong force of

Venetians had entered Bologna. Then the Pope rose from his sick-bed, in the dead of winter, and marched out to besiege Mirandola," 1511, which capitulated. "Bayard soon after attacked him, and all but took him prisoner. A congress at Mantua followed; but the Pope sternly refused to make terms with the French: the war must go on. Then Louis took a dangerous step. He convoked an ecclesiastical council at Pisa, and struck a medal to express his contempt and hatred for Julius II. . . . The Pope had gone back to Rome, and Bologna had opened her gates to the French; the coming council, which should depose Julius, was proclaimed through Northern Italy. But, though the moment seemed favourable, nothing but a real agreement of the European powers could give success to such a step. And how far men were from such an agreement Louis was soon to learn; for Julius, finding that the French did not invade the States of the Church, resumed negotiations with such success that in October 1511 a 'Holy League' was formed between the Pope, Venice, Ferdinand of Aragon, and Henry VIII. of England. Maximilian wavered and doubted; the Swiss were to be had—on payment. At first Louis showed a bold front; in spite of this strange whirl of the wheel of politics from the League of Cambrai to the Holy League, he persevered, giving the command of Milan to his nephew, Gaston of Foix, Duke of Nemours, a man of 23 years, the most promising of his younger captains. He relieved Bologna, seized Brescia, and pillaged it [1512]; and then pushed on to attack Ravenna; it is said that the booty of Brescia was so great that the French soldiers, having made their fortunes, deserted in crowds, and left the army much weakened. With this diminished force Gaston found himself caught between the hostile walls of Ravenna, and a relieving force of Spaniards, separated from him only by a canal. The Spaniards, after their usual way of warfare, made an entrenched camp round their position. The French first tried to take the city by assault; but being driven back, determined to attack the Spanish camp." They made the assault [on Easter Day, 1512] and took the camp, with great slaughter; but in his reckless pursuit of the retreating enemy Gaston de Foix was slain. "The death of the young Prince more than balanced the great victory of the day: for with Gaston, as Guicciardini says, perished all the vigour of the French army. . . . Though Ravenna was taken, the French could no longer support themselves. Their communications with Milan were threatened by the Swiss; they left garrisons in the strong places and fell back. The council of Pisa also had to take refuge at Milan. When the Swiss came down from their mountain-passes to restore the Sforza dynasty, the harassed council broke up from Milan, and fled to Lyons; there it lingered a while, but it had become contemptible; anon it vanished into thin air. The Pope retook Bologna, Parma, Piacenza; the Medici returned to Florence [see FLORENCE: A. D. 1502-1569]; Maximilian Sforza was re-established [see MILAN: A. D. 1512], while the Grisons Leagues received the Valteline as their reward: the English annoyed the coast without any decisive result. . . . Ferdinand seized Navarre, which henceforward became Spanish to the Pyrenees. Before winter, not one foot of Italian soil remained to the French. Julius II., the

formidable centre of the Alliance, died at this moment (1513). . . . The allies secured the election of a Medicean Pope, Leo X., a pontiff hostile to France, and certain not to reverse that side of his predecessor's policy. . . . Louis, finding himself menaced on every side, suddenly turned about and offered his friendship to Venice. . . . Natural tendencies overbore all resentments on both sides, and a treaty between them both guaranteed the Milanese to Louis and gave him a strong force of Venetian soldiers. Meanwhile, Ferdinand had come to terms with Maximilian and boyish Henry VIII., who . . . had framed a scheme for the overthrow of France. The French king, instead of staying at home to defend his frontiers, was eager to retake Milan, and to join hands with the Venetians. . . . But the Swiss round Maximilian Sforza defended him without fear or treachery; and catching the French troops under La Trémoille in a wretched position not far from Novara, attacked and utterly defeated them (1513). The French withdrew beyond the Alps; the Venetians were driven off with great loss by the Spaniards, who ravaged their mainland territories down to the water's edge. For the short remainder of his life Louis XII. had no leisure again to try his fortunes in Italy: he was too busy elsewhere."—G. W. Kitchin, *Hist. of France*, v. 2, bk. 2, ch. 3.

A. D. 1523-1527.—The double dealings of Pope Clement VII.—Invasion of Milanese by Francis I. and his defeat and capture at Pavia.—The Holy League against Charles V.—The attack on Rome by Constable Bourbon.—Giulio de' Medici, natural son of Guiliamo de' Medici, and cousin of Leo X., had succeeded Adrian VI. in the Papacy in 1523, under the name of Clement VII. "Nothing could have been more unfortunate than the new Pope's first steps on the zig-zag path which he proposed to follow. Becoming alarmed at the preponderating power of Charles [the Fifth, Emperor, King of Spain and Naples, Duke of Burgundy, and ruler of all the Netherlands,—see AUSTRIA: A. D. 1496-1526; and GERMANY: A. D. 1519], in 1524 he entered into a league with Francis [the First, king of France]; but scarcely had this been concluded when the memorable battle of

Pavia [see FRANCE: A. D. 1523-1525], resulting in the entire defeat of the French, on the 24th of February, 1525, and the captivity of the French king, frightened him back again into seeking anew the friendship of Charles, in April of that year. Each of these successive treaties was of course duly sworn to and declared inviolable; but it could hardly be expected that he who exercised the power of annulling other men's oaths would submit to be bound by his own, when the observance of them became inconvenient. Clement accordingly was not prevented by the solemn treaty of April, 1525, from conspiring against his new ally in the July following. The object of this conspiracy was to induce Ferdinando Francesco d'Avalos, Marquis of Pescara, who commanded the army of Charles V. before Milan, to revolt against his sovereign, and join the Italians in an attempt to put an end for ever to Spanish sway in Italy. . . . But the Spanish general had no sooner secured clear evidence of the plans of the conspirators, by pretending to listen to their proposals, than he reported the whole to Charles. The miscarriage of this scheme, and the exposure consequent upon it, necessarily threw the vacillating and terrified Pontiff once more into the arms of Francis. 'The Most Christian'—as the old Italian historians often elliptically call the Kings of France—obtained his release from his Madrid prison by promising on oath, on the 17th of January, 1526, all that Charles, driving a hard bargain, chose to demand of him [see FRANCE: A. D. 1525-1526]. And Clement hastened to prove the sincerity of his renewed friendship by a professional contribution to the success of their new alliance, in the welcome shape of a plenary absolution from all observance of the oaths so sworn. . . . On the 22nd of May following [at Cognac], the Pope entered into a formal league with Francis [called 'Holy,' for the reason that the Pope was a party to it]. Venice joined her troops to those of the Ecclesiastical States, and they marched together to the support of the Milanese, who had risen in revolt against the Emperor. Assistance had also been promised by Henry of England, who had stipulated, however, that he should not be named as a party to the alliance, but only considered as its protector. This was the most strenuous and most united attempt Italy had yet made to rid herself of the domination of the stranger, and patriotic hopes beat high in several Italian hearts. . . . It may be easily imagined that the 'Most Catholic' monarch [Charles V.] felt towards Clement at this time in a manner which led him to distinguish very nicely between the infallible head of the universal Church and the sovereign of the Ecclesiastical States. . . . Though he retained the utmost respect and reverence for the vicergerent of heaven, he thought that a little correction administered to the sovereign of Rome would not be amiss, and nothing could be easier than to find means ready to his hand for the infliction of it. The Colonnas were of course ready for a rebellion on the slightest encouragement. . . . So when Don Ugo di Moncada, Charles's general at Naples, proposed to the Colonnas to join him in a little frolic at Clement's expense, the noble and most reverend members of that powerful family jumped at the proposal. . . . The united forces of the Viceroy and the Colonnas accordingly one morning entered Rome, altogether without opposition, and marched at

once to the Vatican. They completely sacked, not only the Pope's palace, and the residences of many gentlemen and prelates, but also, says the historian [Varchi], 'with unheard-of avarice and impiety,' robbed the sacristy of St. Peter of everything it contained. Clement had barely time to escape into the castle of St. Angelo; but as he found there neither soldiers nor ammunition, nor even food for above three days, . . . he consented to a treaty by which the Pope agreed to pardon the Colonnas freely for all they had done against him; to take no steps to revenge himself on them; to withdraw his troops from Lombardy; and to undertake nothing in any way, or under any pretext, against the Emperor." As a hostage for the fulfilment of this treaty, Pope Clement gave his dear friend Filippo Strozzi; but no sooner was he delivered from his captors than he hired seven "black companies" of adventurers and 2,000 Swiss, and began a furious war of extermination upon the Colonnas and all their dependents. At the same time he wrote private letters to the heads of his "Holy League," "warning them to pay no heed to any statement respecting a treaty made by him with the Emperor, and assuring them of his intention to carry on the war with the utmost energy." A little later, however, this remarkable Holy Father found it convenient to make another treaty with the Viceroy of Naples, for the release of his friend Strozzi, which bound him still more to friendly relations with the Emperor. This latter treaty, of March, 1527, "would seem in some sort to imply the reconciliation once again of the Pope and the Emperor." But Charles had already set forces in motion for the chastisement of the faithless Pope and his allies, which either he could not or did not care to arrest. "The Constable Bourbon, whom the gross injustice of Francis I., and the intolerable persecution of his infamous mother, Louise de Savoie, had driven to abandon his country and allegiance [see FRANCE: A. D. 1520-1523], . . . was now . . . marching southwards, with the imperial troops, to chastise the different members of the League against the Emperor, which Clement, as has been seen, had formed. George Frundsberg, a German leader of reputation, had also crossed the Alps with 15,000 men,—all Lutherans and Lanzknechts,—as the Italians write with horror and dismay,—and had joined these forces to the Spaniards under Bourbon. . . . The combined force was in all respects more like a rabble rout of brigands and bandits than an army; and was assuredly such as must, even in those days, have been felt to be a disgrace to any sovereign permitting them to call themselves his soldiers. Their pay was, as was often the case with the troops of Charles V., hopelessly in arrear, and discipline was of course proportionably weak among them. . . . The progress southward of this bandit army . . . filled the cities exposed to their inroad with terror and dismay. They had passed like a destroying locust swarm over Bologna and Imola, and crossing the Apennines, which separate Umbria from Tuscany, had descended into the valley of the Arno not far from Arezzo. Florence and Rome both trembled. On which would the storm burst? That was the all-absorbing question. Pope Clement, with his usual avarice-blinded imbecility, had, immediately on concluding the above-mentioned treaty with the Neapolitan viceroy, discharged all his

troops except a body-guard of about 600 men. Florence was nearly in as defenceless a position"; but a small army of the League, under the Duke of Urbino, was at Inessa, and it was "probably the presence of this army, little as it had hitherto done to impede the progress of the enemy, which decided Bourbon eventually to determine on marching towards Rome. It seems doubtful how far they were in so doing executing the orders, or carrying out the wishes, of the Emperor. . . . Upon the whole we are warranted in supposing that Bourbon and Frundsberg would hardly have ventured on the course they took, if they had not had reason to believe that it would not much displease their master. . . . On the 5th of May [1527] Bourbon arrived beneath the walls of Rome. . . . On the evening of the 6th of May the city was stormed and given over to the unbridled cupidity and brutality of the soldiers. . . . Bourbon himself had fallen in the first moments of the attack."—T. A. Trollope, *Hist. of the Commonwealth of Florence*, bk. 10, ch. 3 (v. 4).

A. D. 1527.—The Sack of Rome by the Spanish and German Imperialists.—"Bourbon fell at the first assault; but by evening the Vatican suburb was in the hands of the enemy. Clement, who was even best informed of the state of things, had not anticipated such an issue. He scarcely saved himself by flight from the Vatican to the castle of St. Angelo, whither the fugitive population hurried, as the shipwrecked crew of an entire fleet hastens to a single boat which cannot receive them. In the midst of the thronging stream of men, the portcullis was lowered. Whoever remained without was lost. Benvenuto Cellini was at that time in Rome, and was among the defenders of the walls. He boasted that his ball had destroyed Bourbon. He stole fortunately into the citadel, before it was closed, and entered the Pope's service as bombardier. Even at this last moment, Clement might have saved Rome itself, which, situated on the opposite shore of the river, had not yet been entered by the enemy. They offered to spare it for a ransom; but finding this too high, and awaiting hourly Urbino's army, to which, though nothing was yet to be seen of it, he looked as a deliverer in the time of need, he would hear nothing of it. And thus the undefended city fell into the hands of the imperialists. Almost without resistance they entered Trastevere, a small quarter of the city lying to the west of the Tiber; and then crossing the bridges, which no one had demolished, they pressed forwards into the heart of Rome. It was the depth of the night. Benvenuto Cellini was stationed on the tower of the castle of St. Angelo, at the foot of the colossal angel, and saw the flames bursting forth in the darkness, and heard the sorrowful cry all around. For it was late before the soldiers began to cast off all restraint. They had entered quietly. The Germans stood in battalions. But when they saw the Spaniards broken up and plundering, the desire was aroused in them also; and now a spirit of emulation appeared, as to which nation could outdo the other in cruelty. The Spaniards, it is asserted by impartial Italians, carried the day. There had been no siege, no bombardment,

no flight of any great extent; but as if the earth had opened, and had disgorged a legion of devils, so suddenly came these hosts. Everything was in a moment abandoned to them. We must endeavour to conceive what kind of men these German soldiers were. They formed an intermediate class between the prime and the refuse of the people. Gathered together by the hope of booty, indifferent what end was assigned them, rendered wild by hunger and tardy pay, left without a master after the death of their commander, they found themselves unrestrained in the most luxurious city of the world—a city abounding with gold and riches, and at the same time decried for centuries in Germany, as the infernal nest of the popes, who lived there as incarnate devils, in the midst of their Babylonian doings. The opinion that the pope of Rome, and Clement VII. in particular, was the devil, prevailed not only in Germany, but in Italy and in Rome the people called him so. In the midst of plague and famine he had doubled the taxes and raised the price of bread. What with the Romans, however, was an invective arising from indignation, was an article of faith among the Germans. They believed they had to do with the real antichrist, whose destruction would be a benefit to Christendom. We must remember, if we would understand this fury of the German soldiery, in whose minds, as in those of all Germans, Lutheran ideas at that time prevailed, how Rome had been preached and written upon in the north. The city was represented to people as a vast abyss of sin; the men as villains, from the lowest up to the cardinals; the women as courtesans; the business of all as deceit, theft, and murder; and the robbing and deluding of men that had for centuries been emanating from Rome, was regarded as the universal disease from which the world was languishing. Thither for centuries the gold of Germany had flowed; there had emperors been humbled or poisoned; from Rome every evil had sprung. And thus, while satiating themselves with rapine and murder, they believed a good work was being done for the welfare of Christendom, and for the avenger of Germany. Never, however—this we know—does the nature of man exhibit itself more beast-like, than when it becomes furious for the sake of ideas of the highest character. Before the castle of St. Angelo, which, carefully fortified with walls and fosses, alone afforded resistance, the German soldiers proclaimed Martin Luther as pope. Luther's name was at that time a war-cry against pope and priesthood. The rude multitude surmised not what Luther desired when he attacked the papacy. In front of St. Peter's church, they represented an imitation of the papal election with the sacred garments and utensils. They compelled one priest to give extreme unction to a dying mule. One protested that he would not rest until he had consumed a piece of the pope's flesh. It is true, Italians for the most part relate this, but the German reports themselves do not deny the excessive barbarity which was permitted. Ten millions of precious metal was carried away. How much blood did this money involve, and what was done to those from whom it was taken? Fewer were put to death than were plundered, says one of the records, but what does that imply? It is true, the Germans often quarrelled with the Spaniards, because the horrors which they saw

them practise were too terrible for them. Otherwise the sparing of human life was less an act of clemency than of covetousness. Prisoners of war were at that time regarded as slaves; they were carried away as personal property, or a ransom was extorted. . . . This system was carried to a great pitch in Rome. The possessors of palaces were obliged to purchase their ransom, the Spanish cardinals as well as the Italian—no difference was made. Thus at least escape was possible. . . . And as the people were treated, so were the things. Upon the inlaid marble floor of the Vatican, where the Prince of Orange took up his abode—the command of the army devolving upon him after Bourbon's death—the soldiers lighted their fire. The splendid stained glass windows, executed by William of Marseilles, were broken for the sake of the lead. Raphael's tapestries were pronounced excellent booty; in the paintings on the walls the eyes were put out; and valuable documents were given as straw to the horses which stood in the Sistine Chapel. The statues in the streets were thrown down; the images of the Mother of God in the churches were broken to pieces. For six months the city thus remained in the power of the soldiery, who had lost all discipline. Pestilence and famine appeared. Rome had more than 90,000 inhabitants under Leo X.; when Clement VII. returned a year after the conquest, scarcely a third of that number then existed—poor, famished people, who had remained behind, because they knew not whither to turn. All this lay on the conscience of the man who now for months had been condemned to look down upon this misery from the castle of St. Angelo, in which the Spaniards held him completely blockaded, and where pestilence and want of provisions appeared just as much as down below in Rome. At last, after waiting day after day, he saw Urbino's army approaching from afar: their watch-fires were to be perceived; and every moment he expected that the duke would attack and deliver the city. But he moved not. It is thought he intended now to avenge the rapine which the Medici under Leo X. had carried on against him. . . . After having rested for some time in sight of the city, in which the imperialists had opened their intrenchments round the castle of St. Angelo for a regular siege, he withdrew back again to the north, and left the pope to his fate.”—H. Grimm, *Life of Michael Angelo*, ch. 10, sect. 3 (v. 2).

ALSO IN: Benvenuto Cellini, *Life*; tr. by J. A. Symonds, bk. 1, sect. 34-38 (v. 1).—*The same*; tr. by T. Roscoe, ch. 7.—J. S. Brewer, *The Reign of Henry VIII.*, ch. 25 (v. 2).

A. D. 1527-1529.—Siege and captivity of the Pope.—New league against the Emperor.—French invasion and disastrous siege of Naples.—Genoese independence recovered.—Treaties of Barcelona and Cambrai.—Francis renounces all pretensions beyond the Alps.—Charles V. supreme.—Shut up in Castle St. Angelo, the Pope, Clement VII., “deprived of every resource, and reduced to such extremity of famine as to feed on asses' flesh, was obliged to capitulate on such conditions as the conquerors were pleased to prescribe. He agreed to pay 400,000 ducats to the army; to surrender to the emperor all the places of strength belonging to the Church; and, besides giving hostages, to remain a prisoner himself until the chief articles

were performed. . . . The account of this extraordinary and unexpected event was no less surprising than agreeable to the emperor. But in order to conceal his joy from his subjects, who were filled with horror at the success and crimes of their countrymen, and to lessen the indignation of the rest of Europe, he declared that Rome had been assaulted without any order from him. He wrote to all the princes with whom he was in alliance, disclaiming his having had any knowledge of Bourbon's intention. He put himself and court into mourning; commanded the rejoicings which had been ordered for the birth of his son Philip to be stopped; and, employing an artifice no less hypocritical than gross, he appointed prayers and processions throughout all Spain for the recovery of the pope's liberty, which, by an order to his generals, he could have immediately granted him. . . . Francis and Henry [of France and England], alarmed at the progress of the imperial arms in Italy, had, even before the taking of Rome, entered into a closer alliance; and, in order to give some check to the emperor's ambition, had agreed to make a vigorous diversion in the Low Countries. The force of every motive which had influenced them at that time was now increased; and to these was added the desire of rescuing the pope out of the emperor's hands, a measure no less politic than it appeared to be pious. This, however, rendered it necessary to abandon their hostile intentions against the Low Countries, and to make Italy the seat of war. . . . Besides all . . . public considerations, Henry was influenced by one of a more private nature: having begun, about this time, to form his great scheme of divorcing Catharine of Aragon, towards the execution of which he knew that the sanction of papal authority would be necessary, he was desirous to acquire as much merit as possible with Clement, by appearing to be the chief instrument of his deliverance. . . . Henry . . . entered so eagerly into this new alliance, that, in order to give Francis the strongest proof of his friendship and respect, he formally renounced the ancient claim of the English monarchs to the crown of France, which had long been the pride and ruin of the nation; as a full compensation for which he accepted a pension of 50,000 crowns, to be paid annually to himself and his successors. The pope, being unable to fulfil the conditions of his capitulation, still remained a prisoner. . . . The Florentines no sooner heard of what had happened at Rome, than they ran to arms . . . and, declaring themselves a free state, reestablished their ancient popular government [see FLORENCE: A. D. 1502-1509]. The Venetians, taking advantage of the calamity of their ally, the pope, seized Ravenna, and other places belonging to the church, under pretext of keeping them in deposit." On the other hand, Lannoy, Charles' viceroy at Naples, "marched to Rome, together with Moncada and the Marquis del Guasto, at the head of all the troops which they could assemble in the kingdom of Naples. The arrival of this reinforcement brought new calamities on the unhappy citizens of Rome; for the soldiers, envying the wealth of their companions, imitated their license, and with the utmost rapacity gathered the gleanings which had escaped the avarice of the Spaniards and Germans. There was not now any army in Italy capable of making head against the imperialists."

But the troops who had enjoyed months of license and riotous pillage in Rome could not be brought back to discipline, and refused to quit the perishing city. They had chosen for their general the Prince of Orange, who "was obliged to pay more attention to their humours than they did to his commands. . . . This gave the king of France and the Venetians leisure to form new schemes, and to enter into new arrangements for delivering the pope, and preserving the liberties of Italy. The newly-restored republic of Florence very imprudently joined with them, and Lautrec . . . was . . . appointed generalissimo of the league. . . . The best troops in France marched under his command; and the king of England, though he had not yet declared war against the emperor, advanced a considerable sum towards carrying on the expedition. Lautrec's first operations [1527] were prudent, vigorous and successful. By the assistance of Andrew Doria, the ablest sea-officer of that age, he rendered himself master of Genoa, and reestablished in that republic the faction of the Fregosi, together with the dominion of France. He obliged Alexandria to surrender after a short siege, and reduced all the country on that side of the Tessino. He took Pavia, which had so long resisted the arms of his sovereign, by assault, and plundered it with . . . cruelty. . . . But Lautrec durst not complete a conquest which would have been so honourable to himself and of such advantage to the league. Francis . . . was afraid that, if Sforza were once reestablished in Milan, they [his confederates] would second but coldly the attack which he intended to make on the kingdom of Naples. . . . Happily the importunities of the pope and the solicitations of the Florentines, the one for relief, and the other for protection, were so urgent as to furnish him with a decent pretext for marching forward. . . . While Lautrec advanced slowly towards Rome, the emperor" came to terms with the pope, and Clement obtained his liberty at the cost of 350,000 crowns, a tenth of the ecclesiastical revenues of Spain, and an agreement to take no part in the war against Charles. The latter next made overtures to the French king, offering some relaxation of the treaty of Madrid; but they were received in a manner that irritated even his cold temper. He, in turn, provoked his antagonist, until a ridiculous exchange of defiance to personal combat passed between them. Meantime "Lautrec continued his operations, which promised to be more decisive. His army, which was now increased to 35,000 men, advanced by great marches towards Naples." The remains of the imperial army retreated, as he advanced, from Rome, where it had held riot for ten months, and took shelter behind the fortifications of the Neapolitan capital. Lautrec undertook (April, 1528) the siege of Naples, with the co-operation of the Genoese admiral, Doria, who blockaded its port. But he was neglected by his own frivolous king, and received little aid from the Pope, the king of England, or other confederates of the league. Moreover, Doria and the Genoese suffered treatment so insolent, oppressive and threatening, from the French court that the former opened negotiations with the emperor for a transfer of his services. "Charles, fully sensible of the importance of such an acquisition, granted him whatever terms he required. Doria sent back his commission, together with the collar of St.

Michael, to Francis, and, hoisting the imperial colours, sailed with all his galleys towards Naples, not to block up the harbour of that unhappy city, as he had formerly engaged, but to bring them protection and deliverance. His arrival opened the communication with the sea, and restored plenty in Naples, which was now reduced to the last extremity; and the French . . . were soon reduced to great straits for want of provisions." With the heat of summer came pestilence; Lautrec died, and the wasted French army, attempting to retreat, was forced to lay down its arms and march under guard to the frontiers of France. "The loss of Genoa followed immediately upon the ruin of the army in Naples." Doria took possession of the town; the French garrison in the citadel capitulated (September 12, 1528), and the citadel was destroyed. "It was now in Doria's power to have rendered himself the sovereign of his country, which he had so happily delivered from oppression." But he magnanimously refused any pre-eminence among his fellow citizens. "Twelve persons were elected to new-model the constitution of the republic. The influence of Doria's virtue and example communicated itself to his countrymen; the factions which had long torn and ruined the state seemed to be forgotten; prudent precautions were taken to prevent their reviving; and the same form of government which hath subsisted with little variation since that time in Genoa, was established with universal applause." In Lombardy, the French army, under St. Pol, was surprised, defeated and ruined at Landriano (June, 1529), as completely as the army in Naples had been a few months before. All parties were now desirous of peace, but feared to seem too eager in making overtures. Two women took the negotiations in hand and carried them to a conclusion. "These were Margaret of Austria, dutchess dowager of Savoy, the emperor's aunt, and Louise, Francis's mother. They agreed on an interview at Cambrai, and, being lodged in two adjoining houses, between which a communication was opened, met together without ceremony or observation, and held daily conferences, to which no person whatever was admitted." The result was a treaty signed August 5, 1529, known as the Peace of Cambrai, or "the Ladies' Peace," or "Peace of the Dames." By its terms, Francis was to pay 2,000,000 crowns for the ransom of his sons; restore such towns as he still held in the Milanese; resign and renounce his pretensions to Naples, Milan, Genoa, and every other place beyond the Alps, as well as to Flanders and Artois; and consummate his marriage with the emperor's sister, Eleanor. On the other hand, the emperor only agreed not to press his claims on Burgundy, for the present, but reserved them, in full force. Another treaty, that of Barcelona, had already, in 1529, been concluded between the emperor and the pope. The former gave up the papal states which he occupied, and agreed to reestablish the dominion of the Medici in Florence; besides giving his natural daughter in marriage to Alexander, the head of that family. In return he received the investiture of Naples, absolution for all concerned in the plundering of Rome, and the grant to himself and his brother of a fourth of the ecclesiastical revenues throughout their dominions.—W. Robertson, *Hist. of the Reign of Charles V.*, bk. 4-5.

(Southern): A. D. 1528-1570.—Naples under the Spanish Viceroy.—Ravages of the Turks along the coast.—Successful revolt against the Inquisition.—Unsuccessful French invasion under Guise.—"After the memorable and unfortunate expedition of Lautrec, in 1528, Philibert of Chalons, Prince of Orange, who commanded the Imperial army, exercised the severest vengeance [in Naples] on the persons and estates of all those nobles who had joined the French, or who appeared to demonstrate any attachment towards that nation. . . . These multiplied . . . acts of oppression received no effectual redress during the short administration [1529-1532] of Cardinal Colonna, who succeeded to the Prince of Orange. . . . In the place of Cardinal Colonna was substituted Don Pedro de Toledo, who governed Naples with almost unlimited powers, during the space of near 21 years. His viceroyalty, which forms a memorable Epoch in the annals of the country, demands and fixes attention. We are impressed with horror at finding, by his own confession, . . . that during the progress of his administration, he put to death near 18,000 persons, by the hand of the executioner. Yet a fact still more extraordinary is that Giannone, himself a Neapolitan, and one of the ablest as well as most impartial historians whom the 18th century has produced, not only acquits, but even commends Toledo's severity, as equally wholesome and necessary," on account of the terrible lawlessness and disorder which he found in the country. "The inflexible and stern character of the viceroy speedily redressed these grievances, and finally restored order in the capital. . . . All the provinces experienced equal attention, and became the objects of his personal inspection. The unprotected coasts of Calabria and of Apulia, subject to the continual devastation of the Turks, who landed from their galleys, were fortified with towers and beacons to announce the enemy's approach. . . . Repeated attempts were made by Solymán II., Emperor of the Turks, either alone or in conjunction with the fleets of France, to effect the conquest of Naples, during this period: but the exertions of Toledo were happily attended with success in repulsing the Turkish invaders. . . . In no part of the middle ages . . . were the coasts of Naples and Sicily so frequently plundered, ravaged, and desolated, as at this period. Thousands of persons of both sexes, and of all conditions, were carried off by Barbarossa, Dragut, Sinan, and the other Bashaws, or admirals of the Porte. Not content with landing on the shores and ravaging the provinces, their squadrons perpetually appeared in sight of Naples; laid waste the islands of Ischia and Procida, situate in its immediate vicinity; attacked the towns of Pouzzoli and Baiæ; and committed every outrage of wanton barbarity. . . . The invasion of 1552, when Dragut blocked up the harbour of Naples, with 150 large galleys, during near four weeks, spread still greater consternation; and if the fleet of France had arrived, as had been concerted, it is more than probable that the city must have fallen into their hands. But the delays of Henry II., Solymán's ally, proved its preservation. The Turkish admiral, corrupted by a present of 200,000 ducats, which the

Viceroy found means of conveying to him, retired and made sail for Constantinople. . . . The administration of Toledo . . . was . . . completely subverted from the moment that he attempted [1546] to introduce the Inquisition. . . . The Neapolitans, patient under every other species of oppression, instantly revolted. . . . They even forgot, in the general terror, the distinction of ranks; and the Barons united with their fellow-citizens to oppose that formidable tribunal. The Viceroy, returning to the capital, reinforced by 3,000 veteran Spaniards, determined nevertheless to support the measure. Hostilities took place, and the city, during near three months, was abandoned to anarchy, while the inhabitants, having invested the castle, besieged their governor. . . . The Emperor, convinced by experience of the impracticability of success in his attempt, at length desisted." Toledo died in 1553, and "was succeeded by the Cardinal Pacheco, as Viceroy; and the abdication of Charles V., in the following year, devolved on his son Philip II. the sovereignty of Naples. Alarmed at the preparations made by Henry II., King of France, in conjunction with Paul IV., who had newly ascended the papal throne, Philip dispatched Ferdinand, Duke of Alva, to the aid of his Neapolitan subjects; and to the vigorous measures embraced by him on his arrival was due the safety of the kingdom [see FRANCE: A. D. 1547-1559]. . . . The administration of the Duke of Alcalá, to whom Philip delegated the supreme power soon after the recall of Alva [1558], lasted near 12 years, and was marked by almost every species of calamity."—Sir N. W. Wraxall, *Hist. of France, 1574-1610, ch. 9 (v. 2)*.—"The march of the Mareschal of Lautrec was the last important attempt of the French to reconquer Naples. . . . Spain remained in possession of this beautiful country for two centuries. . . . Their [the Spaniards'] ascendancy was owing as well to an iron discipline as to that inveterate character of their race, the firmness of purpose which had gradually developed itself in the long struggle for the country which they wrenched inch by inch from their tenacious enemies. The Neapolitans found that they had in the Spaniards different rulers from the French."—A. de Reumont, *The Curafus of Maddaloni: Naples under Spanish Dominion, bk. 1*.

A. D. 1529.—Siege of Florence by the Imperial forces.—Reinstatement of the Medici. See FLORENCE: A. D. 1502-1569.

A. D. 1530-1600.—Under the Spanish domination, and the Papacy of the Counter-Reformation.—The Inquisition.—The Jesuits.—The Vice-regal rule.—Deplorable state of the country.—"It will be useful, at this point, to recapitulate the net results of Charles's administration of Italian affairs in 1530. The kingdom of the Two Sicilies, with the island of Sardinia and the Duchy of Milan, became Spanish provinces, and were ruled henceforth by viceroys. The House of Este was confirmed in the Duchy of Ferrara, including Modena and Reggio. The Duchies of Savoy and Mantua and the Marquisate of Montferrat, which had espoused the Spanish cause, were undisturbed. Genoa and Siena, both of them avowed allies of Spain, the former under Spanish protection, the latter subject to Spanish coercion, remained with the name and empty privileges of republics. Venice had made her peace with

Spain, and though she was still strong enough to pursue an independent policy, she showed as yet no inclination, and had, indeed, no power, to stir up enemies against the Spanish autocrat. The Duchy of Urbino, recognised by Rome and subservient to Spanish influence, was permitted to exist. The Papacy once more assumed a haughty tone, relying on the firm alliance struck with Spain. This league, as years went by, was destined to grow still closer, still more fruitful of results. Florence alone had been excepted from the articles of peace. It was still enduring the horrors of the memorable siege when Clement left Bologna at the end of May. . . . Finally, on August 12, the town capitulated. Alessandro de' Medici, who had received the title of Duke of Florence from Charles at Bologna, took up his residence there in July 1531, and held the State by help of Spanish mercenaries under the command of Alessandro Vitelli. . . . Though the people endured far less misery from foreign armies in the period between 1530 and 1600 than they had done in the period from 1494 to 1527, yet the state of the country grew ever more and more deplorable. This was due in the first instance to the insane methods of taxation adopted by the Spanish viceroys, who held monopolies of corn and other necessary commodities in their hands, and who invented imposts for the meanest articles of consumption. Their example was followed by the Pope and petty princes. . . . The settlement made by Charles V. in 1530, and the various changes which took place in the duchies between that date and the end of the century, had then the effect of rendering the Papacy and Spain omnipotent in Italy. . . . What they only partially effected in Europe at large, by means of St. Bartholomew massacres, exterminations of Jews in Toledo and of Mussulmans in Granada, holocausts of victims in the Low Countries, wars against French Huguenots and German Lutherans, naval expeditions and plots against the state of England, assassinations of heretic princes, and occasional burning of free thinkers, they achieved with plenary success in Italy. . . . It is the tragic history of the eldest and most beautiful, the noblest and most venerable, the freest and most gifted of Europe's daughters, delivered over to the devilry that issued from the most incompetent and arrogantly stupid of the European sisterhood, and to the cruelty, inspired by panic, of an impious theocracy. When we use these terms to designate the Papacy of the Counter-Reformation, it is not that we forget how many of those Popes were men of blameless private life and serious views for Catholic Christendom. When we use these terms to designate the Spanish race in the sixteenth century, it is not that we are ignorant of Spanish chivalry and colonising enterprise, of Spanish romance, or of the fact that Spain produced great painters, great dramatists, and one great novelist in the brief period of her glory. We use them deliberately, however, in both cases; because the Papacy at this period committed itself to a policy of immoral, retrograde, and cowardly repression of the most generous of human impulses under the pressure of selfish terror; because the Spaniards abandoned themselves to a dark fiend of religious fanaticism; because they were merciless in their conquests and unintelligent in their administration of subjugated provinces; because they glutted their

lusts of avarice and hatred on industrious folk of other creeds within their borders; because they cultivated barren pride and self-conceit in social life; because at the great epoch of Europe's reawakening they chose the wrong side and adhered to it with fatal obstinacy. . . . After the year 1530 seven Spanish devils entered Italy. These were the devil of the Inquisition, with stake and torture-room, and war declared against the will and soul and heart and intellect of man; the devil of Jesuitry, with its sham learning, shameless lying, and casuistical economy of sins; the devil of vice-royal rule, with its life-draining monopolies and gross incapacity for government; the devil of an insolent soldiery, quartered on the people, clamorous for pay, outrageous in their lusts and violences; the devil of fantastical taxation, levying tolls upon the bare necessities of life, and drying up the fountains of national well-being at their sources; the devil of petty-princedom, wallowing in sloth and cruelty upon a pinchbeck throne; the devil of effeminate hidalgoism, ruinous in expenditure, mean and grasping, corrupt in private life, in public ostentatious, vain of titles, cringing to its masters, arrogant to its inferiors. In their train these brought with them seven other devils, their pernicious offspring: idleness, disease, brigandage, destitution, ignorance, superstition, hypocritically sanctioned vice. These fourteen devils were welcomed, entertained, and voluptuously lodged in all the fairest provinces of Italy. The Popes opened wide for them the gates of outraged and depopulated Rome. . . . After a tranquil sojourn of some years in Italy, these devils had every where spread desolation and corruption. Broad regions, like the Patrimony of S. Peter and Calabria, were given over to marauding bandits; wide tracts of fertile country, like the Siennese Maremma, were abandoned to malaria; wolves prowled through empty villages round Milan; in every city the pestilence swept off its hundreds daily; manufactures, commerce, agriculture, the industries of town and rural district, ceased; the Courts swarmed with petty nobles, who vaunted paltry titles, and resigned their wives to eunuchs and their sons to sloth; art and learning languished; there was not a man who ventured to speak out his thought or write the truth; and over the Dead Sea of social putrefaction floated the sickening oil of Jesuitical hypocrisy."—J. A. Symonds, *Renaissance in Italy: The Catholic Reaction*, pt. 1, ch. 1.

A. D. 1559-1600.—Peace without Prosperity.—Foreign and domestic Despotism.—Exhaustion and helplessness of the country.—"From the epoch of the treaty of Chateau Cambresis [1559] to the close of the 16th century, Italy remained, in one sense, in profound and uninterrupted peace. During this long period

of 41 years, her provinces were neither troubled by a single invasion of foreign armies, nor by any hostilities of importance between her own feeble and nerveless powers. But this half century presented, nevertheless, anything rather than the aspect of public happiness and prosperity. Her wretched people enjoyed none of the real blessings of peace. Subject either to the oppressive yoke of their native despots, or to the more general influence of the arch-tyrant of Spain, they were abandoned to all the exactions of arbitrary government, and compelled to lavish their blood in foreign wars and in quarrels not their own. While France, torn by religious and civil dissensions, sank for a time from her political station among the powers of the continent, and was no longer capable of affording protection or exciting jealousy, Philip II. was left free to indulge in the peninsula all the obdurate tyranny of his nature. . . . The popes were interested in supporting his career of bigotry and religious persecution; the other powers of Italy crouched before him in abject submission. To feed the religious wars, in which he embarked as a principal or an accessory, in the endeavour to crush the protestant cause in France, in the Low Countries, and in Germany, he drained Italy of her resources in money and in men. . . . While the Italian soldiery fought with the courage of freemen, they continued the slaves of a despot, and while the Italian youth were consumed in transalpine warfare, their suffering country groaned under an iron yoke, and was abandoned a prey to the unresisted assaults of the infidels. Her coasts, left without troops, or defences in fortifications and shipping, were insulted and ravaged by the constant descents of the corsairs of Turkey and Barbary. Her maritime villages were burnt, her maritime population dragged off into slavery; and her tyrants, while they denied the people the power of defending themselves, were unable or careless also to afford them protection and safety."—G. Procter, *Hist. of Italy*, ch. 9.

A. D. 1627-1631.—Disputed succession to the Duchy of Mantua.—War of France with Spain, Savoy and the Emperor.—"About Christmas in the year 1627, Vincenzo II., Duke of Mantua, of the house of Gonzaga, died without issue. His next of kin, beyond all controversy, was Charles Gonzaga, Duke of Nevers, whose family had settled in France some fifty years before, and acquired by marriage the dukedoms of Nevers and Rethel. Although there was a jealousy on the part both of Austria and Spain that French influences should be introduced into Upper Italy, there seems to have been no intention, in the first instance, of depriving Charles of his Italian inheritance. . . . But . . . when the old Duke Vincenzo's days were evidently numbered, Charles's son, the young Duke of Rethel, by collusion with the citizens, arrived at Mantua to seize the throne which in a little

while death would make vacant." At the same time, he took from a convent in the city a young girl who represented whatever claims might exist in the direct native line, and married her, the pope granting a dispensation. "Both the King of Spain and the Emperor . . . were incensed by conduct which both must needs have regarded as indicative of hostility, and the latter as an invasion of his feudal rights. Spain flew to arms at once. The emperor summoned the young duke before his tribunal, to answer the charges of having seized the succession without his investiture, and married his ward without his consent. . . . Charles, supported by the promises of Richelieu, refused to acknowledge the emperor's rights of superiority, or to submit to his jurisdiction."—B. Chapman, *Hist. of Gustavus Adolphus*, ch. 8.—"The emperor . . . sequestered the disputed territory, and a Spanish army invaded Montferrat [embraced in the dominions of the Duke of Mantua] and besieged Casale, the capital. Such was the paramount importance attached by Richelieu to his principle of opposition to the house of Austria, that he induced Louis to cross the Alps in person with 36,000 men, in order to establish the Duke of Nevers in his new possessions. The king and the cardinal forced the pass of Susa in March, 1629, in spite of the Duke of Savoy, who was another competitor for Montferrat, and so decisive was the superiority of the French arms that the duke immediately afterward signed a treaty of peace and alliance with Louis, by which he undertook to procure the abandonment of the siege of Casale and the retreat of the Spaniards into their own territory. This engagement was fulfilled, and the Duke of Nevers took possession of his dominions without farther contest. But the triumph was too rapid and easy to be durable."—N. W. Jervis, *Students' Hist. of France*, ch. 19.—"The Spaniards remained, however, in Milanese, ready to burst again upon the Duke of Mantua. The king was in a hurry to return to France, in order to finish the subjugation of the Reformers in the south, commanded by the Duke of Rohan. The cardinal placed little or no reliance upon the Duke of Savoy. . . . A league . . . was formed between France, the republic of Venice, the Duke of Mantua, and the Duke of Savoy, for the defence of Italy in case of fresh aggression on the part of the Spaniards; and the king, who had just concluded peace with England, took the road back to France. Scarcely had the cardinal joined him before Privas when an Imperialist army advanced into the Grisons and, supported by the celebrated Spanish general Spinola, laid siege to Mantua. Richelieu did not hesitate: he entered Piedmont in the month of March, 1630, to march before long on Pignerol, an important place commanding the passage of the Alps; it, as well as the citadel, was carried in a few days. . . . The Duke of Savoy was furious, and had the soldiers who surrendered Pignerol cut in pieces. The king [Louis XIII.] had put himself in motion to join his army. . . . The inhabitants of Chambéry opened their gates to him; Annecy and Montmélian succumbed after a few days' siege; Maurienne in its entirety made its submission, and the king fixed his quarters there, whilst the cardinal pushed forward to Casale [the siege of which had been resumed by Spinola] with the main body of the army. Rejoicings were still going on for a success gained before

Veillane over the troops of the Duke of Savoy, when news arrived of the capture of Mantua by the Imperialists. This was the finishing blow to the ambitious and restless spirit of the Duke of Savoy. He saw Mantua in the hands of the Spaniards, 'who never give back aught of what falls into their power' . . . ; it was all hope lost of an exchange which might have given him back Savoy; he took to his bed and died on the 26th of July, 1630, telling his son that peace must be made on any terms whatever." A truce was arranged, followed by negotiations at Ratisbon, and Casale was evacuated by both parties—the Spaniards having had possession of the city, while the citadel was held by the French. "It was only in the month of September, 1631, that the states of Savoy and Mantua were finally evacuated by the hostile troops. Pignerol had been given up to the new Duke of Savoy, but a secret agreement had been entered into between that prince and France: French soldiers remained concealed in Pignerol; and they retook possession of the place in the name of the king, who had purchased the town and its territory, to secure himself a passage into Italy. . . . The affairs of the emperor in Germany were in too bad a state for him to rekindle war, and France kept Pignerol."—F. P. Guizot, *Popular Hist. of France*, ch. 41.—"The peace left all parties very nearly in the condition in which they were when the war began; the chief loser was the emperor, who was now compelled to acknowledge De Nevers as Duke of Mantua and Montserrat; and the chief gainer was the Duke of Savoy, whose territories were enlarged by the addition of Alba, Trino, and some portions of the territory of Montserrat which lay nearest to his Piedmontese dominions. France, too, made some permanent acquisitions to compensate her for the cost of the war. She eluded the stipulation which bound her to evacuate Casal, and Victor Amedée subsequently suffered her to retain both that fortress and Pignerol, such permission, as was generally believed, . . . having furnished the secret reason which influenced Richelieu to consent to the duke's obtaining the portion of Montserrat already mentioned, the cardinal thus making the Duke of Mantua furnish the equivalent for the acquisitions made by Louis."—C. D. Yonge, *Hist. of France under the Bourbons*, ch. 7 (v. 1).

A. D. 1631.—Annexation of Urbino to the States of the Church. See PAPACY: A. D. 1605-1700.

A. D. 1635.—Italian alliances of Richelieu against the Spaniards in Milan. See GERMANY: A. D. 1634-1639.

A. D. 1635-1659.—Invasion of Milanese by French and Italian armies.—Civil war and foreign war in Savoy and Piedmont.—The extraordinary siege of Turin.—Treaty of the Pyrenees.—Restoration of territory to Savoy.—"Richelieu . . . having obtained the alliance of the Dukes of Savoy, Parma, and Mantua, and having secured the neutrality of the Republics of Venice and Genoa, now bent all his efforts to expel the Spaniards from Milan, which was at that time but weakly defended. . . . In 1635, a French army of 15,000 men was accordingly assembled in Dauphiny, and placed under the command of Mareschal Crequi. Having crossed the Alps, it formed a junction with 8,000 troops under the Duke of Parma, and 12,000 under the Duke of Savoy, to whom the supreme command of this

formidable army of 35,000 men was entrusted. Such a force, if properly employed, ought to have proved sufficient to overwhelm the Dutchy of Milan, in its present unprotected condition. . . . But the confederates were long detained by idle disputes among themselves, their licentiousness and love of plunder." When they did advance into Milanese, their campaign was ineffective, and they finally "separated with mutual disgust," but "kept the field, ravaging the open and fertile plains of Milan. They likewise took possession of several towns, particularly Bremi, on the Po. . . . On hearing of the distress of Milan, the King of Spain took immediate steps for the relief of that bulwark of his Italian power. In 1636 he appointed to its government Diego Guzman, Marques of Leganez, who was a near relative of Olivarez. . . . He had not long entered on the government intrusted to him when he succeeded in expelling the enemy from every spot in Milan, with exception of Bremi, which they still retained. Milan having been thus delivered, Leganez transferred the theatre of war to the States of the Duke of Parma, and completely desolated those fertile regions," compelling the Duke to renounce his French alliance (1637). "The Duke of Savoy, Victor Amadeus, did not long survive these events; and it was strongly suspected, both in Spain and Italy, though probably on no just grounds, that he had been poisoned. . . . The demise of the Duke of Mantua occurred nearly about the same period; and on the decease of these two princes, the Court of Spain used every exertion to detach their successors from the French confederacy. Its efforts succeeded, at least to a certain extent, with the Dutchess-dowager of Mantua. . . . But the Dutchess of Savoy, . . . being the sister of Louis XIII., could not easily be drawn off from the French interests. Olivarez [the Spanish minister], despairing to gain this princess, excited by his intrigues the brothers of the late Duke [Cardinal Maurice and Prince Thomas] to dispute with her the title to the regency." Leganez, now (1638) laid siege to Bremi, and Marshal Crequi, in attempting to relieve the place, was killed by a cannon shot. "By the loss of Bremi, the French were deprived of the last receptacle for their supplies or forces in the Dutchy of Milan; and in consequence of the death of Crequi, they had now no longer any chief of their own nation in Italy. The few French nobility who were still in the army returned to their own country, and the soldiery dispersed into Montferrat and Piedmont. Leganez, availing himself of this favourable posture of affairs, marched straightway into Piedmont, at the head of an army of 20,000 men. . . . He first laid siege to Vercelli, which, from its vicinity to Milan, had always afforded easy access for the invasion of that dutchy, by the French and Savoyards." A new French army, of 13,000 men, under Cardinal La Valette, was sent to the relief of the place, but did not save it from surrender. "After the capture of Vercelli, the light troops of Leganez ravaged the principality of Piedmont as far as the gates of Turin."—J. Dunlop, *Memoirs of Spain, from 1621 to 1700*, v. 1, ch. 4.—Fabert and Turenne were now sent from France to the assistance of La Valette, "and soon changed the aspect of affairs. Turenne aided powerfully in driving back Leganez and Prince Thomas from Turin, in seizing Chivasso

and in organizing a decisive success." In November, 1639, the French, through want of provisions, were forced to retreat to Carignano, repelling an attack made upon them in the course of the retreat. The command was now handed over to Turenne, "with instructions to revictual the citadel of Turin, which was defended by French troops against Prince Thomas, who had gained most of the town. Turenne succeeded . . . in conveying food and munitions into the citadel. In the following spring d'Harcourt [resuming command] undertook to relieve Casale, which belonged to the Duke of Mantua. . . . The place was besieged by Leganez." The attempt succeeded, the besieging army was beaten, and the siege raised. "After the relief of Casale d'Harcourt resolved, on the advice of Turenne, to besiege Turin. The investment was made on the 10th May, 1640. This siege offered a curious spectacle; the citadel which the French held was besieged by Prince Thomas, who held the town. He himself was besieged by the French army, which in its turn was besieged in its lines of circumvallation by the Spanish army of Leganez. The place capitulated on the 17th September. . . . Prince Thomas surrendered; Leganez recrossed the Po; Marie Christine [the Dowager-Duchess] re-entered Turin; and d'Harcourt, being recalled to France by the cardinal, left the command of the army to Turenne."—H. M. Hozier, *Turenne*, ch. 2.—"The fall of Turin did not put an end to the civil war, but its main exploits were limited to the taking of Cuveo by Harcourt (September 15th, 1641), . . . and of Revel, which was reduced by the Piedmontese troops who fought on the French side. . . . In the meantime the Regent, no less than her opponents, began to grow weary of the burdensome protection of their respective allies. . . . Under such circumstances, a reconciliation between the hostile parties became practicable, and was indeed effected on the 24th of July, 1642. The Princes were admitted to a share of the Regent's power, and from that time they joined the French standard, and took from the Spaniards most of the places they had themselves placed in their hands. . . . In the meanwhile the great agitator of Europe, Richelieu, had died (1642), and had been followed by the King, Louis XIII., five months later. . . . The struggle between the two great rival powers, France and Spain, scarcely interrupted by the celebrated peace of Westphalia, which put an end to the Thirty Years' War in the North, in 1648, continued throughout the greatest part of this period; but the rapid decline of Spain, the factions of Alessio in Sicily and of Massaniello in Naples, as much paralysed the efforts of the Court of Madrid as the disorders of the Fronde weakened that of Paris. The warlike operations in North Italy were languid and dull. The taking of Valenza by the French (September 3rd, 1656) is the greatest event on record, and even that [was] void of results. By the treaty of the Pyrenees (November 17th, 1659) Savoy was restored to her possessions, and Vercelli was evacuated by the Spaniards. The citadel of Turin had been given up by the French two years before, owing to the influence of Mazarin, who married on that occasion his niece Olimpia Mancini to Eugene Maurice, son of Thomas, Prince of Carignano, and first cousin to Charles Emanuel II. From that union, it is well known, was born in Paris, in

1663, Prince Eugene of Savoy. The French nation were highly displeased at the loss of the Turin citadel, and never forgave the Cardinal this mere act of just and tardy restitution. Pinerola and Perosa, however, still remained in their hands, and placed the Court of Turin entirely at their discretion. During all this lapse of years, and until the latter end of the century, the history of Piedmont presents but a melancholy blank."—A. Gallenga, *Hist. of Piedmont*, v. 3, ch. 2.

A. D. 1646-1654.—French hostility to the Pope.—Siege of Orbitello.—Masaniello's revolt at Naples.—French intrigue and failures.

—"The war [of France and Spain] in Italy had for some years languished, but hostility to the Pope [on the election of Innocent X., which Cardinal Mazarin, then supreme in France, had opposed] stirred it again into life. New vessels were fitted out for the navy, and large preparations were made for the invasion of Italy. . . . On April 26, 1646, the expedition set sail, and on the 9th of May it cast anchor off the important city of Orbitello. The fleet consisted of 156 sail, and was expected to land 10,000 men, and Mazarin wrote that all Italy was in terror. The ships were commanded by the Duke of Brézé, and no more skilful or gallant leader could have been found. . . . The command of the land forces was, however, entrusted to a leader whose deficiencies more than counterbalanced Brézé's skill. Mazarin desired an Italian prince to lead his expedition, and Prince Thomas of Savoy had been chosen for the command. . . . Fearing that disease would come with the hot weather, Mazarin urged Prince Thomas to press forward with the siege. But the most simple advances seemed beyond his skill. . . . A severe misfortune to the navy made the situation worse. In a sharp and successful engagement with the Spanish fleet, a cannon ball struck and killed the Duke of Brézé. His death was more disastrous than would have been the loss of 20 sail. The French fleet retired to Provence and left the sea open to the Spanish. Sickness was fast reducing the army on land, and on July 18th Prince Thomas raised the siege, which was no further advanced than when it was begun, and led back the remains of his command to Piedmont. . . . So mortifying an end to this expensive venture only strengthened Mazarin's resolution to make his power felt in Italy. The battered ships and fever-wasted soldiers were scarcely back in Provence, when the minister began to prepare a second expedition for the same end. . . . By September a fleet of 200 sail, with an army of 8,000 men commanded by the Marshals of La Meilleraie and Du Plessis, was under way. The expedition was conducted with skill and success. Orbitello was not again attacked, but Porto Longone, on the island of Elba, and Piombino, on the mainland, both places of much strategic importance, were captured after brief sieges. With this result came at once the change in the feelings of Innocent X. for which Mazarin had hoped," and certain objects of the latter's desire—including a cardinal's hat for his brother Michael—were brought within his reach. His attention was now turned to the more southerly portion of the peninsula. "During the expedition to Orbitello in 1646, Mazarin had closely watched Naples, whose coming revolution he foresaw. The ill-suppressed discontents of the city now

showed themselves in disturbances, sudden and erratic as the eruptions of Vesuvius, and they offered to France an opportunity for seizing the richest of the remaining possessions of Spain. After the vicissitudes of centuries, Naples and Sicily were now subject to the Spanish crown. They were governed by a viceroy, and were subjected to the drain of men and money which was the result of Spain's necessities and the characteristic of her rule. Burdened with taxation, they complained that their viceroy, the Duke of Arcos, was sending to Spain money raised solely for their own defence. The imposition of a duty on fruits, in a country where fruit formed a cheap article of diet for the poor, and where almost all were poor, kindled the long smouldering discontent. Under the leadership of a fisherman [Tommaso Aniello], nicknamed Masaniello, the people of Naples in 1647 rose in revolt. Springing from utter obscurity, this young man of twenty-seven, poor and illiterate, became powerful almost in a day. While the Duke of Arcos hid himself away from the revolt, Masaniello was made Captain-General of Naples. So sudden a change turned his head. At first he had been bold, popular, and judicious. He sought only, he said, to deliver the people from their taxes, and when that was done, he would return again to selling soles and red mullets. But political delirium seized him when he reached an elevation which, for him, was as dizzy as the throne of the Roman emperors, and like some who reached that terrible eminence, his brain was crazed by the bewilderment and ecstasy of power. He made wild and incoherent speeches. He tore his garments, crying out against popular ingratitude, attacking groups of passers-by, riding his horse wildly through the multitude, and striking with his lance to the right and left. The populace wearied of its darling. Exalted to power on July 7th, he was murdered on the 16th, with the approval of those who had worshipped him a week before. But the revolution did not perish with him. Successive chiefs were chosen and deposed by a fickle people. When the insurrection was active, the representatives of Spain promised untaxed fruits and the privileges allowed by Charles V., and they revoked their promises when it appeared to subside. In the meantime, Mazarin watched the movement, uncertain as to the course he should pursue. . . . While the minister hesitated, the chance was seized by one who was never accused of too great caution." This was the Duke of Guise—the fifth Henry of that Dukedom—a wild, madcap young nobleman, who accepted an invitation from the Neapolitan insurgents to become their chief. Guise landed at Naples on the 15th of November, 1647, with half a dozen attendants, and a month later he was followed by a French fleet. But the latter did nothing, and Guise was helplessly without means. "The truth was that Mazarin, even if desirous of crippling the Spaniards, was very averse to assisting Guise. He believed that the duke either desired to form a republic, of which he should be chief, or a monarchy, of which he should be king, and neither plan was agreeable to the cardinal." At the end of a fortnight the fleet sailed away. Guise held his ground as the leader of the revolt until the following April, when certain of the Neapolitan patriots, corrupted by the enemy, betrayed the city into the

hands of the Spaniards. "Guise endeavored, with a handful of followers, to escape towards Capua, but they were captured by a detachment of Spaniards. . . . By the petition of powerful friends, and by the avowal of France, Guise was saved from the public execution which some of his enemies demanded, but he was presently taken to Spain, and there was kept a prisoner during four years." Meantime, Mazarin had prepared another expedition, which appeared before Naples in the summer of 1648, but only to discover that the opportunity for deriving any advantage from the popular discontent in that city was past. "Receiving no popular aid, the expedition, after some ineffective endeavors, was abandoned." Six years afterwards, in 1654, Mazarin sent a third expedition to Naples, and entrusted it to the command of the Duke of Guise, who had lately been released from his captivity in Spain. "Guise hoped that the Neapolitans would rise in revolt when it was known that their former leader was so near, but not a person in the city showed any desire to start a movement in behalf of the Duke of Guise. The Spanish met him with superior forces." After some slight encounters the expedition sailed back to France.—J. B. Perkins, *France under Mazarin*, ch. 8 (v. 1), and 16 (v. 2).

A. D. 1701-1713.—Savoy and Piedmont.—The War of the Spanish Succession.—The Peace of Utrecht.—"Compelled to take part, with one of the contending parties [in the War of the Spanish Succession—see SPAIN: A. D. 1698-1700, and 1701-1702], Victor [Duke of Savoy] would have been prompted by his interest to an alliance with Austria; but he was beset on all sides by the combined forces of France and Spain, and was all the more at their mercy as Louis XIV. had (April 5th, 1701) obtained from Ferdinand Gonzaga of Mantua permission to garrison his capital, in those days already one of the strongest places in Italy. The Duke of Savoy had already, in 1697, married his daughter, Adelaide, to one of Louis's grandsons, the Duke of Burgundy; he now gave his younger daughter, Mary Louise, to Burgundy's brother, the new King of Spain (September 11th, 1701), and took the field as French commander-in-chief. He was opposed by his own cousin, Prince Eugene, at the head of the Imperial armies. The war in Lombardy was carried on with some remissness, partly owing to the natural repugnance or irresolution of the Duke of Savoy, partly to the suspicion with which, on that very account, he was looked upon by Catinat and Vaudemont, the French and Spanish commanders under him. The King, in an evil hour, removed his able marshal, Catinat, and substituted for him Villeroi, a carpet knight and court warrior, who committed one fault after another, allowed himself to be beaten by Eugene at Chiari (September 1st), and to be surprised and taken prisoner at Cremona (1702, January 21st), to the infinite relief of his troops. Vendôme restored the fortunes of the French, and a very brilliant but undecided action was fought at Luzzara (August

15th), after which Prince Eugene was driven from the neighbourhood of Mantua, and fell back towards the mountains of Tyrol. With the success of the French their arrogance increased, and with their arrogance the disgust and ill-will of Victor Amadeus." The Duke withdrew from the camp and began to listen to overtures from the Powers in the Grand Alliance. "Report of the secret intercourse of the Duke with Austrian agents reached Louis XIV., who sent immediate orders to Vendôme to secure and disarm the Piedmontese soldiers (3,800 to 6,000 in number) who were fighting under French standards at Mantua. This was achieved by treachery, at San Benedetto, on the 29th of September, 1703. An attempt to seize the Duke himself, whilst hunting near Turin, miscarried. Savoy retaliated by the arrest of the French and Spanish ambassadors, and war was declared (October 5th). The moment was ill-chosen. Victor had barely 4,000 men under his orders. The whole of Savoy was instantly overrun; and in Piedmont Vercelli, Ivrea, Verrua, as well as Susa, Bard, and Pinerolo, and even Chivasso, fell into the enemy's hands during the campaigns of 1704 and 1705. In the ensuing year the tide of invasion reached Nice and Villafranca; nothing was left to Victor Amadeus but Cuneo and Turin, and the victorious French armies appeared at last under the very walls of the capital (March, 1706). The war had, however, been waged with different results beyond the Alps, where the allies had crushed the French at Blenheim (1704) and at Ramillies (1705). One of the heroes of those great achievements, Prince Eugene, now hastened to the rescue of his cousin. He met with a severe check at Cassano (August 16th, 1705), and again at Calcinato (April 19th, 1706); but his skilful antagonist, Vendôme, was called away to Flanders, and Prince Eugene so out-maneuvred his successors as to be able to join Victor at Turin. The French had begun the siege of this place on the 13th of May, 1706. They had between 50,000 and 60,000 men, and 170 pieces of artillery 'with them.' When Prince Eugene, early in September, reached the neighborhood of Turin, he concerted with Victor Amadeus an attack on the investing army which destroyed it completely. "Its relics withdrew in awful disorder towards Pinerolo, pursued not only by the victorious troops but also by the peasantry, who, besides attachment to their princes, obeyed in this instance an instinct of revenge against the French, who had barbarously used them. Out of 50,000 or 60,000 men who had sat down before Turin in March, hardly 20,000 recrossed the Alps in September. Three of the French generals lay dead on the field; . . . 6,000 prisoners were marched through the streets of the liberated town, and 55 French banners graced the main altar of the cathedral. In the following year, Victor and Eugene, greatly against their inclination, were induced by the allies to undertake an expedition against Toulon, which, like all previous invasions of Provence, led to utter discomfiture, and the loss of 10,000 combatants (1707, July 1st to September 1st). An attack upon Briançon, equally undertaken against the sound judgment of the Duke of Savoy, in 1708, led to no better results; but Savoy won back Exilles, Perosa, Fenestrelles, and, one by one, all the redoubts with which during those wars the Alps were bristling. The war slackened in Italy, and

the fates of Europe were decided in the Netherlands. . . . By the Peace of Utrecht [A. D. 1713] France renounced to Savoy all the invaded territories, and, besides, the valleys of Oulx, Cessanne, Bardonneche, and Castel Delfino, ancient possessions of Dauphiny, east of the Alps, from the 12th century, whilst, for her own part, Savoy gave up the western valley of Barcelonnette; thus the limits between the two nations (with the exception of Savoy and Nice) were at last fixed on the mountain-crest, at 'the parting of the waters.' By virtue of an agreement signed with Austria, November 8th, 1703, the whole of Montferrat, as well as Alessandria, Valenza, Lomellina, and Val Sesia, dependencies of the duchy of Milan, and the imperial fiefs in the Langhe (province of Alba), were ceded to Savoy."—A. A. D. 1715-1735.—Ambitions of Elizabeth Farnese, the Spanish queen.—The Austro-Spanish conflict.—The Quadruple Alliance.—Acquisition of Naples by the Spanish Bourbons.—By the provisions of the Treaty of Utrecht, Philip V. of Spain was left with no dominions in Italy, the Italian possessions of the Spanish monarchy having been transferred to Austria. Philip might have accepted this arrangement without demur. Not so his wife—"Elizabeth Farnese, a lady of the Italian family for whom the Duchy of Parma had been created by the Pope. The crown of Spain was settled on her step-son. For her own child the ambitious queen desired the honours of a crown. Cardinal Alberoni, a reckless and ambitious ecclesiastic, was the minister of the Spanish court. Under his advice and instigated by the queen, Philip claimed the possessions in Italy, which in the days of his grandfather had belonged to the Spanish crown. When his title to that crown was admitted, he denied the right of the other powers of Europe to alienate from it its possessions. This was not all: in right of his queen he claimed the duchies of Parma and of Tuscany. She determined to recover for him all the Italian possessions of the Spanish crown, and to add to them the duchies of Parma and Tuscany. The Duke of Parma was old and childless. The extinction of the reigning line of the Medici was near. Cosmo di Medici, the reigning sovereign, was old. His only son, Jean Gaston, was not likely to leave heirs. To Parma Elizabeth advanced her claims as heiress of the family of Farnese; to Tuscany she asserted a more questionable title in right of a descent from the family of Medici. These duchies she demanded for her son, Don Carlos, in whose behalf she was ready to waive her own claims. The success of these demands would have given to the Spanish monarchy even greater power than it had before enjoyed. To Naples, Sicily, and Milan, would have been added the territories of Parma and Tuscany. All Europe denounced the ambitious projects of Alberoni as entirely inconsistent with

that balance of power which it had then become a political superstition to uphold. Philip's French relatives were determined in opposition to his claims; and to resist them the quadruple alliance was formed between Holland, England, France and the emperor. The parties to this alliance offered to the Spanish Bourbons that the emperor should settle on Don Carlos the reversion to the duchies of Parma and Tuscany on their lapsing to him by the failure of the reigning families without heirs. These proposals were rejected, and it was not until the Spanish court found the combination of four powerful monarchs too strong for them, that they reluctantly acceded to the terms of the Quadruple Alliance, and accepted for Don Carlos the promised reversion of Parma and Tuscany. To induce the emperor to accede to this arrangement the Duke of Savoy was compelled to surrender to him his newly-acquired kingdom of Sicily, receiving instead the island of Sardinia with its kingly title. It is as kings of Sardinia that the princes of Savoy have since been known in European history. The treaty of the quadruple alliance was thus the second by which at this period the European powers attempted to arrange the affairs of Italy. This treaty left the house of Austria in possession of Sicily and Naples. It was assented to by Spain in 1720. European complications unconnected with Italy produced new wars and a new treaty; and the treaty of Seville in 1724, followed by one entered into at Vienna two years later, confirmed Don Carlos in the duchy of Parma, of which, on the death of the last of the Farnese in 1734, he entered into possession. A dispute as to the election of a king of Poland gave the Spanish court an opportunity of once more attempting the resumption of the Neapolitan dominions. Don Carlos, the second son of Philip and Elizabeth, was now just grown to man's estate. His father placed in his hand the sword which he himself had received from Louis XIV. Don Carlos was but seventeen years old when he took possession of his sovereignty of Parma. In the same year [1734] he was called from it to invade the Sicilian dominions of Austria. He conquered in succession the continental territories, and the island of Sicily; and on the 15th of June, 1734, he was proclaimed as King of the Two Sicilies. The war of the Polish Succession was ended in the following year by a peace, the preliminaries of which were signed at Vienna. In this treaty an entirely new arrangement of Italian affairs was introduced. The rights of Don Carlos to the kingdoms of Naples and Sicily were recognised. Parma was surrendered to the emperor; and, lastly, the duchy of Tuscany was disposed of to a new claimant [Francis of Lorraine] for the honours of an Italian prince."—I. Butt, *Hist. of Italy*, v. 1, ch. 5.

A. D. 1741-1743.—The War of the Austrian Succession: Ambitious undertakings of Spain.—"The struggle between England and Spain [see ENGLAND: A. D. 1739-1741] had altogether merged in the great European war, and the chief efforts of the Spaniards were directed against the Austrian dominions in Italy. The kingdom of Naples, which had passed under Austrian rule during the war of the [Spanish] Succession, had, as we have seen, been restored to the Spanish line in the war which ended in 1740, and Don Carlos, who ruled it, was altogether subservient to Spanish policy. The Duke of Lorraine, the husband of Maria Theresa, was sovereign of Tuscany; and the Austrian possessions consisted of the Duchy of Milan, and the provinces of Mantua and Placentia. They were garrisoned at the opening of the war by only 15,000 men, and their most dangerous enemy was the King of Sardinia, who had gradually extended his dominions into Lombardy, and whose army was, probably, the largest and most efficient in Italy. 'The Milanese,' his father is reported to have said, 'is like an artichoke, to be eaten leaf by leaf,' and the skill and perseverance with which for many generations the House of Savoy pursued that policy, have in our own day had their reward. Spanish troops had landed at Naples as early as November 1741. The King of Sardinia, the Prince of Modena, and the Republic of Genoa were on the same side. Venice was completely neutral, Tuscany was compelled to declare herself so, and a French army was soon to cross the Alps. The King of Sardinia, however, at this critical moment, was alarmed by the ambitious projects openly avowed by the Spaniards, and he was induced by English influence to change sides. He obtained the promise of certain territorial concessions from Austria, and of an annual subsidy of £200,000 from England; and on these conditions he suddenly marched with an army of 30,000 men to the support of the Austrians. All the plans of the confederates were disconcerted by this defection. The Spaniards went into winter quarters near Bologna in October, fought an unsuccessful battle at Campo Santo in the following February [1743], and then retired to Rimini, leaving Lombardy in complete tranquillity. The British fleet in the Mediterranean had been largely strengthened by Carteret, and it did good service to the cause. It burnt a Spanish squadron in the French port of St. Tropez, compelled the King of Naples, by the threat of bombardment, to withdraw his troops from the Spanish army, and sign an engagement of neutrality, destroyed large provisions of corn collected by the Genoese for the Spanish army, and cut off that army from all communications by sea."—W. E. H. Lecky, *Hist. of Eng.*, 18th Century, ch. 3 (v. 1).

A. D. 1743.—The War of the Austrian Succession: Treaty of Worms.—"By a treaty between Great Britain, the Queen of Hungary, and the King of Sardinia, signed at Worms September 23rd, 1743, Charles Emanuel renounced his pretensions to Milan; the Queen of Hungary ceding to him the Vigevaneseo, that part of the duchy of Pavia between the Po and the Tessino, the town and part of the duchy of Piacenza, and a portion of the district of Anghiera. Also whatever rights she might have to the mar-

quisate of Finale: hoping that the Republic of Genoa would facilitate this agreement, in order that the King of Sardinia might have a communication with the sea. The Queen of Hungary promised to increase her army in Italy to 30,000 men as soon as the affairs of Germany would permit; while the King of Great Britain engaged to keep a strong fleet in the Mediterranean, and to pay Charles Emanuel annually £200,000, so long as the war lasted, he keeping in the field an army of 45,000 men."—T. H. Dyer, *Hist. of Modern Europe*, bk. 6, ch. 4 (v. 3).

A. D. 1743.—The Bourbon Family Compact (France and Spain) for establishing Spanish claims. See FRANCE: A. D. 1743 (OCTOBER).

A. D. 1744.—The War of the Austrian Succession: Indecisive campaigns.—"In Italy, the discordant views and mutual jealousies of Maria Theresa and the king of Sardinia prevented the good effects which might have been derived from their recent union. The king was anxious to secure his own dominions on the side of France, and to conquer the marquisate of Finale; while Maria Theresa was desirous to direct her principal force against Naples, and recover possession of the two Sicilies. Hence, instead of co-operating for one great object, their forces were divided; and, after an arduous and active campaign, the Austrians were nearly in the same situation as at the commencement of the year. Prince Lobcowitz being reinforced, compelled the Spaniards to retreat successively from Pesara and Senegallia, attacked them at Loreto and Reconati, and drove them beyond the Fronto, the boundary of the kingdom of Naples. Alarmed by the advance of the Austrians, the king of Naples broke his neutrality, quitted his capital at the head of 15,000 men, and hastened to join the Spaniards. But Prince Lobcowitz . . . turned towards Rome, with the hope of penetrating into Naples on that side; and, in the commencement of June, reached the neighbourhood of Albano. His views were anticipated by the king of Naples, who, dividing the Spanish and Neapolitan troops into three columns, which were led by himself, the duke of Modena, and the count de Gages, passed through Anagni, Valmonte, and Monte Tortino, and reunited his forces at Veletri, in the Campagna di Roma. In this situation, the two hostile armies, separated only by a deep valley, harassed each other with continual skirmishes. At length prince Lobcowitz, in imitation of prince Eugene at Cremona, formed the project of surprising the head-quarters of the king of Naples. In the night of August 10th, a corps of Austrians, led by count Brown, penetrated into the town of Veletri, killed all who resisted, and would have surprised the king and the duke of Modena in their beds, had they not been alarmed by the French ambassador, and escaped to the camp. The Austrian troops, giving way to pillage, were vigorously attacked by a corps of Spaniards and Neapolitans, despatched from the camp, and driven from the town with great slaughter, and the capture of the second in command, the marquis de Novati. In this contest, however, the Spanish army lost no less than 3,000 men. This daring exploit was the last offensive attempt of the Austrian forces. Prince Lobcowitz perceiving his troops rapidly decrease by the effects of the climate, and the unwholesome air of the Pontine marshes, began his retreat in the begin-

ning of November, and though followed by an army superior in number, returned without loss to Rimini, Pesaro, Cesano, and Imbola; while the combined Spaniards and Neapolitans took up their quarters between Viterbo and Civita Vecchia. In consequence of the expedition against Naples, the king of Sardinia was left with 30,000 men, many of them new levies, and 6,000 Austrians, to oppose the combined army of French and Spaniards, who advanced on the side of Nice. After occupying that place, the united army forced the intrenched camp of the Sardinians, though defended by the king himself, made themselves masters of Montalbano and Villafraña, and prepared to penetrate into Piedmont along the sea coast. The Genoese, irritated by the transfer of Finale, were inclined to facilitate their operations; but were intimidated by the presence of an English squadron which threatened to bombard their capital. The prince of Conti, who commanded under the infant Don Philip, did not, however, relinquish the invasion of Piedmont, but formed the spirited project of leading his army over the passes of the Alps, although almost every rock was a fortress, and the obstacles of nature were assisted by all the resources of art. He led his army, with a large train of artillery, and numerous squadrons of cavalry, over precipices and along beds of torrents, carried the fort of Chateau Dauphin, forced the celebrated Barricades which were deemed impregnable, descended the valley of the Stura, took Demont after a slight resistance, and laid siege to Coni. The king of Sardinia, having in vain attempted to stop the progress of this torrent which burst the barriers of his country, indignantly retired to Saluzzo, to cover his capital. Being reinforced by 6,000 Austrians, he attempted to relieve Coni, but was repulsed after a severe engagement, though he succeeded in throwing succours into the town. This victory, however, did not produce any permanent advantage to the confederate forces; Coni continuing to hold out, the approach of winter and the losses they had sustained, amounting to 10,000 men, compelled them to raise the siege and repossess the Alps, which they did not effect without extreme difficulty."—W. Coxe, *Hist. of the House of Austria*, ch. 105 (v. 3).

ALSO IN: W. Russell, *Hist. of Modern Europe*, pt. 2, ch. 28.

A. D. 1745.—The War of the Austrian Succession: Successes of the Spaniards, French and Genoese.—"The Italian campaign of 1745, in boldness of design and rapidity of execution, scarcely finds a parallel in military history, and was most unpropitious to the Queen of Hungary and King of Sardinia. The experience of preceding years had taught the Bourbon Courts that all attempts to carry their arms across the Alps would be fruitless, unless they could secure a stable footing in the dominions of some Italian state on the other side, to counteract the power of their adversary, who had the entire command of the passes between Germany and Italy, by means of which reinforcements could be continually drafted to the scene of action. Accordingly they availed themselves of the jealousy and alarm excited at Genoa, by the transfer of Finale to the King of Sardinia, to engage that republic on their side. The plan was to unite the two armies which had wintered on the distant frontiers of Naples and Provence, in the

vicinity of Genoa, where they were to be joined by 10,000 auxiliaries on the part of the republic. Charles Emanuel was sensible of the terrible consequences to himself, should the Genoese declare openly for the house of Bourbon, and sent General Pallavicini, a man of address and abilities, to renounce his pretensions to Finale, while Admiral Rowley, with a British fleet, hovered on their coasts. In spite of all this, nevertheless, the treaty of Aranjuez was concluded between France, Spain, and Genoa. After surmounting amazing difficulties, and making the most arduous and astonishing marches, the army commanded by Don Philip, who was accompanied by the French General Maillebois, and that commanded by Count de Gages, effected their junction on the 14th of June, near Genoa, when their united forces, now under Don Philip, amounted to 78,000 men. All that the King of Sardinia could do under these circumstances, was to make the best dispositions to defend the Milanese, the Parmesan, and the Plaisantine; but the whole disposable force under the King and Count Schulenburg, the successor of Lobkowitz, did not amount to above 45,000 men. Count Gages with 30,000 men was to be opposed to Schulenburg, and took possession of Serravalle, on the Scrivia; then advancing towards Alessandria he obliged the Austrians to retire under the cannon of Tortona. Don Philip made himself master of Acqui, so that the King of Sardinia, with the Austrian General, Count Schulenburg, had to retreat behind the Tanaro. On the 24th of July the strong citadel of Tortona was taken by the Spaniards, which opened the way to the occupation of Parma and Placentia. The combined army of French, Spanish, Neapolitans, and Genoese being now masters of an extensive tract with all the principal towns south of the Po, they readily effected a passage near the confluence of the Ticino, and with a detachment surprised Pavia. The Austrians, fearful for the Milanese, separated accordingly from the Sardinian troops. The Bourbon force seeing this, suddenly reunited, gained the Tanaro by a rapid movement on the night of the 27th of September, forded it in three columns, although the water reached to the very necks of the soldiers, fell upon the unsuspecting and unprepared Sardinians, broke their cavalry in the first charge, and drove the enemy in dismay and confusion to Valenza. Charles Emanuel fled to Casale, where he reassembled his broken army, in order to save it from utter ruin. The confederate armies still advanced, drove the King back and took Trino and Verua, which last place lay but twenty miles from his capital: fearful now that this might be bombarded he hastened thither, withdrew his forces under its cannon, and ordered the pavement of the city to be taken up. Maillebois, on his side, penetrated into the Milanese, and by the month of October the territories of the house of Austria in Italy were wholly subdued. The whole of Lombardy being thus open, Don Philip made a triumphant entry into Milan on the 20th of December, fondly hoping that he had secured for himself an Italian kingdom, as his brother, Don Carlos, had done at Naples. The Austrian garrison, however, still maintained the citadel of Milan and the fortress of Mantua."—Sir E. Cust, *Annals of the Wars of the 18th Century*, v. 2, pp. 75-76.

A. D. 1746-1747.—The War of the Austrian Succession: A turn of fortune.—The Spaniards and French abandon North Italy.—The Austrians in Genoa, and their expulsion from the city.—"Of all the Austrian possessions in Lombardy, little remained except the fortress of Mantua and the citadel of Milan; while the citadels of Asti and Alessandria, the keys of Piedmont, were expected to fall before the commencement of the ensuing campaign. On the return of the season for action, the struggle for the mastery of Italy was renewed, and the queen of Spain already saw in imagination the crown of Lombardy gracing the brow of her second son. On the east, the French and Spanish armies had extended themselves as far as Reggio, Placentia, and Guastalla; on the north they were masters of the whole country between the Adda and Tesino; they blockaded the passages by the lake of Como and the Lago Maggiore, and were preparing to reduce the citadel of Milan; on the west their posts extended as far as Casale and Asti, though of the last the citadel was still held by the Sardinians. The main body of the French secured the communication with Genoa and the country south of the Po; a strong body at Reggio, Parma, and Placentia, covered their conquests on the east; and the Spaniards commanded the district between the Po and the mountains of Tyrol. The Sardinians were collected into the neighbourhood of Trino; while the Austrians fell back into the Novaresse to effect a junction with the reinforcements which were daily expected from Germany. In this situation, a sudden revolution took place in the fortune of the war. The empress queen [Maria Theresa], by the conclusion of a peace with Prussia, was at liberty to reinforce her army in Italy, and before the end of February 30,000 men had already descended from the Trentine Alps, and spread themselves as far as the Po." This change of situation caused the French court to make overtures to the king of Sardinia, which gave great offense to Spain. The wily Sardinian gained time by his negotiations with the French, until he found an opportunity, by suddenly ending the armistice, to capture the French garrison in Asti, to relieve the citadel of Alessandria and to lay siege to Valenza. "These disasters compelled Maillebois [the French general] to abandon his distant posts and concentrate his forces between Novi and Voghera, in order to maintain the communication with Genoa. Nor were the Spaniards beyond the Po in a less critical situation. A column of 10,000 Austrians under Berenclau having captured Codogno, and advanced to Lodi, the Spanish general was compelled to withdraw his troops from the passes towards the lakes, to send his artillery to Pavia and draw towards the Po. The infant had scarcely quitted Milan before a party of Austrian hussars entered the place." Meantime, the Spanish general Castelar, blockaded in Parma by the Austrians, broke through their lines and gained the eastern Riviera, with the loss of half his force. In June, the Spaniards and French, concentrated at Placentia, made a powerful attack on the Austrians, to arrest their progress, but were repulsed with heavy loss. The Sardinians soon afterwards formed a junction with the Austrians, which compelled the Spaniards and French to evacuate Placentia and retreat to Genoa, abandoning stores and artillery and losing many men. In the midst

of these disasters, the Spanish king, Philip V., died, and his widowed queen, Elizabeth Farnese—the "Spanish termagant," Carlyle calls her—who had been the moving spirit of the struggle for Italy, lost the reins of government. His son (by his first wife, Maria Louisa of Savoy) who succeeded him, had no ambitions and no passions to interest him in the war, and resolved to escape from it. The marquis Las Minas, whom he sent to take command of the retreating army, speedily announced his intention to abandon Italy. "Thus deserted, the situation of the French and Genoese became desperate. . . . Maillebois, after exhorting the Genoese to defend their territory to the last extremity, was obliged to follow the example of Las Minas in withdrawing towards Provence. Abandoned to their fate, the Genoese could not withstand the combined attacks of the Austro-Sardinians, assisted by the British fleet. The city surrendered almost at discretion; the garrison were made prisoners of war; the stores, arms and artillery were to be delivered; the doge and six senators to repair to Vienna and implore forgiveness. The marquis of Botta, who had replaced Lichtenstein in the command, took possession of the place with 15,000 men, while the king of Sardinia occupied Finale and reduced Savona. In consequence of this success the Austrian court meditated the re-conquest of Naples and Sicily, which had been drained of troops to support the war in Lombardy." But this project was overruled by the British government, and the allied army crossed the Var, to carry the war into the southeastern provinces of France. "Their progress was, however, instantly arrested by an insurrection at Genoa, occasioned by the exactions and oppressions of the Austrian commanders. The garrison was expelled by the tumultuary efforts of the populace; and the army, to obviate the mischiefs of this unexpected reverse, hastily measured back its steps. Instead of completing the disasters of the Bourbon troops, the Austro-Sardinians employed the whole winter in the investment of Genoa." The siege was protracted but unsuccessful, and the allies were forced to abandon it the following summer, on the approach of the Bourbon forces, which resumed the offensive under Marshal Belleisle. After delivering Genoa, the latter sent a detachment of his army into Piedmont, where it met with disaster. No further operations of importance were undertaken before the conclusion of the peace, which was then being negotiated at Aix-la-Chapelle.—W. Coxe, *Memoirs of the Bourbon Kings of Spain*, ch. 46-48 (v. 3-4).

A. D. 1749-1792.—Peace in the Peninsula.—The Treaty of Aix-la-Chapelle "left nothing to Austria in Italy except the duchies of Milan and Mantua. Although the grand-duchy of Tuscany was settled on the family of Hapsburg-Lorraine, every precaution was taken to prevent that province from being united with the German possessions of their house. The arrangements of the treaty of Aix-la-Chapelle continued up to the period of the French revolution undisturbed. Those arrangements, although the result of a compromise of the interests and ambitions of rival statesmen, were not, considering the previous state of Italy, unfavourable to the cause of Italian independence. Piedmont, already recognised as the protector of Italian nationality, gained not only in rank, but in

substantial territory, by the acquisition of the island of Sardinia, still more by that of the High Novarese, and by extending her frontier to the Ticino. Naples and Sicily were released from the tyranny of viceroys, and placed under a resident king, with a stipulation to secure their future independence, that they should never be united to the Spanish crown. . . . In the 45 [?] years which elapsed between the treaty of Aix-la-Chapelle and the French revolution, Italy enjoyed a perfect and uninterrupted peace. In some, at least, of its principalities, its progress in prosperity and in legislation was rapid. Naples and Sicily, under the government of Charles III., and subsequently under the regency of his minister, Tanucci, were ruled with energy and prudence. Tuscany prospered under the sway of the princes of Lorraine, Milan and Mantua were mildly governed by the Austrian court; and Lombardy rose from the misery to which the exactions of Spanish viceroys had reduced even the great resources of that rich and fertile province. In the other Italian States at least no change had taken place for the worse. Industry everywhere flourished under the presence of the most essential of all blessings,—peace.”—I. Butt, *Hist. of Italy*, v. 1, ch. 5.

(Southern): A. D. 1808-1809.—Beginning of the reign of Murat at Naples.—Expulsion of the English from Capri.—Insolence of Murat's soldiery.—Popular discontent and hatred.—Rise of the Carbonari.—Civil war in Calabria.—“Joachim Murat, the new King of Naples, announced his accession to the nation [July, 1808]. ‘The august Napoleon,’ he said, ‘had given him the kingdom of the two Sicilies. Gratitude to the donor, and a desire to benefit his subjects, would divide his heart.’ . . . The commencement of Murat's reign was felicitous; the English, however, occupied the island of Capri, which, being placed at the opening of the gulf, is the key of the bay of Naples. Their presence stimulated all who were averse to the new government, intimidated its adherents, and impeded the freedom of navigation, to the manifest injury of commerce; besides, it was considered disgraceful, that one of the Napoleonides should suffer an enemy so near, and that enemy the English, who were at once so hated and so despised. The indolence of Joseph had patiently suffered the disgrace; but Joachim, a spirited soldier, was indignant at it, and he thought it necessary to commence his reign by some important enterprise. He armed therefore against Capri: Sir Hudson Lowe was there in garrison with two regiments collected from all the nations of Europe, and which were called the Royal Corsican and the Royal Maltese. . . . A body of French and Neapolitans were sent from Naples and Salerno, under the command of General Lamarque, to reduce the island; and they effected a landing, by means of ladders hung to the rocks by iron hooks, and thus possessed themselves of Anacapi, though not without great difficulty, as the English resolutely defended themselves.

... The siege proceeded but slowly — succours of men and ammunition reached the besieged from Sicily; but fortune favoured the enemy, as an adverse wind drove the English out to sea. The King, who superintended the operations from the shore of Massa, having waited at the point of Campanella, seizing the propitious moment, sent fresh squadrons in aid of Lamarque, and the English, being already broken, and the forts dismantled, now yielded to the conqueror. The Neapolitans were highly gratified by the acquisition of Capri, and from that event augured well of the new government. The kingdom of Naples contained three classes of people — barons, republicans, and populace. The barons willingly joined the party of the new king, because they were pleased by the honours granted to them, and they were not without hopes of recovering their ancient privileges, or at least of acquiring new ones. ... The republicans were, on the contrary, inimical to Joachim, not because he was a king, for they easily accommodated themselves to royalty; but because his conduct in Tuscany, where he had driven them forth or bound them in chains like malefactors, had rendered him personally obnoxious to them. They were moreover disgusted by his incredible vanity, which led him to court and caress with the most zealous adulation every bearer of a feudal title. ... The populace, who cared no more for Joachim than they had done for Joseph, would easily have contented themselves with the new government, if it had protected them from the oppressions of the barons, and had procured for them quiet and abundance. But Joachim, wholly intent on courting the nobles, neglected the people, who, oppressed by the barons and soldiery, became alienated from him. ... The spirit of discontent was further increased by his introduction of the conscription laws of France. ... Joachim, a soldier himself, permitted every thing to his soldiery; and an insupportable military license was the result. Hence, also, they became the sole support of his power, and it took no root in the affections of the people. The insolence of the troops continually augmented; not only every desire, but every caprice of the head of a regiment, nay, even of the inferior officers, was to be complied with, as if they were the laws of the realm; and whosoever even lamented his subjection to their will was ill-treated and incurred some risk of being declared an enemy to the King. ... The discontents produced by the enormities committed by the troops of Murat gave hopes to the court of Palermo that its fortunes might be re-established in the kingdom beyond the Faro. Meanwhile, the civil war raged in Calabria; nor were the Abruzzi tranquil. In these disturbances there were various factions in arms, and various objects were pursued: some of those who fought against Joachim, and had fought against Joseph, were adherents of Ferdinand, — others were the partisans of a republican constitution. ... The sect of the Carbonari arose at this period." — C. Botta, *Italy during the Consulate and Empire of Napoleon*, ch. 5. — "The most famous, the most widely disseminated, and the most powerful of all the secret societies which sprang up in Italy was that of the Carbonari, or Charcoal-makers. ... The Carbonari first began to attract attention in the Kingdom of Naples about the year 1808. A Genoese named Maghella, who burned with

hatred of the French, is said to have initiated several Neapolitans into a secret order whose purpose it was to goad their countrymen into rebellion. They quitted Naples, where Murat's vigilant policy kept too strict a watch on conspirators, and retired to the Abruzzi, where in order to disarm suspicion they pretended to be engaged in charcoal-burning. As their numbers increased, agents were sent to establish lodges in the principal towns. The Bourbon king, shut up in Sicily, soon heard of them, and as he had not hesitated at letting loose with English aid galley-prisoners, or at encouraging brigands, to harass Murat, so he eagerly connived with these conspirators in the hope of recovering his throne. Murat, having striven for several years to suppress the Carbonari, at last, when he found his power slipping from him, reversed his policy towards them, and strove to conciliate them. But it was too late: neither he nor they could prevent the restoration of the Bourbons under the protection of Austria. The sectaries who had hitherto foolishly expected that, if the French could be expelled, Ferdinand would grant them a Liberal government, were soon cured of their delusion, and they now plotted against him as sedulously as they had plotted against his predecessor. Their membership increased to myriads; their lodges, starting up in every village in the Kingdom of Naples, had relations with branch societies in all parts of the Peninsula: to the anxious ears of European despots the name Carbonaro soon meant all that was lawless and terrible; it meant anarchy, chaos, assassination. But when we read the catechism, or confession of faith, of the Carbonari we are surprised by the reasonableness of their aims and tenets. The duties of the individual Carbonaro were, 'to render to the Almighty the worship due to Him; to serve the fatherland with zeal; to reverence religion and laws; to fulfil the obligations of nature and friendship; to be faithful to promises; to observe silence, discretion, and charity; to cause harmony and good morals to prevail; to conquer the passions and submit the will; and to abhor the seven deadly sins.' The scope of the Society was to disseminate instruction; to unite the different classes of society under the bond of love; to impress a national character on the people, and to interest them in the preservation and defense of the fatherland and of religion; to destroy by moral culture the source of crimes due to the general depravity of mankind; to protect the weak and to raise up the unfortunate. ... It went still farther and asserted the un-Catholic doctrine of liberty of conscience: 'to every Carbonaro,' so reads one of its articles, 'belongs the natural and unalterable right to worship the Almighty according to his own intuition and understanding.' We must not be misled, however, by these enlightened professions, into a wrong notion of the real purposes of Carbonarism. Politics, in spite of a rule forbidding political discussion, were the main business, and ethics but the incidental concern of the conspirators. They organized their order under republican forms as if to prefigure the ideal towards which they aspired. The Republic was subdivided into provinces, each of which was controlled by a grand lodge, that of Salerno being the 'parent.' There were also four 'Tribes,' each having a council and holding an annual diet. Each tribe had a Senate, which advised a

House of Representatives, and this framed the laws which a magistracy executed. There were courts of the first instance, of appeal, and of cessation, and no Carbonaro might bring suit in the civil courts against a fellow member, unless he had first failed to get redress in one of these. . . . The Carbonari borrowed some of their rites from the Freemasons, with whom indeed they were commonly reported to be in such close relations that Freemasons who joined the 'Carbonic Republic' were spared the formality of initiation; other parts of their ceremonial they copied from the New Testament, with such additions as the special objects of the order called for."—W. R. Thayer, *The Dawn of Italian Independence*, bk. 2, ch. 4 (v. 1).

A. D. 1814.—Desertion of Napoleon by Murat.—His treaty with the Allies.—Expulsion of the French from the Peninsula.—Murat, king of Naples, "foreseeing the downfall of the Emperor, had attempted to procure from Napoleon, as the price of his fidelity, the union under his own sceptre of all Italy south of the Po; but, failing in this, he prepared to abandon the cause of his benefactor. On the 11th January, 1814, he concluded a treaty with the Allies, by which he was guaranteed possession of Naples; and forthwith advancing on Rome with 20,000 men, occupied the second city in his brother-in-law's empire (Jan. 19); having previously published a flaming proclamation, in which the perfidy and violence of the imperial government were denounced in terms which came strangely from a chief of the Revolution. . . . At the end of December, 1813, Eugene had withdrawn to the Adige with 36,000 men, before Bellegarde and 50,000 Austrians; and he was already taking measures for a further retreat, when the proclamation of Murat, and his hostile advance, rendered such a movement inevitable. He had accordingly fallen back to the Mincio, when, finding himself threatened on the flank by a British expedition from Sicily under Lord William Bentinck, he determined on again advancing against Bellegarde, so as to rid himself of one enemy before he encountered another. The two armies, however, thus mutually acting on the offensive, passed each other, and an irregular action at last ensued on the Mincio (Feb. 8),

in which the advantage was rather with the French, who made 1,500 prisoners, and drove Bellegarde shortly after over the Mincio, about 3,000 being killed and wounded on each side. But, in other quarters, affairs were going rapidly to wreck. Verona surrendered to the Austrians on the 14th, and Ancona to Murat on the 16th; and the desertion of the Italians, unequal to the fatigues of a winter campaign, was so great that the Viceroy was compelled to fall back to the Po. Fouché, meanwhile, as governor of Rome, had concluded a convention (Feb. 20) with the Neapolitan generals for the evacuation of Pisa, Leghorn, Florence, and other garrisons of the French empire in Italy. A proclamation, however, by the hereditary prince of Sicily, who had accompanied Bentinck from Sicily, gave Murat such umbrage that he separated his troops from the British, and commenced operations, with little success, against Eugene on the Po, in which the remainder of March passed away. Bentinck, having at length received reinforcements from Catalonia, moved forward with 12,000 men, and occupied Spezia on the 29th of March, and, driving the French (April 8) from their position at Sestri, forced his way through the mountains, and appeared on the 16th in front of Genoa. On the 17th the forts and positions before the city were stormed; and the garrison, seeing preparations made for a bombardment, capitulated on the 18th, on condition of being allowed to march out with the honours of war. Murat had by this time recommenced vigorous operations, and after driving the French (April 13) from the Taro, had forced the passage of the Stura; but the news of Napoleon's fall put an end to hostilities. By a convention with the Austrians, Venice, Palma-Nuova, and the other fortresses still held by the French, were surrendered; the whole of Lombardy was occupied by the Germans; and in the first week of May the French troops finally repassed the Alps."—*Epitome of Alison's Hist. of Europe*, sect. 775, and 807-808.

A. D. 1814-1815.—Return of the Despot.—Restoration of Austrian tyranny in the North.—The Pope in Rome again.—"With little resistance, Northern Italy was taken from the French. Had it been otherwise, had Murat and Beauharnais joined their forces, they might have long held the Austrians in check, perhaps even have made a descent on Vienna; and although this might not have hindered the ultimate overthrow of Napoleon, yet it must have compelled the Allies, at the day of settlement, to respect the wishes of the Italians. But disunited, and deluded into the belief that they were partners in a war of liberation, the Italians woke up to find that they had escaped from the talons of the French eagle, only to be caught in the clutch of the two-headed monstrosity of Austria. They were to be used, in the language of Joseph De Maistre, like coins, wherewith the Allies paid their debts. This was plain enough when the people of the just-destroyed Kingdom of Italy prepared to choose a ruler for themselves: one party favored Beauharnais, another wished an Austrian prince, a third an Italian, but all agreed in demanding independence. Austria quickly informed them that they were her subjects, and that their affairs would be decided at Vienna. Thus, almost without striking a blow, and without a suspicion of the lot awaiting them, the Northern Italians fell back under the domination

of Austria. In the spring and early summer of 1814 the exiled princelings returned: Victor Emanuel I. from his savage refuge in Sardinia to Turin; Ferdinand III. from Würzburg to Florence; Pius VII. from his confinement at Fontainebleau and Savona to Rome [see PAPACY: A. D. 1808-1814]; Francis IV. to Modena. Other aspirants anxiously waited for the Congress of Vienna to bestow upon them the remaining provinces. The Congress . . . dragged on into the spring of the following year. . . . In Lombardy and Venetia, Metternich soon organized a thoroughly Austrian administration. The government of the two provinces was separate, that of Lombardy being centred at Milan, that of Venetia at Venice; but over all was placed an Austrian archduke as Viceroy. Each district had its civil and military tribunals, but the men who composed these being appointees of the viceroy or his deputies, their subservience could usually be reckoned upon. The trials were secret, a provision which, especially in political cases, made convictions easy. . . . Feudal privileges, which had been abolished by the French, could be recovered by doing homage to the Emperor and by paying specific taxes. In some respects there was an improvement in the general administration, but in others the deterioration was manifest. . . . Art, science, and literature were patronized, and they thrived as potted plants thrive under the care of a gardener who cuts off every new shoot at a certain height. . . . We may liken the people of the Austro-Italian provinces to those Florentine revelers who, at the time of the plague, tried to drive away their terror by telling each other the merry stories reported by Boccaccio. The plague which penetrated every corner of Lombardy and Venetia was the Austrian police. Stealthy, but sure, its unseen presence was dreaded in palace and hovel, in church, tribunal, and closet. . . . Every police-office was crammed with records of the daily habits of each citizen, of his visitors, his relatives, his casual conversations,—even his style of dress and diet were set down. . . . Such was the Metternichian system of police and espionage that counteracted every mild law and every attempt to lessen the repugnance of the Italians. They were not to be deceived by blandishments: Lombardy was a prison, Venetia was a prison, and they were all captives, although they seemed to move about unshackled to their work or pleasure.”—W. R. Thayer, *The Dawn of Italian Independence*, bk. 2, ch. 2 (v. 1).—See, also, VIENNA, THE CONGRESS OF; AUSTRIA: A. D. 1815-1846; and HOLY ALLIANCE.

(Southern): A. D. 1815.—Murat's attempt to head a national movement.—His failure, downfall and death.—Restoration of the Bourbons at Naples.—“Wild as was the attempt in which, after Napoleon's return from Elba, the King of Naples lost his crown, we must yet judge of it both by his own character and the circumstances in which he was placed. . . . In the autumn of 1813 communications took place at Milan between Murat and the leaders of the secret societies which were then attempting to organise Italian patriotism in arms. In 1814, when the restoration of Austrian rule in Lombardy so cruelly disappointed the national hopes, these communications were renewed. The King of Naples was assured that he needed but to

raise the standard of Italian independence to rally round him thousands and tens of thousands of volunteers. . . . These calculations . . . were readily adopted by the rash and vain-glorious monarch to whom they were presented. . . . His proud spirit chafed and fretted under the consciousness that he had turned upon Napoleon, and the mortification of finding himself deserted by those in reliance upon whose faith this sacrifice had been made. The events in France had taken him by surprise. In joining the alliance against Napoleon he had not calculated on the deposition of the emperor, still less had he dreamed of the destruction of the empire. . . . He bitterly reproached his own conduct for having lent himself to such results. . . . When his mind was agitated with these mingled feelings, the intelligence reached him that Napoleon had actually left Elba, on that enterprise in which he staked everything upon regaining the imperial throne of France. It came to him direct from Napoleon. . . . He foresaw that the armies of the allied powers would be engaged in a gigantic struggle with the efforts which Napoleon would be sure to make. Under such circumstances, he fancied Italy an easy conquest; once master of this he became a power with whom, in the conflict of nations, any of the contending parties could only be too happy to treat. He determined to place himself at the head of Italian nationality, and strike one daring blow for the chieftainship of the nation. . . . His ministers, his friends, the French generals, even his queen, Napoleon's sister, dissuaded him from such a course. . . . But with an obstinacy by which the vacillating appear sometimes to attempt to atone for habitual indecision, he persevered in spite of all advice. . . . He issued a proclamation and ordered his troops to cross the Papal frontier. . . . The Pope appointed a regency and retired, accompanied by most of the cardinals, to Florence. . . . On the 30th of March his [Murat's] troops attacked the Austrian forces at Cesena. The Germans were driven, without offering much resistance, from the town. On the evening of that day he issued from Rimini his proclamation to the Italian people, which was against Austria a declaration of war. . . . A declaration of war on the part of Austria immediately followed. . . . The whole of the Italian army of Austria was ordered at once to march upon Naples; and a treaty was concluded with Ferdinand, by which Austria engaged to use all her endeavours to recover for him his Neapolitan dominions. . . . The army which Murat led northward, instead of numbering 80,000 as he represented in his proclamation, certainly never exceeded 34,000. . . . Nearly 60,000 Austrians defended the banks of the Po. . . . On the 10th of April, the troops of Murat, under the command of General Pepe, were driven back by the Austrians, who now in their turn advanced. . . . A retreat to the frontiers of Naples was unanimously resolved on. This retreat was one that had all the disasters without any of the redeeming glories of war. . . . At last, as they approached the confines of the Neapolitan kingdom, an engagement which took place between Macerata and Tolentino, on the 4th of May, ended in a total and ignominious rout. . . . At Macerata most of the troops broke up into a disorganised rabble, and with difficulty Murat led to Capua a small remnant of an army, that could

hardly be said to be defeated, because they were worsted without anything that deserves to be called a fight. From Capua, on the 12th of May, the king sent to Naples a proclamation granting a free constitution. To conceal the fact that this was wrung from him only in distress, he resorted to the miserable subterfuge of ante-dating it from Rimini, on the 30th of March." On the evening of the 18th of May, Murat entered Naples quietly on foot, and had his last interview with his queen and children. A British squadron was already in the harbor. The next night he slipped away to the island of Ischia, and thence to Frejus, while Queen Caroline remained to discharge the last duties of sovereignty. On the 20th Naples was surrendered to the Austrians, and the ex-queen took refuge on an English vessel to escape from a threatening mob of the lazzaroni. She was conveyed to Trieste, where the Austrian emperor had offered her an asylum. The restored Bourbon king, Ferdinand, made his entry into the capital on the 17th of June. Meantime, Murat, in France, had offered his services to Napoleon and they had been declined. After Waterloo, he escaped to Corsica, whence, in the following October, he made a foolhardy attempt to recover his kingdom, landing with a few followers at Pizzo, on the Neapolitan coast, expecting a rising of the people to welcome his return. But the rising that occurred was hostile instead of friendly. The party was quickly overpowered, Murat taken prisoner and delivered to Ferdinand's officers. He was summarily tried by court martial and shot, October 13, 1815.—I. Butt, *Hist. of Italy*, v. 2, ch. 10-11.

A. D. 1820-1821.—Revolutionary insurrections in Naples and Sicily.—Perjury and duplicity of the king.—The revolt crushed by Austrian troops.—Abortive insurrection in Piedmont.—Its end at Novara.—Abdication of Victor Emmanuel I.—Accession of Charles Felix.—"In the last days of February, 1820, a revolution broke out in Spain. The object of its leaders was to restore the Constitution of 1812, which had been suppressed on the return of the Bourbons to the throne. . . . The Revolution proved successful, and for a short time the Spaniards obtained possession of a democratic Constitution. Their success stirred up the ardour of the Liberal party in the kingdom of the two Sicilies, and before many weeks were over a revolutionary movement occurred at Naples. The insurrection originated with the army under the command of General Pepé, and it is worthy of note that the movement was not directed against the reigning dynasty, and was not, even nominally, associated with any demand for national unity. All the insurgents asked for was the establishment of a Constitution similar to that then existing in Spain. After a very brief and feeble resistance, the King yielded to the demands of the military conspirators, who were strongly supported by popular feeling. On the 1st of October, a Parliament of the Neapolitan kingdom was opened by His Majesty Francis the First, who then and there took a solemn oath to observe the Constitution, and even went out of his way to profess his profound attachment for the principles on which the new Government was based. General Pepé there-

upon resigned the Dictatorship he had assumed, and constitutional liberty was deemed to have been finally established in Southern Italy by a bloodless revolution. The rising on the mainland was followed after a brief interval by a popular insurrection in Sicily. The main object, however, of the Sicilian Constitutionals was to bring about a legislative separation between the island and the kingdom of Naples proper. . . . The Sicilian insurrection afforded Francis I. the pretext he had looked for, from the commencement, for overthrowing the Constitution to which he had personally plighted his faith. The Allied Sovereigns took alarm at the outbreak of the revolutionary spirit in Sicily, and a Congress of the Great Powers was convoked at Laibach [see VERONA, THE CONGRESS OF] to consider what steps required to be taken for the protection of social order in the kingdom of Naples. . . . By the Neapolitan Constitution the Sovereign was not at liberty to leave the kingdom without the consent of the Parliament. This consent was only given, after much hesitation, in reliance upon the reiterated assurances of the King, both publicly and privately, that his one object in attending the Congress was to avert, if possible, a foreign intervention. His Majesty also pledged himself most solemnly not to sanction any change in the Constitution to which he had sworn allegiance, and . . . he promised further that he would not be a party to any reprisals being inflicted upon his subjects for the part they might have taken in the establishment of Constitutional liberty. As soon, however, as Francis the First had arrived at Laibach, he yielded without a protest to the alleged necessity for a foreign occupation of his kingdom, with the avowed object of putting down the Constitution. Without any delay being given, the Austrian regiments crossed the frontier, preceded by a manifesto from the King, calling upon his faithful subjects to receive the army of occupation not as enemies, but as friends. . . . The national troops, under General Pepé, were defeated with ease by the Austrians, who in the course of a few weeks effected, almost without opposition, the military occupation of the whole kingdom [February—March, 1821]. Forthwith reprisals commenced in grim earnest. On the plea that the resistance offered by the Constitutionals to the invading army constituted an act of high treason, the King declared himself absolved from all promises he had given previously to his departure. A reign of terror was set on foot. . . . Signor Botta thus sums up the net result of the punishments inflicted after the return of the King in the Neapolitan provinces alone. 'About a thousand persons were condemned to death, imprisoned, or exiled. Infinitely greater was the number of officers and officials who were deprived of their posts by the Commissioners of Investigation.' . . . The establishment of Constitutional Government in the kingdom of the Two Sicilies, and the resolution adopted at the instigation of Austria, by the Congress of Laibach, to suppress the Neapolitan Constitution by armed force, produced a profound effect throughout Italy, and especially in Sardinia. The fact that internal reforms were incompatible with the ascendancy of Austria in the Peninsula was brought home to the popular mind, and, for the first time in the history of Italy, the desire for civil liberty became identified with the

national aversion to foreign rule. In Piedmont there was a powerful Constitutional party, composed chiefly of professional men, and a strong military caste, aristocratic by birth and conviction, but opposed on national grounds to the domination of Austria over Italy. These two parties coalesced for a time upon the common platform of Constitutional Reform and war with Austria; and the result was the abortive rising of 1821. The insurrection, however, though directed against the established Government, had about it nothing of an anti-dynastic, or even of a revolutionary character. On the contrary, the leaders of the revolt professed, and probably with sincerity, that they were carrying out the true wishes of their Sovereign. Their theory was, that Victor Emmanuel I. was only compelled to adhere to the Holy Alliance by considerations of foreign policy, and that, if his hands were forced, he would welcome any opportunity of severing himself from all complicity with Austria. Acting on this belief, they determined to proclaim the Constitution by a sort of coup d'état, and then, after having declared war on Austria, to invade Lombardy, and thus create a diversion in favour of the Neapolitans. It is certain that Victor Emmanuel I. gave no sanction to, and was not even cognisant of, this mad enterprise. . . . The troubles and calamities of his early life had exhausted his energy; and his one desire was to live at peace at home and abroad. On the other hand, it is certain that Charles Albert [Prince of Savoy-Carignan, heir presumptive to the throne of Sardinia] was in communication with the leaders of the insurrection, though how far he was privy to their actual designs has never yet been clearly ascertained. The insurrection broke out just about the time when the Austrian troops were approaching the Neapolitan frontiers. . . . The insurrection gained head rapidly, and the example of Alexandria was followed by the garrison of Turin. Pressure was brought to bear upon Victor Emmanuel I., and he was led to believe that the only means of averting civil war was to grant the Constitution. The pressure, however, overshot its mark. On the one hand, the King felt that he could not possibly withstand the demand for a Constitution at the cost of having to order the regiments which had remained loyal to fire upon the insurgents. On the other hand, he did not feel justified in granting the Constitution without the sanction of his brother and [immediate] heir. In order, therefore, to escape from this dilemma, his Majesty abdicated suddenly in favour of Charles Felix [his brother]. As, however, the new Sovereign happened to be residing at Modena, at the Court of his brother-in-law, the Prince of Savoy-Carignan was appointed Regent until such time as Charles Felix could return to the capital. Immediately upon his abdication, Victor Emmanuel quitted Turin, and Charles Albert was left in supreme authority as Regent of the State. Within twelve hours of his accession to power, the Regent proclaimed the Spanish Constitution as the fundamental law of Piedmont. . . . The probability is . . . that Charles Albert, or rather his advisers, were anxious to tie the hands of the new Sovereign. They calculated that Charles Felix, who was no longer young, and who was known to be bitterly hostile to all Liberal theories of Government, would abdicate sooner than accept the

Crown of a Constitutional kingdom. This calculation proved erroneous. . . . As soon as his Majesty learned the news of what had occurred in his absence, he issued a manifesto [March, 1821], declaring all the reforms granted under the Regency to be null and void, describing the authors of the Constitution as rebels, and avowing his intention, in the case of necessity, of calling upon the Allied Powers to assist him in restoring the legitimate authority of the Crown. Meanwhile, he refused to accept the throne till the restoration of order had given Victor Emmanuel full freedom to reconsider the propriety of abdication. This manifesto was followed by the immediate advance of an Austrian corps d'armée to the frontier stream of the Ticino, as well as by the announcement that the Russian Government had ordered an army of 100,000 men to set out on their march towards Italy, with the avowed object of restoring order in the Peninsula. The population of Piedmont recognised at once, with their practical good sense, that any effective resistance was out of the question. . . . The courage of the insurgents gave way in view of the obstacles which they had to encounter, and the last blow was dealt to their cause by the sudden defection of the Prince Regent. . . . Unable either to face his coadjutors in the Constitutional pronunciamento, or to assume the responsibility of an open conflict with the legitimate Sovereign, the Regent left Turin secretly [March 21, 1821], without giving any notice of his intended departure, and, on arriving at Novara, formally resigned his short-lived power. The leaders, however, of the insurrection had committed themselves too deeply to follow the example of the Regent. A Provisional Government was established at Turin, and it was determined to march upon Novara, in the hope that the troops collected there would fraternise with the insurgents. As soon as it was known that the insurgents were advancing in force from Turin, the Austrians, under General Bùbner, crossed the Ticino, and effected a junction with the Royal troops. When the insurgents reached Novara, they suddenly found themselves confronted, not by their own fellow-countrymen, but by an Austrian army. A panic ensued, and the insurrectionary force suffered a disastrous, though, fortunately, a comparatively bloodless, defeat. After this disaster the insurrection was virtually at an end. . . . The Austrians, with the consent of Charles Felix, occupied the principal fortresses of Piedmont. The old order of things was restored, and, upon Victor Emmanuel's formal refusal to withdraw his abdication, Charles Felix assumed the title of King of Sardinia. As soon as military resistance had ceased, the insurrection was put down with a strong hand." —E. Dicey, *Victor Emmanuel*, ch. 3-4. — "Henceforth the issue could not be misunderstood. The conflict was not simply between the Neapolitans and their Bourbon king, or between the Piedmontese and Charles Felix, but between Italian Liberalism and European Absolutism. Santarosa and Pepé cried out in their disappointment that the just cause would have won had their timid colleagues been more daring, had promises but been kept; we, however, see clearly that though the struggle might have been prolonged, the result would have been unchanged. Piedmont and Naples, had each of their citizens been a hero, could not have overcome the Holy

Alliance [see HOLY ALLIANCE], which was their real antagonist. The revolutionists had not directly attacked the Holy Alliance; they had not thrown down the gauntlet to Austria; they had simply insisted that they had a right to constitutional government; and Austria, more keener than they, had seen that to suffer a constitution at Naples or Turin would be to acknowledge the injustice of those principles by which the Holy Alliance had decreed that Europe should be repressed to the end of time. So when the Carbonari aimed at Ferdinand they struck Austria, and Austria struck back a deadly blow. . . . But Austria and the Reactionists were not content with simple victory; treating the revolution as a crime, they at once proceeded to take vengeance. . . . Ferdinand, the perjured Neapolitan king, tarried behind in Florence, whilst the Austrians went down into his kingdom. . . . But as soon as Ferdinand was assured that the Austrian regiments were masters of Naples, he sent for that Prince of Canosa whom he had been forced unwillingly to dismiss on account of his outrageous cruelty five years before, and deputed to him the task of restoring genuine Bourbon tyranny in the Kingdom of the Two Sicilies. A better agent of vindictive wrath than Canosa could not have been found; he was troubled by no humane compunctions, nor by doubts as to the justice of his fierce measures; to him, as to Torquemada, persecution was a compound of duty and pleasure. . . . The right of assembling, no matter for what purpose, being denied, the universities, schools, and lyceums had to close; proscription lists were hurriedly drawn up, and they contained not only the names of those who had been prominent in the recent rising, but also of all who had incurred suspicion for any political acts as far back as 1793. . . . Houses were searched without warrant; seals were broken open; some of the revelations of the confessional were not sacred. The church-bells tolled incessantly for victims led to execution. To strike deeper terror, Canosa revived the barbarous torture of scourging in public. . . . How many victims actually suffered during this reign of terror we cannot tell. Canosa's list of the proscribed had, it is said, more than four thousand names. The prisons were choked with persons begging for trial; the galleys of Pantelleria, Procida, and the Ponza Islands swarmed with victims condemned for life; the scaffolds, erected in the public squares of the chief towns, were daily occupied. . . . At length, when his deputies had terrorized the country into apparent submission, and when the Austrian regiments made it safe for him to travel, Ferdinand quitted Florence and returned to Naples. . . . In Sicily the revolution smouldered and spluttered for years, in spite of remorseless efforts to stamp it out; on the mainland, robberies and brigandage, and outbreaks now political and now criminal, proved how delusive was a security based on oppression and lies. Amid these conditions Ferdinand passed the later years of his infamous reign. . . . In Piedmont the retaliation was as effectual as in Naples, but less blood was shed there. Della Torre took command of the kingdom in the name of Charles Felix. . . . Seventy-three officers were condemned to death, one hundred and five to the galleys; but as nearly all of them had escaped, they were hanged in effigy; only two,

Lieutenant Lanari and Captain Garelli, were executed. The property of the condemned was sequestered, their families were tormented, and the commission, not content with sentencing those who had taken an active part in the revolution, cashiered two hundred and twenty-one officers who, while holding aloof from Santarosa, had refused to join Della Torre at Novara and fight against their countrymen. . . . The King . . . had soon reason to learn the truth of a former epigram of his, 'Austria is a bird-line which you cannot wash off your fingers when you have once touched it'; for Austria soon showed that her motive in bolstering falling monarchs on their shaky thrones was not simply philanthropic nor disinterested. General Bubna, on taking possession of Alessandria, sent the keys of that fortress to Emperor Francis, in order, he said, — and we wonder whether there was no sarcasm in his voice, — in order to give Charles Felix 'the pleasure of receiving them back from the Emperor's hand.' 'Although I found this a very poor joke,' wrote Charles Felix to his brother, 'I dissembled.' How, indeed, could he do otherwise? . . . Charles Felix had in truth become but the vassal of the hereditary enemy of his line, and that not by conquest, but by his own invitation."—W. R. A. D. 1830-1832.—Revolt in Modena, Parma, and the Papal States, suppressed by Austrian troops.—"The Revolution of 1830 [in France] made a natural impression in a country which had many evils to complain of and which had so lately been connected with France. The duke of Modena, Francis IV., sought to make use of the liberal movement to extend his rule over northern Italy. But at the last moment he was terrified by threats from Vienna, turned against his fellow-conspirators, and imprisoned them (Feb. 3, 1831). The people, however, were so alienated by his treachery that he fled with his prisoners to seek safety in Austrian territory. A provisional government was formed, and Modena was declared a free state. Meanwhile the election of a new pope, Gregory XVI., gave occasion for a rising in the papal states. Bologna took the lead in throwing off its allegiance to Rome, and in a few weeks its example was followed by the whole of Romagna, Umbria, and the Marches. The two sons of Louis Bonaparte, the late king of Holland, hastened to join the insurgents, but the elder died at Forlì (17 March), and thus an eventful career was opened to the younger brother, the future Napoleon III. Parma revolted against Maria Louisa, who followed the example of the duke of Modena and fled to Austria. The success of the movement, however, was very short-lived. Austrian troops marched to the assistance of the papacy, the rebellion was put down by force, and the exiled rulers were restored. Louis Philippe, on whom the insurgents had relied, had no sympathy with a movement in which members of the Bonaparte family were engaged. But a temporary revival of the insurrection brought the Austrians back

to Romagna, and a great outcry was raised in France against the king. To satisfy public opinion, Louis Philippe sent a French force to seize Ancoua (Feb. 22, 1832), but it was a very harmless demonstration, and had been explained beforehand to the papal government. In Naples and Sardinia no disturbances took place. Ferdinand II. succeeded his father Francis I. on the Neapolitan throne in 1830, and satisfied the people by introducing a more moderate system of government. Charles Albert became king of Sardinia on the death of Charles Felix (27 April, 1831), and found himself in a difficult position between Austria, which had good reason to mistrust him, and the liberal party, which he had betrayed."—R. Lodge, *Hist. of Modern Europe*, ch. 25.

A. D. 1831-1848.—The Mission of Mazzini, the Revolutionist.—Young Italy.—"The Revolution of 1830, ineffectual as it seemed to its promoters, was yet most significant. It failed in Italy and Poland, in Spain and Portugal; it created a mongrel monarchy, neither Absolute nor Constitutional, in France; only in Belgium did it attain its immediate purpose. Nevertheless, if we look beneath the surface, we see that it was one of those epoch-marking events of which we can say, 'Things cannot be again what until just now they were.' . . . The late risings in the Duchies and Legations had brought no comfort to the conspirators, but had taught them, on the contrary, how ineffectual, how hopeless was the method of the secret societies. After more than fifteen years they had not gained an inch; they had only learned that their rulers would concede nothing, and that Austria, their great adversary, had staked her existence on maintaining thralldom in Italy. Innumerable small outbursts and three revolutions had ended in the death of hundreds and in the imprisonment or proscription of thousands of victims. . . . Just when conspiracy, through repeated failures, was thus discredited, there arose a leader so strong and unselfish, so magnetic and patient and zealous, that by him, if by any one, conspiracy might be guided to victory. This leader, the Great Conspirator, was Joseph Mazzini, one of the half dozen supreme influences in European politics during the nineteenth century, whose career will interest posterity as long as it is concerned at all in our epoch of transition. For just as Metternich was the High Priest of the Old Régime, so Mazzini was the Prophet of a Social Order, more just, more free, more spiritual than any the world has known. He was an Idealist who would hold no parley with temporizers, an enthusiast whom half-concessions could not beguile: and so he came to be decried as a fanatic or a visionary. . . . Mazzini joined the Carbonari, not without suspecting that, under their complex symbolism and hierarchical mysteries they concealed a fatal lack of harmony, decision, and faith. . . . As he became better acquainted with Carbonarism, his conviction grew stronger that no permanent good could be achieved by it. . . . The open propaganda of his Republican and Unitarian doctrines was of course impossible; it must be carried on by a secret organization. But he was disgusted with the existing secret societies: they lacked harmony, they lacked faith, they had no distinct purpose; their Masonic mummeries were childish

and farcical. . . . Therefore, Mazzini would have none of them; he would organize a new secret society, and call it 'Young Italy,' whose principles should be plainly understood by every one of its members. It was to be composed of men under forty, in order to secure the most energetic and disinterested members, and to avoid the influence of older men, who, trained by the past generation, were not in touch with the aspirations and needs of the new. It was to awaken the People, the bone and sinew of the nation; whereas the earlier sects had relied too much on the upper and middle classes, whose traditions and interests were either too aristocratic or too commercial. Roman Catholicism had ceased to be spiritual; it no longer purified and uplifted the hearts of the Italians. . . . Young Italy aimed, therefore, to substitute for the mediæval dogmas and patent idolatries of Rome a religion based on Reason, and so simple as to be within the comprehension of the humblest peasant. . . . The doctrines of the new sect spread, but since secret societies give the census-taker no account of their membership, we cannot cite figures to illustrate the growth of Young Italy. Contrary to Mazzini's expectations, it was recruited, not so much from the People, as from the Middle Class, the professional men, and the tradesmen." In 1831 Mazzini was forced into exile, at Marseilles, from which city he planned an invasion of Savoy. The project was discovered, and the Sardinian government revenged itself cruelly upon the patriots within its reach. "In a few weeks, eleven alleged conspirators had been executed, many more had been sentenced to the galleys, and others, who had escaped, were condemned in contumacy. Among the men who fled into exile at this time were . . . Vincent Gioberti and Joseph Garibaldi. . . . To an enthusiast less determined than Mazzini, this calamity would have been a check; to him, however, it was a spur. Instead of abandoning the expedition against Savoy, he worked with might and main to hurry it on. . . . One column, in which were fifty Italians and twice as many Poles, . . . was to enter Savoy by way of Annemasse. A second column had orders to push on from Nyon; a third, starting from Lyons, was to march towards Chambéry. Mazzini, with a musket on his shoulder, accompanied the first party. To his surprise, the peasants showed no enthusiasm when the tricolor flag was unfurled and the invaders shouted 'God and People! Liberty and the Republic!' before them. At length some carabineers and a platoon of troops appeared. A few shots were fired. Mazzini fainted; his comrades dispersed across the Swiss border, taking him with them. . . . His enemies attributed his fainting to cowardice; he himself explained it as the result of many nights of sleeplessness, of great fatigue, fever and cold. . . . To all but the few concerned in it, this first venture of Young Italy seemed a farce, the disproportion between its aim and its achievement was so enormous, and Mazzini's personal collapse was so ignominious. Nevertheless, Italian conspiracy had now and henceforth that head for lack of which it had so long floundered amid vague and contradictory purposes. The young Idealist had been beaten in his first encounter with obdurate Reality, but he was not discouraged. . . . Now began in earnest that 'apostolate' of his, which he laid

down only at his death. Young Italy was established beyond the chance of being destroyed by an abortive expedition: Young Poland, Young Hungary, Young Europe itself, sprang up after the Mazzinian pattern; the Liberals and revolutionists of the Continent felt that their cause was international, and in their affliction they fraternized. No one could draw so fair and reasonable a Utopia for them as Mazzini drew; no one could so fire them with a sense of duty, with hope, with energy. He became the mainspring of the whole machine—truly an infernal machine to the autocrats—of European conspiracy. The redemption of Italy was always his nearest aim, but his generous principle reached out over other nations, for in the world that he prophesied every people must be free. Proscribed in Piedmont, expelled from Switzerland, denied lodging in France, he took refuge in London, there to direct, amid poverty and heartache, the whole vast scheme of plots. His bread he earned by writing critical and literary essays for the English reviews,—he quickly mastered the English language so as to use it with remarkable vigor,—and all his leisure he devoted to the preparation of political tracts, and to correspondence with numberless confederates. . . . He was the consulting physician for all the revolutionary practitioners of Europe. Those who were not his partisans disparaged his influence, asserting that he was only a man of words; but the best proof of his power lies in the anxiety he caused monarchs and cabinets, and in the precautions they took to guard against him. . . . Mazzini and Metternich! For nearly twenty years they were the antipodes of European politics. One in his London garret, poor, despised, yet indomitable and sleepless, sending his influence like an electric current through all barriers to revivify the heart of Italy and of Liberal Europe; the other in his Vienna palace, haughty, famous, equally alert and cunning, . . . shedding over Italy and over Europe his upas-doctrines of torpor and decay!"—W. R. Thayer, *The Dawn of Italian Independence*, bk. 3, ch. 1 (v. 1).

A. D. 1848.—Expulsion of Jesuits. See **JESUITS**: A. D. 1769-1871.

A. D. 1848-1849.—Insurrection and revolution throughout the peninsula.—French occupation of Rome.—Triumph of King "Bomba" in Naples and Sicily.—Disastrous war of Sardinia with Austria.—Lombardy and Venice enslaved anew.—"The revolution of 1831, which affected the States of the Church, Modena, and Parma, had been suppressed, like the still earlier rebellions in Naples and Piedmont, by Austrian intervention. . . . Hence, all the hatred of the Italians was directed against foreign rule, as the only obstacle to the freedom and unity of the peninsula. . . . The secret societies, and the exiles in communication with them—especially Joseph Mazzini, who issued his commands from London—took care that the national spirit should not be buried beneath material interests, but should remain ever wakeful. Singularly, the first encouragement came from" Rome. "Pope Gregory XVI. . . . had died June 1st, 1846, and been succeeded by the fifty-four-year-old Cardinal Count Mastai Ferretti, who took the name of Pius IX. If the pious world which visited him was charmed by the amiability and clemency

of its new head, the cardinals were dismayed at the reforms which this new head would fain introduce in the States of the Church and in all Italy. He published an amnesty for all political offences; permitted the exiles to return with impunity; allowed the Press freer scope; threw open the highest civil offices to laymen; summoned from the notables of the provinces a council of state, which was to propose reforms; bestowed a liberal municipal constitution on the city of Rome; and endeavored to bring about an Italian confederation. . . . After the French revolution of 1848 he granted a constitution. There was a first chamber, to be named by the Pope, and a second chamber, to be elected by the people, while the irresponsible college of cardinals formed a sort of privy council. A new era appeared to be dawning. The old-world capital, Rome, once the mistress of the nations, still the mistress of all Roman Catholic hearts, was to become the central point of Italy. . . . But when the flames of war broke out in the north [see below], and the fate of Italy was about to be decided between Sardinia and Austria on the old battle fields of Lombardy, the Romans demanded from the Pope a declaration of war against Austria, and the despatch of Roman troops to join Charles Albert's army. Pius rejected their demands as unsuited to his papal office, and so broke with the men of the extreme party. . . . In this time of agitation Pius thought that in Count Pellegrino Rossi, of Carrara, . . . he had found the right man to carry out a policy of moderate liberalism, and on the 17th of September, 1848, he set him at the head of a new ministry. The anarchists . . . could not forgive Rossi for grasping the reins with a firm hand." On the 15th of November, as he alighted from his carriage at the door of the Chambers, he was stabbed in the neck by an assassin, and died on the spot. He was about, when murdered, to open the Chambers with a speech, in which he intended "to promise abolition of the rule of the cardinals and introduction of a lay government, and to insist upon Italy's independence and unity. . . . The next day an armed crowd appeared before the Quirinal and attacked the guard, which consisted of Swiss mercenaries, some of the bullets flying into the Pope's antechamber. He had to accept a radical ministry and dismiss the Swiss troops. . . . Pius fled in disguise from Rome to Gaeta, November 24th, and sought shelter with the King of Naples. Mazzini and his party had free scope. A constitutional convention was summoned, which declared the temporal power of the Pope abolished (February 5th, 1849), and Rome a republic. To them attached itself Tuscany. Grand-duke Leopold II. had granted a constitution, February 17th, 1848, but nevertheless the republican-minded ministry of Guerrazzi compelled him to join the Pope at Gaeta, February 21st, 1849. The republic was then proclaimed in Tuscany and union with Rome resolved upon." But Louis Napoleon, President of the French republic, intervened. "Marshal Oudinot was despatched with 8,000 men. He landed in Civita Vecchia, April 26th, 1849, and appeared before the walls of Rome on the 30th, expecting to take the city without any trouble. But . . . after a fight of several hours, he had to retreat to Civita Vecchia with a loss of 700 men. A few days later the Neapolitan army, which was to attack the rebels from the south,

was defeated at Velletri; and the Spanish troops, the third in the league against the red republic, prudently avoided a battle. But Oudinot received considerable re-enforcements, and on June 3d he advanced against Rome for the second time, with 35,000 men, while the force in the city consisted of about 19,000, mostly volunteers and national guards. In spite of the bravery of Garibaldi and the volunteers, into whom he breathed his spirit, Rome had to capitulate, after a long and bloody struggle, owing to the superiority of the French artillery. On the 4th of July Oudinot entered the silent capital. Garibaldi, Mazzini, and their followers fled. . . . Pins, for whose nerves the Roman atmosphere was still too strong, did not return until the 4th of April, 1850. His ardor for reform was cooled. . . . In the Legations they had to protect themselves by Austrian bayonets, and in Rome and Civita Vecchia by French. This lasted in the Legations until 1859, and in Rome and Civita Vecchia until 1866 and 1870. Simultaneously with Rome the south of Italy had entered into the movement so characteristic of the year 1848. The secesses of 1820 and 1821 were repeated." The Sicilians again demanded independence; expelled the Neapolitan garrison from Palermo; refused to accept a constitution proffered by King Ferdinand II., which created a united parliament for Naples and Sicily; voted in a Sicilian parliament the perpetual exclusion of the Bourbon dynasty from the throne, and offered the crown of Sicily to a son of the king of Sardinia, who declined the gift. In Naples, Ferdinand yielded at first to the storm, and sent, under compulsion, a force of 13,000 Neapolitan troops, commanded by the old revolutionist, General Pepé, to join the Sardinians against Austria. This was in April, 1848. A month later he crushed the revolution with his Swiss mercenaries, recalled his army from northern Italy, and was master, again, in his capital and his peninsular kingdom. The following summer he landed 8,000 troops in Sicily; his army bombarded and stormed Messina in September; defeated the insurgents at the foot of Mount Etna; took Catania by storm in April, 1849, and entered Palermo, after a short bombardment, on the 17th of May, having gained for its master the nickname of "King Bomba." "He ordered a general disarmament, and established an oppressive military rule over the whole island; and there was no more talk of parliament and constitution. All these struggles in central and southern Italy stood in close connection with the events of 1848 and 1849 in upper Italy. . . . In the north the struggle was to shake off the Austrian yoke. . . . During the month of January, 1848, there was constant friction between the citizens and the military in Milan and the university cities of Pavia and Padua. . . . March 18th, Milan rose. All classes took part in the fight; and the eighty-two-year-old field-marshal Count Joseph Radetzky . . . was obliged, after a street fight of two days, to draw his troops out of the city, call up as quickly as possible the garrisons of the neighboring cities, and take up his position in the famous Quadrilateral, between Peschiera, Verona, Legnano, and Mantua. March 22d, Venice, where Count Zichy commanded, was lost for the Austrians," who yielded without resistance, releasing their political prisoners, one of whom, the celebrated Daniel Manin, a Venetian lawyer,

took his place at the head of a provisional government. "Other cities followed the lead of Venice. The little duchies of Modena and Parma could hold out no longer; Dukes Francis and Charles fled to Austria, and provisional governments sprung up behind them. Like Naples, the duchies and Tuscany also sent their troops across the Po to help the Sardinians in the decisive struggle. The hopes of all Italy were centred on Sardinia and its king. . . . Charles Albert, called to the aid of Lombardy, entered Milan to win for himself the Lombardo-Venetian kingdom and the hegemony of Italy. He presented himself as the liberator of the peninsula, but it was not a part for which he was qualified by his antecedents. . . . He was a brave soldier, but a poor captain. . . . His opponent, Radetzky, was old, but his spirit was still young and fresh. . . . Radetzky received re-enforcements from Austria, and on the 6th of May repelled the attack of the Sardinian king south-west of Verona [at Santa Lucia]. May 29th, he carried the intrenchments at Cartatone; but as the Sardinians were victorious at Goito and took Peschiera, while Garibaldi with his Alpine rangers threatened the Austrian rear, he had to desist from further advances, and limit his operations to the recapture of Vicenza and the other cities of the Venetian main-land. In the mean time the Austrian court, chiefly at the instigation of the British embassy, had opened negotiations with the Lombards, and offered them their independence on condition of their assuming a considerable share of the public debt, and concluding a favorable commercial treaty with Austria. But, as the Lombards felt sure of acquiring their freedom more cheaply, they did not accept the proposition. Radetzky was now in a position to assume an active offensive. He won a brilliant victory at Custoza, July 25th. The Sardinians attempted to make a stand at Goito and again at Volta, but were driven back, and Radetzky advanced on Milan. Charles Albert had to evacuate the city," and on the 9th of August he concluded an armistice, withdrawing his troops from Lombardy and the duchies. But in the following March (1849) he was persuaded to renew the war, and he placed his army under the command of the Polish general Chrzanowski. It was the intention of the Sardinians to advance again into Lombardy, but they had no opportunity. "Radetzky crossed the Ticino, and in a four days' campaign on Sardinian soil defeated the foe so completely — March 21st at Mortara, and March 23d at Novara — that there could be no more thought of a renewal of the struggle. . . . Charles Albert, who had vainly sought death upon the battle-field, was weary of his throne and his life. In the night of March 23d, at Novara, he laid down the crown and declared his eldest son king of Sardinia, under the title of Victor Emmanuel II. He hoped that the latter would obtain a more favorable peace from the Austrians. . . . Then, saying farewell to his wife by letter, attended by but two servants, he travelled through France and Spain to Portugal. He died at Oporto, July 26th, 1849, of repeated strokes of apoplexy." After long negotiations, the new king concluded a treaty of peace with Austria on the 6th of August. "Sardinia retained its boundaries intact, and paid 75,000,000 lire as indemnity. The false report of a Sardinian victory at Novara had caused the popula-

tion of Brescia to fall upon the Austrian garrison and drive them into the citadel. General Haynau hastened thither with 4,000 men well provided with artillery. The city was bombarded, and on the 1st of April it was reoccupied, after a fearful street fight, in which even women took part; but Haynau stained his name by inhuman cruelties, especially toward the gentler sex. Venice was not able to hold out much longer. It had at first attached itself to Sardinia, but after the defeat of the Sardinians the republic was proclaimed. Without the city, in Haynau's camp, swamp fever raged; within, hunger and cholera. On the news of the capitulation of Hungary, August 22d, it surrendered, and the heads of the revolution, Manin and Pepe, went into exile. All Italy was again brought under its old masters."—W. Müller, *Political Hist. of Recent Times*, sect. 16.—The siege of Venice, "reckoning from April 2, when the Assembly voted to resist at any cost, lasted 146 days; but the blockade by land began on June 18, 1848, when the Austrians first occupied Mestre. During the twenty-one weeks of actual siege, 900 Venetian troops were killed, and probably 7,000 or 8,000 were at different times on the sick-list. Of the Austrians, 1,200 were killed in engagements, 8,000 succumbed to fevers and cholera, and as many more were in the hospitals: 80,000 projectiles were fired from the Venetian batteries; from the Austrian, more than 120,000. During the seventeen months of her independence, Venice raised sixty million francs, exclusive of patriotic donations in plate and chattels. When Gorzkowsky came to examine the accounts of the defunct government he exclaimed, 'I did not believe that such Republican dogs were such honest men.' With the fate of Venice was quenched the last of the fires of liberty which the Revolution had kindled throughout Europe in 1848. Her people, whom the world had come to look down upon as degenerate,—mere trinket-makers and gondoliers,—had proved themselves second to none in heroism, superior to all in stability. At Venice, from first to last, we have had to record no excesses, no fickle changes, no slipping down of power from level to level till it sank in the mire of anarchy. She had her demagogues and her passions, but she would be the slave of neither; and in nothing did she show her character more worthily than in recognizing Manin and making him her leader. He repaid her trust by absolute fidelity. I can discover no public act of his to which you can impute any other motive than solicitude for her welfare. The common people loved him as a father, revered him as a patron saint; the upper classes, the soldiers, the politicians, whatever may have been the preferences of individuals or the ambition of cliques, felt that he was indispensable, and gave him wider and wider authority as danger increased. . . . The little lawyer, with the large, careworn face and blue eyes, had redeemed Venice from her long shame of decadence and servitude. But Europe would not suffer his work to stand; Europe preferred that Austria rather than freedom should rule at Venice. At daybreak on August 28 a mournful throng of the common people collected before Manin's house in Piazza San Paterniano. 'Here is our good father, poor dear fellow,' they were heard to say. 'He has endured so much for us. May God bless him!' They escorted him and his family to the shore,

whence he embarked on the French ship *Pluton*, for he was among the forty prominent Venetians whom the Austrians condemned to banishment. At six o'clock the *Pluton* weighed anchor and passed through the winding channel of the lagune, out into the Adriatic. Long before the Austrian banners were hoisted that morning on the flagstaffs of St. Mark's, Venice, with her fair towers and glittering domes, had vanished forever from her Great Defender's sight. Outwardly, the Revolutionary Movement had failed; in France it had resulted in a spurious Republic, soon to become a tinsel Empire; elsewhere, there was not even a make-believe success to hide, if but for a while, the failure. In Italy, except in Piedmont, Reaction had full play. Bomba filled his Neapolitan and Sicilian prisons with political victims, and demonstrated again that the Bourbon government was a negation of God. Pius IX., having loitered at Naples with his Paragon of Virtue until April, 1850, returned to Rome, to be henceforth now the puppet and now the accomplice of Cardinal Antonelli in every scheme for oppressing his subjects, and for resisting Liberal tendencies. He held his temporal sovereignty through the kindness of the Bonapartist charlatan in France; it was fated that he should lose it forever when that charlatan lost his Empire. In Tuscany, Leopold thanked Austria for permitting him to rule over a people the intelligent part of which despised him. In Modena, the Duke was but an Austrian deputy sheriff. Lombardy and Venetia were again the prey of the double-beaked eagle of Hapsburg. Only in Piedmont did Constitutionalism and liberty survive to become, under an honest king and a wise minister, the ark of Italy's redemption."—W. R. Thayer, *The Dawn of Italian Independence*, bk. 5, ch. 6 (v. 2).

A. D. 1856-1859.—Austro-Italy before Europe in the Congress of Paris.—Alliance of France with Sardinia.—War with Austria.—Emancipation of Lombardy.—Peace of Villafranca.—"The year 1856 brought an armistice between the contending powers [in the Crimea—see RUSSIA: A. D. 1853-1854 to 1854-1856], followed by the Congress of Paris, which settled the terms of peace. At that Congress Count Cavour and the Marquis Villamarina represented their country side by side with the envoys of the great European States. The Prime Minister of Piedmont, while taking his part in the re-establishment of the general peace with a skill and tact which won him the favour of his brother plenipotentiaries, never lost sight of the further object he had in view, namely, that of laying before the Congress the condition of Italy. . . . His efforts were rewarded with success. On the 30th March, 1856, the treaty of peace was signed, and on the 8th April Count Walewski called the attention of the members of the Congress to the state of Italy. . . . Count Buol, the Austrian

plenipotentiary, would not admit that the Congress had any right to deal with the Italian question at all; he declined courteously, but firmly, to discuss the matter. . . . But although Austria refused to entertain the question, the fact remained that the condition of Italy now stood condemned, not by revolutionary chiefs, nor by the rulers of Piedmont alone, but by the envoys of some of the leading powers of Europe speaking officially in the name of their respective sovereigns. It was in truth a great diplomatic victory for Italy. . . . No one in Europe was more thoroughly convinced than Napoleon III. that the discontent of Italy and the plots of a section of Italians had their origin in the despotism which annihilated all national life in the Peninsula with the single exception of Piedmont. He felt keenly, also, how false was his own position at Rome. . . . France upheld the Pope as a temporal sovereign, but, nevertheless, the latter ruled in a manner which pleased Austria and which displeased France. . . . Count Cavour went privately to meet the French Emperor at Plombières in July, 1858. During that interview it was arranged that France should ally herself actively with Piedmont against Austria. . . . The first public indication of the attitude taken up by France with regard to Austria and Italy was given on the 1st January, 1859, when Napoleon III. received the diplomatic corps at the Tuileries. Addressing Baron Hubner, the Austrian Ambassador, the French Emperor said: 'I regret that the relations between us are bad; tell your sovereign, however, that my sentiments towards him are not changed.' . . . The ties which united France to Piedmont were strengthened by the marriage, in the end of January, 1859, of the Princess Clotilde, the eldest daughter of Victor Emmanuel, with Prince Napoleon, the first cousin of the French Emperor. . . . An agreement was made by which the Emperor Napoleon promised to give armed assistance to Piedmont if she were attacked by Austria. The result, in case the allies were successful, was to be the formation of a northern kingdom of Italy. . . . Both Austria and Piedmont increased their armaments and raised loans in preparation for war. Men of all ranks and conditions of life flocked to Turin from the other States of Italy to join the Piedmontese army, or enrol themselves among the volunteers of Garibaldi, who had hastened to offer his services to the king against Austria. . . . Meanwhile, diplomacy made continual efforts to avert war. . . . The idea of a European Congress was started. . . . Then came the proposition of a general disarmament by way of staying the warlike preparations, which were taking ever enlarged proportions. On the 18th April, 1859, the Cabinet of Turin agreed to the principle of disarmament at the special request of England and France, on the condition that Piedmont took her seat at the Congress. The Cabinet of Vienna had made no reply to this proposition. Then suddenly it addressed, on the 23rd April, an ultimatum to the Cabinet of Turin demanding the instant disarmament of Piedmont, to which a categorical reply was asked for within three days. At the expiration of the three days Count Cavour, who was delighted at this hasty step of his opponent, remitted to Baron Kellerberg, the Austrian envoy, a refusal to comply with the request made. War was now inevitable. Victor Emmanuel addressed a stirring proclama-
